Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown, published in the New York Journal-American of March 24:

SHALL WE AMEND THE CONSTITUTION?—THIRD-TERM ISSUE AGAIN RAISED—MOVE IN CONGRESS WOULD BAR IT

(By George Rothwell Brown)

WASHINGTON.—It is a startling, perhaps even a very significant, fact that today, 7 years after the advent of the New Deal, there

are pending before Congress 281 resolutions proposing amendments to the Constitution of the United States.

Of these, 255 have been presented in the House of Representatives and 26 in the Senate.

This indicates the existence at the Capitol of a lively interest in the fundamental law, and a deep concern for guarding even more closely those basic principles of individual freedom for whose preservation the Constitution originally was largely created.

While some of the proposed amendments are in the direction of radicalism, it is worthy of observation that the more important ones seek to check the increasing predominance of the Executive power, principally by fixing a limit on the term of office of the President.

It is natural that at this particular time the question of limiting the Presidential tenure should be of serious concern in Congress, as it is in the country at large. Several amendments are pending to limit the period to not more than two terms of 4 years each. A considerable number would limit a President to one term of 6 years.

Almost from the beginning of the Government opinion in Congress and in the country has inclined more to a limitation of two 4-year terms than to a single 6-year term.

To accomplish the first indicated reform, which many of our wisest statesmen have long believed desirable, it would be necessary to amend article II, section 1, of the Constitution.

TEXT OF TWO-TERM CHANGE SUGGESTED

This could be done by inserting certain limiting or qualifying words, so that the clause would read as follows:

"The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of 4 years, but he shall be ineligible for this office after the end of a second term," etc.

Many attempts have been made rigidly to restrict the term of office of the President, but never successfully.

During the Republic's first century 125 amendments limiting the Presidential term were offered in Congress, and more than 50 of these proposed a single 6-year term, the first one being submitted by Representative Joseph Hemphill, of Pennsylvania, in the Nineteenth Congress, in 1826.

Most of the amendments during the first century did not propose to change the 4-year term as fixed by the Constitution, but to limit to two the number of times the same person could be chosen President.

As early as 1824 a resolution passed the Senate by the significant vote of 36 to 3, limiting the President to two terms of 4 years each, and again a similar resolution was adopted by the Senate in 1826.

Sentiment in the House, however, was such that a two-thirds vote could not be mustered on either proposal.

The most serious attempt to make the President ineligible to more than two terms of 4 years each occurred in 1876, when the House by the emphatic vote of 234 to 18 adopted a resolution which read:

"That in the opinion of this House the precedent established by Washington and other Presidents of the United States, in retiring from the Presidential office after their second term, has become by universal concurrence a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions."

This, of course, was not in the form of a resolution to amend the Constitution.

Again in 1880 the attempt was made to limit the Presidency to not more than two terms of 4 years each, this time, as before, the concern having been created by the attempt to renominate Grant at the Republican National Convention in Chicago.

Fear of the overweening power of the Executive, particularly acute at the present moment, is by no means of an origin dating since the ratification of the Constitution.

It was a fear which filled the minds of many of the Nation's founders.

Toward the middle of July 1787 the Constitutional Convention at Philadelphia reached a decision that the Executive should be chosen by the National Legislature "for a term of 7 years, and to be ineligible to reelection."

But a few days later it was urged by William Churchill Houston, of New Jersey; Roger Sherman, of Connecticut; and Gouverneur Morris, of Pennsylvania, that this provision would destroy the motive of reward for good behavior.

COMPROMISE ADOPTED PUT NO LIMIT ON TERMS

Finally on September 24, 1787, the dispute ended when Judge David Brearley's committee brought in a compromise, which finally provided for a term of 4 years, with no restriction as to eligibility for reelection.

In this form this compromise was incorporated in the Constitution.

More than 90 proposed amendments to the Constitution since its adoption have affirmed the wisdom of a single term, or of two terms of 4 years each, without eligibility to reelection.

It has been computed that between 1826 and 1846 new methods of electing the President were proposed not less than 45 times.

In each of his eight annual messages Andrew Jackson recommended to Congress an amendment restricting the Presidency to one term of 4 or 6 years.

By this time the principle established by Washington that a President should serve not more than two terms seemed to have become a part of the unwritten constitutional law.

During the reconstruction period President Andrew Johnson advocated the restriction, and it was advanced in Congress 21 times between 1874 and 1876, but in no instance could it command the necessary votes in Congress.

From 1876 to 1936, when the last complete compilation was made, approximately 100 additional resolutions were introduced in Congress proposing to limit the Presidential term.

Two things between 1885 and 1912 stimulated a revival of concern in Congress and in the country for the fundamental idea that the Constitution should be amended to render it forever impossible for an ambitious or unscrupulous President to perpetuate himself in office.

One was the candidacy of Grover Cleveland, running for the Presidency again after an interval of 4 years.

It is interesting to note that when Mr. Cleveland completed his second nonconsecutive term he did not consider himself entitled by custom to a second consecutive term.

The other incident was the third-term candidacy of Theodore Roosevelt.

WILSON REPUDIATED OWN ONE-TERM PLEDGE

In 1894 William J. Bryan, then in Congress, introduced three resolutions proposing a single-term Presidency, and another making a President ineligible to succeed himself.

Through his influence the Democratic national platform of 1912 pledged itself to observance of the single-term principle, and Woodrow Wilson accepted that platform and was elected upon it.

However, this did not prevent him from repudiating the one-term plank when he became a candidate to succeed himself in 1916.

At the present session of Congress Senator HOLT, a Democrat, of West Virginia, has announced he will present a resolution, and demand a vote upon it, to place the Senate on record as opposed to the third term. It is identical with a resolution offered by Senator LA FOLLETTE on January 31, 1928, and greed to. It reads:

"*Resolved*, That it is the sense of the Senate that the precedent established by Washington and other Presidents of the United States in retiring from the Presidential office after their second term has become, by universal concurrence a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions."

It will be seen that the language is almost identical with that of the resolution adopted by the House in 1873.

The La Follette resolution was adopted when it seemed an effort might be made to renominate President Coolidge.

William E. Borah

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. DWORSHAK. Mr. Speaker, the late Senator Borah had been a member of Boise Lodge of Odd Fellows for 38 years, and that fraternal organization on March 19 conducted memorial services with appropriate tributes to its "most distinguished member."

The Grand Lodge of Idaho, I. O. O. F., at a special meeting held at Boise, Idaho, March 14, 1940, adopted the following resolution as a further testimonial to express the affection and esteem of many thousands of members of this fraternity:

RESOLUTION OF THE GRAND LODGE OF IDAHO, I. O. O. F.

On the evening of January 19, 1940, the people of this Nation were startled and grieved by the announcement that death had sought a shining mark, and that Senator William E. Borah's labors were over. His outstanding record in the Senate and his devotion to the cause of justice among nations in his many years as chairman of the Committee on Foreign Relations had given him the respect and confidence of the people of the world. The expressions of grief at his passing and of praise were general in all foreign countries.

William E. Borah became a member of the Independent Order of Odd Fellows by uniting with Boise Lodge, No. 77, Boise, Idaho, on the 9th day of December 1902, and so remained until the day of his death. He was a natural fraternalist, and the principles of friendship, love, and truth as taught by the order found a deep abiding place in his soul. During his long service as a Senator his fraternal spirit manifested itself in his friendship for humanity and his earnest and continued efforts to improve the conditions of the common citizen throughout the world. His most eloquent

expressions and his greatest efforts were for the weak and lowly of the earth: Therefore be it

Resolved, That the members of the Independent Order of Odd Fellows, in common with the people of Idaho and of this Nation, acknowledge our deep obligation to William E. Borah for his great public service, honestly, faithfully, and courageously rendered. We freely express our admiration of the lofty and fraternal, public, and private life of this gentle-hearted man. We rejoice that his enduring memory will long serve as an inspiration to fidelity, courage, and manhood in the men of today and in the generations to come; and be it further

Resolved, That this resolution be spread at length upon the minutes of the grand lodge of this jurisdiction, and a copy be presented to his widow.

JAMES F. AILSHIE,
FRANK MARTIN,
M. REESE HATTABAUGH,
S. E. BLAINE,
W. R. REEVES,
Committee.

Attest:

PRESLEY F. HORNE,
Grand Secretary.

Answering Representative Rich on Franking Privilege

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1940

Mr. PATMAN. Mr. Speaker, on page 3163 of the CONGRESSIONAL RECORD for March 20, 1940, appears the statement:

> We could save $100,000,000 a year if we took the franking privilege away from the bureaucrats of the various departments and prohibited them from sending out much of the useless material they are now sending out over the country.

The Congressman who made this statement did not state how he arrived at the figure given. However, it is apparently based on a statement made in a recent speech by a candidate for the Republican Presidential nomination, which has been given much publicity. The gentleman's figure was arrived at in this way: According to the report of the Post Office Department, the Government spent $35,700,000 for free mailing, exclusive of its own mail and the congressional franked mail. He then remarked that advertising firms spent one-third to one-fourth of the cost of a mail campaign on postage and on this basis the total cost of the New Deal's propaganda aggregated $107,000,000 in 1938.

This statement is not in accordance with the facts. The amount, $35,700,000, represents the postage at the regular rates which would have been collected if the mail had been subject to postage; the actual cost of handling by the Postal Service was considerably less.

Again, the statement implies that the entire mailings of the various departments of the Government consisted of propaganda. As a matter of fact, the postage figure of $35,700,000 included every activity of the Government, and the tremendous volume of correspondence necessarily incident thereto; it included every income tax blank distributed by the Internal Revenue Bureau; every "man wanted" circular sent out by the Federal Bureau of Investigaton; every Federal report and document; all Government interoffice mail; the millions of farmers' bulletins and leaflets on crop-raising methods, insect control, and so forth; every letter carrying a pension check to an ex-soldier or to one of the thousands of persons enjoying the benefits of the Social Security Act.

This vast amount of routine business constitutes the great bulk of all Government mail, which must obviously be carried on. The charge by inference that it consists in its entirety of propaganda is without any foundation in fact.

Would those who criticize desire to stop all mail to the C. C. C.? Would they desire to stop the sending of pensions to war veterans and veterans' widows? Would they desire to stop the sending of benefit payments to recipients of old-age and social-security annuities, unemployment compensation, or matter relating to other social welfare activities?

Although there has been a material increase in the volume of official free mail in the last 10 years, much of it is the result of the increased activities of the Government undertaken on behalf of the American people in order to overcome the effects of the depression. Notwithstanding this, it is worthy to note that during 5 of the past 7 years, the Postal Service has been operating with a net surplus, whereas during the preceding 7 years there were large postal deficits, that for the fiscal year 1932 reaching the staggering sum of $152,000,000, after taking credit for the free service and nonpostal items as authorized by the act of June 9, 1930.

Finland's War Is Over; Is Our Task Complete?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1940

Mr. DINGELL. Mr. Speaker, now that the war is over for Spartan Finland, the period of reconstruction begins and what a colossal and heartrending task even for the valiant Finns. A country devastated from border to border. Death and desolation everywhere in evidence, as the bloody imprint of communazi-ism, which will take a century to obliterate. Another victim of the fiendish, scab paperhanger is now added to Poland, Czechoslovakia, and Austria. Let me say parenthetically and positively that the civilized world holds Nazi Germany solely responsible for Finland's tragedy. Stalin, the head hunter of the Caucasus is a mere tool who would not have struck down his northern neighbor any more than he ever dared alone to stab Poland to death without Hitler's aid and encouragement. Moreover it was Hitler who by threat of immediate attack against Norway and Sweden prevented the transportation of French and British troops who were ready to aid the Finns. The Nazis threatened direct counteraction. They were determined Finland must be enslaved by the hordes of Communist Russia. Nazi Germany in the eyes of civilization stands convicted of her bestial act against innocent and peaceful Finland. Russia is a mere accessory to the fact.

What are we going to do about it? What excuses have we now to sustain any unwillingness to help maintain civilization, Christianity, and democracy? What is there left to hide behind as regards aid in restoration of the Finns? Nothing but hypocrisy, for there is no argument left. There is no war between Finland and Russia, declared or otherwise. No chance of violating our neutrality or offending the Stalin-Hitler combination, therefore let us act and act quickly. There are several bills in committee, one of which provides for a $60,000,000 unrestricted loan to Finland; the other provides for the remission of a little less than $6,000,000 paid in interest to the United States. And it is a token which could be handed over to show our love and respect for this brave race which so gallantly fought civilization's battle. To retain this money would be a sin. Under the circumstances, it could be likened to the sharp and heartless practice of a pawnbroker who collects his usurious interest from the sorrowing widow while he lives in luxury. We should not accept that kind of money. We do not need that kind of money.

As regards the possibility of an unrestricted loan, there being no question now of neutrality or Stalin's and Hitler's rights or feelings, and the credit is gilt-edged AA–1. Sound business practice would sustain such a loan. There need be no delay; no credit report is necessary. We know from experience that the borrower is the best risk in the world. Here is an opportunity to build, not destroy; rehabilitate, not devastate; to heal the wounds of a glorious nation and help in its restoration.

While I have the opportunity, let me again raise my feeble voice in Finland's behalf, and let me remind our great and generous American people that while the war is over the suffering from cold, starvation, and privation will continue for a long time to come. Everything is destroyed, transportation and distribution paralyzed. Homes, hospitals, factories, and churches are razed to the ground. Hundreds of thousands migrating west from the occupied areas, aimlessly forging their way through a near-Arctic winter, poorly clothed, penniless, and starving. America's humanitarian and philanthropic activities must not be suspended or reduced. Quite the contrary; we should redouble our energies and quicken our pace so as to restore to their rightful position these cultured, proud, and productive people now on the brink of despair. We must aid and encourage them in maintaining their self-respect.

Bituminous Coal Division Should Be Allowed Sufficient Funds to Operate

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. LEAVY. Mr. Speaker, just today the examiners have filed with the Division Director, Howard A. Gray, their general report outlining factors for the establishment of minimum prices for the entire country, and they have recommended prices for the Rocky Mountain and Pacific coast regions.

Early in the month, on March 7, when we were considering the Interior supply bill, and while in Committee of the Whole House on the state of the Union, we adopted an amendment offered by the gentleman from Pennsylvania [Mr. ALLEN] which reduced the appropriation for the Coal Division $1,000,000 below the sum recommended by the subcommittee, which had carefully considered this whole matter. Due to a parliamentary situation, we were unable to get a record vote on this amendment and the appropriation bill passed, allowing but $1,187,000 for the Coal Division. Of course, we hope that the Senate will see fit to restore the cut. If this is not done it would simply mean that the major part of all the effort made and the money spent heretofore will be lost, because it is impossible for this agency to carry on through the next fiscal year with the sum allowed them in the bill as it passed the House.

In order that there may be a better understanding of what the Division is doing and just where they are at this time in their work, and to show how short-sighted and foolish it would be to reduce their appropriation in a sum such as was made by this body on the consideration of this Interior supply bill, I desire to make a part of my remarks at this time the release that I have heretofore referred to. It is as follows:

Secretary of the Interior Harold L. Ickes announced today that the three trial examiners who conducted the Bituminous Coal Division's final hearing on minimum prices yesterday began to issue recommended price schedules.

The examiners Saturday filed with Division Director Howard A. Gray their general report outlining the broad, basic factors for the establishment of minimum prices for the entire country, recommended boundaries of market areas in the United States, recommended prices for the Rocky Mountain and Pacific coast regions, and specific proposed findings of fact for the rail-coal shipments in that territory. These will be available Monday, March 25.

The examiners, Thurlow G. Lewis, Charles O. Fowler, and Samuel Jaffee, notified the Director that the actual work on the remaining price schedules and proposed findings are almost complete, and that they would be issued shortly. Final preparation in form for filing and mailing to interested persons would require a brief additional period, they said. The examiners and their staffs have been working night shifts, Sundays, and holidays for weeks to speed the completion of minimum prices.

Completion of the examiners' report will bring minimum prices to stabilize the Nation's three-and-a-half-billion-dollar bituminous coal industry into position for decision by Director Gray after he hears arguments on any exceptions to the examiners' report.

"Within a few weeks now the Coal Act will put an effective floor under coal prices, and let the coal producers of the country compete among themselves on a basis fair to themselves and to the consuming public," Director Gray said. "I know that the coal industry is greatly in need of minimum prices and I shall do everything in my power, consistently with a careful and thorough consideration of the issues, to expedite the remaining legal steps."

In their general report the examiners said that their recommended prices "are based upon the coordinated minimum prices, as coordinated by the district boards, the Commission, or the Division, with such modifications, deletions, and additions as are required and sustained by substantial evidence at the hearing."

Citing that the Coal Act requires that minimum prices preserve existing fair competitive opportunities between coal producers, the examiners described the bases used in recommending prices that would meet this standard.

Under the Coal Act the minimum prices are to return the coal industry a yield on the sale of its coal equal as nearly as possible to its average cost of doing business. This is to put the industry on a stable basis by stopping the widespread price wars and unfair trade practices which have caused a huge financial deficit in the industry each year since 1925.

In stabilizing the price of coal, not only must the minimum prices be set at the proper levels to return cost, but they must take into account the proper relative values of the coal and other competitive factors. Coals produced in different mines throughout the United States vary, often widely, in their relative value to the purchaser for many reasons, such as their chemical and physical characteristics, the way they burn, the amount of heat they will make, etc.

The examiners found that the copies of invoices and spot orders which the law requires all producers to file generally were not reliable for use in determining the relative market values of different coals except under certain circumstances. According to the examiners, the invoices showed "extremely wide and generally inexplicable ranges in the sales prices of identical coals and showed repeated instances in which less valuable coals sold at higher prices than more valuable ones, for no reasons deducible from the documents themselves." The data, the examiners said, rather than reflecting relative values of coals, showed "such factors as the bargaining power of particular consumers, dumping of surplus sizes, price-cutting raids to secure new territory, distress sales, and in general the demoralized conditions of the industry."

The use of these invoices and spot orders was not indispensable to a determination of effective minimum prices, the examiners found. Some producers protested in the hearing against the failure to use these data.

The examiners based their findings on the evidence found in the record of the hearing, which included such matters as the testimony of expert coal men, the chemical analyses of the coals, information on how the coals were distributed in the past, data as to freight rates and other transportation charges, physical characteristics of the coals, costs of production, and similar material.

The examiners pointed to the vast amount of evidence in the record of the hearing, which was closed on January 20, 1940, after having been almost constantly in session since May 1939. Among it were the records of the previous hearings by the Coal Commission. The District Producers' Boards, the Consumers' Counsel and his successor, the Consumers' Counsel Division of the Office of the Solicitor of the Interior, and Division experts furnished information. More than 300 producers and almost 100 consumers and other interested persons supplied additional evidence. Several hundred more persons filed written protests to specific proposed prices. All interested persons were afforded a full opportunity to file protests, adduce evidence, examine or cross-examine witnesses, argue, and file briefs. The transcript of the record ran over 26,000 pages, with 2,000 exhibits.

One of the most important factors in the record for the formulation of minimum prices was a study of coal distribution in 1937. The examiners found "that the calendar year of 1937 is a representative year, being indicative of the normal fair competitive opportunities for the distribution of bituminous coal throughout the United States, is the fairest available basis for an indication of probable trends of distribution in succeeding years, and is the latest and most nearly representative year which could have been availed of for this purpose."

This distribution data showed which geographical regions could be regarded as common consuming market areas for the purpose of coordinating prices; what kinds, qualities, and sizes of bituminous coal, from which districts, and by what method, and for which uses moved into each market area; the existing fair competitive opportunities enjoyed by the producers in each area, and provided a basis for testing the realization or return obtainable from the coordinated minimum prices.

The distribution information, the examiners found, comprised "the most complete, accurate, and authoritative body of statistical data regarding distribution of coal from mine to market that has ever been assembled for the bituminous-coal industry; and that such data were a proper basis for the formulating of common consuming market areas, for the ascertainment of the movements of various coals into such areas and of existing fair competitive opportunities therein, for the coordination of minimum prices

therein, and for the determination of the yield or return from such minimum prices."

The established minimum prices will cover the coal mined by about 13,500 producers who are participating in the stabilization plan provided by the Coal Act. Their production represents substantially all the commercial sales of coal in the country.

After 4½ Years of W. P. A.

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

ADDRESS OF COL. F. C. HARRINGTON, COMMISSIONER, WORK PROJECTS ADMINISTRATION

Mr. COCHRAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by Col. F. C. Harrington, Commissioner, Work Projects Administration, Saturday, March 16, 1940:

The Work Projects Administration has just finished taking an inventory of all the work it has done during the first 4½ years of its existence; that is, from July 1, 1935, up to January 1, 1940.

There are two obvious reasons why we keep a regular record of our completed work of all kinds. First, we wish to see, from year to year, what types of projects are being selected by communities. We wish to know, in terms of money expended, whether we are increasing our output of benefits for communities to the fullest extent possible. Our job is not only to spend the money appropriated to us by Congress in setting the needy unemployed to work, but to conduct those work operations in such a way as to bring the best results to our communities. I am glad to say that our records show a continual increase over the whole country in the community benefits that are being secured by the use of W. P. A. projects.

The other reason for keeping such a record is to enable us to report to the American people what results have been secured by the expenditure of their money. The inventory which we have just completed, showing accomplishments during the whole period of the existence of the W. P. A., is one which should answer many questions that the public has a right to ask. This inventory shows, first of all, what has been done in the country as a whole. Then it shows what has been done in each State. And for each State it shows what has been done in each county. The American public is entitled to this information and it is given very specifically by this inventory.

To summarize the inventory over the radio this evening would obviously be impossible. The W. P. A. has operated some 250,000 separate projects, distributed over the whole country. The W. P. A. field of operations is far more complex than that of any private business in existence anywhere in the world. Not only do we construct roads and bridges, schools and hospitals, parks and airports, and perform various kinds of conservation work; but we also conduct classes in literacy and naturalization; we produce clothes for families on the relief rolls; we carry on traffic surveys; we aid in research work in State universities; we help communities in doing public-health work of every kind; and we cook and serve school lunches for the children of needy families. This is a brief selection of items from the list. The whole list of our different W. P. A. activities, and the figures showing our accomplishments in each branch of activity would take up more than the radio time at my disposal this evening. Besides, it is well known to all of us that statistics, to be appreciated, should be seen and not heard.

For this reason, therefore, we are making our W. P. A. inventory report available to the press of the Nation so that the American people can see for themselves what the W. P. A. has done. This report will be sent to the press during the coming week—first the national figures, and then the State and county figures. With the cooperation of the press, there will be available to every citizen a detailed answer to the question of what we have got in return for the money spent on W. P. A. work for the unemployed.

In advance of this report, I wish to speak briefly of what these figures indicate. One of the very largest of the activities in which the W. P. A. has been engaged is the construction and improvement of highways, roads, and streets. About 40 percent of all W. P. A. money has been spent on this kind of work. The total of W. P. A. road construction and improvement, during this 4½-year pediod, is 457,000 miles. I might tell you how many times so many miles would go around the world, but I think it will be more helpful if I point out that out of this total mileage of new and improved roads, a very large proportion—well over 350,000 miles—is secondary, rural, and farm-to-market roads.

We are inclined to think of roads in terms of tourist traffic, and we have neglected until recently our secondary-road system. Before the W. P. A. entered the picture, there were numerous rural sections where roads were practically impassable to automobile traffic for weeks and even months out of the year. At such times it was difficult for children to go to school, for doctors to visit their patients, and for farmers to get their produce to market. The W. P. A. in "pulling the farmer out of the mud," has done a work of very great economic and social value.

I should like also to dwell for a moment on the significance of the figures showing how many schools have been built and improved by the W. P. A. School construction in this country was allowed to lapse during the World War, and we had not yet caught up with our needs when the depression came. In 1935 a survey by the National Education Association showed that 700,000 of our children were going to school in buildings which had been condemned as unsafe and unsanitary—many of them actually firetraps. Many buildings were obsolete, many more in urgent need of repairs, and a very large number were badly overcrowded. So great were the needs that it is not surprising that there has been a widespread demand for W. P. A. projects both for new school construction and for the improvement and modernization of old schools. Our inventory shows that the W. P. A. has constructed 4,000 new school buildings, and 1,500 additions, besides improving and modernizing 28,000 other school buildings.

Another field of community needs is that of public health. Services for the prevention and control of sickness are lacking in rural areas and are grossly inadequate in many smaller cities. While hospital beds in private rooms stand empty, thousands of people with low incomes do not receive the hospital services they need. Forty percent of the counties in the United States have no registered general hospitals. Institutions for tuberculosis and mental disease are overcrowded and inadequately supported. Every year 2,000,000 cases of serious illness go entirely without medical treatment, and hundreds of thousands of people die of preventable illnesses. There is a need for more public hospitals, more urban clinics and rural health centers, and more sanitation work.

The figures in our inventory, which show the public-health activities of the W. P. A., should be read against that background.

The W. P. A. has constructed 156 new public hospitals, made 66 additions to existing hospitals, and has renovated and improved 1,436 hospitals. W. P. A. workers, in an average 2-week period, administer some 250,000 general medical and dental examinations, including treatments in clinics, schools, and homes; and 80,000 special tests for specific diseases.

Examples of W. P. A. health work would fill many volumes. One such volume would be filled with the emergency health work done by the W. P. A. immediately after every one of our great disasters of floods, drought, or hurricane. Another volume would be filled with the sanitary work done by the W. P. A. The Surgeon General of the United States Public Health Service has stated that by our sanitary work in the South we have advanced malaria control by 20 years.

As a part of our assistance to community sanitation, the W. P. A. has constructed one and three-quarter million sanitary privies, most of them in what used to be called the "typhoid belt" in the rural South. Some people have laughed at this kind of work, but the fact remains that since it began the typhoid death rate has been cut in half in one State after another. The same kind of sanitary work is producing good results in the fight against dysentery and hookworm. Public-health authorities everywhere in the United States have praised the W. P. A. for the assistance it has given them.

Those are all the figures that I will cite this evening. I wish to turn now for a few minutes to the W. P. A. workers themselves. I want to point out that the value of the work they do is not dependent on them alone. It is to a very large extent dependent on the way projects have been planned by the communities. In general it is true that where projects are well planned, W. P. A. workers do good work.

There are some disadvantages inherent in W. P. A. work as compared with private industry. Our work has to be done when workers are laid off from private industry, and this means that a good deal of it is done in the seasons of the year least favorable to efficient work. Also, unlike private employers, we cannot keep our workers steadily on the job until the work is done—we have to let our workers go as soon as private employment is available for them. They are glad to take private employment, because the wages are higher than W. P. A. wages; but they have no choice in the matter under the law—nor have we—they must take private employment when it is available or be cut off the W. P. A. rolls. And on this point I wish to say that we have investigated thousands of reports of alleged job refusals by W. P. A. workers and have almost invariably found that they were based on hearsay and were completely false in fact.

The conditions under which we operate are obviously different from those of private industry, and are in some respects, as I have said, very disadvantageous. Nevertheless, I am glad to say that the efficiency of our program has been steadily increasing. In view of the complexity of the W. P. A. program, and the fact that it has been operating only 4½ years—a very short time for any large program of operations—I think we can be gratified by the progress that we have made. I note with pleasure that the word "boondoggle" is being dropped from the American vocabulary as applied to W. P. A. work.

I think the American people are just beginning to realize how much valuable work is being accomplished for their benefit through the W. P. A. And this realization, I believe, is changing

the public attitude toward the W. P. A. It has been thought of in the past by many people as a necessary evil. We knew that something had to be done about unemployment, and the W. P. A. seemed to be a stopgap. It is when we look at the other side of the picture and see the great community need for the kind of work that W. P. A. workers have been doing, that we realize the lack of wisdom of such a view of the W. P. A.

It is unjust for anybody to think of W. P. A. workers as recipients of public charity. They earn the money by which they support themselves and their families. They are engaged in creating wealth for our towns and counties. They are helping to build up the Nation.

Like everyone else, I would like to see America's unemployed back at work in private jobs. But there are no sound reasons to believe that this can occur within the near future.

There is still much work that needs to be done for the benefit of our communities all over the United States. We shall have unemployed workers for some time to come. It seems only reasonable that we should continue to bring the workers and the work together and continue to make America a better place to live in. That, I believe, is and will remain our American way of dealing with the situation.

I. Agricultural Propaganda—The Most Flagrant Ever Issued by Any Department of Agriculture

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. CLEVENGER. Mr. Speaker, I have spent many years as a businessman, during which time I kept accounts. I am not a new dealer and can still make two and two equal four, but I cannot add up the printed propaganda of the Farm Security Administration and get the same answers as they do. In the June 16, 1939, issue of the CONGRESSIONAL RECORD, on page 7337, I find the following statements in regard to Georgia:

> These families, therefore, have added a total of $2,687,040 to the wealth of the communities, or an average of $267.28 per family.

President Roosevelt says that we cannot eat our cake and have it too. It seems that the Farm Security Administration can take people off relief rolls, set them up as farmers, and make them profitable farmers, while, at the same time, the Farm Credit Administration has had to take back 100,000 farms because the owners could not pay their interest. This does not make sense.

On the same page of the June 16, 1939, issue of the CONGRESSIONAL RECORD, as the foregoing statement appears, I find the following:

> This increase in the production of foodstuffs does not mean additional competition with farmers in other areas, since virtually the entire output was consumed at home.

It appears that the clients of the Farm Security Administration, with the magic touch of the apostles of the more abundant life, can eat all they raise and still make a profit of $267.28. Is not life wonderful under the guiding hand of the New Deal? One fact is certain, and that is, that the more money that is taken from the Treasury for putting new farmers into business, the more difficult it makes it for the regular farmer, who owns his own farm. The regular farmer is entitled to the domestic market without being forced to compete with a growing number of new farmers subsidized by 100-percent hand-outs from the United States Treasury.

I also find on page 7337, in a letter from the Farm Security Administration, the following statement:

> I want especially to call your attention to the fact that this agency has made loans to about 1 out of 12 farm families in the State.

While this has been taking place, the regular farmers, carrying their own load, have seen hard times because the percentage of farm-loan delinquencies has been increasing until, now, according to the F. C. A., there are 35.7 percent of Federal land-bank loans delinquent and 32.9 percent of the commissioner loans delinquent in the State of Georgia.

I also find in this letter about Georgia, "If all farm families in Georgia had been able to make the same financial gains as our borrowers have, they would have increased the farm wealth of the State by about $66,750,000."

The farm problem for the country is simple indeed if you believe the above statement because we can forget soil conservation, parity, and other agricultural payments and turn the whole agricultural problem over to the Farm Security Administration and, with their magic touch, the farm problem is solved. However, when we check up we find that the F. S. A. distributed $14,013,687 in loans, made gifts or grants of $982,138, and that it cost them $2,280,251 to do business. I find that the overhead cost for being Santa Claus was 16 percent. They claim to have made about 1 out of 12 farmers in Georgia happy and prosperous, but in the meantime it shows that 35 percent of the regular farmers had to run behind, as 35 percent of them cannot even pay their own interest on their Federal land-bank loans. However, they must help by paying their taxes, help finance their competitors who have received the 100-percent hand-out from the modern Santa Claus. All New Deal programs seem to help the few but to bring a hardship to the average American citizen.

I am sure that the dairymen of Michigan, Illinois, Minnesota, and other dairy States will be pleased to read the following which appears in the same letter and on the same page of the CONGRESSIONAL RECORD as the aforementioned quotation:

> By the end of the 1938 crop year, however, the borrowers in Georgia reported that they had increased their milk production by an average of 401 gallons annually, or a total of 4,028,869 gallons.

This was with a 100-percent subsidy from the United States Treasury; however, I am sure that the livestock sections of the country will be happy to know that in the report of the Administration for 1939, I note that there has been a 75-percent increase in cattle and a 100-percent increase in poultry and hogs. Is this one of the reasons why hogs and eggs are at such ruinously low levels in the country today?

One outstanding fact must be realized, and that is that we must begin to use some common sense. We cannot appropriate around a hundred million dollars a year to increase agricultural production by the farm-security route and then turn around and appropriate another $100,000,000 from the United States Treasury for the purchase of surplus commodities and have such a procedure make common sense. We must use judgment—use the farm-security money on a rural W. P. A. basis, and not try to use it to see how much more surplus can be added onto an already glutted market and expect the United States Treasury to continually stand this strain.

The New Deal agricultural program is crumbling and the propaganda that this Department issues is hastening its death, and rightly so.

II. SOME MORE AGRICULTURAL PROPAGANDA—FLAGRANT AND FRAGRANT

In the Appendix of the CONGRESSIONAL RECORD, page 1324, I find a letter from the Farm Security Administration. In addition to its frank admission of how much more the Farm Security Administration knows than the average farmer knows, it seems to prove once more that these funds are not being used as advantageously as they could be used when it comes to helping the rural people of America. In this report on Wyoming I find:

> Moreover, these families increased their net worth, over and above all debts, from $1,726.70 before they came into the F. S. A. program to $2,322.61 at the end of the 1939 crop year, a gain of 35 percent.

In the first place, if a farmer has $1,726.70 worth of the world's goods, why should a relief agency pick him up and help him increase the farm surpluses of this country? I have always been led to believe that the Farm Security was supposed to help people that did not have other credit facilities, but anyone with $1,728.61 should be able to take care of himself in a rich productive State like Wyoming.

In the same letter I also find:

In order to get the family off to a good start, small grants have been made to supplement the loan. * * * They have averaged $114.96 per family or $338,212 over the 4-year period.

The average farmers who are living on their own farms would not have up to 35 percent delinquent Federal land-bank loans, as in South Carolina, if the United States Treasury would give them $114.96 every time each farmer needed it. With this gift or grant money, is it any wonder that the Farm Credit people paint such a rosy picture of their collections or their collection ability?

Another paragraph on the same page of the same letter reads as follows:

One of the most common reasons for past failure among the families which come to F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start we have made every effort to assist them in getting adequate size farms.

Consequently, the borrowers in Wyoming are now operating an average of 986 acres, or an increase of 219 acres since they came on the program.

Is not this wonderful? Here we have them taking people with 767 acres of good Wyoming land and $1,726.70 in money and increase their acreage to 986 acres and a total of $2,322.61 in money and giving them a $114.96 per family subsidy. Then they come to Congress and tell us how they are trying to help someone who is next door to the relief rolls.

These propaganda letters are so ridiculous, so inconsistent, and so brazenly self-praising that I can see why the people of this country are taking articles from the Agricultural Department with a grain of salt, as they do not make sense. In my mind, this may be explained by the following paragraph from the same page and letter as the above:

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it few of the families would have been able to make much progress or to repay their loans.

Here is the secret, according to the propaganda, of how this magic is accomplished. It is the superknowledge of the staff of this New Deal agency. If this type of personal guidance is to be extended to all of the farmers of the country, we will have to add another 150,000 on the pay roll of the Agricultural Department. There are 105,000 directly on the pay roll now, to say nothing of the other 100,000 who are indirectly on the pay roll and on the backs of the farmers and taxpayers of this country.

Have we reached the stage whereby the American farmer—who has reached the highest pinnacle ever attained by a rural people in this world—must submit to a wet-nurse program of a collectivist, visionary branch of our Government? I believe not. The farmers of my State seem to be making some headway in spite of the New Deal.

III. STILL SOME MORE AGRICULTURAL PROPAGANDA

As I read the CONGRESSIONAL RECORD I find numerous letters from the Farm Security Administration to various Members of Congress. They are evidently stock letters with different figures inserted for different States.

I note on page 1459 of the Appendix of the RECORD the following in regard to the State of New York:

The survey showed that the 2,725 standard rehabilitation borrowers in your State had an average net income last year of $703.33 per family as compared with $565.39 in the year before they came to F. S. A. for help.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make its first crop. They have averaged $59.64 per family, or a total of $162,519 over a 4-year period.

This should sum up as follows:

The year before the borrowers came under the benign influence and guiding hand of the New Deal magic agency their annual income was $565.39 per family. The annual income last year, under the Farm Security, was $703.33 per family, or a difference of $137.94; the grants or gifts have been on an average of $59.64 per family over a 4-year period. It must have been then, if this gift was made in a limited number of cases, that many of these borrowers were really behind in their earnings in comparison to their earnings before finding the right stall and getting in with the new dealers.

I also note the typical rehabilitation family in New York has borrowed $1,071.96. Here again we have a New Deal agency broadcasting the taxpayers' money in $1,000 chunks to and fro, without any security except what is purchased in most cases. Is it any wonder that the public debt has reached its legal limit? Is it any wonder, I ask, how it is possible to expect that many of these loans will be really recovered?

In the same letter I find:

Often it has been necessary to work out an adjustment of the family's old debts before rehabilitation could be successful. Local farm-debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts.

Altogether, debt reductions totaling $1,392,973 have been negotiated for the farmers in New York. This represents a scale-down of 17.2 percent.

THE TIME

I think that the time has come when every Member of Congress should ask himself if he thinks it a function of the Federal Government to continually have employees on the Federal pay roll whose work it is to go around the country and try to help people keep from paying their honest debts. This is not any emergency matter. These professional debt reducers are operating on indebtedness incurred as late as 1937. I think the time has come when the people can settle their own differences in an orderly and legal way, and I doubt the wisdom of a governmental policy that hires professional chiselers to carry on this kind of an un-American program.

The more I study this farm security set-up the more fantastic, the more communistic, the more un-American, the more impractical, and the more visionary it appears.

We, the Congress, appropriate over $100,000,000 for farm security which goes out and increases production by subsidizing new farmers to produce more; then we appropriate over another $100,000,000 to the Federal Surplus Commodities Corporation to take the surplus off the market. Then we lower the tariff and import over $4,000,000,000 worth of competitive farm products during the past 7 years. Then we turn around and appropriate another $500,000,000 for soil conservation, or for New Deal conservation.

I claim, Mr. Speaker, that this does not make ordinary horse sense. I maintain that the people of this country are tired of all this waste and extravagance, with its visionary cross-purpose schemes, and want to see these enormous appropriations discontinued before the public debt exceeds the assessed valuation of their property.

Even with the millions that have been poured into the Southern States, I find they have up to 35 percent delinquent Federal land-bank loans in many States and fundamentally they are worse off agriculturally than ever before. What is their future unless they can continue to draw checks out of the United States Treasury which is now so nearly empty? I am not so interested in the farm-credit situation as I am in the national-credit situation just at present. I think this is the time to call a halt on the visionaries.

On page 12 of the annual report of the F. S. A. we find:

Moreover, the borrowers doubled their ownership of poultry and hogs.

No doubt this is why Congress has to appropriate more money for the Federal Surplus Commodities Corporation as shown in the March 24, 1940, Washington Evening Star, which is as follows:

FEDERAL AGENTS PURCHASE EGGS ON BIG SCALE

CHICAGO, March 23.—Uncle Sam filled his Easter egg basket to the brim today in an effort to support prices.

Produce dealers, finding no other outlet for heavy egg supplies, unloaded 634,320 dozens to agents of the Federal Surplus Commodities Corporation, which distributes eggs in relief channels.

This was the extent of buying in the New York and Chicago markets.

Egg prices are the cheapest at Easter time in 6 years, with best grades only slightly above 16 cents wholesale. According to the Chicago Mercantile Exchange, the relief agency is prepared to buy surplus eggs in all North Central States and in Kentucky, an area which normally produces about 17,500,000,000 eggs annually, or half the Nation's supply. Thus, the F. S. C. C. is prepared to receive offers of surplus eggs in 40 States and the District of Columbia.

With today's purchases, the largest since the Government began its current buying program in December, accumulations now total 6,400,000 dozens.

We appropriate to increase farm crops; we appropriate to control the farm crops we appropriated to increase; and then we appropriate to decrease the farm crops that we appropriated to increase, and also that we appropriated to control. Is not life wonderful? This is what you could call spend and spend and spend, and lend and lend and lend. We will soon start paying the fiddler, as the sweet music of magic is near its end.

What Work Projects Administration Workers Accomplished

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

W. P. A. BEGINS "REPORT TO NATION" LISTING 450,000 MILES OF ROADS AND STREETS BUILT OR IMPROVED, VAST EXTENSION OF AIRPORTS AND AIRWAYS

Mr. COCHRAN. Mr. Speaker, when the true story of the accomplishments of the Work Projects Administration is analyzed, lasting and beneficial improvements are found in every part of the Nation.

As part of my remarks I include reports recently issued by Col. F. C. Harrington, Commissioner of Work Projects Administration:

One-seventh of all the highways, roads, and streets in the United States, or more than 457,000 miles, have been built, reconstructed, or improved by W. P. A. workers in 4½ years of operations, Col. F. C. Harrington, Commissioner of Work Projects, announced today.

The report was the first of a series showing accomplishments on W. P. A. projects from July 1, 1935, when W. P. A. was established, through December 31, 1939. It is based on the most comprehensive inventory of W. P. A. work ever compiled, the Commissioner explained, to make available "a report to the Nation on the public improvements resulting from the employment of millions of America's jobless." When completed, it will list all W. P. A. accomplishments county by county.

In addition to roads and streets, the largest single classification of W. P. A. projects, the first report covered the construction of airports, airways, and other transportation facilities.

"For every 10 miles you drive," Colonel Harrington said, "an average of 1½ miles have been built or improved by W. P. A. workers.

"Adopting a familiar form of comparison, the total mileage of highways, roads, and streets built or improved by W. P. A. in 4½ years would be approximately equal in length to 147 transcontinental highways from New York to Los Angeles or Seattle."

Colonel Harrington also cited the accomplishments on airports and airways as representing the bulk of public-property improvements in this field of transportation during recent years.

New airports built by W. P. A. during this period number 197; 337 were reconstructed or improved, and additions were built to 35. There were also 176 landing fields built by W. P. A., with 293 improved, and additions to 45 others. Construction of new runways totaled 1,756,000 feet, or more than 332 miles in length. More than 1,000,000 lineal feet of new runways were paved.

Airport buildings constructed by W. P. A. total 387. There were 430 such buildings reconstructed or improved and additions were built to 45. Outstanding among other improvements to airports and airways were the construction of 9,588 airway markers and the installation of 7,873 light standards to illuminate boundaries; 64 landing areas were floodlighted and 65 airway beacons were built. Extensive improvements to existing facilities also were made in promoting aviation safety.

Major improvements to the Nation's transportation system, as shown by the W. P. A. report, also include:

Approximately 56,000 new bridges and viaducts, ranging from large steel structures to small spans of wood or masonry. The aggregate length of this new construction was 1,766,701 feet, or nearly 335 miles. An additional 37,020 bridges and viaducts, totaling more than 1,500,000 lineal feet, were rebuilt or improved.

Nearly 3,400 miles of culverts were included in the list of new construction and more than 400 miles of existing culverts were improved.

Roadside drainage work by W. P. A. showed a total of nearly 43,000 miles of new pipe or ditch, with reconstruction or improvement of more than 68,000 miles.

New sidewalks and paths aggregated 15,341 miles, of which 12,679 miles were paved. An additional 5,470 miles were rebuilt or improved.

Construction of curbs reached a total of 14,403 miles. An additional 4,100 miles of gutters were built and more than 1,700 miles of guardrails and guardwalls were erected.

Traffic safety also was enhanced by the painting of control lines totaling 4,576 miles in length and the erection of 638,848 traffic signs. In improving road and street lighting, 21,696 light standards were installed, equipping nearly a thousand miles of thoroughfares, and an additional 55,312 light standards were rebuilt or improved along 1,378 miles.

Forty-nine thousand miles of roadside landscaping improvements also were shown by the report.

Illustrative of the variety of items included in this report were a total of 629 new tunnels built for vehicular or pedestrian traffic, or both.

Even waterway-transportation facilities were affected by the W. P. A. program during this period. Construction of 240 docks, wharves, and piers was reported, with the reconstruction or improvement of 234 such structures.

A similar inventory of accomplishment covering public buildings, public utilities, and sanitation is nearing completion, Colonel Harrington said, and will be followed by an accounting of all accomplishments on professional and service projects and other types. Although the period covered by the report is 4½ years, the Commissioner pointed out, W. P. A. operations did not reach full development until near the end of 1935, when grants through the Federal Emergency Relief Administration were discontinued. The report does not include work done under the Federal Emergency Relief Administration or the Civil Works Administration. It also excludes projects now operated by other Federal agencies but financed by W. P. A. funds.

SCHOOL CONSTRUCTION FEATURES W. P. A. PUBLIC-BUILDING PROGRAM

Twenty-three thousand new public buildings, including more than enough school buildings to supply 1 to each of the 3,070 counties in the United States, are among public improvements the Nation has received in exchange for its work-relief program during the last 4½ years, Col. F. C. Harrington, Commissioner of Work Projects, reported today.

Other improvements, the Commissioner said, include approximately 5,000 new playgrounds and athletic fields and almost 1,500 new water, sewage-treatment, and other publicly owned utility plants.

As a part of a comprehensive inventory of W. P. A. accomplishments, the present report covers public buildings, public utilities, sanitation, and recreation facilities, on which more than one-fourth of all W. P. A. workers have been employed. The period covered is from July 1935, when the program began, through December 1939. In the 4½ years, Colonel Harrington said, virtually every community in the United States has benefited through one or more improvements of these types.

In the public-building category alone, he added, W. P. A. has constructed more than 23,000 new buildings and made improvements and additions to 65,000. Schools, hospitals, town halls, and auditoriums are among the types included. In addition to the nearly 5,000 new playgrounds and athletic fields, he said, improvements and enlargements had been made to 10,000, and 7,700 new tennis courts and more than 600 new swimming pools had been built. In the field of sanitation and public health, he continued, W. P. A. constructed over 15,000 miles of sewers; built 1,750,000 sanitary privies for homes without plumbing facilities, and drained nearly 3,000,000 acres of mosquito-breeding swamps.

"The unemployed who have been put to work by W. P. A. have made a great contribution to our national wealth," Colonel Harrington stated. "There is not a county or city throughout the Nation which has not been enriched in some tangible way—a new or improved school, a water plant, new sewerage lines, a park or swimming pool—through the labor of W. P. A. workers.

"These are improvements which would not have been made had there not been a program such as this to make workers available, bearing nearly all the labor costs and defraying a portion of other charges.

"By giving the unemployed jobs on useful public projects we have also kept them off local relief rolls and preserved—in many cases, improving—their skills in preparation for the time when they could again find private employment."

Public-building projects constitute one of the most important fields of activity for W. P. A. workers, Colonel Harrington pointed out. Of particular significance, he said, are the 3,985 new schools which range from small two-room structures in rural sections to large city high schools and college buildings. W. P. A. also reconstructed or improved 27,664 school buildings and built 1,480 additions. New libraries numbering 110 were built and 752 were improved.

Of 6,435 new recreational buildings 848 are gymnasiums and 318 are auditoriums, he said. The remainder are miscellaneous

structures such as field houses, pavilions, picnic shelters, etc. New office and administrative buildings, which include town halls, police stations, courthouses, etc., total 1,063, while improvements and additions to 3,710 are reported.

One hundred fifty-six new hospitals were built, many in areas where no adequate facilities previously existed. W. P. A. workers also reconstructed or improved 1,436 hospitals and built additions of 66 others.

Outdoor recreation areas built or improved by W. P. A. include 1,302 new parks aggregating slightly more than 59,000 acres, improvements to 475,463 acres, and park additions totaling 2,471 acres. New playgrounds total 2,271, two-thirds of which are on school property. More than 10,000 new tennis, handball, and horseshoe courts were built and 295 miles of ski trails cleared and graded. New swimming pools total 629, and wading pools 636. More than 12,000 acres devoted to fairground and rodeo use were prepared or improved.

The 1,470 new publicly owned utility plants constructed by W. P. A. include electric plants, incinerators, water works, and sewage-treatment plants. A total of 9,646 miles of new water lines were laid and 239,000 consumer connections made. New sewer lines total 15,191 miles and 352,000 service connections were made.

An important contribution to public health has been made through the construction of more than 1,750,000 sanitary privies, Colonel Harrington said. These are built to serve families who do not have modern plumbing facilities, and usually replace structures which are a menace to public health. The United States Public Health Service has credited this program with much of the responsibility for the decrease in typhoid and other filth-borne diseases which have been prevalent in certain parts of the country, the Commissioner pointed out.

Another valuable aid to public health, he said, has been achieved through the drainage of 2,981,000 acres of swamp, the construction of 15,654 miles of drainage ditches and the application of over 2,000,000 gallons of spray in mosquito-control work.

W. P. A. COMPLETES ACCOMPLISHMENT REPORT WITH HEALTH AND EDUCATION SERVICES REACHING MILLIONS—CONSERVATION ACTIVITIES REVIEWED

Completing a report on 4½ years of W. P. A. operations, Col. F. C. Harrington, Commissioner of Work Projects, today made public an inventory of accomplishments by workers on professional and service projects and in the fields of flood and erosion control, irrigation, and conservation.

Several millions of persons are reached each week, the Commissioner stated, by W. P. A. health, education, recreation, art, music, library, and related programs.

In the health program it was found in a typical 2-week period that nearly a quarter million examinations and treatments were given in W. P. A. operated or staffed medical and dental clinics and in schools and homes to children and adults who were unable to pay for such services. Nearly 82,500 tests for specific diseases and more than 17,000 immunization treatments were reported.

Closely related in the effect on the Nation's physical welfare were more than 1,000,000 lunches served by W. P. A. workers on a single day to needy and undernourished children in more than 11,000 schools, the housekeeping assistance given 57,000 needy families in a single month, and manufacture of 218,000,000 garments for the destitute during 4½ years.

Educational services provided by W. P. A. are reaching adults in classes with an aggregate enrollment of more than 1,000,000, the Nation-wide report shows, and more than 300,000 are enrolled in literacy and naturalization classes alone.

On the basis of a special survey last year, when the rolls were larger, the public recreation activities supervised by trained W. P. A. workers were found in a typical week to be equivalent to participation for 1 hour each by 15,000,000 persons. Nearly half of this was physical recreation, both indoors and out, and the rest was divided principally between social and cultural recreation. The benefits of such supervised leisure-time activity are readily apparent, Colonel Harrington pointed out, particularly in communities with much unemployment, short working hours, and low income.

"While the W. P. A. construction program has been building up the physical plant of the Nation," Colonel Harrington said, "the professional and service projects have been contributing to its health and culture.

"Most of the millions of persons who this report indicates are deriving benefits from the 'white collar' projects are in the lowest income brackets and could not afford the important services and assistance our project workers have been able to provide. There are communities today in which the only public-health facilities are those provided by W. P. A. or where the only library is staffed by them, or the only opportunity for adults to study is afforded by W. P. A. teachers."

Typical periods were chosen for the inventory of professional and service accomplishments because of the impossibility of measuring cumulative results with the yardsticks applied to construction work in the two previous reports of this series.

These showed that, along with other work, W. P. A. constructed or improved more than 450,000 miles of highways, roads, and streets and built more than 23,000 public buildings from the beginning of W. P. A., July 1, 1935, through last December. Health and education were advanced notably by these programs, also, through the addition and improvement of education, recreation, transportation, and sanitation facilities.

Additional construction covered in the final report issued today includes 4,650 miles of firebreaks and 3,000 miles of fire and forest trails. W. P. A. workers also rebuilt or improved an additional 2,000 miles of firebreaks and trails.

Accomplishments in the fields of flood and erosion control included 6,000 miles of stream-bed improvements, more than 3,000 miles of river-bank and shore improvements, and construction or improvement of 2,700 miles of such works as levees and retaining walls. More than 3,700 miles of irrigation ditches and canals were built and 3,700 repaired or improved.

On the professional and service side of the W. P. A. program, the report shows adult education to be an outstanding activity. In addition to 309,000 enrollees studying for citizenship or learning to read or write, vocational training classes claimed 195,000 students and correspondence work 48,000 in a 2-week period studied. Forums and lectures conducted by W. P. A. project employees had an aggregate attendance of 162,000.

W. P. A. also operated 1,550 nursery schools, providing scientific care and preschool training during the 2 weeks for 43,700 children of unemployed and destitute families, the report shows. Special instruction was given 4,200 institutionalized and handicapped children.

W. P. A. conducted art classes with an enrollment of 45,500 and music classes with 179,000, the inventory disclosed. More than 2,500 performances by units of the W. P. A. music program drew an aggregate attendance of more than 1,000,000 during the period.

Medical clinics operated by W. P. A. or staffed with W. P. A. assistants provided 119,000 examinations and treatments, and dental clinics 35,000 during the first 2 weeks in January, the report shows. Home visits by W. P. A. nurses and doctors provided 17,000 examinations and treatments. In the schools, 35,000 examinations and treatments of various kinds were given.

Public and school libraries operated wholly or partly by W. P. A. workers during December totaled nearly 10,000, of which 115 were "bookmobiles," or light trucks stocked with books for the people of remote sections. During the 4½ years, W. P. A. workers repaired 68,000,000 volumes of school and general library books. During that period nearly 4,000,000 pages of Braille were transcribed for the blind.

Sewing projects, up to January 1, had completed 48,000,000 men's garments, 59,000,000 women's garments, and 110,000,000 garments for children and infants. Other items, such as towels, sheets, and surgical dressings aggregated 66,500,000. The articles produced by sewing projects, which comprise the largest single aspect of the W. P. A. nonconstruction program, were distributed by public relief agencies to needy persons.

The accomplishments cited in this and the preceding reports do not include the work done with transferred W. P. A. funds by other Federal agencies, which have operated projects manned by needy unemployed on the same basis as W. P. A.

Lincoln Day Address Before Democratic Dinner Club at Pomona, Calif.

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

ADDRESS OF COL. EDWIN S. GILL

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include significant portions of Col. Edwin S. Gill's Lincoln Day address to the Democratic Dinner Club of Pomona, Calif.:

When invited to speak here this evening in celebration of the birthday of Abraham Lincoln, I felt highly honored and accepted without question.

There is so much that can well be recounted about his life in a short address like this that no speaker can do more than merely touch a few of the highlights in his career. I shall first give you, very briefly, extracts from some of his speeches in the fifties, when he was an unknown westerner to the Nation as a whole, and bring to you examples of his wonderful knowledge of what the founders of our Nation were striving for in the eighteenth century.

Few who have read something of Lincoln's history have any conception of his constant reading and study of the life and history of his country. It was through this almost continuous reading that he educated himself, not merely about his own country, but about the world. In no place in his career is this better shown than in his speeches in 1856 when the nominee of his party for United States Senator from Illinois, and again in his debates with Douglas in 1858. In several of these talks he declared the Declaration of Independence and the beginning of the American Nation were wrong, if those words, "All men are created free and equal," were only phrases intended to fool men into fighting for an illusionary cause.

In his explanations of the Declaration he took the words "All men are created equal," not only seriously and solemnly, but passionately. He also told his hearers how the original Declaration, as drafted by Jefferson, denounced slavery and promised its abolition; that this attitude was supported by all but two Colonies. Finally, to secure unanimous approval of the instrument, these sentences regarding slavery were stricken from the document, it being verbally understood that each Colony should continue its policy of gradual emancipation of the slaves.

But the address that caught national attention was his "House divided against itself," delivered at Springfield June 17, 1858, following his nomination for United States Senator to oppose Senator Douglas. He began:

"If we could first know where we are, and whither we are tending, we could better judge what to do and how to do it. We are now far into the fifth year since a policy was initiated with the avowed object and confident promise of putting an end to slavery agitation. Under the operation of that policy, that agitation has not only not ceased, but has constantly augmented. In my opinion it will not cease until a crisis has been reached and passed. 'A house divided against itself cannot stand.' I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing, or all the other."

His debates with Douglas gave Lincoln a national reputation, and even before they were finished his name was being discussed as that of a man fitted for the Presidential nomination of his party in 1860.

Following his nomination for President at Chicago, Lincoln withdrew to his home and refused to make an address in all the campaign aside from his response to the address of the committee appointed to notify him of his nomination. No other man ever entering the Presidency was so beset with conditions anything like those facing Lincoln, and he in a position where he could not say a word or lift his hand. How oppressive it was is shown in his farewell address to his neighbors when leaving Springfield for Washington.

In his first inaugural address Lincoln made as plain as the English language would allow that there would be no aggression directed or led by him. But he did warn that the Union must be preserved, and appealed to better thought much as a father might appeal to a wayward boy.

If Lincoln's Gettysburg Address is a multum in parvo, then his second inaugural address must be a super multum in parvo. To quote:

"Fondly do we hope—fervently do we pray—that this mighty scourge of war may speedily pass away. Yet if God wills it that it continue until all the wealth piled by the bondsman's 250 years of unrequited toil shall be sunk and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said 3,000 years ago, so still it must be said, 'The judgments of the Lord are true and righteous altogether.' "

Then, at his last cabinet meeting, held April 14, he expressed the hope there would be no prosecution, no bloody work after the war was over. None need expect he would take any part in hanging or killing men, even the worst of them. "Frighten them out of the country, let down the bars, scare them off," he said, throwing up his hands as if scaring sheep, "Enough lives have been sacrificed."

In closing, let me call attention to the many great lessons to be learned by studying the life of Abraham Lincoln.

I want to say, with all the emphasis I am capable of, that today, as in all our history, no other factor in life is so valuable and so essential as character. Read the lives and sayings of our great men of America, and you will find that each and every one of them held his place of leadership because it was built on industry, frugality, honesty, and character. All were God-loving men, and as a corollary also man-loving men. Drive out these false leaders and directors of thought for our young people, and substitute the principle of Americans for America. Americans who stand for advancement in all walks of life. But, advancement founded on the principles and doctrines upon which our fathers builded so wisely and so well. Not on atheism, communism, and denial of the Christian religion. Let us all help to lead our coming generation to a renewal of intense love for "My native land"; such love for it as those had who handed it down to us of the twentieth century, remembering that—

"Reputation is what men and women think of us.
Character is what God and angels know of us."

Gold and Its Power—Part 4

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. THORKELSON. Mr. Speaker, Mr. Sumner Welles, President Roosevelt's special peace ambassador, is soon to return to Washington, and it is encouraging to see, as stated in the Times-Herald March 16, 1940, that, "unlike Colonel House, Welles shows no partiality toward the Allies." This is hard to believe, as we note the many attempts by the press to whip up pro-English sentiment in the United States. It is generally recognized that the administration is not neutral, and this is also evident as we note the freedom of our ports to merchantmen with arms and the constant anxiety in higher administration circles to furnish aid to the Allies. It was for that reason that I took the position in the extra session last year that neutrality acts are, instead of what the name implies, pseudo treaties with favored nations. Those who will recall the early part of last year may remember that we were blanketed with English propaganda, which declined after May 1, 1939.

This British propaganda became quite active again when Congress adjourned and was very intensive when the Neutrality Act was up for debate in the Senate. It was during this time that much information was inserted in the RECORD exposing the overbearing attitude of Great Britain toward neutral nations. I realized at the time that, could this information reach the people, it would, if nothing else, counteract the British propaganda, which found such prominent space in the daily papers at a time when not a word was printed in regard to facts inserted in the CONGRESSIONAL RECORD.

It is indeed discouraging to find that one cannot, because of the ownership of the daily press, get pertinent facts about such an issue as neutrality before our people. It was the same indifference and control of the daily press that whipped our people into line during the World War, which finally ended by the United States joining England and France for an overdose of democracy.

To stir up public interest in the CONGRESSIONAL RECORD I, on October 11, 1939, inserted a letter that had been lying around my office since the first of the year. This so-called "House" letter was printed, and so was the name over which it appeared, and which I suggested to the reader be disregarded, as well as the addressee. My interest was not in the names appended to the letter, but was, instead, in the substance matter, which no one can disregard or deny is the truth. The American officers whose names appeared in the letter were knighted by the British Government, as stated, and Carnegie and Rhodes both expressed the hope in their books that the United States should again become a part of the British Empire. The valuation of the American people as stated in the letter is just about correct from a British viewpoint, for a statement has recently been made by British statesmen that we look like sheep because we dress alike.

The reaction to this letter was exactly what I expected; for as the owners of the daily press recognized the name of one of their own associates, they rallied forth in defense of the pro-English Mr. House, so recognized in his own and others' writings, and which the Herald now admits when it states:

Unlike Colonel House, Welles shows no partiality toward the Allies.

Nothing but what I expected happened, for the daily press heaped ridicule and ignominy upon me because I had been so gullible as to insert the letter in the RECORD. However, the result was good, for everyone became curious, and as they read the CONGRESSIONAL RECORD all sympathy for England sank to zero. I am still grateful to the daily press for this publicity, for it did, if nothing else, revive public interest in the CONGRESSIONAL RECORD, which is again being carefully read and quoted in many patriotic papers. It is only so that we can get the truth before the people, and when they know the facts, our Nation will be forever safe.

The House letter was withdrawn from the RECORD after having accomplished its purpose, and I now wish to inform those who are interested in reading it that it may be found in the last pages of the Geneva hearings before the Senate of the United States, years 1928 and 1929. In the same volume you may also find much information about British propaganda under the direction of Lord Northcliffe. I advise all those who are still pro-British to read this book, for it is

interesting and enlightening and will, I am sure, leave the reader a better American.

Mr. Speaker, we are now confronted with another attempt to aline us in a world federation of states, based upon exactly the same principles as the League of Nations. I believe Mr. Welles had such plan in mind when he started on this trip to Europe, but he will return a sadder and wiser man. The opinion of the British is interesting, and here is a quotation from the Washington Post, March 14, 1940:

BRITISH CALL WELLES MEDDLER—"UNCLE SHYLOCK" FEELING REVIVED

(By Frazier Hunt)

* * * But the high hope expressed a fortnight ago has disappeared and has been replaced by frank skepticism. In the high official circles where Welles was entertained he has naturally found only the most guarded criticism, but if he were able to mix with ordinary people he would find a growing anti-American sentiment here.

I am sure this is the real opinion of America as held among the British nobility. The United States is only of value to Great Britain when it can be used as a doormat for the British Empire. This trip should set the President and the State Department right, for our interest is purely an American interest, and we should now all join hands and shoulder to shoulder help to get our Nation back on the road to recovery. For the information of those who are still laboring under a delusion of world government, I shall quote the Patriot, January 18, 1940—founded in February 1922 by the late Duke of Northumberland, K. G.:

BEWARE OF FEDERAL UNION

Our forefathers held that the best way of avoiding war was to follow a pacific policy, but to be ready to defend ourselves vigorously in case of attack. That policy succeeded so well that for hundreds of years our country has escaped the worst horrors of war—invasion and destruction. But after the World War we decided that our forefathers had been wrong, and we took the advice of a crowd of intellectuals, Socialists, and others, whom we need not scruple to call our enemies, and put our trust in the League of Nations and disarmed to such an extent that we simply invited disaster. Luckily there was a breathing space between the MacDonald-Baldwin regimes, when we were scrapping our defenses, and the new disaster in Europe calling for the employment of our armed forces. Under more virile direction we did have some little time to prepare, though in the interval Mr. Eden and other believers in the League did their best to involve us in conflict when the part the Army, at any rate, could have played would have been completely inadequate.

The League of Nations has shown its last ineptitude in the case of Finland and Soviet Russia, and calls to mind the Cardinal's terrible curse in The Jackdaw of Rheims, when

"Never was heard such a terrible curse!
But what gave rise to no little surprise,
Nobody seem'd one penny the worse!"

Soviet Russia is certainly none the worse for having been excommunicated; in fact, she has joined the ranks of those powers, and not powers of no importance, which have seen the League is incapable of benefiting mankind as originally intended. The admittance of the League's failure, however, has not prevented just those of our intellectuals and others without intellect from planning again the reform of the world. The new idea is Federal Union.

Before his appointment as British Ambassador to Washington, Lord Lothian, one of the shining lights of that group which formed the round table and thought that they thought for the world, wrote a pamphlet on Federal Union. It is not easy to see how this union differs from the League of Nations, but the following is the explanation of the idea of Federal Unionists, given by Lord Lothian:

"Federal Unionists are not opposed to the League of Nations. On the contrary, they share entirely the ideals for which it stands. Nor are they opposed to international cooperation. On the contrary, they support it as a step in the right direction. In theory all the ideals of the League of Nations could have been accomplished by cooperation. But the reason why cooperation failed after 1918, as all earlier attempts to create an international cooperative system have failed, is precisely because they have left national sovereignty intact and because that element operates continuously and inexorably against the success of cooperation itself. That is why Federal Unionists are convinced that only by going a step beyond the Covenant and pooling some part of national sovereignty in a common organism which represents, not the national units or the governments, but the people of all the member nations as a whole, can the true ends of the League be attained."

National sovereignty, it will be seen, is now the bugbear, and is, indeed, described by Lord Lothian as the "basic cause of anarchy." Once all the nations are democratic in the real sense, then, apparently, there will be a chance for peace. The bright minds behind Federal union cannot understand that it is human nature itself which is at fault and which they must seek to change.

It is probable that Lord Lothian got his views, so antagonistic to national sovereignty, from Mr. Clarence K. Streit, who has written a lengthy book, Union Now, a December choice of the Right Book Club, and, incidentally, showing how the club has come under the control of internationalists. Mr. Streit is certainly a Socialist and expressed his belief that all men are created equal, and perhaps his long connection with the New York Times explains the very favorable reception given in that paper to Lord Lothian's speech in Chicago on January 4, when American readers were told:

"In the light of this speech, Britain in fact is ready to abdicate the Empire in the interest of world-wide security for democratic civilization."

Lord Lothian is the representative in the United States of America of a constitutional monarchy of which most Britons are proud and will never believe that their Empire is a menace to the peace of the world. If Lord Lothian is opposed to these beliefs then he is not a very fitting representative for Great Britain at Washington. But, unfortunately, there is an appearance of backing for his federal union ideas in high quarters, seeing that the Prime Minister, in his speech on January 9, made a remark as regards the end of the war leading to "an extension of Anglo-French collaboration in finance and economics to other nations in Europe, and, indeed, perhaps to the whole world," which, to say the least, is unhappy unless it is to be taken that Mr. Chamberlain has not grasped the significance of federal union.

Lord Lothian and other believers in federal union are obsessed with the idea of democratic cooperation, democracy as they use the word being the same as nation, for the initial union suggested by Mr. Streit in his book covers our Empire and the Dominions, five monarchies, and four republics. The whole principle of such a union does not seem very remote from that of the program of the Communist International:

"The Communist International fights for the creation of a world federation of Soviet Socialist republics. * * * The new proletarian republics would unite until at length they formed the world Union of Soviet Socialist Republics and united all mankind under the international domination of the proletariat."

In one case there is the democracy of the Federal Unionists and in the other the proletariat, both subject to some controlling influence. The League of Nations has shown its incapacity to function; if it is to be succeeded by a Federal Union, its chief success would probably be the end of the British Empire, and that is the aim of Germany. "Some enemy" is at the back of the Federal Union idea just as originally of the League of Nations.

This is an English viewpoint of the Federal Union and is more candid and truthful than opinions as expressed here. I have placed this discourse under the title of "Gold and Its Power," and it follows my remarks on the Inter-American Bank, which is a part of the same scheme. The purpose of all these international organizations is to destroy sound governments throughout the world, so that those with international aspirations may sit on the throne of an international world state. These people actually hope to attain their objective by hurling invectives at all who oppose them.

The internationalists, however, have finally come to the conclusion that they cannot create this world government except by destroying every sovereign government in the world, and it is with that purpose in mind that unseen forces are now at work in the United States to destroy our Government. In 1913, they were successful in destroying the sovereign government of the State when State representation was abolished in the Senate of the United States. They no doubt hope to destroy the sovereign government of the United States by suspension of the Congress, either by war or because of some critical internal upheaval.

This scheme of world control is promoted by the internationalist who now controls gold money and credit. The income from this, and the income from what the money can buy and control, is employed by the international Communist to spread these radical doctrines of destruction so that he himself may, in the midst of this intentional confusion, attain control of the Government. His avenue of approach is subtle, for by pretended charities and philanthropies he confuses and waylays our teachers, so that they innocently further his plans by so-called "liberal construction" of fundamental principles of government and life.

Let Us Establish the "United Nations of the Earth" and Have Permanent Peace

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. WHITE of Idaho. Mr. Speaker and Members of the House, the news reports in the Easter Sunday morning papers are disquieting and disturbing and to me alarming.

I am sure that the American people want to maintain the neutrality of this country in the present European war. If we are to remain neutral then our Government should follow the advice of our first President and keep out of entangling alliances. To do this, we must follow the plan laid down in the proclamation of the first President when he decreed:

After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound, in duty and interest, to take a neutral position * * *. I have given instructions to those officers to whom it belongs to cause prosecution to be instituted against all persons who shall, within the cognizance of the courts of the United States, violate the law of nations with respect to the powers at war, or any of them.

I am opposed to trafficking with any of the belligerents and voted against the cash-and-carry amendment to the Neutrality Act. Today we find that in face of all the assurances given the American people by our national leaders advocating the modification of the Neutrality Act at the time we changed the law to permit the sale of war munitions at the same time safeguarding our shipping by prohibiting American vessels from entering a zone of combat and the ports of the belligerents, now we find that the law is being violated. We learn from press dispatches appearing in the Sunday morning paper that—

The American Export and the American President lines, it was disclosed today, have for 5 months permitted their ships to call at the port of Marseilles, France, under a technicality in the American neutrality law.

This is an open and flagrant violation of the American neutrality law if the provisions of the act mean anything and the act is a safeguard against this Nation becoming involved in the war.

On the same front page we learn:

The Army and Navy were reported authoritatively yesterday to have decided on a general shake-up of their airplane-purchasing programs. * * * The new policy, shaped in cooperation with Treasury officials, involves the transfer to the Allies of possibly several hundred planes nearing completion for the American armed services (Army and Navy). * * * The projected new policy involves a basic revision of the existing official regulation that no late designed military plane should be sold abroad until the improved model was under contract to some Government agency. Two 400-mile-an-hour pursuit planes, the Lockhead P–38 and Curtiss P–40, were released to the Allies recently under this policy.

In the light of these facts, it is vitally important to know how far the Treasury officials will be permitted to go in committing acts that will involve us in this European war, and whether the Army and Navy experts are being put to work to design military planes to be turned over to the Allies, and in this connection what other interpretation can be placed on the statement—

The projected new policy involves a basic revision of the existing regulation that no late-designed military plane should be sold abroad.

Would we be willing to do this for Germany—place our latest defense armament at their disposal? I am sure that we concede that the Germans could take delivery of our defense planes here and fly them across the Atlantic. And are we willing to place these weapons in the hands of Japan? Just where is the intrigue of our administration officials leading us? Could the neutral nations of Europe do a thing like this and maintain their neutrality?

Mr. Speaker, if we are going to be maneuvered into taking sides and entering this war, I think we should know something of the issues involved in the conflict. I think that a careful study should be made of all the conditions that contributed to the situation that brought on the war.

The people on both sides are highly intelligent and have struggled under impossible conditions. It is my feeling that much of our press, our radio, and other sources of public information have been biased from the outset and that we have been propagandized by distorted news and colored statements, in fact that the reading public has been subjected to a constant and sustained campaign of propaganda.

Let Europe settle its difficulties and differences without any hindrances or interference from us and, when the warring nations are ready to make peace, let us join with the rest of the world powers to create an international authority, call it what you will, under a plan where all nations must lay down their arms and instruments of military destruction, give this international authority an army and navy to enforce its decrees and disarm and disband all other military forces that we may establish for all the human family inhabiting every land "the United Nations of the Earth" to the end that all people may attain the same objectives for which our Government was founded:

A more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty—

To all the people of the earth.

Our Melting Pot

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

Mr. HOBBS. Mr. Speaker, at the outset, the grace of station WOL and the Mutual Broadcasting System in granting this opportunity is gratefully acknowledged, and my thanks therefor fervently expressed.

On Thursday evening, February 29, 1940, Hon. LEWIS B. SCHWELLENBACH, one of the two distinguished United States Senators of the State of Washington, used these facilities to purvey an address in the course of which he made a personal attack upon me and my bill, H. R. 5643, and inflicted a similar criticism upon colleagues whom I hold in high esteem, and upon our motives in proposing legislation dealing with various aspects of the immigration and deportation problems. Immediately I requested of station WOL the earliest possible opportunity to reply to Senator SCHWELLENBACH. Because of prior commitments which preempted the broadcasting time of the intervening weeks, the appreciated opportunity is just now afforded.

Senator SCHWELLENBACH says that the bills he decries are "directed against aliens" and that "the danger lies in singling them out as the objects of legislative disfavor." As far as my bill is concerned, it applies to no aliens except those who, by their own conduct, have brought themselves into one or more of these four classes: White slavers, narcotic venders, anarchists and others advocating the overthrow of our Government by force, and felons whose crimes involved moral turpitude, not as to their own entry or naturalization. It is not directed against aliens, but against the crooks, revolutionists, and criminals of that group.

Senator SCHWELLENBACH's argument, if followed to its logical conclusion, would condemn legislation punishing murder because it singled out murderers as the object of legislative disfavor.

The Senator shouts the worn, discredited shibboleths that my bill "provides for concentration camps for aliens" and that it might mean "imprisonment for life." The charitable interpretation of this quotation is that the Senator has not read the bill. There is not one word in it, directly or indirectly, authorizing the establishment of a concentration camp, nor anything of the kind. The bill specifically says that the detention authorized shall be "in established institutions." As for the life-imprisonment scarecrow, the Supreme Court has held that detention in aid of deportation is neither imprisonment nor punishment, and my bill expressly provides that the confinement prescribed must not be at hard labor.

The average alien in detention under my bill would not stay in custody 30 days. Just as soon as he had been convinced that our Government meant business he or his family or friends would immediately procure some kind of travel document, if not a passport; and if this could not be done, all he would have to do to procure his release would be to produce sufficient evidence of good cause and thereby go free on the order of the Secretary of Labor.

H. R. 5643 was the outgrowth of the work of the Committee on the Judiciary in pursuance of the inquiry under the resolution of Congressman J. PARNELL THOMAS, which sought the impeachment of the Secretary of Labor, the Solicitor of Labor, and the Commissioner of Immigration. The Committee on the Judiciary unanimously agreed that there was no evidence justifying impeachment, but in the course of the investigation preceding that conclusion, it was discovered that these officials were criticized because of the fact that many criminal aliens who clearly should have been deported were allowed to remain here in perfect freedom. We found, however, that the fault was not with our immigration authorities, but with our law. During the year 1938, 460 aliens who had been ordered deported by the duly constituted authorities of our Nation could not be deported because of the failure or refusal of foreign governments to permit their return. Some of us were shocked by that discovery. We had not realized that in so many cases the sovereign deportation power of the United States was being thwarted. We felt that the number of such cases might indicate collusion between many of these aliens and officials of their home governments, or worse. The vast majority of these aliens are as free as any citizen, and yet they had each been adjudged unfit to remain here and, after due, fair, and full process of law solemn warrants of deportation had issued. The problem was given careful, intensive, and extensive study. It was found that while, of course, all of these had forfeited their privilege of living in this country by violating our laws, yet in only a few cases were the offenses so serious, or so socially significant, as to warrant the provision of the manifest remedy. But in those few cases the offenses were both serious and socially significant. So the conclusion was reached that as to those few of such aliens whose conduct had placed them in any one of the four worst classes—white slavers, narcotic vendors, anarchists and others advocating the overthrow of our Government by force, and criminals whose crimes involved moral turpitude, not as to their own entry or naturalization—the right of detention necessarily incident to the right of deportation should be broadened, by authorizing, clearly, detention until deportation should have become feasible or other departure arranged, or until the Secretary of Labor, upon sufficient evidence of good cause, should order the release of any one of them temporarily or permanently, with or without rescission of the warrant of deportation.

My bill, H. R. 5643, simply seeks to write that conclusion into law.

A distinguished Member of Congress tells me that he knows of one alien woman in his district who has sent into the degraded pollution of bawdy-house life over a hundred American girls in his State. Yet we allow such people to live here as free as any one of us, even though they are aliens who have no right to live here and who ply their iniquitous trade in open defiance of our law. The perpetuation of such outrageous travesties upon justice is what the opponents of my bill are pleading for, whether they know it or not.

Children all over this country are being preyed upon by peddlers of marijuana cigarettes and other narcotics. Some of the flower of our youth are being transformed into dope fiends. There are perfectly moral, law-abiding aliens, by the thousand, clamoring for the privilege of living here. Should we not banish our alien dope peddlers so that, under our quota system, good aliens may take their places?

There certainly should be no place in America for alien anarchists and others who advocate the overthrow of our Government by force. There are thousands of aliens seeking to come here who would help us build a better nation instead of trying to destroy. My bill advocates the swapping of alien termites for alien builders.

Similarly, it is proposed to replace convicted criminals who have committed felonies involving moral turpitude not as to their own entry or naturalization, with other aliens, anxious to come, who have never committed crimes. Take Cesare Valenti for example. He had a criminal record composed of four convictions in his native Italy before coming here on a passport secured by perjury. Since he became a resident of the United States he has been arrested at least four times, and while serving a 15-year sentence for second-degree murder to which charge he pled guilty, he was one of the organizers of the Philadelphia poison ring which has murdered more than a hundred persons. Senator SCHWELLENBACH is a loyal American. He does not want Valenti nor any of his ilk here any more than I do. Yet, he does nothing about it and implies that I am a demagogue when I do.

We debated my bill on the floor of the House of Representatives. Every argument which Senator SCHWELLENBACH makes against it was made in that debate. Yet, after full hearing and critical examination, the House of Representatives passed my bill with only 61 dissenting votes. If it is such a bad bill and should be defeated, why does not Senator SCHWELLENBACH help us get a hearing in the Senate and there expose it? Does he doubt the wisdom or patriotism of his fellow Senators? Or does he think that they, too, are demagogues?

My bill, if enacted into law, would strain out and remove from the stream of our national life some of the polluting and poisonous elements; the dregs in our melting pot.

Is it directed at aliens because they are aliens? No—a thousand times no. Good immigrants have built our Nation. But not the four classes—white slavers, dope peddlers, criminals, and anarchists—which this bill, in kindly way, would urge to go back whence they came. These who have outraged our hospitality, broken our laws, debauched our youth, or plotted to overthrow our Government are not builders. They are wreckers. Their lives stain our flag.

Good aliens, who come here as our laws provide they may, and who try to build—not destroy, pollute, or poison—are welcome and appreciated. Millions of such are here. Who of us is not an immigrant per stirpes?

We all pay tribute of grateful homage to those millions of good aliens who have helped make America great. Few may be named, but all are in mind.

From Lafayette, Rochambeau, Alexander Hamilton, John Paul Jones, Commodore John Barry, Count d'Estaing, Count de Grasse, Maj. Pierre L'Enfant, General de Kalb, Baron von Steuben, Gen. Richard Montgomery, Haym Salomon, Gen. Thaddeus Kosciusko, Gen. Casimir Pulaski, Gen. William Alexander, Dr. James Craik, Robert Erskine, Gen. Alexander McDougal, Gen. Lachlan McIntosh, Gen. Hugh Mercer, Gen. Arthur St. Clair, James Wilson, John Witherspoon, Robert Morris, and Albert Gallatin, down through the years to Dr. Joseph R. Sizoo, Dr. Peter Marshall, Mr. Justice Felix Frankfurter, Albert Einstein, and Eduard Benes, aliens have here wrought mightily for good.

Alexander Agassiz, Hjalmar Hjorth Boyesen, Leopold Damrosch, Walter Damrosch, Pierre du Pont de Nemours, Mayor William R. Grace, Franklin K. Lane, Mr. Justice Sutherland, Peter Henderson, Ales Hrdlicka, Ludwig Lewisohn, Jacques Loeb, James McCosh, John Edward McCullough, Henry Morgenthau, Hugo Munsterberg, Thomas Nast, John Boyle O'Reilly, Abraham Mitrie Rihbany, Anton Seidl, Pierre Soulé, Karl Spreckels, Matthew Vassar, Henry Villard, Alexander Wilson, William B. Wilson, James Wilson, Karl Bitter, Gustav Lindenthal, James J. Hill, Jacob A. Riis, Edward D. Baker, Samuel Gompers, Anna Howard Shaw, Eleuthere Irenee du Pont, Stephen Girard, Felix Adler, John Jacob Astor, Emile Berliner, Oscar Hammerstein, Otto Kahn, Franz Lieber, Ottmar Mergenthaler, Albert Abraham Michelson, Johann August Roebling, Jacob Henry Schiff, Carl Schurz, Charles Proteus Steinmetz, Nathan Straus, Theodore Thomas, Michael Anagnos, Joseph Pulitzer, John Philip Holland, August Saint-Gaudens, Alexander Turney Stewart, Edward W. Bok, Knute Kenneth Rockne, Michael Heilprin, Judah Peter Benjamin, James Burnie Beck, Alexander Graham Bell, James Gordon Bennett, Andrew Carnegie, John S. Kennedy, James Pugh Kirkwood, James Laurie, Walter Lowrie, Dr. Henry Detweiler, John Muir, Archibald Russell, Michael Pupin, John Ericsson, Louis Agassiz, Meyer Guggenheim, Henry Rosenberg—a veritable honor roll!

We honor ourselves by honoring such men—American patriots.

Do opponents cry against this bill, "Undemocratic"?

If it be undemocratic for the duly elected Representatives of a sovereign people to stop a loophole in our deportation law through which 460 aliens in 1 year escaped their decreed banishment, then we should be just that undemocratic.

Do some say "Un-American"?

If it be un-American to restore the lost sovereignty of our Nation over deportation, we ought to glory in being just that un-American.

Make no mistake, that flag there—Old Glory—was not the product of silkworms and a dye vat.

Our flag—the most significant in all the world—is a living symbol of America's soul. We 130,000,000 people are in truth the flag.

The purity of common purpose for peace and freedom, plus the morals of the many, put that white honor stripe in our living flag. Our lives besmirch it, or keep it white.

That red is not a strike of shame, nor wrath, but of virility, of flaming youth, of new, aspiring, conquering blood which flows in us and to us from the ends of the earth.

That field against which the stars shine is put into our living flag by the loyalty and devotion of those of us who are "true blue."

Those stars are kept bright by the fervor of the love of those who "star" in our national life.

More than a hundred million souls, by the quiet might of righteous living, keep this symbolic silken flag waving proudly over the real living flag their lives compose.

Are we impotent to remove contaminating influences which stain our flag? Do we lack the courage?

The "sob sisters," who have joined the "reds" in fighting this bill, simply fail to appreciate the meaning of our sovereign right of deportation. Deportation means more than the making of an ineffectual order. It means banishment—the removal of the deportee from the free life of America. Our inability to banish and remove these poisonous alien elements from circulation in the bloodstream of our body politic makes us a laughing stock—our national sovereignty, in this regard, but a joke.

As long as we acquiesce in the shameful thwarting of our right of deportation, while every nation that may wish thumbs her nose at us, and, by refusing to take back her poisonous dregs, converts them into free residents of our homeland, our laws are set at naught; our solemn adjudications are as vain as the hand-washing of Pontius Pilate.

Increased Consumer Demand Is Key to Increased Production and Larger National Income. How Many People Should Government Employ Under Present Circumstances?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

LETTER FROM JOHN F. SELLE, OF GAINESVILLE, FLA.

Mr. VOORHIS of California. Mr. Speaker, over and over I have said that if the method of Government employment of the unemployed was to be used to stimulate increased production, business activity, and national income, then this method must be used sufficiently extensively to bring the result aimed at. That result, of course, is to induce enough increase in national income and level Government revenue to balance the Budget on the basis of full employment.

One of the very best expositions of this point of view that I have ever read is contained in the following letter from a Florida businessman who faces frankly the problem his country faces.

There may be better ways of dealing with unemployment than this. But if we are going to take this way we should do so with resolution and carry through with it instead of periodically turning back as was done in 1937, with disastrous consequences, and as we are doing again right this minute.

Mr. John F. Selle's letter follows:

FEBRUARY 25, 1940.

Hon. JERRY VOORHIS,
Washington, D. C.

DEAR MR. VOORHIS: A few days ago I noticed a newspaper report to the effect that you were instigating a study of unemployment by a group of House Members, and I want to commend you for such a worth-while step. I hope that your efforts meet with the success that they deserve, and that you will not only reach the core of the problem, but will be able to suggest a workable remedy.

As you already know I have done considerable work along this line myself, and although I have sent you some of my observations already, I would like to offer some further suggestions which may possibly prove to be of some value in your investigation.

We cannot be content with the administration figure of $80,000,000,000 as a goal for national income. If every available and willing worker were to be employed today, full time and with present-day efficiency of technique, we would produce somewhere between ninety and one hundred billion dollars' worth of goods and services—at present prices—annually. Therefore, any income of less than ninety billion would require less employment than that which we are trying to attain, and would fall short of bringing full employment. Can we get an income of one hundred billions within the next few years? Can we solve our unemployment problems? We certainly can. It will not be an easy task but the difficulty lies in our own unwillingness to think clearly, and not in any inherent difficulty in administering the required reemployment program.

Although we have the ability to produce an income of one hundred billions, some thirty billions more than we are producing currently, we cannot increase our production to the higher level overnight. It takes time to install equipment and employ workers, but the program would be restricted only by this industrial lag. We can safely assume that industry could expand its production rapidly enough to be producing at the rate of eighty billions annually within a year, and at a rate of ninety-five billions within 2 years. The one-hundred-billion rate should be reached within the third year, and then retained with gradual increases as our production efficiency is increased by new inventions and application of new and improved techniques.

We can get this rapid industrial expansion in two ways. We can either get business so optimistic about the future that it will begin to expand production as fast as possible and hope that the increased production will find a market, or we can create a demand for enough goods to make it necessary for industry to expand just to fill the increased demand. I have little faith in the first method. Although there will be enough purchasing power distributed to buy the increased production we would have no assurance that the demand for individual items of production would expand in the same ratios as production of these items is increased. The first

method would also be very susceptible to any temporary lag between production and consumption. In my opinion it would be far better to create the demand first and then allow industry to fill this demand. In this way there would be no loss through errors in estimating the increase in demand for individual items at an increased national income level, and there could be no lag between production and consumption since the consumption will actually precede production. This effect would come about by depleting our inventory stocks faster than production at current rates could replace goods, and this would necessitate an increased rate of production to keep inventories at their normal minimum levels.

If we want to produce $80,000,000,000 worth of goods and services in 1940 we can assure this level by simply consuming $80,000,000,000 worth of goods this year. Production can and will increase to meet such a level of consumption. How can we consume that much? There are three groups of consumers: Individuals consuming for current needs, producers consuming capital equipment for production, and government. The consumption of these consumers is measured by the amounts they spend and the total spending of the three groups must total at least eighty billions if we expect to produce eighty billions' worth of goods this year. I do not care to say that it would be impossible to stimulate private spending and investment to a point where the amount of Government spending required to make up the difference between the total of the first two types of spending and the eighty-billion goal would be only about $6,000,000,000. I do say, however, that it is extremely unlikely that this could be done. As stated above, I prefer the surer method which would not be subject to individual reluctance to cooperate.

The present program of relief employment has not worked properly in bringing economic recovery because we have not made a real effort to determine the amount of spending required to bring the desired results. Because we have been administering the right medicine in too small a dose we have come to feel that the medicine is at fault. I believe that our only hope of full recovery lies in our ultimate recognition of the possibilities latent in Government spending and investment.

We are now borrowing about two billions annually and spending this amount on public works. The fact that this spending has for the past 3 years resulted in little change in national income or price levels indicates that private production is proceeding at the rate of two billions or so above private consumption. The total of private and Government consumption is just about seventy billions annually, and this consumption must be increased considerably to bring results.

If the Government were to put 2,000,000 more workers on relief rolls the added consumption of goods made possible by the spending of wages of these workers would immediately increase total consumption at the rate of about $2,000,000,000 per year. This increase in consumption would necessitate increased production and this could only be brought about through increased employment in industrial channels. If the new workers came from the unemployed residue rather than from relief rolls their wages would be spent also and still further increase consumption, making necessary still further increases in industrial employment. The rate of industrial production would expand fast enough to keep private employment mounting and the investment of capital in capital goods would also increase with still further reemployment. The increase in production could keep up with the increase in demand and there would be no unhealthy inflation of prices such as could be induced were demand stimulated at a faster rate by the addition of still more unemployed to relief rolls.

Since a dollar of new income inserted into the income stream at the point where income has the greatest velocity would increase national income by at least $3 a year, the extra two billions of Government spending would result in an increase in national income about six billions during the first year. Such an increase would encourage private investment and make possible the profitable investment of another two billions, more or less, of now idle capital, in addition to what we are or would be currently saving for investment. This sum paid in wages for the production of capital goods would result in another increase of about $6,000,000,000 per year in national income, and there you have your desired result, a national income for 1940 of better than eighty billions and an increasing rate of production which would assure a total income for 1941 of well above ninety billions, provided that the same principle of impetus to production is maintained until the maximum production is reached.

The objection will doubtless be made that this would require Government deficit spending of four or five billions per year and that we cannot afford this cost. We intend to spend about half this much, anyhow, and it will have no effect other than to prevent the national income from slipping backward, and will provide no forward impetus. If we could spend two billions more and raise our national income ten billions, would this program actually cost us anything? As a businessman, I am inclined to think that we might consider this spending as a most profitable investment. While our debt would increase only two billions (i. e., national debt), our national income would be increased five or six times that amount.

I can't see how such a program would fail to work. Admitting that it may be impossible to persuade Congress to appropriate the necessary sum, there should be no other great difficulties in the way. Once the four billion is appropriated, there are plenty of projects available to take care of this amount. I have a lot more to say about this selection of projects, but it is scarcely pertinent to this discussion. Unless such demand for goods as would be provided by the wages of the relief workers remained unsatisfied simply because stores refused to sell them what they wanted, there could not help but be an increase in demand. If prices were forced up, profits would increase, and there would be added incentive for business to expand its activities. Regardless of whether such a program generated a faith in the future or not, there would be rapid improvement.

Comparing this program with the indefinite and uneconomic wishful thinking of a plan like that embodied in the proposals of opponents to Government spending, I can see little basis for argument. The chances of this program being effective are much higher than the chances of any other general program, and the fact that it has not worked so far is no argument against it. In the early stages, when it only took a small spending dose to bring results, we got results. When it took a larger dose to bring further results, and we refused to use the larger dose, the cure lost its effectiveness. We have to use this principle properly, or we can't expect it to work.

I wish that I could testify before your group but I can't afford a trip just now. I've been singularly successful in converting almost everyone whom I've had a chance to talk with. Tomorrow I'm talking before the American Legion in Jacksonville and in 2 weeks before the Rotary Club there. I hope that this will be the start of some activity in the larger cities for I've been confined to smaller towns up to now. I'll let you know what reaction I find to these arguments in those groups.

Incidentally, I noticed in the RECORD a few weeks ago a number of petitions regarding your bill. You certainly have the home folks behind you and you have at least one supporter outside your State. I hope there are many more, for I think you're getting in some good licks. More power to you.

If this line of argument interests you I could probably amplify some of the points still further. Let me know if there is anything that you or your colleagues don't quite understand. I'll do my best to present proof and make it clearer.

Sincerely yours,

JOHN F. SELLE.

Statement by Matthew Woll on Reciprocal Trade Agreements Resolution

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 25 (legislative day of Monday, March 4), 1940

STATEMENT BY MATTHEW WOLL, VICE PRESIDENT OF THE AMERICAN FEDERATION OF LABOR

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by Matthew Woll, vice president of the American Federation of Labor, in the hearings on the reciprocal trade agreements resolution before the Finance Committee of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LABOR'S FACTUAL ANALYSIS OF TRADE TREATIES—WOLL DEMONSTRATES TO FINANCE COMMITTEE LACK OF TRADE-TREATY BENEFITS

Support of the trade-treaty program rests principally on six points. We shall examine these one by one and then draw a general conclusion.

1. It is maintained that by reducing import duties and obtaining reciprocal concessions from other countries, our export trade is stimulated. This increase in exports, it is contended, in turn requires increased employment in factories and on the farms. The net result is allegedly a contribution to recovery and the promotion of prosperity. Let us examine this general contention.

NO BENEFITS SHOWN

The stimulation of our export trade as a result of the trade treaties signed to date cannot be proved. The evidence available does not support any such contention. If anyone is interested in verifying this statement, he has only to investigate (a) the exports from the United States to trade-treaty countries, not from 1934 to 1938 or 1939, but from the date when each trade treaty went into effect, with our exports to non-trade-treaty countries over the same period. For the nearest approach to scientific comparison each trade-treaty country should be compared with an adjacent non-trade-treaty country. The date of departure for comparison, to repeat, should be the year during which a particular treaty, and not the entire trade-treaty program, went into effect. The favorable results often attributed to the trade-treaty program are arrived at by using 1934 as the blanket basis for comparisons. This is not the proper statistical procedure.

(b) One should compare the increase in our exports from 1932, the low point since 1929, to 1935, with the increase since 1935,

which is the first year during which more than one trade treaty went into effect. Actually 1936 would be a more reasonable base since the trade treaties in 1935 were made with countries of minor commercial importance (Belgium, Sweden, and Haiti). If the exports increased materially in 1933, 1934, and 1935, it may safely be concluded that the trade-treaty program was not responsible for the increase. The increase of 1935 exports over 1932 exports was 40 percent; that of 1937 over 1935, 47 percent. Between these percentages there is not much to choose. But, proper investigation should include 1938. In that year exports declined. If 1938 is compared with 1935 the increase falls to 35 percent. In other words, exports in one way or another increased about as much without benefit of the trade-treaty program as under the program. Nineteen hundred and thirty-nine, in spite of the impetus given to exports by the outbreak of the European war, showed only a 3-percent gain over 1938, and this did not change the picture materially. If duty reductions should give rise to increased exports the present trade-treaty program cannot be used as a means of proving it.

COMPETITIVE IMPORTS TRANSFER JOBS ABROAD

Increased exports, it is held, lead to increased farm and factory employment. This is true on the face of it unless mechanization should offset the increase in output in terms of employment. But, there is another side to this proposition. Increased imports must accompany, to some extent at least, the large exports. Now, if the competitive products that are imported were manufactured in the United States, it is quite certain that the number of workers required to produce them would be considerably greater than the number required to produce an equal dollar volume of exports. This follows from the much lower wage rates prevailing in foreign countries. In other words, if an increase of $1,000,000,000 in exports gave rise to $1,000,000,000 in imports, we would trade a smaller number of man-hours worked in this country for a larger number of man-hours worked in foreign countries. Thus, while the trade would balance in dollars, it would be distinctly against us in employment. The promotion of export jobs by increasing imports is a losing transaction for our workers, and does not represent a means of bringing either recovery or prosperity to our farm and industrial worker as a whole. Undoubtedly exports help some farm and factory workers; but this help must be purchased at the expense of others who would go to work if the competitive imports were produced at home. Wages paid in various foreign countries may be found by consulting the monthly and annual publications of the International Labor Office.

2. The reduction of duties and the removal of trade barriers is said to promote international trade not only between the United States and other countries, but as a result of the example set between all nations of the world. This is supposed to reduce international economic rivalries, and since international economic rivalries embody factors which contribute to war the reduction of trade barriers is supposed to foster international peace. We next examine this proposition.

Let us dismiss the obvious fact that we have a trade-treaty program on the one hand, and a world at war in many sectors on the other. Let us overlook the contention that the trade-treaty program arrived on the scene too late to prevent the outbreak of hostilities based on economic struggles of long standing, even though the program had been in effect long enough to produce the alleged gains in trade claimed for it. Since the latter claim is erroneous, we may agree that nothing occurred which would have produced any appreciable effect upon the economic difficulties which presumably underlay the war.

TRADE TREATIES NO DETERRENT TO WAR

Can anyone say that the trade-treaty program brought about the lifting of a single exchange restriction, a single import quota, or removed a single export subsidy? If our so-called lead in the imposition of trade barriers had such pronounced and immediate effect that from 1929 to 1932 world trade collapsed because of world retaliation and counterretaliation, not only against the United States but against other countries which had nothing to do with the Tariff Act of 1930, why has the reversal of the world trend been so long delayed after 1934, when we began to offer inducements for the reduction and removal of barriers? The adverse effects required only 2 or 3 years to produce their full effects, i. e., from 1930 to 1932; but 5 or 6 years of our proffered hand of good will has been accompanied by increasing rivalry.

International trade leads to international interdependence. This, according to the theory, should lead to international pacification. Yet at the same time it appears that international rivalry grows to some extent, at least, out of competition for control of raw materials. National efforts are directed at independence and not dependence. If nations did not have so many foreign stakes, they should therefore have fewer occasions for rivalry and friction. If we, for example, had no stake in some foreign section, we should not be concerned about protecting such a stake, whether it be a market or an investment. We should be less likely to become involved in a war. Widespread trade leads to such stakes, both in the form of markets and investments.

Yet what value have these stakes to us compared to our domestic market? In 1939 our exports amounted to $3,177,000,000. Let us say that total domestic employment was 40,000,000 in manufacturing, transportation, mining, farming, and the various service trades. An increase of $1 in the weekly wage would have increased the domestic market for goods $2,000,000,000, given a steady price level. That gives an indication of the importance of our foreign markets.

International interdependence based on trade also produces international vulnerability to economic disturbances. Even though the United States is not involved in the European war, we are greatly affected by it. Should the war come to an end tomorrow, we could not escape the depressing consequences of general demobilization and the ensuing unemployment. Had we not created the interdependence which is regarded as the source of peace, we should not be so vulnerable to the machinations and ambitions of foreign dictators.

COUNTRY THREATENED WITH INDUSTRIAL INVASION

Now, this is not set forth as a counsel of isolationism but to demonstrate the fallacy that international interdependence is a guaranty of peace. International stakes may have a value, but pacification of the world is clearly not one of them. Nations fight for stakes, whether they are markets, sources of raw materials, or investments. These stakes may or may not be worth fighting for, but the interdependence which they produce is not a cure for war.

In 1920, after the close of the World War, during which our trade boomed, we found ourselves with $97,000,000 of returned goods on our hands. These represented a considerable surplus and acted as a depressant on domestic trade. If the present war leads to a similar boom in exports, the beginnings of which are already visible, we should prepare ourselves for another stream of returned goods. Perhaps we could then once more begin extending vast credits to foreign countries to pull us out of the ensuing depression. Prostrate foreign countries with depressed wages would seek our market in a strong effort to revive themselves at home. Would the trade-treaty program work in reverse or would it expose us to this depressing competition?

The collapse of our war trade after the World War is reflected in the trade trends from 1919 to 1922. In the following table exports and imports are shown for these years:

Year	United States exports	United States imports	Total
1919	$7,749,000,000	$3,904,000,000	$11,653,000,000
1920	8,080,000,000	5,278,000,000	13,358,000,000
1921	4,378,000,000	2,509,000,000	6,887,000,000
1922	3,765,000,000	3,112,000,000	6,877,000,000

In 1919 and 1920 trade volumes were the highest on record. The increase in trade, however, came in greater proportion in imports from 1918 to 1920. Exports increased 33.6 percent from 1918 to 1920, while imports went up 74.1 percent. From 1919 to 1920 exports increased only 4.3 percent, while imports rose 35.2 percent. Imports from Europe increased $806,000,000, or 216 percent, while exports to Europe increased only 5 percent in 1920 compared with 1919, both figures being for the fiscal years ending June 30.

The following editorial appeared in the February 22 issue of the Potters Herald and is worthy of your consideration:

"CONGRESS SHOULD EXPLAIN

"The Congress is now considering, upon the demand of Secretary of State Hull and other State Department intellectuals, supported by President Roosevelt, the continuance of the reciprocal-trade treaties.

"These trade treaties are contrary to the Constitution, are contrary to the express policy of every Democratic-controlled Congress from 1882 to 1932. They are contrary to and virtually set aside and nullify the protection of jobs and standards of living which American workers received through the Asiatic exclusion law, restrictive immigration laws, and fair labor standards law.

"Secretary of State Hull, in serving as Congressman and Senator, bitterly opposed the granting of taxing and treaty-making power to any appointed officials of our Government.

"Every leader of democracy prior to 1933 has publicly opposed this type of legislation."

Daniel J. Tobin, vice president of the American Federation of Labor, president of the Teamsters International Union, and chairman of Democratic labor committee in 1932 and 1936, a keen student of world and labor conditions, in a leading editorial in the Teamsters' February Journal, says, in part:

"The labor movement is destroyed in most of the countries of the world. That includes the Americas north and south of the United States. If the war conditions continue for 2 years from now, what is left of the labor movement in the European countries will be destroyed because of the economic destruction due to war. * * * Only those who close their eyes or through their ignorance or blindness to war conditions can fail to see that with the destruction of values in the European countries, no matter who wins the war, the economic conditions of those countries will be destroyed. * * * The markets of the world will be drawn down, and cheap labor will be forced upon all the workers of the European countries so that they can help pay the expenses of this awful catastrophe now obtaining in Europe and Asia. The hours of labor established by the French workers' union 2 years ago have been totally set aside, and instead of a 40-hour week they are now working 52 and 56 hours, and will soon be working 60 hours to meet the demands of a nation engaged in war and in danger of destruction. The trade-unionists of England are alarmed, and recently held a conference with the leaders of the French labor movement endeavoring to plan some method of procedure to protect the English worker; or let us put it another way—fearing that war will cause the destruction of the conditions which labor enjoys in that country similar to what has happened in France. Does anyone who

has any sense believe that the economic conditions of the United States can be preserved and that union-labor wages can continue to obtain here if the world is flooded with cheap-labor products and the country invaded by the products of labor of nations driven to destruction by war expenditures?"

In view of the statement of conditions so ably made by President Tobin and the historic policy of the Democratic Party we deem it fair to ask why the change in policy since 1932.

Can it be possible that international bankers, our few exporters and our automobile, office-appliance equipment, and canning trusts have been able to change this historic democratic policy?

Surely, some explanation should be made for this most unusual change in attitude at a time when it should be apparent to everyone that American markets will soon be flooded with the products of the pauper wage paid workers of Europe and Asia.

Your Congressman and your Senator should know your views on reciprocal-trade treaties, the continuance of which jeopardizes your job opportunities and your standards of living.

INCREASED IMPORTS OF MANUFACTURED GOODS

The reason for the great increase in imports after the War as compared with exports lay in the collapse of foreign currencies and the return to European farms and factories of the demobilized armies. Depreciated currencies made it more difficult for the Europeans to purchase from us and easier for us to buy from them. It is worth noting that the chief increase in total imports were in manufactured foodstuffs and finished manufactures. Imports of manufactured foodstuffs from all countries increased from $555,000,000 in 1919 (calendar year) to $1,238,000,000 in 1920, or 123 percent. Those of finished manufactures increased from $493,000,000 in 1919 to $876,000,000 in 1920, or 77 percent. On the other hand, imports of crude materials increased only 4.8 percent and crude foodstuffs only 5.8 percent.

In other words, competition with farm and factory producers of foodstuffs increased sharply, since the imports of manufactured foodstuffs increased 123 percent. Likewise competition with industrial workers increased sharply, since imports of finished manufactures increased 77 percent. Imports of raw materials, most of which have long been, and still are, on the free list, and are largely noncompetitive, increased only about 5 percent. In 1921, 87 percent of the crude material imports were on the free list while of manufactured foodstuffs only 10 percent were on the free list.

The flood of imports became so menacing to the American economy that the Congress passed an emergency tariff act in 1921, which was vetoed; another in 1922, which went into effect; and then revised the rates upward in the Tariff Act of 1922. The new rates were apparently not excessive, since trade increased steadily from 1922 to 1929.

EXPORTS RETURNED

Experience with returned export merchandise was very disheartening in 1920 and 1921. Total returned merchandise during the 2 years amounted to $163,000,000. Over 8,000 automobiles, valued at $13,500,000, were returned. Others were congested in export warehouses and on the docks. They continued to come back from dealers in foreign countries to which they had been shipped until well into 1923. From 1919 to 1923, automobiles valued at $22,800,000 were returned. During the 4 years from 1919 to 1922, both inclusive, total returned goods amounted to $254,000,000, or about $200,000,000 more than normal returns.

In 1922 the Director of the Bureau of Foreign and Domestic Commerce, in his annual report, said, "particular mention should be made of the prompt and effective assistance of the State Department, and its representatives abroad, in the solution of the difficulties in connection with the Cuban warehouse situation, arising from the heavy accumulations of undelivered American goods."

The report might have added that in addition to congestion of Cuban warehouses, Key West was congested with additional goods which had been destined for Cuba but never arrived there.

In the annual report of 1921, page 87, the Director of the Bureau above-mentioned, said in part:

"With the exchange rates of foreign currencies depreciated to a point which made our prices in dollars prohibitive * * * with the impossibility of settling in gold the balance already due us, with the difficulty of arranging further credit facilities, with cancelation of orders, with rejection of goods already shipped and the dishonoring of drafts; it was impossible for exports to continue at the rate * * * to which they had grown during and directly after the war."

On page 130 of the same report appears the following:

"The presence of large and varied stocks of refused merchandise in the customhouse at Buenos Aires has had the effect of seriously slowing up the demand for imported articles, as the idea prevails among consumers that these stocks will eventually be thrown on the market and liquidated at forced sales."

The annual reports of the Director of the Bureau of Foreign and Domestic Commerce for 1921 and 1922 are filled with instances of rejection of imported goods, canceled orders, distress sales, and similar difficulties. A compilation of quotations from these reports has been made and we offer them for the record.

Thus we see two results of the World War for which the State Department might prepare. One is a sharp increase in imports of competitive goods, i. e., manufactured foodstuffs and finished manufactures; and the other, lending of assistance to our foreign representatives to clear foreign docks and warehouses of undelivered American goods.

The report of the Director of the Bureau of Foreign and Domestic Commerce said, to quote further, "It is recognized that depreciated exchange rates of European currencies as compared to the American dollar raise the price of our products to prohibitive figures and act as a check on exports to that market.

"The purchase by American investors of long-time European securities such as railway, municipal, and industrial bonds, would help to correct the exchange rates."

In other words, having exported so heavily, and faced with decreasing exports and increasing imports because of depreciated European currencies, our only defense lay in sending money abroad to reestablish the currencies at a higher rate and thus correct the unhealthy foreign-trade conditions which had developed.

TRADE INCREASED WITH HIGHER TARIFF RATES

Would it not be better to avoid these conditions in advance by refusing to follow the foreign trade siren too far this time? All the accent today is on the removal of trade barriers. During the last war we had the Underwood tariff of 1913. Quotas, exchange devices, and similar restrictions were not yet instruments of trade policy. Yet our foreign trade fell from $13,352,000,000 in 1920 to $6,887,000,000 in 1921, a decline of almost 50 percent in 1 year. Then, after the duties were increased under the Tariff Act of 1922, trade increased again, not, to be sure, because of the tariff, necessarily, but nevertheless hand in hand with it. There is at least as much ground for crediting the increase in trade after 1922 to the higher rates in the Tariff Act of 1922 as there is for crediting the increase after 1932 to an act which went into effect only after a lapse of 2 years and the effect of which could not be felt until 1936. The Tariff Act of 1922 was at least contemporaneous with the increased trade. Compared with it the trade-treaty program looks more like jumping on the bandwagon. Trade had already increased 28 percent before more than one trade treaty had been signed. It had increased more than 47 percent before more than three additional agreements were signed, and, unimportant ones at that (Sweden, Haiti, and Belgium).

We see no process of logic by which the claim can properly be set forth that the trade-treaty program is designed (1) to prevent in any appreciable measure the reappearance of depreciated currencies in Europe during or after the present war and the consequent increase of imports from these countries once the war is over, and increased difficulty in exporting to them; and (2) we see nothing in the trade-treaty program to prevent an initial one-sided and overexpanded export trade. This is not to say that the latter will necessarily occur; but if it does not, the trade-treaty program which seeks to facilitate trade expansion cannot be credited with prevention of the unhealthy condition.

PROMOTING ANOTHER DEPRESSION?

The true interest of the United States lies not in extending its trade with the warring nations and thus increasing its vulnerability to an export debacle when the war ends; but lies rather in maintaining as nearly as possible a peacetime balance. We may be sure that after the war Europe will be in no position to increase its purchases from us, and much less so if the various nations buy to the hilt during the war. If they do the latter they will the sooner reach the position in which they found themselves after the last war, namely, that they cannot buy unless we furnish them the money. If we again do the latter, i. e., lend money, we shall need no Tariff Act of 1930 to repeat 1929–32. Just as the 1921 debacle was accomplished under the low Underwood tariff so can another disaster follow the present war if our traders run after war demand. If, then, we extend credit to the impoverished nations as we did after 1921, the 1929 debacle will surely reappear.

It would be far wiser to cultivate our own garden. The domestic market has vast possibilities. The less we depend upon European outlets or war outlets, the less will the economic reverberations of demobilization strike our country once the war ends.

Thus, we may conclude that international trade does not prevent war. Secondly, we will be in a more favorable position to avoid collapse of our trade if we keep it within reasonable bounds while the war goes on. Next to the avoidance of military involvement in the war, our avoidance of economic involvement is of paramount importance.

EXPORTS OF FARM SURPLUSES REDUCED

3. The United States regularly produces surplus agricultural products which it is held must be exported as the alternative to throwing them on the domestic market with disastrous consequences. Cotton and tobacco and sometimes corn and wheat are the chief products in this classification. In the absence of a foreign market for the surpluses, crop restriction and regimentation must be resorted to at home, it is contended. They allege that we should purchase enough abroad to provide foreign countries with funds with which to buy our surplus products. So goes the argument. Let us see how far the trade situation supports this contention and to what extent the trade-treaty program has fulfilled the claims made for it by way of opening markets for our surplus farm products.

We have on the free list a considerable number of important items which we regularly import. The most important of these are: Newsprint, pulpwood and wood pulp, coffee, rubber, bananas, fertilizer, jute, copper ore, tin, tea, raw silk, cocoa beans, palm oil,

copra, tapioca, tung oil, and carpet wool. Imports of these products account for a large part of total goods imported free of duty.

Total imports of goods on the free list during recent years have been as follows:

1932	$886,000,000
1934	992,000,000
1936	1,384,000,000
1937	1,765,000,000
1938	1,183,000,000

Our exports of raw cotton have been as follows:

	Bales
1932	8,916,000
1933	8,353,000
1934	5,753,000
1936	5,409,000
1937	5,728,000
1938	4,561,000

Exports of unmanufactured tobacco have been as follows:

	Pounds
1926–30	545,000,000
1933	438,000,000
1935	396,000,000
1937	434,000,000
1938	489,000,000
1939	358,000,000

The value of cotton and unmanufactured tobacco exports combined have been as follows:

1931–35 (average)	$547,000,000
1934	505,000,000
1936	508,000,000
1937	515,000,000
1938	383,000,000
1939	321,000,000

Wheat and corn exports averaged slightly over $20,000,000 from 1931 to 1935, and then declined to less than $5,000,000 until 1937 when the combined value of these exports was slightly over $40,000,000. In 1938 the combined exports jumped to $172,000,000, but in 1939 they declined to $56,000,000.

Now it is obvious that our imports of goods on the free list would provide foreign countries with sufficient funds to purchase all the cotton, unmanufactured tobacco, corn, and wheat that we have exported in recent years. It is not necessary that we seek to import more competitive dutiable products in order to provide foreign nations with necessary funds to purchase our chronic surplusage of agricultural products. Our imports of rubber, coffee, silk, tin, copper ore, wood pulp, and pulpwood, etc., provide adequate exchange to take our farm surpluses in ordinary years. If other countries do not liquidate our surpluses, the reason must be found elsewhere. Other sources of supply have been developed. Our cotton exports have declined sharply since 1932 and 1933. Yet our total foreign trade has expanded quite sharply. Whereas our total imports increased over 100 percent from 1932 to 1937, our exports of cotton declined 35 percent. Exports of unmanufactured tobacco have not reached the level of 1931 since that year. Lard, which is often mentioned as one of the exports helped by the trade treaties, has also failed to find an expanded foreign outlet. The average exports from 1931 to 1935 were 444,000,000 pounds per year. In 1936 exports were only 111,000,000 pounds, in 1937 only 135,000,000 pounds, and in 1938 only 204,000,000 pounds. In 1934, the year the trade treaties were first authorized, exports were 431,000,000 pounds.

Evidently failure of foreign countries to increase their purchases of cotton, tobacco, and lard was attributable to some other reason than any failure of the United States to increase its imports, for we have seen that our imports in general increased more than 100 percent from 1932 to 1938.

If we can find no relationship between increased imports, on the one hand, and the export of our two leading agricultural exports, on the other, what becomes of the theory that we should lower our duties in order to dispose of our agricultural surpluses abroad? If foreign markets are so shifting and undependable, for what purpose do we open our domestic market to greater competition in competitive goods?

PROPONENTS CLAIMS SHOWN TO BE FALSE

4. In order to export more we must import more, it is said. This is to say that if we wish to dispose of our farm surpluses abroad or wish to add to factory employment, we must reduce duties in order that foreign goods may come in in greater volume.

But we have just shown that increased imports have not led to greater exports of our farm surpluses of cotton, leaf tobacco, and lard. Previously we saw that increased factory employment attributable to increased exports represented a net loss in employment compared with what employment might be did we manufacture at home the competitive articles which we now import.

The fact is that our imports increased during the years when the average duty on dutiable items was the highest in many years. In 1932 the average duty on dutiable items was 57.8 percent. Yet in 1933 imports increased $108,000,000, and of this increase $90,000,000 was in dutiable items and only $18,000,000 in free items. In 1934, without a lowering of duties, except on Cuban sugar in September of that year, imports again increased. This time they went up $203,000,000, and of this increase 56.6 percent was in dutiable items. Now, in 1937, with returning prosperity and higher prices, imports increased $586,000,000; but even though duties had been reduced by 14 trade agreements, 65 percent of the increase came in items on the free list. In other words, while the duty was high, i. e., from 1932 to 1934, particularly because of the effect of a low price level in combination with specific rates, the increase in imports occurred largely in the dutiable items. In 1937, when the average duty on dutiable items had fallen to 37.4 percent, the principal increase in imports occurred in the items on the free list.

Thus, absolutely no correlation exists, unless it be a negative one, between increase of imports and reduced duties. The facts prove as clearly as anything can be proved in the field of foreign trade, that the level of duties existing before the trade treaties went into effect were not only not embargoes but were not so high that foreign exporters lost their competitive advantage. Certainly the duties did not offset more than the difference in cost of production in foreign countries and the United States. Why then should it be considered necessary to reduce this level of duties?

5. It is argued that the United States was in considerable part responsible for the wide resort to trade barriers and restrictions during the past 10 years by enacting the Tariff Act of 1930. Having taken the lead in the imposition of trade restrictions and having observed the disastrous consequences in paralyzed trade from 1929 to 1932, the United States, it is claimed, should acknowledge its error and take the lead in a sustained program to reduce these barriers. We proceed to examine these allegations and conclusions.

There is possibly little to be gained by pointing to the Empire preferential system enacted by the British Commonwealth in 1928, to the increase in the Cuban tariff in 1928, and to other trade restrictions, all of which preceded the 1930 tariff. Little will be gained from a mention of these facts since those who are bent upon hanging the economic distress after 1929 on the Tariff Act of 1930 refuse to be guided by facts. They have adopted a doctrinal theme song which is impervious to factual evidence.

Other nations have adopted trade restrictions in pursuance of economic policies aimed at national self-interest as they see it. The tariff policy of the United States can at best play but a small part in shaping internal economic policies of European and Asiatic countries. It would be as reasonable to say that the internal economic policies of the United States are shaped by the tariff policy of England as to say that the internal policies of England or Germany or France or Italy or Russia are shaped by our tariff levels. No realistic view of the adoption of internal economic policies can countenance such an absurd conclusion. Cuba, Brazil, Japan, and a few other countries of which leading products find a predominant outlet in the United States, would be greatly affected by radical departures in our treatment of their products; but, in most of these instances in which large outputs of raw products are shipped to the United States, we receive these products free of duty. This is true of coffee, silk, rubber, tin, copper ore, and other raw materials already mentioned.

The alleged disastrous effects of the Tariff Act of 1930 were so swift in making themselves felt that they preceded by nearly a year the actual enactment of the tariff. The mollifying effects of our benevolent trade-treaty program, on the other hand, are so slow that after 5 years of our extensive efforts trade quotas, exchange regulations, export subsidies, controlled exports, and trade shackles in general are more extensive and numerous than they were when we began.

PROPONENTS' HYPOCRISY EXPOSED

Why the Tariff Act of 1930 should have been followed so swiftly by economic retribution while the Tariff Act of 1922, which brought a greater percentage increase in average duties than did the Tariff Act of 1930, was followed by increased foreign trade and unprecedented domestic prosperity, has not yet been satisfactorily explained. The average rate of duty jumped from 29.5 to 38.1 percent when the Tariff Act of 1922 was enacted. This was an increase of 8.6 percentage points and this represents an increase of 29.1 percent, or nearly a third of the 1921 average duty. The 1930 tariff brought about an increase in the average rate from 40.1 percent in 1929 to 44.7 percent in 1930. This was an increase of only 4.6 percentage points. This figure should perhaps be doubled since the new tariff did not go into effect until midyear. The increase would then be 9.2 percentage points. This represents a 22.9 percent increase over the 1929 rate, or something less than one-fourth.

6. It is alleged that the trade-treaty program has brought about increased exports and thus has helped American farmers and industrial workers. At the same time it is held that the ruinous competition anticipated by so-called alarmists has not come to pass. We next examine this point.

We have already shown that the trade-treaty program cannot be credited with the increase in exports which have occurred since the act went into effect. We should modify this by saying that an indeterminate part of our increased exports to Cuba may properly be credited to the trade-treaty program. That our exports to Cuba would have increased in any case may be inferred from the increase in our shipments to the Philippine Islands, which are similar to Cuba in the production of sugar and tobacco and some other tropical products. Exports to Cuba rose from $45,000,000 in 1934, the year of the agreement, to $92,000,000 in 1937, while our shipments to the Philippines in the same period went from $47,000,000 to only $85,000,000. But in 1938 our exports to Cuba fell to $76,000,000 while shipments to the Philippines went to $86,000,000, thus giving

a higher increase than that in our exports to Cuba. Exports to some other nontreaty countries increased more sharply than did those to Cuba.

The reason that our exports to Cuba should have responded to our trade treaty lies in the fact that we reduced the duty on Cuban sugar from 1½ cents per pound to nine-tenths of a cent per pound, and because sugar is the principal product of the island and the United States is an important market for sugar from Cuba even though a quota limitation was placed on the imports. In probably no other case was the duty reduction granted by the United States so great a factor in the particular foreign country's total economy.

EXPORTS TO NONTREATY COUNTRIES HIGHER

As for the remainder of the world there is no possibility of attributing to the trade-treaty program increased exports to trade-treaty countries which cannot be matched by equal or greater increases in exports to nontreaty countries if the comparison is made from the year particular treaties went into effect through 1938, which is the latest year for which detailed statistics are available. In those instances where the exports to trade-treaty countries may be compared with exports to adjacent nontreaty countries, measured from the year in which the specific treaty went into effect, the results are very striking and show graphically the utter failure of the trade treaties to set off the treaty countries from the nontreaty countries. Charts which show exports to adjacent countries where one has entered into a treaty and the other where no trade treaty exists demonstrate the parallel trends and tell the story. In many instances exports to the nontreaty countries increased to a greater percentage than those to adjacent trade-treaty countries.

These facts once more show with compelling force that reduction of our duties does not in general determine trade movements. It demonstrates again that our tariff level was not too high; for, had it been too high, a reduction in the duty should have been reflected in heavier trade. This was not the result obtained with respect to our trade as a whole, compared with other periods of our history, nor with respect to our trade with trade-treaty countries. Since the trade-treaty program went into effect only a normal expansion in our trade has taken place.

The value of domestic manufactures according to Census Bureau increased from $30,557,000,000 in 1933 to $60,710,000,000 in 1937. In the same period exports rose from $1,674,000,000 to $3,349,000,000. The increase of each was virtually 100 percent. Exports merely followed the trend of recovery which was world-wide. In 1938 the Federal Reserve Board's index of industrial production in the United States fell to 86 from a level of 110 in 1937. Imports fell from $3,009,000,000 to $1,949,000,000. Industrial activity in foreign countries did not decline as much as they did in the United States. Preparations for war helped to sustain industrial activity abroad. According to the Yearbook of the International Labor Office industrial production in the United States declined from 92.2 in 1937 to 72.3 in 1938, while the world, exclusive of Russia but including the United States, showed a decline from 104.2 to 92.9. Were the United States omitted the decline would obviously have been less, or about 10 percent. If we now look at our exports in 1937 and 1938 we find a decline from $3,349,000,000 to $3,094,000,000, or slightly less than 10 percent. This is another remarkable correlation and again illustrates the lack of effect of the trade-treaty program on our exports.

It is difficult to know from how many angles the lack of effect of this program on our exports must be shown in order to make an impression. Even the decline in our imports in 1938, roughly from $3,000,000,000 to $2,000,000,000 after most of the trade treaties had been in effect longer than a year did not moderate the claims of the defenders. It merely blinded them a little more, and blindness stands them in good stead.

AUTO EXPORTS DROP 31 PERCENT

The automobile industry is often cited as an example of the benefits obtained through the trade-treaty program. United States exports of automobiles and trucks, including foreign assemblies from parts produced in the United States, since 1932, have been as follows, in units: [1]

Number exported

1932	120,239
1933	176,583
1934	310,522
1935	334,841
1936	346,067
1937	475,914
1938	325,942

From these figures it can be seen that exports increased sharply after 1932. By 1934 the exports had increased 158 percent, and by 1935, 178 percent. In other words, before the effects of the trade treaties could make themselves felt, exports had already recovered very sharply; 1938 exports compared with those of 1935 show a decline of 3 percent; 1937 exports were higher than those of 1935 by 42 percent, it is true, but the foreign market did not hold; unit exports dropped 31 percent from 1937 to 1938. If there is merit in exporting more automobiles and trucks, it is difficult to understand wherein the trade-treaty program may be credited with any contribution to the results.

[1] Source: Automobile Manufacturers Association.

The percentage of automobile and truck exports to factory sales in the United States are shown in the following table: [1]

Percent exports bear to United States factory sales

1932	8.7
1933	9.1
1934	11.2
1935	8.4
1936	7.7
1937	9.8
1938	13.0

Here we see again how exports increased before the trade-treaty program went into effect. In only 1 year, namely, in 1938, was the percentage of exports higher in relation to domestic factory sales than in 1934 when the trade-treaty law was enacted.

Thus, whether we compare unit sales or percentage of exports to domestic sales, we find that the trade-treaty program cannot be credited with the increases recorded since 1932. In both instances most of the ground had been recovered before the trade treaties made themselves felt.

What becomes then of the claim that employment in the automobile industry was stimulated by the trade treaties? Can anyone truthfully say that a hundred additional jobs were created in the automobile industry by the operation of the trade-treaty program? No such claim could be substantiated statistically. Exports go up or down in relation to the domestic and world-wide levels of prosperity. In 1937 domestic production in nearly all lines was on the highest level of any post-depression year; and so were exports. Automobiles and trucks were no exception. In 1938 the level of production declined sharply; and again automobiles and trucks were no exception. Also, once more, exports of automobiles and trucks as well as total exports declined; although as previously pointed out, total exports did not decline as much as domestic production because industrial activity in the rest of the world, because of war-industry activity, did not decline so much as in the United States.

From 1930 through 1937 alone the American people have spent more than $8,000,000,000 in the construction of highways. This vast outlay, with the expenditures of previous years, created the greatest market in the world for the products of the American automobile industry.

The American automobile producers have been among the principal proponents of the trade-treaty program. Great stress has been laid on the possible opening in foreign countries of additional outlets for American automobiles and trucks. We are led to wonder what further subsidies the American automobile industry will require or under what condition will they be satisfied?

With many thousands of jobs of American workers transferred to workers in foreign countries, through our entry into trade treaties, with the benefits of the Fair Labor Standards Act nullified, with the purchasing powers of many thousands of America's workers greatly reduced, with additional billions required yearly to provide for those unable to secure employment, a lesser expenditure for highways surely would not be helpful to the American automobile industry.

The higher wage level existing in some of the export industries is sometimes pointed to as of special significance. The fact is that the industries selected for comparison are mass-production industries which are highly mechanized and as a result have a comparatively low percentage of labor cost. In addition these industries are not subjected to low-wage competition from abroad. There is, therefore, every reason why such industries should pay relatively higher wages quite irrespective of exports.

TRADE TREATIES NOT RECIPROCAL

We may turn now to some other considerations. One of these is the matter of the most-favored-nations clause. These trade treaties are referred to as reciprocal-trade treaties. The fact is that we have made duty reductions which are almost world-wide in their application whereas the reductions which we have been accorded or promised in return are restricted to the countries making direct agreements with us. If there are many exceptions to this we have not heard of them. Only if other countries should make treaties among themselves all around and not with us so that we would make no concessions in return would we receive free benefits from the other countries as they are now receiving from us. The other countries, however, are not making such agreements and as a result we are in the position of giving away our market to third countries, i. e., countries not a party to particular agreements, without exacting concessions in return. This is a means of lowering our duties in general but it is not reciprocity, nor does it meet the usual conception of bargaining.

RAILROAD WORKERS LOSE JOBS

It is sometimes stated that the trade treaties and foreign-trade activity in general lead to increased railway freight activity. This contention overlooks the shorter haul which export freight requires compared with domestic goods destined for domestic consumption. Cotton, for example, one of our heaviest exports, is produced largely in States lying on or near the South Atlantic or Gulf coasts. Wheat moves largely by the Great Lakes or through Gulf ports if the exports are from Texas, Oklahoma, or Kansas. Apples are produced chiefly in Virginia, Pennsylvania, and New York, in the East, and in Oregon, Washington, and California, in the Northwest. Fruit canneries are located predominantly on the West coast. Canned salmon and tuna are seacoast products.

[1] Source: Automobile Manufacturers Association.

Tobacco is produced largely in North Carolina, Kentucky, and Virginia. Packing-house products are located near the Great Lakes or on or near the Mississippi. Petroleum is moved by pipe lines. Cotton goods are manufactured predominantly in New England and in North Carolina and Georgia. Aircraft is manufactured largely in southern California, Washington, New York, Connecticut, and Maryland. Coal comes from Pennsylvania and West Virginia. Automobiles are manufactured largely around Detroit and the Great Lakes.

These various products embody our principal exports and in no instance is a long rail haul involved in moving the bulk of the shipments to export points. On the other hand, in distributing these and numerous other products to consuming centers throughout the United States numerous long hauls in addition to short hauls are required. Ocean shipments of varying distances must be added to inland transportation in the case of exports, with the result that heavy goods must come from points comparatively near the water shipping points.

As for imports, it is generally true that if they are competitive with American goods and are bulky in character they do not usually move far inland, but concentrate their competitive effects in sections near the importing centers. Among such products may be mentioned glass, cement, milk, lumber, cattle, coal, petroleum, fresh fish, etc. Imports which are high in value compared with bulk penetrate the entire country, even in the face of domestic competition, but by their very nature such goods do not give rise to much freight tonnage. Precious stones, watches, scientific instruments, perfumes, lace, pottery, pharmaceuticals and drugs, oriental rugs, assences and extracts, wines and liquors, spices, nuts, and furs are imports of this type.

Among our heaviest imports are wood pulp and pulpwood, fertilizer, newsprint, sugar, bananas, coffee, rubber, cocoa beans, copper ore, copra, palm oil, tapioca, tin, carpet wool, etc. But these articles, with the exception of sugar, are on the free list and are not subject to duty reductions.

BENEFITS OF FAIR LABOR STANDARDS ACT NULLIFIED

If the competitive dutiable imports were produced in the United States, railways would enjoy greater tonnage than they obtain through carriage of exports of equal volume for the reasons already cited. As for the noncompetitive items, they are mostly on the free list and do not enter in greater or lesser quantities because of the trade-treaty program.

It is a legitimate question to ask why extension of the trade-treaty program is feared, if it has not led to any appreciable increase in imports. In the first place, we know that specific labor elements have been injured by existing trade treaties. Specific losses in some industries have possibly been offset by gains in others. Without any net gains appearing in the results as a whole, injuries and losses have nonetheless been experienced. What the Nation gains by possibly benefiting a few mass-production industries, such as the automobile, office appliance, fruit canning and packing industries, at the expense of others, it is difficult to see. So that one industry may possibly but not certainly export more, others are called on to suffer keener foreign competition.

In the second place, imports which concentrate their competitive effects in certain markets demoralize domestic prices and depress wages. The percentage imports of domestic production as a whole often gives a totally misleading impression of the triviality of the effects produced. Imports that may appear trivial when compared with total domestic production may bear heavily upon a limited section or may represent a considerable percentage of a particular class or division of a wider line of goods.

In the third place, the trade treaties do not lend themselves to the flexible range of action required to meet the exigencies of war conditions and are particularly ill-adapted to meet the requirements of post-war liquidation and readjustment.

In the fourth place, the trade-treaty program makes it more difficult for domestic industry to meet the provisions of the Fair Labor Standards Act whereby not less than 30 cents an hour must be paid and work limited to 42 hours per week unless overtime is paid. The Asiatic Exclusion Act was not passed because we consider the orientals undesirables but because of the low wages they are ready to accept. The effect is much the same when we accept their goods manufactured in the Orient without duties to compensate the difference in wage levels. The same holds true of our restrictive immigration laws. As we reduce our duties we approach the nullification of both acts. The intent of Congress will have been nullified by Executive action.

Finally it is in order to point out that a 3-year extension of the trade-treaty program may operate to extend some treaties as much as 6 years. A treaty renewed toward the end of the proposed 3-year extension would run 3 more years and could not be terminated by act of Congress. Only the President could denounce any given treaty and 6 months' notice is provided in the treaties before abrogration can be effected. In 6 months a great deal of economic damage may be inflicted upon the employment opportunities of American workers.

CONGRESS SHOULD ACT—NOT BUREAUCRATS

We find no support for the lowering of duties in the foregoing facts nor any reason for extension of the trade-treaty program. If, on the other hand, it is the will of the elected representatives of the people to seek further reductions in our tariff, we ask that these representatives ratify the reductions in conformity with the constitutional provisions regulating the Nation's entrance into treaties. So that a fair hearing may be obtained by those who may be deprived of employment and a livelihood through further duty reductions, we ask that all trade treaties be ratified by the Senate.

Further, we ask that a limitation be imposed providing that competitive imports of workers in foreign countries be denied entry into American markets at total landed costs, tariff duties paid, which are less than American costs of production or wholesale selling price of products of American workers when such competitive products of American workers are commercially available.

Buying Time to Think

EXTENSION OF REMARKS

OF

HON. PATRICK J. BOLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1940

STATEMENT BY EARL McCLINTOCK, OF NEW YORK CITY

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Mr. Earl McClintock, of New York City:

The past 6 years have brought many visible changes in our social, economic, and political life. To the narrow partisan, the bitter critic, and the so-called vested interests, these changes have appeared to be limited to the United States and the cry is often made that if another political party were in power or a different individual were at the head of our Government all would be different and we would again be enjoying the lush days of the 1920's. Even superficial study or thought would convince one that the whole world, without exception, has been and is in the throes of an upheaval such as has not been experienced since the aftermath of the Napoleonic wars. It would be tedious to relate, and no doubt tiresome to follow, the detailed changes in institutions of all nations and to trace back the causes of these changes to their real sources. It should be sufficient to state that the World War and the Russian Revolution are two obvious causes of general unsettlement. As far as the United States is concerned, though, we must seek underlying conditions that predate these causes by several decades.

Conditions that call for reforms never appear suddenly nor are they changes of the moment. Reforms grow out of recognition of abuses that may have been practiced for a century or more and are forced by the pressure of resentment of such abuses. The more flagrant the abuses and the longer they have been imposed upon a people the more fundamental the necessary changes are in our social, political, and economic set-up. Let us look at the state of the Union 10 years ago, when it appeared that our whole financial and economic system had crashed down upon a bewildered nation. Let us cite, not in the order of their importance, a few of the evils of the past, which brought about the collapse of 1929.

We must plead guilty to the avarice and greed that are the pitfalls of the citizens of any new country abounding in seemingly unlimited natural resources.

Enormous fortunes were made quickly. Railroads were constructed haphazardly, at great cost, with great waste, and with shocking dishonesty on the part of the promoters and builders. The railroads were saddled with all sorts of bonds, which in many cases exceeded even the wasteful cost, then came preferred stocks and common stocks, all of which the gullible public bought and were euchered out of time and time again by reorganizations conducted by the bankers and lawyers of Wall Street. Today the railroads are reaping the whirlwind of those days of high finance, banditry, greed, and lack of foresight. The same policy was followed by the leaders in such industries as United States Steel, the common stock of which was all water when it was organized and yet by exploitation was built up to a value well in excess of a billion dollars.

To make good these original fictitious values the leaders of finance and industry exploited labor to a point that bordered on slavery. When the steel companies and the coal companies and other users of common labor had need of men to do the hard, grimy, ill-paid work they imported labor from the poorer States of Europe by the hundreds of thousands. The exploitation of these human beings is one of the deepest blots on the history of American industry. The workers were housed in hovels; compelled to buy at company stores at exorbitant prices; worked 12 to 14 hours per day at wages which never permitted a man to get out of debt at the company stores, though they bought only the barest necessities of life. But the second and third generation of these imported laborers had acquired some education and comprehended how their forebears had been squeezed of every drop of lifeblood, and the new generation demanded decent wages, respectable conditions of life, and the labor unions came into being. Nor was this exploitation of men confined to the common laborer or to the early days of industry. Even in 1931 men who had spent up to 40 years of their life with a corporation found themselves out of a job and in the streets, with no capital, no food, no home. The corporations were bursting with cash, but no thought was given to the manpower that had

made possible the enormous profits in the past. No; only the stockholder was considered. The promoters, the bankers had already taken out their unearned millions and had safely invested them in Government or municipal bonds on the income from which they had to pay no taxes.

The war had caused industry to expand and to increase production far beyond the possible normal demand of domestic and foreign markets. Agriculture, too, had succumbed to the false theory that a new era had dawned and that there could be no *limit to the demands* for its products or to the ever higher prices they would bring. Good revenue-producing farm lands were mortgaged to buy still more land at fabulous prices. What had been—and should have remained—grazing lands were plowed up in order to produce more corn and more wheat. In industry, because of increasing demand and high costs of labor, more and more labor-saving devices were invented and installed. The whole national economy was off on a spree of unprecedented intensity. The country was literally money mad. Every man, woman, and child was intent on making a fortune quickly in Wall Street. Not only were stocks quoted at fantastic prices, but equities were pyramided through holding companies, and holding companies of holding companies ad infinitum. The public had come to look upon the financial and industrial leaders of the country as infallible—when actually they were as blind to economic realities as the lowliest bootblack. As a matter of fact, a fundamental change, far, far reaching in its effect, had taken place in our national economy in 1915—a change of which our financial, agricultural, industrial, and political leaders seemed unaware even 15 years later. The United States had changed from a debtor nation to a creditor nation.

This country had been developed with the aid of large sums of foreign capital. Many billions of this foreign capital had gone into the construction of our railroads, our industries, into mining, etc. From these investments there flowed abroad every year hundreds of millions of dollars, which could be and were used to purchase American commodities and manufactured goods. There was a natural flow of commerce that made unnecessary any shuttling back and forth of gold bullion. After the outbreak of the World War this condition changed. Foreigners dumped American securities on our markets. They were absorbed here, partly out of savings, but mostly out of huge profits made from supplying the Allies with the sinews of war. When funds derived from the sale of these securities had been used up in the purchase of munitions, grains, cotton, etc., our Government loaned billions of dollars to purchase more and still more supplies. Then the war ended. There was an abrupt end to the demand which we had feverishly and wastefully expanded to meet. Industry and agriculture went into a tailspin in the very early 1920's. But this was not yet the end. The world had to be reconstructed after the destruction of the war. Also, normal construction had been held up even in countries far removed from the scene of the war. Germany, France, Poland, Yugoslavia, Austria, Hungary, South American republics, Japan—in fact, the whole world—was in the American market for funds and secured them through bonds sold to the public.

The proceeds of these loans were used to purchase American agricultural and manufactured products. As long as the loans were being made—and spent—the country was literally booming. But the day of reckoning was bound to come. Loans could not be made indefinitely. When they ceased foreign countries had practically nothing wherewith to pay for our goods. There was no longer the foreign income from investments here; far too large a portion of the world's gold supply was held in the United States. What was even worse, there were no means, except in rare instances, of paying to the residents of the United States even the interest on the loans that had been made to the countries abroad. It was unthinkable to those in power that we should import goods or commodities to make possible exports or service charges on these debts. The result was inevitable. The bubble burst in the fall of 1929. Security values crashed; real estate slumped even more; commodities plunged; export demands dried up; industry was caught with huge inventories at high prices; farmers held heavily mortgaged lands bought at fantastic prices; insurance companies were besieged for loans by policyholders; banks had loans on securities and real estate which could not possibly pay out; employees from the lowliest labor to top executives were unceremoniously discharged.

Mr. Hoover was President. The bankers and industrialists rushed to Washington—with no idea as to the fundamental causes of the disaster—to advise the President that all that was needed to restore prosperity was "confidence." (What a familiar sound this word has even today.) So they all worked to reestablish "confidence." Industry started on an expansion program—when it was already overexpanded. The Government issued reassuring statements; the stock market recovered to an extent. The business, financial, and political doctors were treating only the symptoms and not the disease. As with the human body under such treatment, the patient improved for the moment—but the disease was still at work—and we slipped deeper and deeper into the mire. Then came the inspired idea to our leaders that if our already too-high tariff walls were raised even higher and no goods from abroad could possibly come in to compete with our own—then surely prosperity would be restored. The fallacy of this reasoning was apparent even to eastern Republican Senators. But—so the story goes—when one of them offered to vote against the Hawley-Smoot bill in the Senate (which would have served to defeat the bill) in order to save Mr. Hoover the embarrassment of vetoing it, Mr. Hoover requested him to vote for the bill, as he intended to sign it.

That Tariff Act of 1930 was the death blow to international trade; it marked the beginning of the intense growth of nationalism throughout the world. Each country now built a tariff wall around itself in the fond hope that it could become economically independent of the rest of the world. Our statesmen and bankers insisted that any of our commodities or goods bought abroad should be paid for in gold—not in goods or services. The effect of this policy soon became evident and in September of 1931 England went off the gold standard. Now, our industrial, financial, and political leaders were ignorant of the fact that the English pound sterling, and not the American dollar, governed world prices of commodities. As the value of the pound declined in terms of the dollar, the bottom dropped out of dollar commodity prices. Still Washington and Wall Street insisted on remaining on the gold standard. Not only did commodities go down to a 60-year low, but security prices reached almost the vanishing point. The banks were in difficulties and closed down by the hundreds. Farmers and home owners had their mortgages foreclosed, and their properties sold out at a fraction of the real values; not only were they dispossessed but found themselves burdened with staggering deficiency judgments. Business was at a standstill; bread lines were in the streets; there were civil disturbances; the Government in Washington was paralyzed.

Such was the situation when Mr. Roosevelt became President on March 4, 1933. His first act was to close all the banks until the new Government had time to move. The bankers and industrialists went to Mr. Roosevelt on their knees to be saved. Be it said to his credit, Mr. Roosevelt spurned any treatment of the mere symptoms of the country's troubles; he sought to correct the real underlying causes. The following is a summary, though not necessarily in chronological order, of the new policies adopted to put our economy on a sound basis.

Banks had to be reopened. Through the Reconstruction Finance Corporation their capital structure was strengthened. This was effected by means of loans and the buying by the Reconstruction Finance Corporation of preferred stocks in thousands of banks. Thus the banks were spared enormous losses that would have resulted from forced liquidation of loans, securities, etc. They were able to await more favorable markets which followed. Next came Federal insurance of bank deposits. While the amount of individual insurance in any one bank is limited to $5,000, statistics show that numerically 95 percent of the depositors come within this limitation. The run on banks always comes from the small depositors. By insuring their deposits, this nightmare of the bankers has been eliminated. Today the condition of the banks, on the whole, is sound. The Reconstruction Finance Corporation is still working on the few remaining sore spots.

The United States went off the gold standard. Then followed a rather clumsy way of revaluing gold, until the present price of $35 an ounce had been reached, as against the 99-year price of $20.67 per ounce. The President had received from Congress the power to increase the price to a maximum of $41.34 per ounce and to issue $3,000,000,000 in paper currency. At last the United States had, within limits, a mobile weapon to use against any unfavorable action of the pound sterling against the dollar. Theretofore the United States had been bound by the statutory price of $20.67 per ounce of gold. England, too, had until very recently the equivalent statutory price of, roughly, 84 shillings per ounce, but the price in the free gold market in London was at the same time roughly 150 shillings per ounce. It is the free gold price, not the statutory price, that establishes the international value of the pound. We have no free gold market. The United States statutory price of gold, therefore, establishes the international value of the dollar. In this respect we are still at a disadvantage with England, save for the power of the President to increase the price up to $41.67 per ounce. The effect of this revaluation or devaluation of the dollar to 59.06 percent of its former gold parity was to increase the value of the pound in terms of the dollar. Commodity prices increased, and the farmers were again prosperous. But with increasing prices came increasing production throughout the world—the old vicious circle again—and prices dropped.

The organized farm groups are clamoring again for an increase in the price of gold in terms of dollars. This expedient had worked in 1933, but it is evident to the most casual thinker that with present circumstances entirely different than in 1933, it could not possibly succeed again, excepting, perhaps, briefly and to a very limited degree.

The evils of investment banking, financing, stock jobbing and manipulation, which had been a canker on our economy for several generations, were a main cause of the 1929 crash. In the early days of the New Deal, regulation of the issuance of securities under the Federal Trade Commission was inaugurated. It was not, however, until the passage of the Securities Exchange Act and the public-utilities bill that the Government really had power to clean up this Augean stable. The Securities Exchange Commission has been an outstanding success since its inception. Its real work has just started.

The youth of the country was demoralized. Upon graduation from schools and colleges, there was little opportunity of securing gainful employment. The creation of the Civilian Conservation Corps has helped to tide hundreds of thousands of young men over a dangerous period.

The Social Security Act will prevent, eventually, misery and starvation in old age, but it is of no benefit now and the cost is

terrific. Changes are contemplated that should remedy these defects. Provisions for old-age pensions, in conjunction with the States is a stop gap that has become a political football. Unless the trend is checked forthwith the States and the Federal Government will go bankrupt.

The Home Owners' Loan Corporation has saved foreclosure on hundreds of thousands of homes and farms. Construction of new homes has been facilitated and made cheaper through the Federal Housing Administration. Billions of dollars have been spent in public works to stimulate industry and to give employment. Labor was given rights it never had before. While these rights have been abused to an extent, and organized labor itself is split into two hostile camps, the establishment of the National Labor Relations Board is a step in the right direction. The wage and hour bill, too, is an advance, although there are many rough spots still to be ironed out.

All of the legislation outlined above was definitely constructive—and will, in time, cure many of the deep-seated abuses from which our national economy has been suffering for years.

There has been, however, no solution of the Nation's most serious problems, unemployment and agriculture. In the urban centers are millions with no opportunities for work. The farmers produce crops for which there are only limited markets, and even then at prices which do not cover the costs of production.

From the early days in its history as a Nation the United States has had a series of financial panics, which occurred practically every 20 years from 1837 up to 1913. The country then had undeveloped frontiers which furnished not only a haven, but an opportunity for the victims of these business crises. There came the time in 1913, as another panic was developing, when these frontiers were closed. There were no more. Serious consequences were postponed by the World War in 1914, which produced unprecedented demands for munitions and commodities. As stated before, loans to foreigners carried along our export markets until the bubble burst in the fall of 1929. The millions thrown out of employment huddled in cities, had no hopes, as formerly, of being able to start life anew in undeveloped rich lands of the West and Northwest. They were faced with the alternatives of starvation, or becoming objects of private and governmental charity. Hunger is the surest spark to set off a revolution. Private charity could not cope with the gargantuan task; the Government had to step in. Local and State governments were unable to carry the full load, so the Federal Government assumed the burden.

As a temporary expedient, the policy of unemployment relief is correct. As a permanent fixed charge on the revenues of the Federal Government, it can lead only to eventual inflation and bankruptcy. There is little chance of expanding the export markets for manufactured articles unless we are willing to import something from our foreign customers. We cannot hope to make substantial sales for gold. We have far too much of the world's supply now. Mr. Hull has endeavored to reestablish world trade through reciprocal-trade agreements. This is a step in the right direction. It would have been far more effective and easier 10 years ago, before the nationalistic feeling for economic self-sufficiency had taken such a firm hold on the nations throughout the world, and when monetary supplies of gold were more evenly distributed. New inventions (such as the automobile at the turn of the century) could result in the establishment of new industries and thereby reduce the ranks of the unemployed by hundreds of thousands. However, no inventions with such far-reaching effects appear in the offing. It would seem, therefore, that we shall have with us always many millions of unemployed, unless the problem is attacked from some new angle. The suggestion has been made often that the standard of living in this country will have to be reduced. Such a step would involve lower wages, which, it is argued, would reduce costs and thereby stimulate greater consumption. This, in turn, would stimulate industry and take up, to some degree, the slack in employment.

To reduce the standard of living of our labor is not only contrary to American ideals, it would be suicide for any political party to endeavor to put it into effect. A totalitarian government such as Germany can squeeze labor and reduce the standard of living, but even in Germany there is a limit. That is evidenced now by labor disturbances and by passive resistance resulting in lower production in spite of longer hours of labor. This method of reaching a solution in the United States appears impossible.

The lend-spend theory of the administration is another temporary stopgap. The defeat of that measure in Congress brings clearly to the fore old-age pensions as a possible solution. Employment would be restricted to those between the ages of 18 and 55. Everyone over 55, from Henry Ford down, would cease working and be the recipient of a pension. The increase in the span of life and the lowering of our birth rate would make such a solution an intolerable burden on the workers, and would drain dry the sources of our national wealth.

We have another problem, equally difficult—agriculture. Up until 1930 the United States was a substantial exporter of prime commodities such as cotton, wheat, corn, meat, and so forth. Now, Russia, Argentina, and Brazil have become large growers of cotton. Egypt and India produce more cotton than ever before. There is a world overproduction of this commodity. Moreover, these cotton-producing countries have much lower costs which American cotton cannot hope to meet. Australia, Canada, Argentina, and Russia have taken away our foreign wheat markets. We have attempted to solve this problem by reducing acreage, paying the farmers for cooperation through subsidies which now amount to over a billion dollars a year. As planted acreage decreased intensive cultivation increased, so that we can now produce larger crops on millions fewer acres planted. We find ourselves, therefore, with greater and greater surpluses, lower prices, and an expenditure by the Federal Government of over a billion dollars per year. In spite of these vast expenditure the problem is not one step nearer a solution than it was in 1932.

It is admitted that substantial relief for unemployment and agriculture was necessary. But why, in the meantime, have the basic causes of our present low economic state not been studied and a permanent solution found? Mrs. F. D. Roosevelt has made one of the wisest observations of these troublesome times, "We are only buying time to think." In 7 years that time has cost us $20,000,000,000. But we have done no thinking.

People of brains must forget political, economic, and social differences and make desperate efforts to find a solution before we are overtaken by bankruptcy or revolution or both.

The Youth Problem and N. Y. A.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

MEMORANDUM ON THE YOUTH PROBLEM AND THE ACTIVITIES OF THE NATIONAL YOUTH ADMINISTRATION

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum on the youth problem and the activities of the National Youth Administration.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

The National Youth Administration was set up to provide opportunity to young people. It was established to remedy a vast depletion of opportunity and to conserve and protect the youth of our country, by providing useful work, and to enable young people to "earn while learning."

In developing the N. Y. A. program, National Administrator Aubrey Williams, who has been its head since it was set up by President Roosevelt, has emphasized the twofold nature of the problem—the young people who are actually out of school, in the labor market and unemployed, and the young people who cannot continue their education without assistance and who will therefore add to the unemployed group unless they can stay in school. For those already in the labor market the problem is best met by providing them with part-time work on socially useful projects to develop facilities and services that they and their communities need. Properly tied in with the educational system, these projects benefit not only the public, but also give the young people themselves basic training in skills and the opportunity to develop proper work habits and attitudes. For those desiring further schooling, the problem is best met by part-time work to enable them to remain in school, at tasks which supplement their academic work through the valuable process of earning while learning.

MILLIONS GIVEN JOBS

In its first 5 years, which will end June 26, more than two and one-half million young men and women have been employed.

N. Y. A. has employed an average of 500,000 persons, and in the current fiscal year, with an appropriation of $100,000,000, is employing 450,000 college and high-school students, and more than 270,000 out-of-school unemployed between the ages of 18 and 25.

The out-of-school young workers under skilled supervision are constructing community youth centers, cooperative college dormitories, small school houses, vocational-training shops, small home-economics buildings, school-bus shelters, ski jumps, swimming and wading pools, tennis courts, and even huts for the isolation of tuberculosis patients. They are beautifying and improving public parks, laying out recreational areas, improving highways, repairing furniture and other equipment for schools, constructing such recreational equipment as swings or chinning bars or see-saws, and conserving soil and forest resources. Thousands of young women, as well as young men, are working as recreational leaders and assistants, both on public playgrounds and in the game rooms, swimming pools, and gymnasiums of such organizations as the Y. M. C. A.; and they are assisting in understaffed hospitals, libraries, museums, and offices of governmental or service agencies. Other young women are making clothes for needy families, helping to make and serve hot lunches for school children, assisting in nursery schools, and working on art and handicraft projects.

WHAT N. Y. A. MEANS TO YOUTH

The human values derived from N. Y. A. jobs cannot be reported statistically. We know the young people are saved from idlness, many of them from crime, delinquency, and despair. More

important, they learn how to work. In the words of one Texas N. Y. A. worker now employed in private industry:

"I learned how to work. Before I went into the N. Y. A. I had never had any sort of private employment. You taught me to be on time, to give full measure of work for my pay, to obey orders, to be alert. Before I went into the shops I couldn't have held this or any other regular job because I didn't know how important those habits are."

A young woman, a 1937 high-school graduate who was unable to go to college because of lack of funds, worked for N. Y. A. in a nursery school and then through a typing course obtained office work. She said, "I would still be going from place to place asking for work and receiving the same answer, 'Not experienced,' had it not been for the N. Y. A."

HOW MONEY IS SPENT

What do N. Y. A. workers do with their earnings? Many surveys have established the answers. First, they help at home, overnight placing themselves on the asset side of the family ledger. Next, most of these young people, after wearing hand-me-downs for years, buy themselves some clothes and the other necessities of modern life. Here is one young man's description of what his N. Y. A. job has meant to him:

"Maybe you don't know what it's like to come home and have everyone looking at you, and you know they're thinking, even if they don't want to say it, 'He didn't find a job.' It gets terrible. You just don't want to come home * * *. But a guy's gotta eat some place, and you gotta sleep some place * * *. I tell you, the first time I walked in the front door with my pay check, I was somebody!"

"Usually, after about the second pay check," an N. Y. A. supervisor said, "a boy will come to work with a new pair of trousers. They probably cost him two or three dollars, but they're his, and he bought them with his own money. Maybe on his next wages he'll get a pair of shoes. The girl will blossom out in a $2.95 dress. You can't possibly know what it means to her. We notice that she keeps herself cleaner, that her hair isn't straggling all over the place. You can actually see shoulders straightened up when these boys and girls appear with their new clothes."

The annual cost per out-of-school youth to the Federal Government, including administrative expenses, based on current operations, is $268.80. In addition, local agencies acting as cosponsors for N. Y. A. public projects, expend an average of $52.08 a year as their contribution.

WORK FOR STUDENTS

The part-time student work program, administered by school officials, provides monthly wages of $3 to $6 a month to secondary school students, and $10 to $20 a month for college students. One out of every ten college students in the country is paying part of his way with N. Y. A. earnings, and nearly as high a percentage of high-school students.

A total of 29,999 educational institutions—28,301 high schools and preparatory schools and 1,698 colleges and universities—are participating in this program. The offer of these projects has been accepted by practically every non-profit-making, tax-exempt, bona fide educational institution in the country. These student workers perform a wide variety of duties in assisting their schools to operate. They collect and prepare classroom material, and otherwise expand school functions not now covered by the operating budgets of the schools. They assist in preparation of supplementary reading material, prepare classroom exhibits, repair books, expand library service, and do much of the routine work that takes teachers away from teaching.

These workers also aid in repair and remodeling of buildings, school facilities, and classroom and laboratory apparatus. They perform valuable research work, help in school clinics and hospitals, assist in such courses as domestic science and home economics, maintain office records and files, and assist in general office work.

MAKE HIGH GRADES

A country-wide survey of scholarship records of N. Y. A. college and graduate students in 666 institutions showed that these students as a group received higher grades than the student bodies as a whole in 80 percent of the colleges. Two-thirds of the N. Y. A. students had scholastic averages that placed them in the upper half of the student body.

PLACEMENT SERVICES

N. Y. A. also operates a guidance and placement program to help all young persons into private employment. It collects facts on various occupations and industries which are made available to teachers and young people seeking such information. Special job information and vocational guidance classes are organized in some States, and consultation services have been established in many places. Junior job placement services for youth have been set up by the N. Y. A. in 187 cities and in 41 States as a part of the State employment services, and many of these have been taken over and continued by the States without cost to the N. Y. A. These junior job services in the last 4 years have registered nearly 667,000 young people, have placed 277,000 of them in private jobs, and have visited approximately 128,000 employers while seeking jobs. All out-of-school young persons employed on N. Y. A. are registered with these offices, which keep informed of the nature of work experience provided by N. Y. A. and in turn advise N. Y. A. of the types of jobs available in private industry.

MUST TAKE JOBS

N. Y. A. youth workers are required to take jobs in private industry if offered, even when these jobs are temporary or seasonal. During the fiscal year 1939, 254,000 young people left N. Y. A. projects, nearly all of them voluntarily, and most of them to take jobs or return to school. In the first 7 months of the fiscal year 1940, 154,820 young people left N. Y. A. out-of-school work projects, more than 30 percent of them to take private jobs. This separation rate is more than 9 percent a month, or more than 100 percent a year. This turn-over made it possible to employ 415,000 different young persons last year, although the average monthly employment was only about 219,000.

The problem faced by N. Y. A. is the largest single segment of unemployment. Thirty percent of all the unemployed are between 15 and 24. Hundreds of thousands of the 2,000,000 persons who leave school every year are unable to get jobs. In recent years, according to the estimates of the American Youth Commission, a nongovernmental research body, there have been 4,000,000 unemployed young people looking for jobs and not getting them.

MANY MORE NEED ASSISTANCE

This youth unemployment is concentrated among low-income families. A survey by N. Y. A. State administrators, covering local relief agencies, employment offices, school authorities, and county farm agents, as well as N. Y. A. records, showed that in January 1940 there were 340,000 young persons certified as in need of employment who could not be put on N. Y. A. projects for lack of funds. In addition, this survey developed an estimate of 2,119,000 more not certified but who were unemployed members of low-income families. These figures, of course, do not include the nearly 300,000 in the C. C. C. and an equal or larger number of young heads of families on W. P. A. pay rolls.

COMMUNITY IMPROVEMENTS

The out-of-school N. Y. A. program alone cooperated with more than 5,000 local communities during the 1939 fiscal year to provide better educational facilities, in addition to far-flung activities in development and extension of recreation, health and safety, conservation, and charitable institutions. More than 4,000,000 articles of hospital supplies were produced and 277 small hospital and medical buildings were constructed.

Young women working for N. Y. A. last year served nearly 19,000,000 school lunches to needy children who otherwise would have been improperly fed or hungry.

Highway travel has been made safer by N. Y. A. projects such as road and street repair, construction of curbs, gutters, guard rails, and parking areas. Contributions to air travel have been made through the making of airway markers, improvement of airports and construction of seaplane floats.

N. Y. A. sewing projects turned out 1,628,765 articles of clothing in the year for distribution to needy families through local agencies, in addition to the production and repair of 539,186 household articles.

THIRTY THOUSAND IN RESIDENT CENTERS

Resident training centers, now employing 30,000 out-of-school young people, were developed by the N. Y. A. to bring together young persons from small communities and rural areas for more intensive training. The workers live at the project site and wages are established to provide for food and other living expenses, with from $8 to $10 a month paid in cash. These projects have made it possible to provide better health facilities, supervision, and instruction than are available at smaller projects located near their homes. There are 575 resident centers in operation in 44 States, with from 20 to 500 workers employed in each.

Resident project work is of a wide variety, including shop work of every sort, agricultural training, conservation, domestic science, child care, sanitation, health, and general homemaking. In the shops, workers gain experience using tools and equipment, trade terms, shop arithmetic, safety practices, drafting, and general shop practices under actual production conditions. On all resident projects, the courses are on nonpaid time but are related as directly as possible to the work, and designed to give a well-rounded, practical experience.

Reciprocal-Trade Agreements and American Agriculture

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

STATEMENT BY HON. HARRY S. TRUMAN, OF MISSOURI

Mr. THOMAS of Utah. Mr. President, on behalf of the Senator from Missouri [Mr. TRUMAN], who is necessarily absent, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the Senator from Missouri, together with analyses of the effect of reciprocal-trade agreements upon farm exports and imports.

There being no objection, the statement and analyses were ordered to be printed in the RECORD, as follows:

STATEMENT BY MR. TRUMAN

During the recent debate in connection with House Joint Resolution 407, to extend the Reciprocal Trade Agreements Act for an additional 3-year period, charges were made by opponents of the measure that domestic agriculture has been injured by the operation of the act. It seems self-evident that if the trade-agreements program has been in fact injurious to American agriculture as claimed, opponents of the proposal to extend its operation another three years would produce facts and figures to support their charges. None have been produced. Why? it may be asked. The answer is simple, because in reality, throughout the entire trade-agreements period domestic agriculture has been substantially aided by the trade-agreements program.

The tariff is a highly complicated and technical question which unhappily has been used in the past to serve political ends at cross purposes with national welfare. The present administration in 1934 took the lead in world commercial relations in an intelligent and practical manner and placed the adjustment of tariff duties in the hands of the most competent men available for the purpose, men beyond the reach of political logrolling and tariff lobbying at the expense of national welfare.

The following analyses prepared by Mr. Robert B. Schwenger, of the Department of Agriculture, show in a striking manner the shallowness of the charges that trade agreements are injurious to American agriculture.

HARRY S. TRUMAN.

[From The Agricultural Situation, U. S. Department of Agriculture, vol. 22, No. 12, December 1938]

FARM EXPORTS UNDER TRADE AGREEMENTS

(By R. B. Schwenger)

In spite of the distorting effect on trade data produced by droughts, fluctuations in industrial activity, and a number of other factors during the past 4 years, available data on foreign trade in agricultural products indicate that trade agreements have substantially benefited American farmers. Agricultural exports to countries with which trade agreements were in effect by 1937 have risen many times more rapidly than those to other countries. The trade agreements have been drawn up in such a way as to prevent imports of commodities competitive with domestic farm products from disturbing American markets. The four agreements concluded during 1938, especially that with the United Kingdom, should greatly increase the extent to which farmers benefit from the trade-agreements program.

The following table compares the course of our trade with trade-agreement countries to that of our trade with other countries. Agreements with the 16 countries considered separately in the table were all in effect by August 1937. Most of these agreements went into effect during 1936. Agreements concluded during the current year are not considered, because none of them has appreciably affected data for the period shown.

Exports of United States farm products to the 16 countries rose by $102,000,000, or 55 percent, from the fiscal year 1935–36 (when only 3 of the agreements were in effect throughout the year) to the fiscal year 1937–38. Farm exports to all other countries rose by only $20,000,000, or 3 percent, for the same period. In the case of nonfarm products, there was little difference between the increase in exports to trade-agreement countries and that in exports to other countries.

Since our largest farm export is cotton, which did not suffer greatly from foreign trade barriers and could not, therefore, be directly benefited by trade agreements to any large degree, figures for farm exports other than cotton are significant. These are presented in the following table, where percentages of increase for exports to trade-agreement countries and non-trade-agreement countries are seen to be 108 percent and 38 percent, respectively.

United States foreign trade with trade-agreement countries[1] and with other countries

	Year ended June 30—				
	1935–36	1936–37	1937–38[2]	Increase (+) or decrease (−), 1937–38 over 1935–36	
UNITED STATES (DOMESTIC) EXPORTS					
	Million dollars	*Million dollars*	*Million dollars*	*Million dollars*	*Percent*
Of all commodities:					
To the 16 countries	805	1,034	1,236	+431	+54
To all other countries	1,570	1,757	2,123	+553	+35
Of farm products:					
To the 16 countries	186	207	288	+102	+55
To all other countries	580	525	600	+20	+3
Of farm products other than cotton:					
To the 16 countries	98	110	204	+106	+108
To all other countries	269	239	372	+103	+38

United States foreign trade with trade-agreement countries and with other countries—Continued

	Year ended June 30—				
	1935–36	1936–37	1937–38	Increase (+) or decrease (−), 1937–38 over 1935–36	
UNITED STATES IMPORTS (FOR CONSUMPTION)					
	Million dollars	*Million dollars*	*Million dollars*	*Million dollars*	*Percent*
Of all commodities:					
From the 16 countries	934	1,194	970	+36	+4
From all other countries	1,274	1,698	1,361	+87	+7
Of agricultural commodities:					
From the 16 countries	468	600	454	−14	−3
From all other countries	674	937	701	+27	+4

More than ordinary caution must be exercised in drawing conclusions, from these figures, about the effects of trade agreements. Unusually wide fluctuations have occurred in two other factors affecting the trade. In the first place, two of the greatest droughts in our history held down farm exports and boosted competitive imports from 1935 to 1937, while bountiful harvests in 1937 and 1938 have had the reverse effect on our trade. In the second place, the effect of these ups and downs in production has been magnified by the ups and downs of general economic activity. Our short crops were marketed during years of exceptionally good general demand; so that the shortage of exportable supplies and the need for imports were even greater than would otherwise have been the case.

On the other hand, our bumper harvests were faced with low industrial production, high unemployment, and an inactive market; so that exportable surpluses mounted rapidly and imports fell to negligible proportions. Hence it is important to carry this analysis further than the general changes in trade illustrated by the foregoing tables. Such further analysis, while not conclusive, seems to support the favorable conclusions indicated by the general figures.

Of the $106,000,000 increase in our exports of farm products other than cotton to the 16 trade-agreement countries during the period under consideration, the largest part (a rise of $45,000,000 or 141 percent) was recorded for exports to Canada. Practically all of this increase occurred in items upon which Canadian duties were reduced by the terms of the trade agreement. Furthermore, expansion in the quantity of our exports to Canada of some of the leading commodities on which Canadian duty reductions were granted was proportionately much greater than the expansion of our exports of those same commodities to the rest of the world. This was true not only for some of the drought-affected commodities such as wheat and oats, which expanded by enormous percentages under the influence of 1937 crops, but also of a number of other leading items such as grapefruit and fresh apples.

These facts are especially significant because Canada's economy is closely linked to our own. Her cycle of business activity has been very similar to that in the United States and, to some extent at least, her farm production suffered from the same droughts which we experienced. Consequently, our farm trade with Canada might be expected to be distorted somewhat less by these two factors than has that with other countries.

The second largest part of the $106,000,000 increase occurred in exports of farm products other than cotton to the Netherlands, which rose by $28,000,000 or 224 percent. Here again, the increase took place in items upon which the Netherland duties were reduced by the terms of the trade agreement. The third largest increase occurred in exports to Belgium, which rose by $19,000,000 or an increase of 208 percent. The fourth largest increase was a rise of $8,000,000 or 53 percent in our exports to Cuba.

Not all trade-agreement countries showed equally favorable results. Our farm exports to 5 of the 16 countries (Colombia, France, Haiti, Honduras, and Nicaragua) made a less favorable record than did those non-trade-agreement countries as a whole. It is to be noticed, however, that, except for France, these are predominantly agricultural countries where farm products could not, by the very nature of international trade relations, figure prominently in the trade agreements. In the case of France, the poor showing was, of course, due to the failure of French economic activity to recover substantially from the 1932 depression.

Corroboration for the conclusions to which the above figures seem to point is found in the import statistics of the trade-agreement countries themselves. Such statistics are available from 1934 to 1937 for the 11 most important of the 14 countries with which trade agreements were in effect by 1936. In 10 of these 11 countries, the United States proportion of total imports has risen since the conclusion of the trade agreements. The only exception is Brazil, where large sales by Germany had, until the beginning of 1938, increased its share in the Brazilian market and reduced the share of other countries, including the United States. The United States proportion of the total imports of all of the 11 countries rose steadily from 16.5 percent in 1934 to 20.1 percent in 1937.

[From the Agricultural Situation, U. S. Department of Agriculture, vol. 23, No. 1, January 1939]

FARM IMPORTS UNDER TRADE AGREEMENTS

(By R. B. Schwenger)

The reciprocal trade agreements program of the United States is aimed at the increase of mutually beneficial trade between the parties to the agreements.

Hence, it is natural to expect them to increase not only our farm exports (as data presented in the December issue of the Agricultural Situation indicate that they have) but to increase our farm imports as well. It is not desirable, however, that they should increase imports of farm products which can be produced effectively in this country and it is especially undesirable that they should have a disruptive influence on domestic farm markets. An examination of available data indicates that the agreements have tended to increase farm imports but that safeguards included in the texts of the agreements have prevented any increases which might have disturbed domestic markets.

At first glance, the data for farm imports from trade-agreement countries and nonagreement countries appear to show a more favorable situation for the latter than for the former over the past 3 fiscal years. From 1935–36 to 1937–38, total farm imports from the 16 countries with which trade agreements were in effect by August 1937 decreased by 3 percent, while those from all other countries increased by 4 percent. This was due almost entirely, however, to lower imports from Canada and Cuba where, as is discussed below, the trade agreements have not been responsible for the reductions.

When the data on farm imports are broken down to show Canada and Cuba separately from the other trade-agreement countries, as in the following table, a rise of 22 percent is shown for trade-agreement countries other than Canada and Cuba.

United States imports from trade-agreement countries and other countries[1]

	Year ended June 30—				
	1935–36	1936–37	1937–38	Increase (+) or decrease (−), 1937–38 over 1935–36	
				Amount	Percent
United States imports (for consumption) of agricultural commodities:					
From 16 trade-agreement countries	$468,000,000	$600,000,000	$454,000,000	−$14,000,000	−3
From Canada and Cuba	204,000,000	249,000,000	131,000,000	−73,000,000	−36
From 14 other trade-agreement countries	264,000,000	351,000,000	323,000,000	+59,000,000	+22
From nonagreement countries	674,000,000	937,000,000	701,000,000	+27,000,000	+4

[1] Belgium; Brazil; Canada; Colombia; Costa Rica; Cuba; El Salvador; Finland; France, including her colonies, dependencies, and protectorates other than Morocco; Guatemala; Honduras; Haiti; Kingdom of the Netherlands; Nicaragua; Sweden; and Switzerland.

The decline in imports from Cuba is less surprising than it might at first appear, since the trade agreement was in effect throughout both of the years being compared. If we set 1933, the first full pre-agreement year, against 1935, the first full post-agreement year, total United States imports from Cuba rose from $58,000,000 to $111,000,000, a rise of 91 percent. For the same years total imports from all countries rose by only 41 percent. The corresponding figures for agricultural imports were a 93-percent increase from Cuba and a 43-percent increase from the rest of the world. Agricultural imports from Cuba during 1937–38 were 80 percent larger than during 1933. Thus, the Cuban agreement is no exception to the rule that trade agreements tend to expand trade in both directions.

The decline in imports from Canada did not occur, for the most part, in items upon which United States duties were reduced by the terms of the trade agreement. It occurred because a number of commodities which were imported heavily during the period of drought shortage in the United States (1935–37) have since been imported in only negligible quantities. Imports of commodities upon which United States duties were reduced under the agreement actually rose by 12 percent between 1935–36 and 1937–38.

The possibility of increased agricultural imports from trade-agreement countries disrupting domestic farm markets, however, has been carefully guarded against not only by refusing to reduce United States farm tariffs sufficiently or in such a way as to disturb domestic markets but also by introducing specific safeguards where reductions were made on the more important so-called competitive agricultural imports. Sugar, the largest item of trade affected by such reductions, is an excellent example. The reduction in the duty on sugar imports into the United States under the terms of the trade agreement with Cuba went into effect only after quantitative country quotas had been imposed on all sugar imports. These quotas prevented the lowered duty from resulting in any expansion of the quantity of sugar imported.

Another important case is that of live cattle, upon certain classes of which the United States duty was lowered by the terms of the trade agreement with Canada. The reduced duty applies only to a specified quantity, a very small fraction of our total cattle supplies. Even in years when this quota can be filled, it is too small to have a significant effect on domestic markets. Furthermore, in the second Canadian agreement, effective January 1, 1939, provision is made for the reduced duty to apply to only a specified number each quarter.

Other important tariff concessions which are similarly guarded include those on potatoes and grain. The concession in the duty on Cheddar cheese under the Canadian agreement has been criticized because it was not guarded by a tariff quota. Imports under the reduced duty, however, even in drought years, have represented a lower proportion of domestic production than during the 5 pre-agreement years, 1925–29. The proportion during the first 6 months of 1938 was one-third of 1 percent of domestic Cheddar cheese production. Hence, such criticism appears to be unwarranted.

In evaluating the figures for total imports of agricultural products from countries with which trade agreements have been concluded, it is important to remember that, except for a few countries such as Canada and Cuba, most of the agricultural products involved consist of such commodities as rubber, coffee, cacao beans, and other tropical products, in which the American farmer is interested as a consumer rather than as a producer.

When the 1938 trade agreements, particularly that with the United Kingdom, have been in effect long enough for a statistical record of their operations to be available, it is anticipated that the record will indicate much greater benefits to American farmers, especially through expanded farm exports, than they have received under the first 16 agreements. Those agreements covered countries which took only 28 percent of our agricultural exports during 1929. Agreements in effect on January 1, 1939, will cover countries that took 55 percent of those exports.

[Supplement to articles in the Agricultural Situation for December 1938 and January 1939]

FOREIGN AGRICULTURAL TRADE UNDER TRADE AGREEMENTS

Data on United States foreign trade in agricultural commodities during the fiscal year 1938–39 continue to support the conclusion (presented in the December 1938 and January 1939 issues of the Agricultural Situation) that trade agreements have benefited American farmers. Agricultural exports to countries with which trade agreements were in effect throughout the year were 15 percent ($28,000,000) higher than during 1935–36. Agricultural exports to all other countries declined 19 percent. If cotton is excluded, exports to the 16 trade-agreement countries rose 69 percent, and those to all other countries 26 percent. Agricultural imports declined about one-eighth from both the trade-agreement countries and others. The decline in imports from trade-agreement countries, as a group, was primarily the result of the decrease in agricultural imports from Canada and Cuba. Agricultural imports from the 14 other trade-agreement countries, taken together, rose 11 percent.

United States foreign trade with trade-agreement countries[1] *and with other countries*

Political Issues in the Coming Election

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Political Issues in the Coming Election, delivered by the junior Senator from Florida [Mr. PEPPER] at Middletown, Conn., on March 8, 1940, before the annual parley conducted by the Wesleyan parley committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Emerson has said that an institution is but the length and shadow of one man as Mohammedanism of Mohammed, Confucianism of Confucius, Christianity of Christ.

That's the reason that the issue in the coming campaign is one magnetic and magnificent name—Franklin D. Roosevelt.

A new voice began to cry in the economic and spiritual wilderness of America in 1932. There was an evangelical note in that voice. It echoed in the deep wells of human sentiment. It kindled the dying embers in the human heart.

Hear that voice speaking through the Democratic platform of 1932 with the fervor of the early patriots, "those who were responsible for those policies have abandoned the ideals on which the war was won and thrown away the fruits of victory, thus rejecting the greatest opportunity in history to bring peace, prosperity, and happiness to our people and the people of the world. They have ruined our foreign trade, destroyed the values of our commodities and products, crippled our banking system, robbed millions of our people of their life savings, and thrown millions more out of work, produced widespread poverty, and brought the Government to a state of financial distress unprecedented in time of peace.

"The only hope * * * is a drastic change in economic governmental policies.

"We believe that a party platform is a covenant with the people to be faithfully kept * * *."

In the Democratic platform of 1936 we hear the rising crescendo of that voice uttering a new declaration of independence for the people of America.

"We hold this truth to be self-evident—that the test of a representative government is its ability to promote the safety and happiness of the people. * * *

"We hold this truth to be self-evident—that government in a modern civilization has certain inescapable obligations to its citizens, among which are:

"(1) Protection of the family and the home.

"(2) Establishment of a democracy of opportunity for all the people.

"(3) Aid to those overtaken by disaster.

"These obligations, neglected through 12 years of the old leadership, have once more been recognized by American Government. Under the new leadership they will never be neglected."

For 7 years, now, that voice has been the voice of America; the hope of a Nation's underprivileged; the succor of a Nation's helpless; the assurance of a Nation's troubled.

In words which Jefferson himself might have written, those platforms thundered against monopoly, an unfair trade practice which threatened the independence of labor, the small producer, and the distributor; against financial interests fleecing the American people of their savings; by the sale of securities issued both at home and abroad; against excessive charges by utility companies; against a vicious banking system, which violated the confidence and jeopardized the savings of the American public; against an iniquitous tariff law which gave undue and abused privilege to a class at the expense of the whole people. And equally clearly, candidly, and courageously did that platform covenant with the American people that it would use the power of the people's government to give a greater, actual, practical security to America's citizens; those citizens struggling with the superior forces throttling their agriculture; those citizens struggling with the dominating forces of economic maladjustment which had thrown them out of employment and closed to them avenues of economic opportunity; to those citizens who aspired to a greater liberty of leisure gained by the reduction of excessive hours of labor; the kind of security that could be provided to the individual citizen only by unemployment and old-age assistance. Likewise in the same spirit did that platform pledge the Democratic Party to the restoration of the citizen's private liberty curtailed by the eighteenth amendment, and reiterate again democracy's fundamental doctrine of liberty, "equal rights to all, special privileges to none."

In those platforms there is truly a new declaration of independence—the faith of the people's party, that the peoples' government was concerned not merely with the technical, but with the larger liberty and the effective freedom of the American citizen. For obviously, if the American family might enjoy its traditional freedom around the sacred hearthstone of the American home, it was not enough that the Government should not itself trespass upon that liberty; the Government must see to it that neither the kidnaper, the marauder, nor any man who would take away that liberty by any kind of injustice, physical, moral, or economic, shall be permitted so to do. What higher form of freedom, what better state of liberty could the citizen be afforded under a true democracy of opportunity for all the people? Who more than Thomas Jefferson would have appreciated such a declaration of policy, and such a covenant of faith?

Surely, there is nothing inconsistent with the noblest conception of liberty for a party to assume an obligation to aid those overtaken by disaster. You may be sure that the American people are not easily fooled. Well do they know what liberty is their inheritance, what freedom they have the right to enjoy. So when the American people have given to these declarations of party objectives approval never paralleled in American history, you may also be sure that these concepts of individual liberty are in high accord with those which are deeply imbedded in American hearts.

The cyclonic forces which threatened to engulf the American people and the American social and economic order in March 1933 began to form when Alexander Hamilton and his associates wrote their political concept into the fabric of American political life. The economic despotism which some private enterprise wielded, the financial tyranny which the masters of the Nation's finance exercised at the end of 1932, the shameless abdication by the American Government of its duty to prevent these aggressions, and to preserve the traditional liberties of the individual American citizen prior to 1933, all had their origin in the views of the Hamiltonians, that the form of this Government should be a kind of fascism—ruled by the industrial and financial interests—and that the Government, when it did not especially contribute to and enhance the power of these ruling State corporations, should at least assure them the protection of the rule of the jungle, that "He may take who has the power, and he may keep who can."

Against a state of affairs provoked by these conditions and accentuated by the closing of the American frontier more than one-third of a century before; a state of affairs which for the first time drove the dark shadows of threatened revolution across the folds of the American flag—an otherwise peaceful nation in 1932 rose in righteous wrath.

It demanded that the money changers be driven out of the temples of finance; that business abuses be stopped, and at least a semblance of the moral law be applied to what ambitious and powerful men could do under the guise of business. It demanded the democracy reassert itself, and the people regain some control, at least, over their economic and political destinies. It demanded that the economic structure of the United States be built from the bottom up, and not from the top down. It demanded that the currency of this Nation be put to its legitimate purpose of serving the business needs of an industrious people.

It demanded that the rewards of business enterprise be fairly distributed and that the burden of toil be lightened upon the back of labor. It demanded that the true principles of democracy be applied to the industrial order as well as to the political order. It demanded that our untold resources be applied to the alleviation of human suffering to better homes, better food, better clothes, and better recreation for all the American people, and not just a few. It demanded the preservation for the American citizen of the greatest of American liberties—the right to work and the privilege of being succored in old age, at least to a peaceful death.

It demanded that the marvels of modern science, the genius of current invention and discovery be made the workhouse for a more abundant life for all the men, women, and children of America. It demanded that the door of economic opportunity, which had been jammed shut for decades by an avaricious monopoly, be opened again. It demanded that the Government of the United States be moved from Wall Street to Washington, where the people's Constitution put it. It demanded a revival of true American earnestness and zeal, the resurrection of age-old American ideals and dreams, when the United States was conspicuous for its spiritual wars. It demanded an America that had the spirit of the forefathers in its own crusading breast.

The American people got what they demanded in Franklin D. Roosevelt.

That is the reason that from every nook and cranny of the Nation, growing louder and more determined every day, comes the full-throated voice of the people in the simple and certain refrain "We will not give up Roosevelt."

Of course the people of the United States will not give up Roosevelt. He has restored democracy to this country; he has brought the Government back to the people; he has torn the instruments of power from the ramparts of the greedy and specially privileged. Like Andrew Jackson, he has rescued the Government for the people. Not through the mob but by the orderly processes of democratic government, he has shown ordinary men and women that they have a stake in this Nation; that they have a voice in its Government.

He has shown these ordinary men and women that democratic government really means; that is to say, that their Government, if it will, can keep them from losing their money in any bank; or losing their home under foreclosure; or losing their child from lack of medical care or hospital facilities; or losing their crops, if farmers, from natural hazard; or losing their savings through crooked stock promotors; or losing the right to work as a heritage of America; or losing the produce of their farms to the commodity speculators.

The people know—Roosevelt has shown them—that the way they get along, whether things are getting better or are getting worse, is definitely determined by the way their Government really governs.

Never again will the people of this country let another Hoover fiddle at government while the substance and the hearts of his people are burned up by flames he could have stopped.

What Hoover and his government will have to answer for:

Men and women having all they had sweated out of life gone in a bank failure—their homes torn out of their heart—their families wrecked and scattered. Boys and girls losing their chance of an education, their whole hopes of a decent future gone with the ill wind. Death and disease stalking upon the highway—stalking the wrecked, wasted bodies and blighted lives in every humble lodging. And Hoover afraid to govern, his courage and his character failing him.

Surely he must have seen the whole structure of our national life crumbling underneath his eyes—surely these men in high buildings, who sat astride great empires of wealth and who had access to the best information there was—these men who were his guides and his political masters—surely they must have seen what they were doing to the people of their country.

They either didn't see or were stupid; or they didn't care; or they didn't have the courage to govern and failed the Nation in a place of trust.

On that bleak day in March 1933 it was Roosevelt courage which filled the hearts of America, which braced this Nation for a reversal of its sad course. It was the same courage which made Franklin D. Roosevelt victor in every great crisis of his life. With the sound of that magnificent voice, America with its unerring instinct, knew that the Providence, which has always guided us, had again raised up from the people a leader, strong and brave.

Roosevelt is the issue in America again today. We gladly accept that issue, for Roosevelt is the hope of America.

The Roosevelt record is our bible. It sets forth our faith. It is at once our record and our testament of hope.

The people know that Roosevelt has been the best friend business in the United States has ever had in the White House. From 1933 to 1939 he poured into the empty tills of business in direct Federal expenditures about $26,000,000,000. Note what went with that money:

Food	$8,500,000,000
Housing	4,800,000,000
Household operations	2,350,000,000
Clothing	2,100,000,000
Medical care	900,000,000
Automobiles	900,000,000
Recreation	450,000,000
Furnishings	450,000,000
Personal care	450,000,000
Transportation (excluding automobiles)	400,000,000
Tobacco	400,000,000
Other purposes	100,000,000
Reading and education	300,000,000
Agricultural payments	3,700,000,000

In addition to that staggering aid to business, Roosevelt caused the Federal Government to buy for cash over $6,000,000,000 worth of materials of nearly every kind and character from every part of the Nation as an incident to the Federal program.

That $32,000,000,000 Roosevelt has poured into the lap of business in this country in 7 years in cash and in cash customers.

But Roosevelt has caused this Government to lend to business in the same period another $17,000,000,000 in cash. One billion dollars went to small business, financing foreign trade, electrification and electrical supplies, shipping, and the railroad; $5,000,000,000 went to financial institutions for business, farm, and home; $6,500,000,000 went to agriculture; $3,333,333,333 went to home mortgages; $1,500,000,000 went to public bodies.

That makes $32,000,000,000, plus $17,000,000,000, or $49,000,000,000, that Roosevelt has put out in cash from the Federal Government in 7 years to rehabilitate business in this country. In passing, let it be noted that half of those $17,000,000,000 in loans has already been paid back.

Contrast that record with the Hoover outlay of about $3,000,000,000 for 4 years while business was starving to death. And contrast the people who got the money Roosevelt put out with those who got the Hoover bounty.

The trouble with those opposed to Roosevelt is that when they speak of business they don't mean the business of the masses of the people of this country; they mean the business of the few. They don't mean little business; they mean big business. They don't mean the business of America's 29,000,000 families; they mean the business of America's 200 corporations which own one-fourth of this Nation.

It is the same old habit of the friends of big business which Bryan so eloquently described in Chicago a generation ago, when he said:

"We say to you that you have made the definition of a businessman too limited in its application. The man who is employed for wages is as much a businessman as his employer; the attorney in a country town is as much a businessman as the corporation counsel in a great metropolis; the merchant at the cross-road store is as much a businessman as a merchant in New York; the farmer who goes forth in the morning to toil all day, who begins in the spring and toils all summer, and who by the application of brain and muscles of the natural resources of the country creates wealth, is just as much a businessman as the man who goes upon the board of trade and bets upon the price of grain; the miners who go down a thousand feet into the earth or climb 2,000 feet upon a cliff and bring forth from their hiding places the precious metals to be poured into the channels of trade are as much businessmen as the financial magnates who, in a backroom, count the money of the world. We come to speak of this broader class of businessmen."

The Roosevelt money was poured into the foundations of our economic life and not into the superstructure. It was life-giving nourishment put around the roots of the economic tree and not poured on the leaves. This Roosevelt money went to every city, town, and hamlet, and not just to Wall Street. This democratic principle has proved itself to all the world in these results.

The people know that our national income fell from $81,000,000,000 in 1929 to $40,000,000,000 in 1932. They know Roosevelt immediately stopped the downward spiral and the figure went steadily up to $72,000,000,000 in 1937. In his recent Budget message the President told us that in that period the national income rose 69 percent. Continuing, the President said, "The people paid $3,000,000,000 more in taxes, but they had nearly 10 times more than that, or $30,000,000,000, to spend on other things." This statement deserves a headline.

But when we had reached that happy state, instead of going ahead to the greatest recovery and prosperity in our history, those who teach a false economy, the Budget balancers, complaining of Federal expenditures, prevailed in political counsel, and private enterprise at the same time got too greedy for profit; so, before we knew it, we were in another dangerous downward spiral in 1937, but, thank God, Roosevelt and not Hoover was in the White House, and Roosevelt again applied the mechanics which got us out of the 1932 depression and stopped the decline and again sent the factors of our recovery upward before they approached the depths of the period from 1929 to 1932.

There is the record of two administrations, as clear as a mountain peak. Hoover sat by for 4 years, with only a futile gesture, while conditions grew increasingly worse.

Listen to what President Hoover said on November 21, 1939:

"There is no reason why business should not be carried on as usual."

Again, said President Hoover on December 3, 1929, in his message to Congress:

"We have reestablished confidence; wages should remain stable."

I wonder if that's the kind of confidence those opposing Roosevelt are yearning for?

Again on January 21, 1930, President Hoover spoke:

"The tide of employment has changed in the right direction."

Again on March 7, 1930, President Hoover said:

"All the evidence indicates that the worst effect of the crash on employment will have passed during the next 60 days."

In June 1930 President Hoover told Amos Pinchot and his committee who came appealing for a great expansion of public work that they "had come 6 weeks too late."

In October 1930, President Hoover refused to call a session of the Congress, and said:

"No special session is necessary to deal with employment."

Finally, on December 2, 1930, President Hoover said to Congress, "Economic depression cannot be cured by legislative action or Executive pronouncement."

Here at last was the full confession of the hopelessness and despair on the part of the Government of the United States—the only source the people with their heavy hearts had to turn to to keep them from being crucified in the cruel economic crucible of the day and that Government without even a hope.

How encouraging it is to see Franklin D. Roosevelt by courageous and democratic action twice immediately reverse our Nation's course from the pit of depression to the height of Hoover's prosperity.

The figures don't tell the significance of that story in human terms but the increase in our national income under Roosevelt over what it would have been if it had continued at the 1932 rate is about $139,000,000,000. The people know what this has meant in their lives—to their future.

But big business, offended because it didn't get all the Roosevelt money spent, professes to be on the verge of nervous prostration about the Nation's debt. There is no record of that favored group, in any period of history, in peace or when their country was at war, ever having complained about any Federal expenditure that they got; but now they say, Roosevelt has ruined the country with debt.

The facts about the debts of this country that you hear so much about from those solemn-faced mourners who say our coun-

try is all gone to the dogs, is a very simple story. It was all clearly presented before the House Ways and Means Committee during hearings on the Revenue Act of 1938, page 727.

Gross public debt:	
June 30, 1939	$40,439,532,000
Mar. 3, 1933	20,937,351,000
Increase in gross public debt	19,502,181,000
Increase in Treasury assets:	
General fund balance:	
June 30, 1939	2,838,226,000
Mar. 3, 1933	158,528,000
Balance	2,679,698,000
Proprietary interest in Government corporations and credit agencies:	
June 30, 1939	3,668,238,000
Mar. 3, 1933	2,184,000,000
Difference	1,384,238,000
Exchange stabilization fund:	
June 30, 1939	2,000,000,000
Mar. 3, 1933	
Difference	2,000,000,000
Total increase in Treasury assets	6,630,930,000
Net increase in public debt	13,438,245,000

You remember I said the total increase in our national income between 1933 and 1939 over what it would have been if the rate of 1932 had continued was $139,000,000,000. In the course of that increase in our national income there has been a net increase of $13,438,000,000 in the national debt. Leaving a balance to the good if all the net increase in the national debt from 1933 to 1939 were paid out of the increased national income of about $115,500,000,000. A pretty good trade, I say! And it is well to remember that $2,000,000,000 of that net increase of $13,438,000,000 out of the national debt is attributed to the payment of the bonus which gave justice to the veterans of this Nation.

A simple set of figures, therefore, that one can remember on the fingers of his hand, tells the whole economic story of the last 7 years.

National income, $40,000,000,000 in 1932; $68,500,000,000, in 1939.

Twenty-six billion dollars of cash Federal expenditures between 1933 and 1939, upon the Federal program for recovery and better conditions in the country. Six billion dollars in cash put out in that period by the Federal Government for the purchase of materials to carry on that program. Seventeen billion dollars disbursed in cash by the Federal Government in that time in loans to big business, little business, and agriculture.

Total increase in the national income in that period above what it would have been if the rate of 1932 under Hoover had continued, $139,000,000,000.

Net increase in the national debt in the same period, $13,438,000,000 and $2,000,000,000 of that debt increase going to pay the bonus.

It is well to remember that the Democrats paid the bonus due the soldier boys while the Hoover Administration drove them out of Washington with a bayonet.

A few days ago the brilliant young prosecuting attorney in New York purported to startle the country with the announcement that "our productive plant and equipment have been running down at the heels for the past 7 years at an average rate of more than $1,000,000,000 a year." Mr. Dewey didn't favor the country with an announcement as to how he arrived at that figure or what the source of his authority was. If Mr. Dewey had simply inaccurately, by inadvertence of some sort, quoted a figure and made an error that would be quite understandable and quite forgivable, but in Mr. Dewey's case I am afraid that he didn't quite get the point that his advisers wanted him to make.

The true figures on this subject are easily ascertainable. Let me give you exact figures and the exact source. On pages 40 and 48 of the volume, National Income and Capital Formation, 1919–25, and page 2 of the bulletin, Commodity Flow and Capital Formation, both published by the National Bureau of Economic Research, the following facts are brought out:

Gross capital formation declined from $11,489,000,000 in 1929 to $2,987,000,000 in 1933, or 74 percent. That was in Hoover's day.

Net capital formation declined from plus $4,355,000,000 in 1929 to minus $1,974,000,000 in 1933. By 1937 gross capital formation had recovered to $9,383,000,000—a rise of 214 percent. That was under Roosevelt. Net capital formation had been transformed from a negative figure in 1933 to a positive figure of $3,143,000,000 in 1937. In the period of 1933–38, inclusive, net capital formation was not a negative figure of $7,000,000,000 as Mr. Dewey figured, but a positive figure of almost $3,500,000,000—a trifling error of $10,000,000,000 by the prosecuting attorney of New York. That was under Roosevelt.

You and I are not high-priced accountants, but we can understand that if used machinery is replaced by new machinery, the productive capacity of the machinery is increased instead of decreased. So the productivity of the American economic machine has greatly increased since 1933, not only because of expenditures over and above the depreciation allowance, also because of expenditures equal to the depreciation allowance.

Field ingot capacity increased from 70.2 million gross tons at the end of 1932 to 73.1 gross tons at the end of 1938. The percentage increases in capacity for the more important of these products between the end of 1932 and the end of 1937 was as follows:

	Percent
Seamless pipe and tube	16.7
Tin plate	27.3
Sheet	35.7

These figures were compiled by the American Iron and Steel Institute.

According to the Wall Street Journal of February 16, the steel industry expects to spend $140,000,000 for new equipment this year which will bring "the total spent or to be spent for new equipment since 1934 to about $1,000,000,000.

Petroleum refining capacity increased from 3,890,000 barrels per day at the end of 1932 to 4,509,000 barrels per day at the end of 1938.

Paper and paperboard capacity increased from 13,700,000 tons per year at the end of 1932 to 16,200,000 tons at the end of 1938. The gross during 1938 exceeded the gross during any previous year on record.

Electric power generating capacity increased from 33,900,000 kilowatts at the end of 1932 to 37,500,000 kilowatts at the end of 1939. The industry predicts that the increase during 1940 will be the greatest in 10 years. Everybody knows that American farm capacity has steadily increased since 1932. In fact in 1937 expenditures for new farm machinery and equipment greatly exceeded any previous years of expenditures since 1920, and has remained at a high level since.

Not only has our manufacturing machine not run down at the heels in the last 6 years, it has steadily increased in efficiency. The National Research Project made a most careful study of this question. Their analysis of 59 manufacturing industries show the output per man-hour increased each year since 1932 up to 1936. In that year, 1936, production per man-hour was 18.1 percent greater than in 1932, an average gain of 4.3 percent per year. Checks on recent data indicate that manufacturing output per man-hour today is 25 to 30 percent higher than in 1932, 30 to 35 percent higher than in 1929.

In fact, a few days ago, the Federal Reserve Board put out the fact that the output of our industrial machines in this country exceeded 1929, yet the project facts were that there were a million fewer men employed in turning out the output. It is a matter of common knowledge that we have an industrial machine that will easily produce this work, $90,000,000,000 a year, yet only able to produce now at the rate of $70,000,000,000 a year.

I have not attempted to give any inventory nor to mention what this Government in the last 7 years has done for the health of this country, the Nation-wide, federally supported campaign for the abolition of syphilis, of cancer, of tuberculosis, for maternal care, succor for the blind, aid to dependent children, assistance to the aged; nor have I spoken how the Federal Government has tried with remarkable efficiency to clean up the cesspools of corruption in the Nation's life, to purify the channels of commerce and trade, to keep ever open the doors of opportunities to those who want to enter into and live as part of our economic system; nor have I mentioned what it has done in striking down monopolies, breaking up restraints upon free trade, purifying the whole economic stream of the country.

Is it now time to abandon these objectives? Have they been found unworthy ends? Have we placed an undue emphasis upon the protection of the family and the home; the establishment of a democracy of opportunity for all the people, upon aid to those who are the victims of disaster? Is there no longer any need for government, and by that we mean for society in general, to concern itself about the welfare of individual men, women, and children; about whether they have jobs, decent homes, safe health conditions; about a fair chance to get a foothold in the economic system.

How tragic is the picture confronting us when we lift our eyes to the horizon of what yet needs to be done. There are 29,000,000 American families, consisting of an average of four and a fraction persons per family. Fourteen percent of these families have an annual income of $500 or less; 42 percent an annual income of $1,000 or less; 65 percent an annual income of $1,500 or less; 87 percent an annual income of $2,500 or less; 97 percent an annual income of $5,000 or less; 99 percent, $10,000 or less, as annual income, and 1 percent only, $10,000 or more per year. The figures for farm groups alone would be distinctly less. In some sections of the country the wage of a farm laborer sounds almost like the compensation of the Chinese coolie. With such a standard of living condemning 25,000,000 American citizens to a bare margin of nutritive safety, is there any wonder that there is a wide-spread pellagra and very general under nourishment, that every year there are over a million preventable deaths of somebody's loved ones. There are some 1,300 counties in the United States in which there are no hospital facilities. It is the opinion of the United States Public Health Service that in all probability another 10 years

could be added to the life expectancy of the citizenship of this country by the application of measures known to Medical Science to be wholly, or even partially effective; that the death rate in cancer could be cut in half, infant and maternal mortality with vigorous and intelligent attention could be reduced another 50 percent; that pneumonia, the "Captain of men of death," can be diminished at least 25 percent; that venereal diseases, a major cause of insanity, insecurity, and death, could be practically abolished; that tuberculosis could be practically wiped out; that the improvement of general conditions and the application of proper medical care would relatively abolish insanity; that the life expectancy of our people could be pushed up to 70 years even within the next decade.

Two hundred of the largest corporations of this country still own approximately one-fourth of all the wealth of this country, and about one-half of all the nonbanking corporate wealth of the Nation. One-tenth of 1 percent of the corporations of the United States earn 50 percent of the earnings of all the corporations of the country. In a recent year 4 percent of all the estates transmitted by inheritance represented one-third of all the property descending by inheritance.

In the year 1910, with a population of 92,000,000, there were 32,000,000 farmers in the United States. In 1938, with a population of 130,000,000, the country had only 31,819,000 farmers. There are 650,000 farmers tilling 100,000,000 acres of land where the farms are too poor to yield a decent living. Forty-two percent of the farm population are tenants. An additional 10 percent, rent the land they cultivate. Between 1930 and 1935 there were over 200,000 increase in the number of tenant farmers in the United States.

A territory as large as the State of North Carolina has been eroded into uselessness. There are probably 10,000,000 people in this country of employable age who actually need work, want to work, and can't find a decent job. We have more illiterates than college graduates. Only two and one-fourth million of our population are college graduates; only 5,000,000 are high-school graduates; 32,000,000 have had only elementary-school work. Rural school teachers receive less than $550 a year. Out of a population of 20,000,000 boys and girls from 16 to 24 years of age, nearly 5,000,000 are out of school, unemployed, and seeking jobs.

There are 700,000 crimes committed annually by people under 21 years of age in the United States. We have over 4,000,000 criminals. A felony is committed every 24 seconds. Thirty-six lives are taken every day by homicide. There is 1 murder in our civilized country every 40 minutes. In institutions of juvenile delinquency there are 30,000 inmates; in our State and Federal prisons, 140,000; in State and county prisons there are another 46,000. The total United States annual crime cost is estimated at $15,000,000,000, which is $28,500 every minute—over $40,000,000 every day.

In 1938 we had 300,000 children under institutional care, 350,000 patients in hospitals for mental diseases, 100,000 freeble-minded and epileptics in State institutions, 66,000 children blind and partially seeing, 100,000 crippled children, 500,000 deaf and hard-of-hearing children, another half million delinquent children, 1,000,000 more children with defective speech. Fifty percent of all these defectives lived in rural areas.

Does this picture convince anyone that the time for constructive effort and for a crusade for human welfare is past in America? Can anyone see this sad spectacle without his heart going out to the suffering and the sorrowful, to the neglected, the forgotten, the little-privileged the weak, the victims of their own disabilities, those caught in the fell clutch of untoward circumstance? Remember, there is none of these but who has a human soul and in his heart the echoes of all the left aspirations that have ever reverberated in the consciences of men. Remember that through his heart surges all those human hopes which man has ever dreamed of. Remember that he too, yearns anxiously for his place, though small, in the sun of life—in his country's destiny.

Here is presented, then, a period in our history when, in a way, never approximated in the Nation's past a whole political party, the Government of the United States by the will of the American people, has devoted itself to making things better for those who dwell upon this soil, and with a singleness of purpose which no administration past has observed, it has persisted in its determination to make this Nation a conspicuous example of how in the crucible of honest cooperative effort there may be refined the greatest and happiest Nation in all the world.

This policy has represented no maudlin sentiment, no unreasoning sympathy, no irresponsible emotionalism; it has been at once an administration that joined both head and heart. For, while it has placed first things first, while it has contemplated that the only thing that mattered about this country was the way the people who inhabited it lived, nevertheless, it has not only made conditions better for the man at the foot of the structure, but as well for the man who sits in his exalted position at the apex of the economic pyramid. That man in his rarified atmosphere is, too, better off than he was, because these things which were once but the signs of wealth have become tangible and real economic assets. His business, his home, his personal and physical well-being enjoy a security which comes from an ordered Nation where chaos, anarchy, the threat of revolution have been destroyed.

A Government has dared to grapple with economic difficulties challenging the best efforts and the best brains of the world. People have been guided into new services and new vocations; they have been taught new skill. Work has been provided for those displaced by the irresistible march of technological improvement. A purchasing power to enjoy the good things and to give a market to the sellers of good things has been developed. Without trespass upon a single immunity, without the violation of any right, without force, any manner of coercion, but through the sheer compelling power of intelligent and devoted leadership there has come about an order, a pattern, a spirit of coordination in our national life which makes America now the strongest Nation she has ever been in her history. Not only that, it has given America again the feel of herself. Like Antaeus of old, our people have touched Mother Earth, and in touching it they have gained new strength that comes only from contact with the eternal forces of the world.

Darker than at any time in American history is the world prospect today. The maelstrom of war threatens to engulf the earth. Where is there a man who the people can so implicitly trust to keep us out of war as Franklin D. Roosevelt? Where is the man who has had the many years' experience that Franklin D. Roosevelt has had to keep us from the precipice of war? Where is the man who knows so intimately and so perfectly the sentiment of the people of America for peace as does Roosevelt? Yet when the world comes again to chaos which will follow either continued war or peace, where is the man who so understands the world's problems or can offer so constructive a contribution to a peace which may follow the world's centuries-old aspirations for peace as Roosevelt?

Where is the man whose vision is so broad, whose sentiments for right and justice and fairness are so pronounced as in the great, generous heart of Roosevelt?

We are not without hope in America; we do not believe in futility; we have not quit fighting, hoping, dreaming of a greater America, a healthier, happier, a more prosperous America, a better, safer, saner world. That is the reason we are not willing to fold our hands and do nothing, either at home or abroad. That is the reason we are not willing to turn our Government, which is the instrument of our progress, into the hands of incompetents, of the blind, or those who do not want to progress. That is why we have reasoned in our hearts together. That is the reason we have scanned the whole horizon for the best and the greatest leader that America could have in this time of crisis. That is the reason we, the people of America, have an unshakable determination that we will not give up Roosevelt as the President of the United States.

We young men and women of America have a right to be concerned about our inheritance. A bit ago it was being wasted away and squandered by those who neither knew how to preserve it nor cared a great deal about its conservation. Now it is in the hands of a new trustee. It has been restored. It has been saved, not only for us but for our posterity. We have a right to expect and to demand that no little group of economic royalists shall again be allowed to build a wall around an economic system and emblazen to ambitious youth, from the crest of its ornamented gates, the sign, "Keep out—private property." Young men and women have a right to ask and to demand the answer to the question, What kind of a future are we building for them, for their bodies, their minds, their souls, and dynamic ambitions?

Ahead of us lies a vista that challenges the scope of the imagination, a future that grasps the fancy and sends the blood racing through the veins of a proud and understanding citizenry. The long road is winding toward the top of the hill. If we but hold our course, husband our resources for the final climb, spend ourselves in our fidelity to our cause, there shall soon burst upon our vision the green valley on the other side.

Extension of Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

EDITORIALS FROM THE WASHINGTON NEWS, THE WASHINGTON STAR, AND THE WASHINGTON POST

Mr. HERRING. Mr. President, during the next few days the Senate will have under consideration perhaps the most important piece of legislation that this session of Congress will be called upon to consider—reenactment of the Reciprocal Trade Agreements Act. The House of Representatives has already favorably acted upon it, passing the measure by a vote of 216 to 168 to extend it another 3 years. A recent analysis conducted by James S. Twohey Associates, New York, showed newspaper support in favor of extending the trade-agreements program had risen to 82 percent, which indicates in striking terms the sentiments of our millions of voters generally.

Thoughtful consideration, of course, ought to be given to the reenactment of the bill; but to make it a political football—particularly at a time whose exigencies demand flexibility in the carrying on of our commercial relations—would be a national tragedy. I ask that the three editorials, which I send to the desk and which indicate the sentiments of the country generally concerning extension of the trade-agreements program, may be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington News of March 25, 1940]

TO TRADE OR NOT TO TRADE

Today the Senate begins debate on the bill to prolong the Hull-Roosevelt program of reciprocal-trade agreements. The House has already passed it.

The arguments have all been made, in the House and elsewhere, but they will be made again—and with the Senate's lavish disregard for brevity.

It seems to us that all the issues save one may be set aside as immaterial. The one that remains, after the chaff of oratory from the logrollers and protectionists is winnowed out, is this:

Does the United States want to trade, or does it not?

If it does not, then let the Hull program slide. The "easy" way to do that is to require Senate ratification of each trade agreement. This is the kiss of death that is proffered by the traditionalists, the tariff politicians, including even the chairman of the Senate Foreign Relations Committee, "Silver" KEY PITTMAN.

If we wish to continue as a merchant power, and to expand our foreign trade, and to be ready when peace comes with a tested formula for combating the guerrilla economics that helped bring on this present war, then the Hull program must be voted new life.

The basic axiom of international economy is this: If you would sell, you must buy. The Hull program is a recognition of this simple truth. The opposition to the Hull program, despite all the fancy arguments and phony statistics, can be boiled down to this: "We want to eat our cake and have it. We want to sell, but not to buy. We want high tariffs to subsidize our particular constituents. We are not interested in promoting the only foreign trade that is possible in the long run—a two-way trade from which our whole economy would gain and without which it must wither, as the Lord knows it withered after the Smoot-Hawley Act of 1930."

The magazine Fortune, out today, reports the result of one of its round tables, this time on the matter of foreign trade. The 17 participants included industrial, economic, educational, manufacturing, banking, farm, and labor leaders. Three of them advanced criticisms against the Trade Agreements Act. But the great majority favored renewal of the act, because—

"First, it constitutes an instrument by which the State Department can quickly negotiate a settlement of difficulties arising out of war trade.

"Second, we know of no satisfactory alternative to the Hull trade program.

"Third, the renewal of the Trade Agreements Act will serve notice on the world that the United States clings to the idea of free enterprise and will, when the proper time comes, lend its great influence to a plan for world reconstruction aimed at the revival of private enterprise.

"To abandon or emasculate this program, we fear, might strengthen the world-wide forces of totalitarianism."

[From the Washington Star of February 15, 1940]

A GOOD START

Secretary Hull's trade-agreements program, continuation of which has been sanctioned by the House, is off to a good start in the Senate as a result of the announcement by Ohio's Senator TAFT that he is opposed to any amendment requiring Senate ratification of the agreements. In taking this eminently sensible position, Senator TAFT, a leading candidate for the Republican Presidential nomination, said that such a requirement "simply would kill the whole program."

It is difficult to see how anyone can dispute that contention. The main purpose and the greatest single virtue of the present program is that it removes the delicate task of tariff adjustment from the influence of narrow sectional interests and the consequential logrolling which has characterized virtually every congressional effort at formal tariff revision. If the trade agreements were to be made subject to Senate approval it would be almost impossible to negotiate any worth-while pact. Negotiators from other countries hardly would be willing to spend months preparing an agreement if they knew that in all probability it would be killed or drastically changed in the Senate. The proposal, as Senator TAFT said, simply would kill the whole program, and there should be no misunderstanding about that. If the trade program is to be killed it should be done without subterfuge by the taking of a vote on that specific issue, and not through the adoption of a ruinous amendment. The public then would know where to place responsibility for the economic distress which would follow.

Senate opponents of the present program have suggested other amendments which are designed to guard against the possibility that the limited power of tariff adjustment now vested in the President and the Secretary of State might be abused in the future. If this power had been abused in the past there would be justification for such amendments, but that is not the case. Without a doubt, the country as a whole has benefited from the agreements which have been negotiated, and it is to be hoped that the Senate will not hesitate to renew this executive power to work out the problem of leveling trade barriers by the only method which holds any real promise of success.

[From the Washington Post of February 23, 1940]

A REPUBLICAN APPROVES

Representative BRUCE BARTON'S advocacy of the reciprocal trade agreements program is outstanding for two reasons. In the first place, Mr. BARTON has refused to treat the question of continuing the program as a partisan issue. He has the distinction of being the only Republican in the House who has, as yet, openly indorsed it. In the second place, he has based his advocacy on the long-time benefits of cultivating two-way trade instead of concerning himself about the immediate effects of specific tariff changes upon our import trade.

On both counts, Mr. BARTON deserves to be congratulated for putting the interest of the Nation, as a whole, above lesser political and economic considerations. All economists stress the inevitability of admitting imports in order to provide foreigners with the means of buying our goods. But Mr. BARTON puts his emphasis not so much upon the necessity of our taking goods as upon the desirability of doing so. "It is a matter of common sense," he says, "that we should take useful goods—rather than, to us, useless gold—in exchange for our exports."

That argument is not only a more realistic but also a more compelling reason for lowering barriers to imports than the one usually assigned. Today many nations are able to buy from us considerable amounts of goods without selling an equivalent amount of goods to cover payments. That is because the export excess in our favor is covered by imports of gold. We take this gold at an artificially high, fixed price in unlimited quantities. And the more we take, the less we obtain of useful goods in exchange for our own valuable exports.

In discussions of our gold policy, these facts have frequently been brought out, but there has been little enlightening discussion of their bearing upon the future of the trade-agreements program. Mr. BARTON has performed a public service, therefore, in directing attention to the importance of stimulating a useful import trade as an alternative to acceptance of overvalued gold that adds to our already excessive stocks of the metal.

Tax Compromises in the Department of Justice—Some Aspects of Procedure and Policy

---

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ADDRESS BY HON. SAMUEL O. CLARK, JR.

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Samuel O. Clark, Jr., Assistant Attorney General, United States Department of Justice, at the tenth tax clinic, section of taxation, of the American Bar Association, March 23, 1940:

In one way or another most of you have become familiar in a general way with the Tax Division of the Department of Justice and its function of representing in a myriad of cases a client who is engaged in the process, at times a painful one, of taking private wealth for public use. Possibly the aspect of the Department's work with which you are most familiar is the actual litigation of cases, for much of its task is performed in the Court of Claims, the district courts, the circuit courts, or the Supreme Court. Inevitably there are some cases which must be litigated, where the final solution can be found only in the courts. In some a definite ruling on doubtful points is sought as a guide for the future; in others there may be no common meeting ground for compromise. But litigation is not needlessly sought after. In the words of Burke, "All government * * * is founded on compromise and barter. We balance inconveniences; we give and take; we remit some rights that we may enjoy others * * *."[1]

There is a large body of cases where litigation to the bitter end is unnecessary, where a conclusion fair to both parties may be reached through mutual concessions without benefit of the final authoritative voice of the court. In view of the inevitable complexity of the tax law, the uncertainty which is a necessary adjunct of that

[1] Edmund Burke, speech on Conciliation with America.

complexity, and the multitude of tax disputes which fill our court calendars, the desirability of there being readily available an administrative as opposed to a judicial process for the disposition of cases is clear. The Tax Division recognizes the advantages flowing from a prompt disposition of cases through administrative negotiations and the importance of the existence of satisfactory machinery for the carrying on of such negotiations.

The importance of this function of the Tax Division is shown by the fact that almost one-fourth of the cases which pass through the Division are disposed of by compromise. Thus during the last 5 years, of the more than 8,000 cases disposed of by the Tax Division—and this figure does not include a large number of special tax cases—1,872 have been settled or compromised. Recognition of the importance of the compromise function has led to the designation of a specially trained group of lawyers in the Tax Division to handle this large volume of work.

The power of the Attorney General to compromise cases is an untrammeled one. It is a power which "is in part inherent, appertaining to the office, and in part derived from various statutes and decisions."[2] It extends to all cases arising out of the internal-revenue laws where such cases are in litigation in the courts as distinguished from the Board of Tax Appeals, or are referred to the Department for the purpose of instituting legal proceedings. Summarizing an opinion of the Attorney General, promulgated in 1934,[3] this power to compromise:

(1) is to be exercised with wise discretion; (2) is to be resorted to only to promote the Government's best interest or to prevent flagrant injustice; (3) is broad and plenary; (4) attaches immediately upon receipt of a case in the Department; (5) carries with it both civil and criminal features and (6) any other matter germane to the case which the Attorney General may find necessary or proper to consider before he invokes the aid of the courts; and (7) does not end with the entry of judgment but embraces execution.

While an exact marking out of the boundaries of this power is unnecessary to this discussion, one or two significant points may be briefly indicated. In spite of the broad scope of the power, nice questions of jurisdiction frequently arise, one of the most difficult of which is the determination of whether a given matter is germane to a case within the jurisdiction of the Department. For example, where a taxpayer is busy disputing with the Government two tax matters, only one of which is in litigation in the courts, and then wearies of the disputes and desires to dispose of both at once in a single compromise, has the Department the requisite jurisdiction to declare peace? In other words, is the dispute which has not reached the Tax Division germane to that which is in the courts?

Obviously, the existence of the requisite affinity or kinship cannot be determined by any rule of thumb; what is or what is not germane must usually be determined by the circumstances of each case. One test, however, which has been suggested is whether or not the matter which is not in litigation will be necessarily affected by the disposition of the case before the Department. For example, one case involved both income taxes and gift taxes, but only the income taxes were in litigation. The taxpayer offered to settle the case on the basis of paying a percentage of each of the taxes. The offer was rejected on the ground that the liability of the taxpayer in one case depended upon different principles of law than his liability in the other; that a decision by a court in one would have no direct bearing upon the outcome of the other; and that, accordingly, the gift-tax case, which had not been referred to this Department, was not germane to the income-tax case. On the other hand, assume that in a case pending before the Department the sole question involved is the taxpayer's cost basis of certain property and that there is also pending before the Bureau a claim for refund for another taxable year based entirely upon the same ground. In this situation the matter not in litigation will be necessarily affected by a disposition of the case before the Department, and, accordingly, it is germane for the purposes of compromise.

I wish to call attention also to cases which are referred to the joint committee. Under section 3777 of the Internal Revenue Code, no refund or credit of certain kinds of taxes in excess of $75,000 may be made until the matter has been before the Joint Committee of Congress on Internal Revenue Taxation for a period of 30 days. Accordingly, it has been the practice of the Department in recent years to condition the acceptance of offers involving refunds in excess of $75,000 upon the approval of the joint committee.

While the power to compromise cases is extremely broad, it is one which, in the words of the Attorney General's opinion, is to be exercised with "wise discretion and resorted to only to promote the Government's best interests or to prevent flagrant injustice." Assuming that technical jurisdiction exists, when and under what conditions may this power be appropriately exercised? Again, no definite formula has been evolved to define those cases where the Department of Justice may properly exercise its power to compromise. In general, however, a twofold standard is applied to determine the question of whether a given civil case is compromisable. The principal test, and one that is applied in the majority of the cases, relates to the merits. The other test is the financial condition of the taxpayer. In other words, if in a given case there is a reasonable doubt as to legal liability or as to collectibility, the case is generally considered a proper one for compromise. Conversely, where ingenuity of counsel cannot raise a bona fide doubt as to the merits, as where a judgment has become final, or the liability is certain, and where the existence of substantial bank accounts and unencumbered real estate makes it impossible to contend that the taxpayer cannot pay, generally there can be no compromise. "Certainty cannot be said to exist," however, "where there is a bona fide dispute as to either a question of fact or of law."[4] Where such is the case there is room for mutual concession and the problem then resolves itself into one of evaluating the possibilities, of weighing what is given against what is taken as honestly, accurately, and intelligently as possible.

Where the question of collectibility is involved, an investigation of the financial condition of the taxpayer is made by the Bureau of Internal Revenue. Naturally the Department relies in large measure upon the results of such an investigation. In some instances, in addition, the views of the United States attorneys are requested because of their familiarity with local conditions.

There is one factor which is frequently urged upon the Government by counsel for the taxpayers as justifying compromise and almost invariably rejected. That is the factor of inequity. This is not to say that the Department is blind to inequity, for the power to compromise may be exercised "to prevent flagrant injustice"—but the injustice must be flagrant. Too often, however, claims of flagrant injustice are found to be exaggerated or untrue or confused with mere hardship. Compromises in this category have been rather rare, but the power has been exercised where, for example, the taxpayer has made a showing that payment of the full amount in a lump sum would bankrupt him or would otherwise work some irremediable adversity. But even in these instances the Department has generally gone no further than agree to accept payment in installments of the amount offered in compromise. Also, in such cases provision is made for the payment of interest upon the deferred installments and the taxpayer usually is required to post collateral to insure full payment. The justification for this policy was stated by the present Attorney General in an address given a few years ago:[5]

"A liberal compromise policy which waives the claims of the Treasury for consideration of 'public policy' or hardship is impossible of administration without creating a favored class of taxpayers, and without creating many real discriminations, which give rise to stories of compromise by influence and partiality. * * * If the present policy seems severe, let it have credit for being impartial."

If in a case there is doubt as to liability or as to collectibility and, accordingly, it is a proper one for compromise, administrative machinery established for the consideration of compromise offers may be quickly put in motion. To some of you who customarily handle cases before the Department, it may appear that this machinery is complicated, has too many overseers, and is productive of unnecessary delay. Simplicity and speed are, of course, desirable, other things being equal, and these factors are emphasized so far as may be consistent with essential safeguards. In exercising the broad and plenary power to compromise there is substituted for the judicial an administrative judgment, and a heavy responsibility rests upon those who exercise that power. Every care must be and is taken to insure that it is not exercised carelessly or in a discriminatory manner.

It may be well to trace the course of the typical offer in compromise from the time of its submission to the receipt by the proponent of notice of the action which has been taken. Most of the offers are submitted directly to the Tax Division of the Department in the form of letters. Generally the Department does not require the use of a form such as Treasury Forms 656 and 656–C. When offers are submitted directly to the Department, it is the uniform practice to refer them to the Bureau of Internal Revenue, which is in effect our client, for the recommendation of the chief counsel, and in many instances in cases pending in the district courts to the United States attorney as well.

Upon receipt of the chief counsel's recommendation and the recommendation of the United States attorney when appropriate, the attorney in the Tax Division to whom the case has been assigned prepares a detailed memorandum which he sends over the desk of his section chief to the compromise section. The case is then assigned to one of the members of this section for consideration of the offer in the light of all the circumstances of the case. His conclusions are embodied in a covering memorandum, which is reviewed by the head of the compromise section, and is then considered by the principal assistant to the Assistant Attorney General in charge of the Division. The Assistant Attorney General personally reviews all compromises in the more important cases and in all other cases in which there is a divergence of views.

The file then goes to the Assistant Solicitor General, who is authorized to act finally upon offers in compromise of claims on behalf of the United States in all cases in which the gross amount of the original claim does not exceed $50,000, and of claims against the United States wherein the amount to be refunded does not exceed $10,000. The Assistant Solicitor General usually refers a compromise to one of the members of his staff, and upon completion of this review he takes final action or submits the matter to the Attorney General with his recommendation if the amounts just mentioned are exceeded.

The views of all of the individuals who pass upon the offer are placed in the file, together with all other recommendations made in the case. Needless to say, there are inherent differences between compromises to which the Federal Government is a party

and those between private litigants. In the former class of cases orderly procedure demands the safeguards which already have been touched upon. In the latter class the informality and expedition that might be obtained are limited principally by the confidence of one attorney in another and the distance to the nearest telephone. There may be those among you who feel that the "square corners"[6] the late Justice Holmes said a citizen must turn in dealing with the Government, are stretched into city blocks when it comes to compromising tax cases. Nevertheless, it is believed that the present procedure is best suited to situations in which the judgment of those handling cases for the Government is substituted for that of the courts.

Clearly, this procedure cannot be carried out in a day or a week. It does take time. However, every effort is being made to prevent unnecessary delays. Further, the Department is so geared that where an immediate decision is essential and where the facts are such that an informed judgment may be quickly reached, a decision may be secured within a period of a few days. Frequently informal conference between taxpayer's counsel and attorneys in the Tax Division are helpful from the standpoint of time saving and may be of material assistance in arriving at an accurate understanding of the merits of the case. The Department is always willing to discuss the possibility of disposing of a case in this manner, and the door has never been closed to anyone approaching the Tax Division with a legitimate and timely compromise proposal.

In addition to steps taken within the Tax Division, much can be done by counsel for the taxpayers toward expediting the consideration of a compromise offer. Considerable time is lost in many cases because the offer submitted is indefinite or ambiguous in its terms. Ambiguous offers, of course, must be returned for clarification. It is important that any offer made be explicit in all details. For example, in an offer to accept a refund of, say, $10,000, it should be specifically stated whether the payment of $10,000 and no more, or $10,000 plus interest, is contemplated. Likewise, in cases where there may be doubt as to collectibility, the net effect of a naked assertion of inability to pay is delay. Such an assertion is too frequently thrown in for whatever value it may have. It has none. The facts should be properly developed in the offer, and a statement of the taxpayer's assets and liabilities and any other pertinent information or documentary evidence should be presented. Again, obviously inadequate offers are frequently submitted. Such offers are in no way helpful to a taxpayer's case and so far as possible they are not permitted to delay a pending trial. A careful, intelligent appraisal by counsel of the settling value of his case will do much toward speeding up its final disposition.

Before leaving the subject of compromise in civil cases, I wish to refer briefly to the new pretrial procedure.[7] Frequently an offer in compromise is submitted as the result of a pretrial hearing held in accordance with the new Federal Rules of Civil Procedure. Of course, it is not possible for the Government's representative at the pretrial hearing to bind the Government to a compromise of a Federal tax case, since his authority in that respect is limited. However, the disclosures at the pretrial might indicate that the case is one that is susceptible of compromise and might lead to a satisfactory offer by the taxpayer. In many instances lawyers have hesitated, prior to the pretrial hearing, to take up the subject of compromise. The way is opened, however, by the pretrial judge's inquiry as to whether the case is one that might be compromised. This is now a common practice of the courts. It frequently brings about a discussion of compromise and causes counsel to explore the possibilities of thus disposing of the case. Counsel are often in a better temper to consider amicable adjustments after disclosure by each side of facts upon which it relies.

CRIMINAL CASES

In addition to the civil cases, the criminal tax cases form an important part of the work of the Tax Division in the Department of Justice. The criminal features of tax work, however, comprise too large a field to permit more than a few comments on some of the more troublesome problems which these cases present.

Certain misconceptions are apparently prevalent concerning the attitude and policy of the Department of Justice with respect to the prosecution of criminal cases. Simply stated, the act of willfully and fraudulently evading taxes constitutes a serious crime which may be punished by a penitentiary sentence, and it is the duty and policy of the Department of Justice to prosecute those who have committed it. The policy, however, is not one of "unnecessary severity."[8] A case which is forwarded from this Department to the United States attorney for the institution of criminal proceedings is one which has been subjected to a painstaking scrutiny carefully designed to eliminate those cases where the invoking of criminal sanctions is not warranted.

Such a case began with a joint investigation by a revenue agent and a special agent of the Bureau. Upon the completion of the agent's investigation, the report of the special agent went to the office of the Chief of the Intelligence Unit of the Bureau in Washington. The case was then reviewed by the Penal Division of the Bureau and by the Tax Division of the Department of Justice. At one or more times during the course of the consideration of his case, the taxpayer had an opportunity to present whatever facts and explanations he desired.

This procedure is designed "to avoid groundless prosecution as well as to assure deserved ones."[9] A case which survives this process is one where it has been concluded, after a careful examination of the facts by a group of experienced lawyers both in the Chief Counsel's Office of the Bureau and in the Tax Division, that substantial evidence of guilt and a reasonable prospect of securing a conviction exist.

With this background the policy of the Department with respect to criminal prosecutions may be broadly sketched. Criminal proceedings are not regarded as implementing the ordinary civil remedies available for enforcing tax collections. Indictments are not used as clubs to compel payment of taxes by the individuals indicted. On the contrary, it is the view of the Department of Justice that the collection of the civil liabilities, including fraud penalties, is a matter entirely apart from the criminal aspect of the case. Trials of criminal cases have been insisted upon even where it has been apparent that as a result only a fraction of the amount which may have been offered in settlement of the case can be collected. In other words, where it has been finally concluded that substantial evidence of guilt and a reasonable prospect for conviction exist, the case cannot be disposed of by the mere payment of money, no matter what the amount, in settlement of the civil liabilities. This cannot be too strongly emphasized, for despite the age of the policy and the publicity given to it, some counsel for prospective defendants persist in attempting to dispose of the criminal features of a case by money payment alone. The only way in which the criminal aspect of such a case may be settled in the Department without a trial is by the entry of an unconditional plea to one or more of the major counts of the indictment. It is optional with the defendant whether he wishes to dispose of his civil liabilities concurrently with the entering of the plea.

Offers which are clearly inadequate and do not meet these standards will be summarily rejected and will not be permitted to delay the criminal proceedings. Where a settlement offer is made, it is the policy of the Department to require the payment of the full civil liability, including penalties and interest, or so much thereof as the taxpayer is able to pay. However, the taxpayer is, of course, given an opportunity to demonstrate that the proposed civil liability is clearly excessive. In general, the same standards are applied to the determination of the adequacy of money payments as are applied to offers in civil cases.

Accordingly, describing a criminal case which has been disposed of in the manner just referred to as one that has been compromised is misleading. The defendant pays the civil liability in full and admits his guilt by an appropriate plea to the indictment. It is hardly necessary to point out that no agreement is ever made with the defendant as to the degree of the criminal punishment that will be imposed. That is a matter which obviously lies exclusively within the discretion of the court. Moreover, it is the standing policy of the Department to make no recommendations to the court as to either leniency or severity of punishment where the civil liabilities are settled concurrently with the entry of the plea. In the typical case, however, an objective statement of facts is submitted for the information of the court. This statement covers the amount and source of the defendant's income, the amount of the tax evaded, the means or devices employed to that end, and other pertinent information bearing on the case.

The present policy of making no recommendation as to severity or leniency of punishment was adopted principally because of the erroneous impression, which was almost inevitably created by the joining of the civil with the criminal side of the case, that a close relationship existed between the collection of the civil liabilities and the particular recommendation made by the Department. This present policy, however, is apparently in turn subject to misinterpretation. It perhaps has been construed in some instances as indicating that the Department of Justice is not interested in the criminal penalties imposed. That is not the case. We feel that even as to first offenders the evasion of the tax may have been so flagrant that a prison sentence is called for. The fact that the defendant, after his crime has been detected, pays the taxes which he has evaded together with penalties and interest is, of course, one of the facts to be considered when sentence is imposed. But to my mind it is not a dominant fact. A contrary view causes the extent of the criminal penalty to rest upon the ability of the defendant to pay the civil liabilities and not upon the flagrancy of the crime.

---

[6] *Rock Island A. & L. R. Co.* v. *United States* (254 U. S. 141, 143).

[7] The experience in regard to compromise at or after pretrial is significant. In the State courts of Massachusetts and in the Wayne County Circuit Court at Detroit, Mich., pretrial practice prevailed for several years before its adoption in Federal procedure. In the Massachusetts courts 25 percent of the cases are compromised before the pretrial judge and another 16 percent are compromised between the pretrial hearing and the regular trial. While it cannot be proved statistically that pretrial brought about all of those compromises, undoubtedly most of them were consummated as the result of pretrial. Experience in the State courts at Detroit and Pittsburgh and in the United States District Court of Massachusetts has been similar. The latter court was probably the first Federal court to have a pretrial calendar after the new Federal rules became effective. Out of 313 cases pretried in that court, 95, or nearly one-third, were compromised during a pretrial session lasting 3 weeks.

[8] 1934 Tax Magazine, p. 342, Changes in Treasury Tax Policy, by Robert H. Jackson.

[9] 1934 Tax Magazine, p. 342, Changes in Treasury Tax Policy, by Robert H. Jackson.

In conclusion, I wish again to emphasize that the Department is ready and willing to consider any reasonable, legitimate compromise or settlement proposal. In the nature of things we cannot make the offers, but we can and do smooth the way for the proponents. The Department will meet at least half way anyone who comes to us with a bona fide proposal. The only request we make is that the offer be reasonable, and that it take into account the realities of the situation.

Can Industry Hire the Unemployed?

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ADDRESS BY HON. CORRINGTON GILL

Mr. COCHRAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. Corrington Gill, Assistant Commissioner of the Work Projects Administration, over the National Broadcasting Co. on Saturday, March 23, 1940, at 1:30 p. m., at a luncheon meeting of the People's Lobby, National Press Club, Washington, D. C.:

The question "Can industry hire the unemployed?" is certainly timely. Like many other large questions, all kinds of answers are given. All kinds of reasons are advanced to explain unemployment. This year will bring a new crop. Next to the war in Europe, probably no other problem will receive so much attention.

Some people blame industry for not doing something about unemployment. This, I think, is the wrong approach to the problem. Industry can do little or nothing directly about it. Industry hires all the workers it can. If business prospects are good you can be sure that industry will reemploy people. Individual business enterprises hire what labor they need—no more, no less. If 10,000,000 people are unemployed it is not because industry does not want to give them jobs. The real reason is that business cannot make a profit by giving these people work.

From the depths of the depression in 1933 to the end of 1939, business reemployed about eight and a half million workers. This is a real accomplishment—one that is frequently forgotten in the heated discussions about unemployment and the responsibilities of business. This big increase in employment was made because business prospects were good. Any further increases in employment will come about for the same reason.

This brings us to the question: How many workers must industry reemploy in order to bring unemployment down to a low level? We can get a good idea of the size of the job by looking at the number of people now regularly employed and the number available for work.

There is very little guessing on these points. Some people at present are trying to convince the public that little is known about the size of the unemployment problem. We know a good deal about it. Of course, we need to know more, and much more will be known after we get the 1940 census returns.

Let's look at the simple facts, and add up the figures which show us what we have to face. In the first place, how does regular employment compare now with the prosperity era of a little over a decade ago? Official figures show that employment a few months ago increased to a high level, partly because of the great activity brought about by the war. We know that the volume of industrial production reached an all-time peak. Yet the figures show that there were 1,500,000 fewer workers employed than in 1929. This is one element in our unemployment total. Incidentally, employment has dropped drastically in the last month or two.

Now, let's look at the second and largest element in our unemployment total. This is the increase in the labor supply that has taken place since 1929. The increase has amounted to 6,600,000 persons—that is, the number working or looking for work has increased by this amount over the number working or looking for work in 1929. There are two reasons for this growth.

In the first place normal population growth adds to the labor supply. Secondly—and this point is confusing to most people—the age structure of our population is changing. There are now relatively more people of working age than there were 10 years ago. Difficult as it is to believe, the increase in the number of people of working age has been greater than the increase in the total population.

This fact is important. It has been overlooked by some well-known newspaper columnists, and others as well, with the result that they think unemployment is less serious than it really is. The facts of the situation are that the labor supply is much larger than 11 years ago and there are fewer jobs to go around. Any way you look at it, you cannot escape the fact that the size of the problem has grown.

Let's add these figures up. The first figure I gave was the 1,500,000 unemployed who represent the decrease in employment from 1929 to 1939. Then add to this the 6,600,000 more workers in the labor supply. This comes to 8,100,000 increase in unemployment over an estimated 2,000,000 in 1929.

The situation then is this. Industry has reemployed about 8,000,000 workers since 1933. This represents a half-way mark because there are still 8,000,000 more who need jobs. Industry cannot put these all to work quickly, even under very favorable circumstances. It will take years to do the job. And each year another 600,000 workers are added to the labor supply. We have to keep on increasing employment each year by this figure just to hold our ground; if we want any reduction in the 8,000,000 who ought to get jobs we must increase activity much more.

Some idea of the size of the problem can be seen in this way. If industry increased employment each year by the enormous figure of 2,000,000, at the end of 5 years we would have unemployment down to about 3,000,000.

Such an increase is most improbable. Industry does not expand that much or that steadily for so many years at a stretch. What are the prospects that private industry will be able to absorb these unemployed workers?

I am not going to try my hand today at the tricky game of business forecasting. There are serious obstacles to the rapid and easy sort of long-time economic expansion we became accustomed to in the past. The disappearance of the frontier, and the apparent absence of any revolutionary development like the automobile have made it, and still make it, difficult to find adequate outlets for the savings we, as a Nation, tend to accumulate in prosperous times. War and other difficulties abroad dim the chances of foreign investment as a stimulus. Rigid price and cost policies, and the growth of trade barriers between the States, in recent years, have handicapped economic expansion. How rapid our progress will be in overcoming or circumventing these obstacles I would not want to predict. Twenty years, or even ten years from now, the level of economic activity may be such that unemployment will no longer be a serious problem.

We are concerned, however, about the present and the immediate future. The policies we are now formulating must be policies that will apply to the next few years. Here I think something definite can be said about the prospect for the absorption of the unemployed. From 1933 to 1937 the rate of recovery was, it is generally admitted, pretty rapid; as rapid, certainly, as we are likely to see in the next few years. Even if we could hit the recovery pace of 1933–37 again, it would take us 5 or 6 years to absorb most of the unemployed. A realistic appraisal of the present prospects for business expansion suggests that any such rate of increase is highly unlikely.

It is not now a question of recovery. We recently recovered to the 1929 level of activity. What we need is expansion far beyond the levels of any earlier period.

We must, of course, continue and intensify our efforts to stimulate and encourage expansion of economic activity in every way possible. But we must not delude ourselves into thinking that we can perform miracles. We are going to have a serious unemployment problem on our hands for a considerable time to come. It is better, not only for the unemployed but for the country as a whole, that we recognize this fact and make our plans accordingly. Not only must we provide a means of livelihood for the unemployed, but we should also make the fullest possible use of this opportunity to turn their desire for useful work to account in ways that will be of definite value to their community and to the Nation.

The Poor Pay the Taxes

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

EDITORIAL FROM THE BOSTON HERALD OF MARCH 24, 1940

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of Sunday, March 24, 1940:

[From the Boston Herald of March 24, 1940]

THE POOR PAY THE TAXES

A little pamphlet entitled "C. I. O.'s 1940 Legislative Program for Jobs, Security, and Peace" and circulated by that organization should interest those who like to think that only the well-to-do are protesting against the tax exactions of the New Deal. In the final chapter, headed "Taxation," is this:

"Of all the Federal revenue collected in 1929, 30.2 percent came from taxes bearing primarily upon consumption such as excise

taxes, customs, tobacco, and liquor taxes. * * * By 1938, the percentage of taxes based primarily upon consumption was 51.3 percent."

That is, the classes for which the C. I. O. presumes to speak are paying two-thirds more now, under the supposedly beneficent New Deal, than in the first year of the Hoover administration, which the President has attacked often as the exploiter of the poor. The people of limited incomes are just beginning to realize that, as taxes go up, the proportion of their earnings which they retain goes down. The taxes are eased along to the ultimate consumer, and, of course, "there is a substantial withdrawal from consumer purchasing power."

Even stronger testimony of the same kind comes from a gentleman whose income is in the stratospheric levels. Our free-spending, free-speaking, free-thinking Minister to Canada, James H. R. Cromwell, was testifying before the Ways and Means Committee of the House in regard to estate, inheritance, and manufacturers' sales taxes. Replying to a question—according to the Saturday Evening Post—he said: "As a matter of fact 75 percent of taxes are now paid by the poor."

Our Federal-tax structure is a rambling, jerry-built thing which the Democrats threw together in panicky haste. The New Deal promised to correct its defects but, even with control of the Senate and the House by large majorities, it has not made good on its pledge. There is little solicitude for the people who must pay the bills, but there is no end of effort to provide ample funds for those who have the spending power. What is needed, obviously, is a set of men who will have a better attitude toward employers and employed and will have measures enacted which will correct the many inequities.

That is not likely to be accomplished if Democrats of a new kind should succeed the New Deal type. Only a President and a House which are free to start anew, without any feeling of obligation not to undo anything which has been done, and not to reflect discredit on the philosophy and philosophers of the Democracy, can reasonably be expected to do the job. Any Republican President would be more likely to accomplish the task than the most brilliant Democrat, hampered by boundless party commitments.

New Deal at Cross-Purposes

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

Mr. GILLIE. Mr. Speaker, "Consistency thou art a jewel." This adage from the old English ballad most certainly does not apply to the nimble-minded new dealers in the Department of Agriculture.

One year ago Secretary Wallace published a booklet entitled "Barriers to Internal Trade in Farm Products." This was a special report to the Secretary of Agriculture by the Bureau of Agricultural Economics. In this volume are examples of the trade barriers that have sprung up between the States during the past few years. They include the infamous port-of-entry system in some States. Indiana recently abandoned the McNutt-sponsored port-of-entry liquor racket. The booklet calls attention to the wrongs that have arisen from this practice of States setting up barriers contrary to the spirit of the law of the land.

Imagine my surprise, therefore, to find the following news article in the Washington Times-Herald of March 18, 1940:

WALLACE SETS UP MINIMUM PRICES ON MILK PRODUCTS

Farmers will be guaranteed minimum prices for milk products under a schedule for the Washington milkshed promulgated by Secretary of Agriculture Wallace.

C. I. Dunn, market administrator, issued the price scale after an audit of the books of the handlers concerned.

Indications were that the schedules would not result in any change in the present price of milk or cream to District consumers.

Dunn fixed composite prices for each dairy on the basis of the quantity of milk products ranging from milk for table use to ice-cream mix bought by the handlers in the past.

The composite price per hundredweight included: Embassy, Fairfax, $2.52; Harvey Dairy, Inc., $2.41; Highland Farms Dairy, $2.53; Model Farms Dairy, $2.80; and Walnut Hill Dairy, $2.65.

The following Associated Press dispatch from Washington is additional evidence of the cross-purposes of the price-fixing trade-barrier program of the New Deal:

WITNESS AT HEARING TELLS OF BARRIERS IN DAIRY INDUSTRY—EXPERT DECLARES THAT REGULATORY AUTHORITY MISUSED

WASHINGTON, March 20.—A University of Illinois dairy expert told the Monopoly Committee today that misuse of regulatory authority often resulted in trade barriers in the milk industry, boosting prices to consumers without adding any necessary protection to public health.

"The problem," Harrison A. Ruehe, head of the university's dairy department, testified, "is one that calls for solution by State, county, and municipal cooperation, but, most of all, by an enlightened understanding by consumers of the extra burden of costs occasioned by duplicating contradictory regulations.

"This will result in reciprocal acceptance of equivalent quality standards of inspection by health authorities and there will then be a free flow from State to State and intrastate of equally wholesome milk and dairy products."

Ruehe contended the Federal Government was responsible for one type of trade barrier through the Department of Agriculture's milk-marketing orders, which he said resulted in discouraging entrance of new producers into particular markets.

"During the past 20 years," the witness said, "there has been a progressive evolution of State, county, and municipal sanitary standards regulating milk and its products. This has been of benefit to public health and has had the support of the dairy industry. However, there has developed a misuse of inspection under these health measures which have had the effect of trade barriers."

Here we have just one more example of the cross-purposes of the New Deal. First, they write a book, one-half inch thick, telling the vices of trade barriers, and now they turn around and erect a trade barrier, or a Chinese wall, around the milkshed of Washington and other cities under the guise of health requirements. The protected monopolies are charging consumers 14 cents per quart for milk and 12 cents per quart for buttermilk.

This is one more example of "blowing hot" and "blowing cold." The administration states that they cannot fix prices, but they turn right around and do fix prices. They fix prices for the few at the expense of the many.

The more I see of the New Deal agricultural program, the more convinced I am that there is one thing which they can never be accused of, and that is consistency.

Appropriation for the Civilian Conservation Corps

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

LETTER FROM MILLARD W. RICE

Mr. ANDERSON of Missouri. Mr. Speaker, several days ago I spoke briefly on this floor regarding the proposed reduction in the appropriation for the Civilian Conservation Corps, at which time I pointed out that such a move was not in any manner in the interest of economy.

The Civilian Conservation Corps provides a haven not only for thousands of young men but for thousands of war veterans who would otherwise be on direct relief or some other form of aid. In connection with the C. C. C.'s great contribution to the welfare of the veterans, I ask unanimous consent to extend my remarks and include therein a letter which I received today from Mr. Millard W. Rice, legislative representative of the Veterans of Foreign Wars of the United States:

VETERANS OF FOREIGN WARS OF THE UNITED STATES,
Kansas City, Mo., March 25, 1940.

The Honorable C. ARTHUR ANDERSON, M. C.,
House of Representatives, Washington, D. C.

MY DEAR MR. ANDERSON: During the last several years, you have prominently identified yourself as one of those very much interested in securing adequate annual appropriations for the Civilian Conservation Corps, and you have several times taken steps, with the effective cooperation of others, to provide a greater appropriation for that purpose than had been recommended by the House Committee on Appropriations.

H. R. 9007, the proposed Labor-Federal Security Appropriation Act, 1941, recently favorably reported by the House Committee on Appropriations, would provide for an appropriation to the Civilian Conservation Corps of only $230,000,000, as compared with $295,000,000 for the current fiscal year, thus necessitating a reduction in the number of operating C. C. C. camps from 1,500 to 1,282, and thus necessitating a decrease in the average enrollment from 270,000 to 239,600, and incidentally necessitating a proportionate reduction in the number of veteran camps and veteran enrollees, ordinarily constituting about 9 percent of all C. C. C. enrollees.

In the past, it has been possible for a considerable number of veterans receiving domiciliary treatment in Veterans' Administration facilities, at a substantial cost to the Federal Government, to become enrollees in C. C. C. camps, and thus to become useful, productive, self-respecting employees, instead of dissatisfied, nonproductive patients in Veterans' Administration facilities.

It seems to be universally agreed that the Civilian Conservation Corps has been responsible for many worth-while construction and conservation projects, of permanent value to the Nation, and incidentally for the physical, psychological, and vocational rehabilitation of thousands of enrollees. These favorable results, amply substantiated by the testimony before the House Committee on Appropriations, would certainly seem to indicate that we ought to have more, rather than less, C. C. C. enrollees and C. C. C. camps.

At our organization's fortieth national encampment, held in Boston, Mass., August 27 to September 3, 1939, it went on record in favor of increasing the veterans' quota in Civilian Conservation Corps from 30,000 to 50,000, and to provide that veterans should be eligible for immediate reenrollment, in the event that private employment obtained by a former enrollee should shortly thereafter have been terminated.

We are happy to know that you and your associates are going to press for the adoption of an amendment on the House floor to increase the appropriation for the Civilian Conservation Corps from $230,000,000 to at least $280,000,000, for the next fiscal year. We sincerely hope that your efforts in that direction will prove to be successful.

Respectfully yours,

M. W. RICE,
Legislative Representative.

St. Patrick's Day Address

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1940

ADDRESS BY REV. ROBERT I. GANNON, S. J.

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Reverend Robert I. Gannon, S. J., president of Fordham University, at the one hundred and fifty-sixth anniversary dinner of the Society of the Friendly Sons of St. Patrick in the Hotel Astor, New York City, on March 16, 1940:

When any function has been repeated as often as this glorious dinner of yours, it falls into a pattern, a kind of ritual. We always have Irish bacon and kale—one speaker always handles national affairs—Governor Smith always tells us how foolish men look from the top of the Empire State (especially real-estate men), and one speaker is always condemned to work on your emotions and suffuse the whole evening with a touch of local color.

Of course, there is not much trouble about the color. The lights are green, the flowers are green, the cakes are green, the music was green, the champagne was green—at least, it looked a little green the third time it came around—and here we have gathered together all the green bloods of the city, with the exception of our versatile mayor. Senator WAGNER has been talking to Bishop Donahue all night in a brogue you could cut with a knife. No, the color is easy enough. It's the emotion that chokes me. For you have wept at every ancient wrong and laughed at every ancient joke for 156 years flat. The only topic left now that is really new is the women of Ireland, God bless them. They are always new. Last year Judge Brogan talked about them in the sweetest speech I ever heard. This year we'll bring them out again, with a shot of Angostura.

Of course, there may be a few battle-scarred veterans in the balcony who are saying to their neighbors behind their hands: "I wish to high heaven I knew as little about women as he does. 'He jests at scars that never felt a wound.'" I admit there is a point there, but early in my researches I came upon an old Irish proverb, the translation of which goes something like this: "Three kinds of men fail to understand a woman: young men, old men, and middle-aged men." That takes in everybody on the dais. It is perfectly true that some of us are happily limited in our empirical knowledge, but after all, it is the theory that matters, because the women of Ireland have changed so little in the last few thousand years that history may be a great help to us in solving our problems.

Go back, then, to the beginning of the book and the earliest colleen that we read of, aside from the good little people, who were probably living in the Gap of Dunloe before the old serpent had tasted an apple himself; the first colleen was Caesair, who landed in Galway with her people about 4,000 years ago, to be exact, just 40 days before the universal flood. They would have been better off if they had stayed in their boats. But in 40 days, just by communing with the foggy dew—for there was nobody else in the place—she had absorbed enough Irish wit to remark with her dying breath as she sank for the third time and the waters closed over her head, "This is certainly going to be an awful lesson to me."

Then the mists roll down from the hilltops and part just here and there through the following centuries to show us Macha of the Golden Hair, queen of an Ulster that was Irish and free, and Maeve, the warlike queen of Connaught, and Deirde of the Hundred Sorrows—all types of Ireland itself. Not many names, perhaps, for so many years, but piecing together fragments of epics and songs from those far-off days, we find a womanhood, respected for its purity and intelligence and independence, too. You will find among the great ones doctors, lawyers, and poets, and what not. But most of them, even in those early days, were just what they are today, heads of families.

You may think there is something modern in a wisp of an Irish woman who rules her 6-foot man with a lift of the eyebrow, but it was just the same before the time of St. Patrick. Even then they hung onto their dowry and their independence and could always give a good account of themselves. In fact, they were excused from military service later in the Christian era only because public maneuvers interfered with their domestic campaigns.

The same sentiment we find recorded centuries later on a tombstone in Kilmurry, in County Clare:

> "This stone was reared by Sarah's lord
> Not Sarah's virtues to record,
> For they're well-known to all the town.
> This stone was raised to keep her down!"

And to this day a tombstone is the only surefire method.

Germany had her warrior maidens, the Valkyrie, but only in the Metropolitan Opera House—deep chested Divas with feathers in their tin hats. Herodotus talks about Amazons in Scythia—but everyone knows they were not half as real as a Leprechaun. Ireland, on the other hand, had women of flesh and blood who could swing a battle ax with the best of them; Queen Maeve, who could have knocked the British Boadicea well into France; Ineen Dhu, the mother of Red Hugh O'Donnell, who according to the minstrels had the heart of a hero and the soul of a soldier; and Grace O'Malley, the gallant sea captain who sailed up the Thames in her own ship and snapped her fingers under Queen Elizabeth's painted nose. There were the forebears of the heroic women of Limerick, who manned the walls after the breach and died by the thousands.

And yet for all that, the women who fought and sometimes lost were as nothing to the women who never fought and always won, for as Lecky points out so well, "the conquest of Ireland by the Puritan soldiers of Cromwell was nothing to the conquest of these same soldiers by the invincible religion of the Irish women." Who knows but that in this hall tonight there are men whose distant grandfathers were round-headed savages brought over from England to exterminate the Irish race, but who by the grace of God saw the gospel light in the eyes of a little colleen and stayed instead in the mountains of Wicklow to father a race of confessors to the faith.

For these women of Ireland were descended not only from warlike queens, they were descendents too of the mystical Brigid of the flaming faith. Just as she in her time had tended the Druid fires before the sacred oak until St. Patrick gave her the blessed sacrament, instead so they in their time took their natural virtues—a perfectly natural fearlessness and a perfectly natural strength—and burned them together in a tabernacle lamp.

It may seem strange and incongruous to some who are accustomed to seeing Cathleen ni Hoolahan dressed in her symbolic green with the golden crown on her head, but to me the embodiment of old Ireland has always been one poor Irish laundress whom I knew many years ago—more than 40 years ago in Staten Island. Her name was Mrs. Kelly and she took in washing to support her husband and the rest of her children, for her lord and spouse was not quite as much help as her eldest boy, Tom, who was 10. In fact, the only work I ever saw the old man do was to nail up a new addition to the house whenever a new little Kelly was expected, and new little Kellys were as good as the robins for telling when spring was due, they were that regular.

I am afraid that some women in the public eye today who have more daughters-in-law than they have sons, and more sons-in-law than they have daughters, would find the Kellys a very badly planned family. A planned family, you know, is one that you plan not to have. Can't our bright ladies think up the grand terms. Planned family! They can make anything seem clean and respectable merely by calling it something it isn't. I wonder what nickname they have for the latest selection of the board of higher education.

The badly planned Kellys, then, lived in a home-made tarpaper shack that was built in a rambling sort of way under an old oak

tree, down by the waters of the Upper Bay. But inside it was as clean as the heart of the mother that kept it; and the children, down to the baby, Barney, were all gentle and well behaved. Even on week days, when they didn't wear much, they still had some of their mother's innate refinement and dignity. And on Sundays when they passed our house in single file, the tallest going first, on the way to St. Peter's Church, there weren't many in the parish who wouldn't be proud to own them. It meant, of course, that Mrs. Kelly had worked far into Saturday night to iron out their shirts and ruffles and press their pants and brush their hats, but it meant too, that she could keep her head unbowed amid sorrow that would have broken common clay.

She could be merry on occasion, too, and her hospitality was famous among the little ones. Nothing I knew gave quite the thrill that came into stealing down to the shack late in the winter afternoon when Mrs. Kelly was tired after a day at the tubs. She would sit us down on the floor in a row, the neighbors' children as well as her own, and hand out bread and butter with sugar on it. And nothing in the last 40 years has tasted half as good. Then she would light an oil lamp and take down from the shelf the only frivolous book in the house, Willie Reilly. She had a Bible, but we didn't care for that. We always called for the frivolous book, and she would read to us and we would sit there in the dusk, charmed by the music of her voice.

Put all that into symbols, and what have you got? Granueille, the tragic old Ireland that our grandfathers knew, sitting beside the ruins of her past, with the strings of her harp all broken, rags on her back, and tears on her face, but a light in her eye, and on her dear, dark head a crown which meant that her soul was still her own.

Oh, times have changed now. The old Ireland is gone and a greater, newer Ireland has taken her place—a glorious Ireland, all things considered; one of the few really civilized nations left on the face of the earth. She still has her troubles, of course, and will have while English garrisons are quartered in the black North. Her leaders are not as popular as they might be elsewhere, for, being Irish, every gossoon in the barnyard knows all about running the country, but sometimes I think that her sons are as well off as we are here and now. Their lives are more like the lives we led 40 years ago before something happened to the United States. Oh, I don't mean to imply that the land of the free and the brave was ever entirely above criticism. We always had a few political problems. It was always possible for a district leader to exist without visible means of support, and some of them did. In fact, the purloining politician was regarded in the old days as part of the general overhead, like the boll weevil and the potato bug, and due allowance was made for him. But when he had stolen the people's money he was satisfied. He never tried to steal their souls. Now there is a new swarm abroad in the land. They call themselves liberals, all in a spirit of good, clean fun, of course, just as Hitler calls himself a Socialist, being almost as social as he is democratic. So, too, for people who do not agree with them, these liberals are the greatest little slave drivers in the world. They are not as crude or as simple as the ward heelers with the big cigars. What they want is not so much our money as our children. They want our schools and colleges. They want the key positions in the civil service. They want control of relief and all the social agencies, and they are getting what they want. Later they hope, when they have the youth of the Nation in their power, to eliminate all religion and all morality that does not conform to their peculiar ideology.

But, dark as the picture is, it looks as though western civilization may yet prevail. In the first place, we can always depend on our enemies to overplay their hand. They are too smart for their own good. They are historically greedy and rash. Not content to slip quietly into places of influence, they must rush their men in through crooked civil-service examinations and get the spotlight of the Court of Appeals turned on them. Not content to slip a knife between the ribs of an eminent educator who isn't enough like themselves and inter his remains under flattering resolutions, they must slap public decency in the mouth by an appointment that, for sheer effrontery and contempt of the taxpayers, has not been equaled since the days of Boss Tweed.

Our first hope, then, lies in the greedy rashness of our adversaries. Our second hope brings us back to the women of Ireland. For I do not think that you and I, mere trailing men as we are, will do very much about the present situation. We are so used to the deadening compromises that a man meets with in the ordinary struggle for existence that we have dulled our powers of indignation. Not so the women. They have a God-given persistence that compensates for physical handicaps. It is no mere accident that widows outnumber widowers three to one. Give the women a clean-up job of any kind and they will see it through to the end. Especially, I may say, the women of Ireland and their daughters to the third generation. Let them once fully realize that this new and insidious political force that calls itself liberalism is aiming at their schools, their church, their home, their children, and we shall not have to do a thing but applaud their success.

For the women of Irish descent in America have taken prosperity in the main, as Mrs. Kelly would have taken it had it ever knocked at her tar-paper door. They have remained women of refinement, of dignity, of modesty, of charity, of courage, and of beautiful spirituality. They are still a blend of the warlike Meave and the Mystical Brigid. So that as we rise to drink a toast tonight to the women of Ireland—God bless them—not only the flowers and the music in the room but the hope in our hearts is eternally green.

Hon. Robert L. Doughton, of North Carolina—Long Tenure of Service

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1940

Mr. RANKIN. Mr. Speaker, we Members on the Democratic side of the House, in particular, are gratified to learn that our distinguished colleague from North Carolina, Hon. ROBERT L. DOUGHTON, chairman of the Committee on Ways and Means, has yielded to the demands of the people of his district and agreed to run for reelection. [Applause.]

I am glad to note that this applause comes from both sides of the aisle, which testifies to the high esteem in which the gentleman from North Carolina [Mr. DOUGHTON] is held by the entire membership.

There never was a time when we needed men of Mr. DOUGHTON'S experience and ability in public life worse than we do today. Hon. Champ Clark, a former Speaker of this House, one of the ablest Speakers who ever occupied the chair, and one of the greatest Democrats of his day and generation, in an address which he delivered before the Press Club here in Washington during the time he was Speaker, said:

> It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor.
>
> "Poeta nascitur non fit"—a poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.
>
> The old Charlotte district in Virginia knew this and kept John Randolph of Roanoke in the House till he became a great national figure. Then the Old Dominion sent him to the Senate and General Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.
>
> It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possesses these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the "top-notchers."
>
> Let us take the present House and see how long the men who hold the high places have served. I cannot name all, but will cite a few as samples.
>
> Mr. Speaker Cannon is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt," for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker 8 years, only one man, Henry Clay, having been Speaker longer.
>
> I am serving my twenty-second year; Minority Leader Mann is serving his twentieth year; Mr. Kitchin, chairman of Ways and Means, his sixteenth; Mr. Fitzgerald, chairman of Appropriations, his eighteenth; Mr. Moon, chairman of the Post Office and Post Roads, his twentieth; Mr. Jones, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. Flood, chairman of Foreign Affairs, his sixteenth; Mr. Hay, chairman of Military Affairs, his twentieth; Mr. Glass, chairman of Banking and Currency, his sixteenth; Mr. Adamson, chairman of Interstate and Foreign Commerce, his twentieth; Mr. Stephens, chairman of Indian Affairs, his twentieth; Mr. Slayden, chairman of the Library, his twentieth; Mr. Henry, chairman of Rules, his twentieth; Mr. Lever, chairman of Agriculture, his sixteenth; Mr. Padgett, chairman of the Navy, his sixteenth; Mr. Lloyd, chairman of Accounts, his twentieth; and Mr. Sparkman, chairman of Rivers and Harbors, his twenty-second. There are other big chairmanships, but these will suffice to show that as a rule the big places go to old and experienced Members, for most of the men who rank close to the chairmen are old-timers. The same thing holds good with reference to members of the minority. As an illustration, Messrs. Gillette and Cooper, who are serving their twenty-fourth year, are the ranking Republicans on Appropriations and Foreign Affairs, almost certain to be chairmen thereof should the Republicans ever again have a majority in the House, as in that event, in all probability, Mr. Mann will be Speaker, unless he is nominated for President next June.

Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and, having elected a fairly good man to Congress, they keep him in the harness.

The Member of longest consecutive service is called the "father of the House." Five Philadelphians in immediate succession bore that honorable title—Randall, Kelley, O'Neill, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When General Bingham announced the death of General Harmer, his immediate predecessor as "father of the House," he stated that the five Philadelphia "fathers of the House" had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

In the second and third Congresses in which I served, Maine, with only four Members, had the Speakership and the chairmanship of the great Committees on Ways and Means, Navy, and Public Buildings and Grounds—a most remarkable circumstance, giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country.

The best rule, it seems to me, is for a district to select a man with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things.

I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in "mending my fences." My constituents have attended to that. God bless them.

Times have changed, and many conditions have changed, but the words of Champ Clark hold good today.

A man's long service here not only gives him experience and prestige with the membership of the House but it acquaints him with every branch and bureau of the Government, as well as with the heads of the departments and the leaders in the various bureaus with which he has to deal. It gives him a tremendous advantage in shaping legislation or in serving the interests of the district he represents.

Some districts change so often they never get a chairmanship and their Representatives never rise to be leaders in the House. If the gentleman from North Carolina [Mr. DOUGHTON] had retired, the chances are that North Carolina would not have had the chairmanship of the Ways and Means Committee again for a generation, at least.

Take a look at the present House of Representatives and you will see that the men who occupy influential positions, as a rule, are the ones who have served for a long period of years. For instance, our distinguished Speaker, Hon. WILLIAM B. BANKHEAD, of Alabama, has been in the House for 26 years, and will, no doubt, be here many, many more if he so desires.

The gentleman from Colorado, Mr. TAYLOR, chairman of the Committee on Appropriations, one of the most powerful committees in the House, has been a Member of this body for more than 30 years; while the ranking Republican on that committee, the gentleman from New York, Mr. TABER, who would take his place in case of a change in administration, has served for 18 years.

The distinguished dean of the House of Representatives, the gentleman from Illinois, Mr. ADOLPH SABATH, who now occupies the position of chairman of the powerful Committee on Rules, has been a Member of his body for 34 years, while the ranking Rupublican on the Rules Committee, the gentleman from New York, Mr. FISH, has been here for more than 20 years.

The gentleman from Texas, Mr. RAYBURN, the majority leader, has been in the House for 28 years; and the minority leader, the gentleman from Massachusetts, Mr. MARTIN, has been here 16 years.

The gentleman from Texas, Mr. SUMNERS, chairman of the Committee on the Judiciary, has been a Member for 28 years. The gentleman from Georgia, Mr. VINSON, chairman of the Committee on Naval Affairs, has been a Member of the House for 28 years; and the gentleman from Alabama, Mr. STEAGALL, chairman of the Committee on Banking and Currency, has been here for 26 years. The gentleman from Texas, Mr. JONES, chairman of the Committee on Agriculture; the gentleman from California, Mr. LEA, chairman of the Committee on Interstate and Foreign Commerce; the gentleman from Texas, Mr. MANSFIELD, chairman of the Committee on Rivers and Harbors; and the gentleman from Virginia, Mr. BLAND, chairman of the Committee on Merchant Marine and Fisheries, have each served in the House for 24 years.

The gentleman from Virginia, Mr. DREWRY, chairman of the Democratic congressional committee; and the gentleman from Texas, Mr. LANHAM, chairman of the Committee on Public Buildings and Grounds, have each served in the House for 22 years; while the gentleman from New York, Mr. CULLEN, the ranking Democrat on the Committee on Ways and Means, and the gentleman from New York, Mr. DANIEL A. REED, one of the ranking Republicans on that committee, have each served 22 years. The gentleman from South Carolina, Mr. FULMER, ranking Democrat on the Committee on Agriculture, and who is next in line for chairman of that committee, has been in the House for 20 years.

The gentleman from New York, Mr. BLOOM, chairman of the Committee on Foreign Affairs; the gentleman from Missouri, Mr. CANNON, ranking member of the Committee on Appropriations, and the ablest parliamentarian this country has seen since the death of James R. Mann; the gentleman from New York, Mr. DICKSTEIN, chairman of the Committee on Immigration and Naturalization; the gentleman from Texas, Mr. LUTHER A. JOHNSON, ranking member of the Committee on Foreign Affairs, have each served in the House for 18 years.

If one of these gentlemen who hold these chairmanships, or one of these ranking Members should retire, it would not only deprive the House of the benefit of his long experience, but it would mean that that position would probably be taken away from the State for at least a generation.

As you know, I myself am chairman of a committee, the Committee on World War Veterans' Legislation, one that touches more individual lives than almost any other committee in the House. If I were to relinquish that position, the chances are it would not go to a Member from my State again at least for the next 25 or 30 years, if ever.

The gentleman from North Carolina Mr. WARREN, chairman of the Committee on Accounts, has served here for 16 years, as has the gentleman from Mississippi, Mr. WHITTINGTON, chairman of the Committee on Flood Control, the gentleman from Georgia, Mr. Cox, ranking member on the Committee on Rules, the gentleman from Florida, Mr. GREEN, chairman of the Committee on the Territories, the gentlewoman from New Jersey, Mrs. NORTON, chairman of the Committee on Labor, and the gentleman from New York, Mr. SOMERS, chairman of the Committee on Coinage, Weights, and Measures.

These men of long service shape the policies of the Congress. I do not mean to discredit those younger men whom recent political changes have moved up to chairmanship of their respective committees, as the gentleman from Missouri, Mr. WOOD, chairman of the Committee on War Claims, or my distinguished neighbor, the gentleman from Alabama, Mr. JARMAN, who so ably presides over the Committee on Printing, and who relinquished another chairmanship to take that place. He is also vice chairman of the very important Joint Committee on Printing of the two Houses. Mr. JARMAN'S rise in that respect has been unusual.

Then there is the gentleman from Missouri, Mr. ROMJUE, chairman of the Committee on the Post Office and Post Roads, who has served in the House for 22 years; the gentleman from Oklahoma, Mr. CARTWRIGHT, chairman of the Committee on Roads, who has served for 14 years. The chairman of the Committee on the Civil Service, the gentleman from Georgia, Mr. RAMSPECK, has served for 12 years; and the chairman of the Committee on Education, the gentleman from In-

diana, Mr. LARRABEE, has served for 10 years; the gentleman from Louisiana, Mr. DEROUEN, chairman of the Committee on the Public Lands, has been here 14 years.

Mr. Speaker, I could carry this list on to include a large number of other leading Members of the House on both sides of the aisle, including such able leaders as the gentleman from Massachusetts, Mr. TREADWAY, the ranking member on the Committee on Ways and Means, who has been here for 28 years, and his colleague, Mr. TINKHAM, of the Committee on Foreign Affairs, who has been here for 26 years, and others whose names are familiar to us all.

I agree with Champ Clark that there is no other body of men in the world where experience means so much to the individual member, or to the people he represents.

At this time, let me say that we all regret to note the voluntary retirement of the distinguished gentleman from New York, Mr. CROWTHER, who has served in this body for 22 years. If his district persists in electing a Republican to Congress, it could do no better than to draft him and retain him in his present position as one of the ranking members of the Committee on Ways and Means.

Our distinguished colleague the gentleman from North Carolina, Hon. ROBERT L. DOUGHTON, who, as I said, is chairman of the powerful Committee on Ways and Means, has served in this body for 30 years. As a result of that service, he has risen to the chairmanship of the major committee of the House.

He is one of the most valuable Members of this Congress, and I am sure that every Member on the Democratic side, as well as our colleagues on the other side, will be glad to know that he has yielded to the demands of the people of North Carolina and agreed to run for reelection. [Applause.]

Lard Substitutes Bought by the United States Government for the War Department

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

Mr. BOLLES. Mr. Speaker, today hog prices are the lowest in many years, with the farmer receiving 5 cents per pound and less on the farm for his hogs. He is being told that there is an oversupply of pork products. Yet at the very same time this Government, which is being supported by the farmers' hard-earned tax dollars, is purchasing and using lard substitutes in great quantities.

The War Department alone, Secretary of War Woodring admits, is purchasing an average of 10,000,000 pounds of lard substitutes a year. These lard substitutes are manufactured from fats and oils practically all of which are imported from foreign countries. Every pound of substitute used means one less pound of home-produced lard consumed.

Secretary of War Woodring gives the startling information that in 1937 only 3,361,000 pounds of lard were purchased by the Army, while during the same year 10,175,000 pounds of lard substitutes were bought. In 1938 but 2,444,000 pounds of lard were purchased, while the astounding amount of 10,884,000 pounds of lard substitutes were being used by the Army. In 1939 the Army bought but 3,284,000 pounds of lard, while at the same time buying 9,897,000 pounds of lard substitutes.

Cost prices had no real influence or effect in connection with these purchases, for in almost every instance prices paid for lard and lard substitutes were exactly the same.

Perhaps the above figures will give the American farmer some idea why he is unable to find a profitable market for his hogs. No wonder he is finding it so difficult to pay his taxes and to clothe and educate his family. With his own Government favoring the use of substitutes manufactured from imported foreign products it is easy for him to understand why hogs are selling at 5 cents per pound in the livestock markets of America.

Recalling that in an interview not long ago President Roosevelt personally favored the purchase of Argentine beef for Navy use, defending his position with the claim that Argentine beef was better than American beef, one cannot help but wonder if it is not a fixed policy of the present administration to entirely disregard the interests of American agriculture in making food purchases for the Government. It is about time that the farmers of America demanded their tax dollars be spent at home rather than abroad. Our American soldiers and sailors should be furnished good American lard from American hogs produced on American farms, rather than lard substitutes manufactured from cheap products shipped in from foreign shores.

Food-Stamp Plan

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

ARTICLE BY RAYMOND CLAPPER

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very well written article by Mr. Raymond Clapper on the food-stamp plan. The article was published in the Washington Daily News of March 23, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of March 23, 1940]

SUCCESSFUL EXPERIMENT

(By Raymond Clapper)

The food-stamp plan, by which surplus farm commodities are distributed to relief clients through grocery stores, has received a remarkable vote of confidence in the Senate, which gives this experiment a unique status among New Deal activities.

During the House economy drive the food-stamp plan was sacrificed. Agriculture Secretary Wallace had asked $80,000,000 for it. The Senate Appropriations Committee not only inserted this item when it revised the House bill but raised it to $85,000,000. Senator LA FOLLETTE attempted to increase the figure to $113,000,000, but parliamentary technicalities stood in the way. However, the $85,000,000 appropriation was approved on a roll call without a dissenting vote, and it is likely that the House will adopt this sum, or the major part of it.

To Milo R. Perkins, who is in charge of surplus commodity disposition for the Agriculture Department, goes the credit for the conception and skillful establishment of the food-stamp plan. It replaces the old system of buying carloads of surplus grapefruit, oranges, and other products and dumping them into the hands of relief authorities in various cities to be given away helter-skelter before they spoil.

The food-stamp plan is simple and eliminates all of that Government interference. Grocers buy their goods in the regular way, as if there were no stamp plan. The only difference is that customers come in—they have to be certified by relief authorities, from whom they obtain little books of stamps. Instead of paying cash for the goods, they pay in these Government stamps, which the grocer redeems at his bank, which, in turn, cashes them through the Government. The trick is in the little book of stamps. The Government has given the relief client 50 cents in blue stamps for each $1 worth of orange stamps he has purchased. With the blue stamps, which were given him free by the Government, he may buy only out of a special list of commodities designated by the Agriculture Department—a list which consists of commodities in which surpluses exist and which changes from time to time. Usually it includes varieties of meats, vegetables, and fruit.

This method pumps up the sale of surplus farm products. One poultry journal, checking on the effect of the plan, found that in Springfield, Ill., relief clients were able to buy many times more eggs. Before, the average relief family was using slightly more than 1 egg per person per week—a total of 57 eggs a year. After the stamp plan went into effect they were using 6.2 eggs per person—323 a year.

The plan is a subsidy, simple and direct, which operates through regular commercial channels to assist in moving surplus farm products into consumption. Some 14,000,000 persons in the country are eligible to receive such stamps. But the plan has been introduced gradually, so that it could be carefully adapted and perfected. It has been installed only where a community was united in asking for it. Hundreds of applications are pending which cannot be acted upon for lack of funds. Mr. Perkins has avoided the slap-dash, hurry-up, do-it-all-today, blanket attempt to impose the scheme on the whole country overnight. In this he has profited by the disaster which has overtaken other New Deal experimenters who tried to go too far too fast.

Of course, the whole thing is a stopgap subsidy. But it is an effective and smooth-working stopgap which doesn't mess everything up and create paralyzing controversy—and that is a real achievement.

We grow more than people can buy. In colonial days, Secretary Wallace says, it required 19 people on farms to support themselves and 1 city dweller. Now 1 person on the land supports himself and 3 people in town and 1 abroad. By raising the standard of living—as is seen in the sale of eggs at Springfield, Ill.—consumption of farm products can be vastly expanded. Possibly not enough. Perhaps there are just too many farmers. For the time being, however, agriculture has to be subsidized. New Dealers can do it one way. Republicans can do it another. But whatever you call it, and however you do it, and however unsound it may be, it cannot be escaped.

The thing that Milo Perkins has done is to take the inescapable subsidy and make it do the most good for all concerned. If you have to give a subsidy, you can do it efficiently. We have learned through this experiment one way to do it efficiently.

Purchase of Russian Gold

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

ARTICLE FROM COLLIER'S OF MARCH 30, 1940

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from Collier's of March 30, 1940, on the subject of the purchase of Russian gold.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Collier's for March 30, 1940]

THE RUSSIAN WAY

As appalling as any other single feature of the Finnish war has been the mass murder of their own men by the Russian generals, political commissars, and Ogpu operatives.

Mass murder is the only name we know of for it. It is nothing but mass murder when, at pistol point or under threat of death, hordes of poor, ignorant peasants are hurled in frontal attacks against integrated pillboxes, machine-gun nests and fortified positions, through splintered-steel hurricanes of cross-fire and interlacing barrages.

Anybody who wants to call it by some prettier name than mass murder is invited to consider this: That, though the total Russian losses probably never will be known, experts deduce from United States Army General Staff expectancy tables that the Russians suffered 50,000 dead and 250,000 wounded in the first 17 days of the great offensive against the Mannerheim line.

That isn't a great offensive, regardless of the winnings. It is a great massacre.

Horrible though the spectacle has been, however, it should have been surprising to nobody. Nobody, that is, who knows what the word "statism" means.

"Statism," a better though less familiar word than "totalitarianism," is the philosophy of the Governments run by Adolf Hitler and Benito Mussolini. It is nothing new in the world. It is, in fact, far older than democracy.

The core of the statism philosophy is simply that the individual person, with his hopes and fears and loves, his fragile body and his sensitive soul, is nothing; that the state is all.

So, in peacetime, if you live under a statist government, the state owns you. It runs every phase of your life—your job, your home life, the upbringing of your children, and any other phase you care to name.

The state tells you it is doing all this for your benefit. But that is merely to keep you and your fellow slaves quiet. The state is really running the mob of you for its own benefit—which means to feed the egomania of whatever Mr. Big happens to be on top of your particular statist ant heap.

The same holds true in war, only more so. If you're young enough and strong enough to go to war, you'll go. The whole mob of you and your fellow slaves will do exactly what Mr. Big and his henchmen tell you to do.

If the state is facing an enemy somewhere near its size, it will conserve as much man power as seems wise, assuming its generals have any military ability whatever. If it is trying to overwhelm a small but fearless nation like Finland, it will toss its uniformed and animated dummies and dolls into the holocaust until, by the very weight of their numbers, they smother the enemy.

That is what statism means in war. The Russian generals, commissars, and Ogpu operatives have merely been applying the statist philosophy to this war with absolute logic. What else are a statist government's soldiers for?

It does make us the least bit ill, though, to think that the United States Government for years has been buying gold from Soviet Russia, as well as from all other comers, at $35 an ounce.

In 1938, Russia mined 5,235,909 ounces of gold—$183,256,815 worth at the $35-an-ounce price which we have maintained since we clipped the dollar to 59.06 cents gold on January 31, 1934. It costs Russia about $11 an ounce to mine gold.

With the profits from the gold which it has sold to us directly or indirectly, Russia has bought goods of various descriptions; mainly war-making goods of late.

There is no law compelling our Treasury to buy gold that originated in Russia. Really, do we owe Russia the duty of helping it finance its plans for the destruction of democracy all over the world?

Activities of Governors

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26 (legislative day of Monday, March 4), 1940

COMMENTS BY C. E. SMITH

Mr. NEELY. Mr. President, the Honorable C. E. Smith, who was formerly a member of the National Bituminous Coal Commission, is now a daily contributor to the Fairmont Times of a famous column entitled "Good Morning." This column for the 25th of March consists of a monograph on Governors of States. It is as rich in philosophical humor as anything the immortal Mark Twain ever wrote. It should be read by all Governors who take themselves too seriously, but especially by any one of them who, like the frog in the fable, endeavors to make himself appear as big as an ox. I ask unanimous consent that this unusual article be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fairmont Times]

Governors have a way of taking things, especially themselves, too seriously. It doesn't make much difference what State it is, you'll find the Governor taking himself too seriously. That old fellow up in Michigan, for instance. At 80 years of age he began to talk against sin. Scared everybody, too. People thought he might start a movement to make sinning go out of the fashion. Then there's this Ohio Governor, who was riding high toward the G. O. P. presidential nomination. All of a sudden he got hipped on relief and made a lot of people believe he was opposed to the common people eating. What's going to happen to him? Just another Governor.

Down in Oklahoma is another one. He has started himself a war against the United States Government. When his little war is over you'll hear no more from him. In Georgia there's one who had to make his headlines by getting mixed up with the Federal court.

Rule VI, which is the one about taking yourself too seriously, seems to be the undoing of the Governors. No matter with what good intentions a Governor starts out some day rule VI will get him, and from that time on he will be bobbing in and out of trouble like a cork on a fishline, if you will pardon the simile.

Our notion is that a good Governor should be a fair-to-middling poker player and should know how to carve a turkey and slice a ham. If there is nothing else to pass around to the boys he should be like Ruby Lafoon and issue commissions to several thousand colonels. Most Governors lay a lot of stress on building up an organization. That never pays in the long run. The old rule that every patronage job makes one ingrate and 20 enemies usually runs true, and no matter how much patronage a Governor dishes out, the minute he goes out of office he hasn't enough friends to bury him. In the final analysis the only fellow in politics who is worth a damn is the fellow who wants a job and

not the fellow who has one. There is not a statehouse in America where more than half the help is really beholden to the Governor. They all give a lot of lip service and submit to being gouged out of a cut of their salary, but most of them are waiting to stick a long knife under somebody's fifth rib.

If a political machine had to depend on its beneficiaries to carry the elections it would be sunk without a trace. A machine is really nothing more or less than a lot of crazy people who take the ballots which have been cast by the voters and substitute others which they have themselves marked. You can never trust a voter in a ballot booth; that is, a political machine can't. Every member of a political machine is sore about something, and if you let him in a booth by himself with nobody looking on but him and God, his pencil will make some strange marks on that ballot.

So it is not only foolish and futile, but a waste of time, for a Governor to fiddle away his time building up an organization, because about the time he gets it well oiled and ready to go something will happen to force them to be honest and then the stuff's off.

In fact, we are getting the notion that political machines as instruments of carrying elections are things of the past. Voters are influenced by other considerations than machine politics. Take the large blocs of votes in this State. There are the coal miners, which constitute a large bloc in itself. Then there is the other labor vote, which was powerful enough 2 years ago to defeat a prominent Congressman in this district. There is the veteran vote, the school teacher vote, and so on. None of these groups is controlled by machine politics. They usually walk into the election room and cast their ballot without a single election worker having the slightest information of how they voted.

Which all means that if the machine cannot steal the election it has, in truth, very little influence on the result, and the chances are that a Governor, no matter how hard he has tried to be a good Governor, would be terribly disappointed if he could see the actual ballots cast by members of his hard-built organization.

So we, being older, are content to stand at the side of the road and let others dally along the primrose path of political preferment.

And we no longer have apprehension as to the welfare of our own side. We have had some bits of information as to the progress of the registration of voters. Believe it or not, the Democrats not only are holding their own, but in certain instances are making gains. This information should be of great value to some of our Republican friends. If it proves to be true, they can save time and money by waiting till the next time.

Soil and Water Conservation in the Washita Basin

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, under permission granted, I submit five resolutions adopted at a recent meeting of the Washita Valley Improvement Association held at Chickasha, Okla., for the purpose of coordinating and promoting efforts to conserve water and soil in the rich Washita River Basin of Oklahoma and Texas.

The importance of taking early and adequate steps to protect the rich bottom lands of the Washita Valley from floods and conserve the water resources of this river in order to regulate stream flow and to irrigate irrigable lands cannot be overestimated. Saving our soil and water is important. It is real national defense. It is something that cannot be delayed if we are to stop the costly floods in the Washita Basin.

The resolutions adopted at the Chickasha meeting are:

Resolution No. 1

Whereas surveys have been completed by the Department of War, the Department of Agriculture, and the Department of the Interior, of the Washita River and its drainage area to determine the best means of controlling the floods and the amount of land practicable to irrigation; and

Whereas the President of the United States has asked that these surveys be coordinated before submission to Congress; and

Whereas there seems to be difficulty among the departments in the coordination of these reports; and

Whereas the report is necessary before Congress can act: Now, therefore, be it

Resolved, That we ask our Congressmen and Senators to use all of their influence to bring about a quick coordination and release of these reports in order that authorization of this Congress might be had of the Washita project; be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of War, the Secretary of Agriculture, the Secretary of the Interior, and to Members of the congressional delegation from Oklahoma.

Resolution No. 2

Whereas there are 255,290 acres of land in the drainage basin of the Washita River belonging to Indians, of which 58,000 acres are bottom lands; and

Whereas the Indians are wards of the United States Government and under the jurisdiction of the Department of the Interior; and

Whereas these lands represent a large part of the total lands in the Washita Basin: Now, therefore, be it

Resolved, That this meeting request the Department of Indian Affairs to cooperate with the people interested in the development of the Washita River to bring about the protection of the bottom lands from floods, and the development of the water resources by using the stored water to regulate stream flow and to irrigate irrigable lands; be it further

Resolved, That copies of this resolution be sent to the Department of Indian Affairs in Washington and to each Member of the congressional delegation from Oklahoma.

Resolution No. 3

Whereas the Washita traverses the State of Oklahoma from the northwest to the south central part of the State and is flanked on either side by the richest alluvial lands in the State of Oklahoma; and

Whereas 200,000 acres of this land are subject to overflow and many of our towns, as well as transportation facilities and other properties, are subject to the ravages of floods; and

Whereas there are over 400,000 acres of rich alluvial lands that could be developed by irrigation; and

Whereas many cities and towns need better and more adequate water supplies; and

Whereas pollution is a serious problem because of low flows; and

Whereas recreational facilities need improving: Now, therefore, be it

Resolved, That this meeting also endorse proper soil-conservation measures to hold all of the moisture that is practical on the ground where it falls; and be it further

Resolved, That since flood control and erosion are problems of the National Government, that we insist upon the Washita's being given full consideration of our National Congress for its development and complete protection from floods.

Resolved further, That this meeting request the assistance of the Izaak Walton League, the Farmers Union, the Wheat Growers Association, the various chambers of commerce, and other civic, industrial, and commercial organizations to aid in the securing of the development of agriculture and industry in the Washita Basin.

Resolution No. 4

Realizing, that when Congress makes appropriations for the control of the waters of the Washita, such control will include a joint program of soil conservation, flood control, and irrigation; and realizing further that any irrigation project will necessarily require the fullest scientific data to be of permanent benefit, be it

Resolved, That we present to the Department of the Interior and all other governmental agencies the advisability of establishing at the most likely location in the Washita Basin of a governmental irrigation experiment station wherein such data can be compiled through practical irrigation experiments and be made available for general use to all residents within the Washita Basin.

Resolution No. 5

Whereas the congressional delegation from Oklahoma and our State administration and officials have heretofore been working diligently toward obtaining flood-control projects on the Washita River, be it

Resolved, That the Washita Valley Improvement Association extend to them a vote of appreciation for the work which they have already done and urge that they continue their efforts until they obtain the proper results.

Tributes to Senator Borah

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

TRIBUTES FROM VARIOUS SOURCES

Mr. WHITE of Idaho. Mr. Speaker, the whole world pays homage to Idaho's illustrious statesman, the late Senator WILLIAM E. BORAH. Our State and Nation will long miss the wise counsel of this great American patriot. On the day of his funeral at Boise, the capital of Idaho, memorial services

were held in the city of Kellogg, located in the great Coeur d'Alene mining region of northern Idaho, under the auspices of the Wardner Industrial Union and by the Kellogg Chamber of Commerce.

Under leave to extend my remarks in the RECORD, I submit for inclusion in the RECORD the resolution passed by the Wardner Industrial Union, a record of the meeting of the Kellogg Chamber of Commerce, and the address of Frank Griffin, prominent attorney and Democratic leader of northern Idaho, paying a glowing tribute to Senator BORAH at the union's memorial services.

RESOLUTION OF WARDNER INDUSTRIAL UNION

Whereas Hon. WILLIAM EDGAR BORAH, in the early years of his career as a lawyer, came into the county of Shoshone for the purpose of serving the State of Idaho and the citizens of this county in particular; and

Whereas at the time of his visit he found the industrial affairs of this county in a chaotic and disordered condition, and thereupon at once diligently exercised his extraordinary talents for the purpose of restoring order, confidence, and peace to a distraught community; and

Whereas by and through the sagacity of his counsel and the loyalty of his services, a standard of unity designed to create a spirit of cooperation and harmony in the field of mining was established, from which immediately accrued a peaceful and profitable industrial program; and

Whereas Hon. WILLIAM EDGAR BORAH was truly a friend of those who labor in mine and field and a formidable champion in the advocacy of their causes, and who from the commencement of his career in public life to the end thereof employed his matchless abilities toward improving their condition and promoting their welfare; and

Whereas divine Providence has, in Its infinite wisdom, summoned our beloved friend and noble benefactor to another shore, causing us to mingle our grief with the millions of our fellow citizens, who, like ourselves, feel at this hour an unutterable consciousness of loss: Now, therefore, be it

Resolved by the Wardner Industrial Union in special meeting assembled, That we, the members of this organization, here acknowledge our gratitude and our indebtedness to the Honorable WILLIAM EDGAR BORAH for the great public and private services performed by him for and on behalf of the citizens of this district; and, saddened though we are by his sudden departure from this life, we are sustained by the knowledge that his enduring achievements will long serve both as an inspiration and as a sterling example not only for this generation but for the generations to come; and be it further

Resolved, That these resolutions be spread upon the minute book of this organization, and that a copy thereof be presented to his gracious and beloved widow.

THE WARDNER INDUSTRIAL UNION,
By JAMES LYONS, *President.*

Attest:

P. J. O'NEILL, *Secretary.*

KELLOGG CHAMBER OF COMMERCE, KELLOGG, IDAHO, MINING AND SMELTING CENTER OF THE COEUR D'ALENES

The Kellogg (Idaho) Chamber of Commerce held memorial services for the late United States Senator WILLIAM E. BORAH on January 25, 1940, at which resolutions of sympathy were adopted and forwarded to Mrs. Borah.

R. L. Brainard, president of the chamber and a personal friend of Senator BORAH for many years, delivered the address before the chamber. The meeting was attended by many friends of Senator BORAH who had been his strong supporters throughout his political career.

"We are too close to current events to fully appraise Senator BORAH'S great contribution to America's national life," stated Mr. Brainard in his address. "That will be the work of future historians. Senator BORAH championed many causes. They were worth fighting for and some day America will catch up with them. In his death every good cause lost a fearless champion. He passed away in the full flower of his usefulness, and yet his life was peculiarly complete. When the summons came he left to us the blessed memory of a life of great lasting usefulness and a character rich in all the manly virtues."

TRIBUTE TO SENATOR WILLIAM E. BORAH DELIVERED AT MEMORIAL EXERCISES AT KELLOGG, IDAHO, UNDER THE AUSPICES OF THE WARDNER INDUSTRIAL UNION, BY FRANK GRIFFIN

BORAH, of Idaho, has answered his last roll call. A modern David has fallen. The saddle of a valiant crusader is empty. He who labored so long and faithfully in his Father's vineyard has departed for his eternal home.

WILLIAM E. BORAH, who for more than three decades served our State and Nation with an untiring zeal and an unselfish devotion, hastily summoned from his seat in the United States Senate by the Author of Creation, has gone to join that celestial congress "where the wicked shall cease from troubling and the weary shall find rest." His untimely passing has brought to those who knew him personally, and to those who have followed his brilliant career, a deep sense of pain and of sorrow. We are pained by the consciousness of the great loss sustained by the State and Nation, we sorrow because we know that his ringing voice, his happy smile, his magnetic personality, while they shall remain always green in our memories, still are at this hour a part of our yesterdays.

It is highly fitting that we of Shoshone County should, on this day proclaimed as one of mourning by the Governor of Idaho, reflect upon the splendid achievements of Senator BORAH and publicly express our gratitude for the services rendered by him for and on behalf of the citizens of this district.

As early as 1896 BORAH began his fight for the remonetization of silver, and went so far as to threaten a break with his party unless it adopted a plank endorsing the unlimited coinage of silver at the ratio of 16 to 1. Throughout his long career in the Senate he advocated measures calculated to stimulate the mining industry. Many of his efforts were successful and brought about a more profitable production of minerals from the mines of the Coeur d'Alenes.

In the early years of his career as a lawyer he came into this county and found it torn and disordered by industrial dissension. He immediately set himself to the task of restoring order and confidence to this community. How well he accomplished his purpose is best acclaimed by the fact that from the time he completed his services until the present day industrial strife in Shoshone County has been the exception rather than the rule. If I am rightfully informed, Senator BORAH, during the time to which I refer, assisted in drafting the constitution and bylaws of this organization. What amount of credit he is entitled to for his labors in your behalf I shall leave to your own conscience and good judgment to determine.

WILLIAM E. BORAH won and retained the admiration and esteem of Americans because of his relentless advocacy of justice and fair play for men of all classes and conditions of life. Shortly after his entrance into the United States Senate he came to be recognized as the representative at the Capitol of that inarticulate mass of men and women who could not afford the expense of private representation at the seat of government. This was a recognition he treasured; it conferred upon him a trust that he never betrayed and a reputation that he carried with him unsullied to his grave. That is why men and women in all walks of life have gathered today to honor his name. Yet BORAH, in his lifetime, had many powerful enemies, but he was an enemy of no man. He fought false methods, not men; he espoused principles rather than persons. His great heart closeted no malice, hatred, or spirit of revenge. Like Jefferson, his policies demanded "an equal and exact justice to all, with special privilege for none."

As a lawyer and later as a Senator, he never permitted the advocacy of a cause to embitter his nature with passion or prejudice. In one of his greatest orations, delivered under circumstances that could have easily aroused the passions, he declared:

"But in the midst of this awful tragedy let us strive to be just. This crime, when fastened upon its author, will place him or them beyond the pale of human forgiveness or pity. Therefore let us not place it unjustly or upon suspicion. Let us not believe it is the crime of any class or any portion of our citizens, or that it finds sympathy with anyone other than the actual perpetrator. Let us hope that when mystery yields up her secret it will be found that it is someone irresponsible toward all others, actuated by that stronge fanaticism and fiendishness which the lawbreaker bears toward the brave and upright and loyal, who has alone committed the crime. Oh, if men, high and low, rich and poor, would only learn obedience to the law, if they could only measure the worth of this, the rarest jewel in the crown of liberty!"

And again in the same address he said:

"Neither suspicion or rumor nor passion shall have sway, but justice nevertheless will be done."

BORAH was a typical American; his life's experiences will furnish rich and romantic material for some future Alger. Time will not permit a detailed statement of his life and public services, but allow me to remind you who may be discouraged with your lot in life—you who may deplore the fact that you were not born rich, or that you have no college degree or affluent friends—that BORAH came to Idaho with no inherited wealth, that he possessed no college degree, but acquired his legal training according to the fashion of Lincoln, that upon his arrival in Boise he had in his pockets the paltry sum of $15.75. No wealthy friends met him at the depot with horse and carriage. Without friends and in a far western city, with not enough money to pay 2 weeks' board at the most, this man, whose death we now mourn, by the force of his energy and ability, through self-reliance, integrity, and his persistent application to duty, rose from his humble station in life to become dean of the United States Senate and the most widely known American statesman in the world.

Is this not an achievement capable of inspiring every man, woman, and child in the United States? America is still the land of freedom and opportunity, and rich rewards await all who have the character and ability to merit them.

In an article published in the Red Book in 1936, BORAH, in discussing the Constitution of the United States, with particular reference to hard times, wrote:

"We hear constantly about these 'difficult times' as an argument in favor of wiping out all the rights and guaranties given the people

under the Constitution. It was in 'difficult times,' very difficult times, times which tried men's souls, that the Constitution was written, and 'centralization of leadership' was for all times rejected. It was in 'difficult times,' when economic and financial chaos reigned, that Washington calmly rejected the proffered 'centralization of leadership.' It was in 'difficult times,' very difficult times, a time when we were torn with civil strife, that the great martyr declared that the Government of the people must not perish.

"They had faith in our form of government; and difficult as the times were, they did not indulge in the defeatist policy of surrendering the vital principles upon which a free government rests."

Let us remember, therefore, that a defeatist attitude on our part is as inexcusable and unwarranted as an attack upon the Government itself. May the life of BORAH be an inspiration to all of us and a sustaining influence in hours of doubt and uncertainty.

"The moving finger writes; and having writ
Moves on; nor all thy piety nor wit
Shall lure it back to cancel half a line
Nor all thy tears wash out a word of it."

We know that in the story of life as WILLIAM E. BORAH wrote it for himself there is no single line that we would cancel; no single word that we would erase. Man stands bewildered before the unfathomable mysteries of life. We cannot comprehend why a powerful leader is stricken at a time when we appear to need him most. We can only bow to the will of Divine Providence and pray that God may give us more men of the character, courage, and ability that was BORAH'S.

The National Debt

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1940

Mr. HORTON. Mr. Speaker, it is well to bear in mind during these first-installment income-tax payment days of 1940 and while we are considering appropriation bills that the heavy taxes our people have been paying during the past long 7 years plus other Government collections represent but little more than half the amount spent by our Government during that same period.

Every man, woman, and child in this country would have to pay $321.41 to the Federal Government in order to wipe out the present national debt.

Every unnecessary appropriated dollar adds to the tax debt of the individual.

The following figures should cause us to stop, stop, and stop spending:

Internal-revenue collections, $28,827,231,324.69 from March 1933 to March 1940. Expenditures exceed collections by almost twenty-three billions.

Although the Federal Government collected $28,827,231,324.69 in the 7-year period from March 1, 1933, to March 1, 1940, this sum was $22,940,196,597.80 short of meeting the requirements of operating the regular departments of the Government, paying the interest on the public debt, and conducting the various programs for recovery and relief. As a consequence of this deficit spending, the national debt has risen from $22,538,672,164, at the expiration of Herbert Hoover's administration, to a record high of $42,365,353,180, reported at the close of business on February 29 by the Treasury Department.

The national debt, as on a per capita basis, amounts to $321.41 per person. Besides the national debt, the Federal Government as of February 29, stood as guarantor of unmatured obligations of various governmental agencies in the amount of $5,621,328,848.67. These contingent liabilities are from various lending, spending, and insuring agencies having total assets of $13,383,143,150, of which sums the proprietary interest of the United States amounts to $3,607,113,675. The liabilities of these same Government corporations and credit agencies, including capital and surplus, is categorically detailed at $13,383,143,150, the identical amount of the assets.

To keep the national debt from exceeding the limit of $45,000,000,000 fixed by Congress, the cash in the Treasury has been depleted until the working balance on February 29 was but $1,634,160,443.39, a figure far below a safe, sane, businesslike margin. Despite this fact, we hear rumors of still further depletion for direct benefit payments in order to avoid further taxation, and to stay within the national debt limit.

It just does not make sense.

Farm Imports

EXTENSION OF REMARKS
OF
HON. ROBERT L. RODGERS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1940

Mr. RODGERS of Pennsylvania. Mr. Speaker, the homely question has been asked, "Which is the most important leg of a three-legged stool?" Our economic structure compares to a three-legged stool—these three legs being agriculture, labor, and industry. If one leg is too short or another too long the stool is out of balance and we are courting danger.

The farm leg is an important leg. For every dollar of rise or fall in farm income we have a corresponding rise or fall of approximately $7 in national income. The pay rolls of labor go up or go down, the volume of business and industry is advanced or retarded. This shows that the three legs of the stool are of equal importance and should be of relative length.

How have the reciprocal-trade agreements affected the farm leg? In giving consideration to this question, we must bear in mind that when a trade agreement is made with one country, from whom the United States may have received proper concessions, the same rights of making imports apply to all other countries—Germany excluded—without any concessions whatever. In other words, while reciprocity, to a degree at least, may have been attained with one country there is no reciprocity whatever with the remaining countries. We want foreign commerce, of course. We want to export our surplus products for those things which we ourselves do not have or cannot economically produce.

How do other nations pay for the goods which they buy from us? There are only two ways, either in other goods, or in money, usually gold. The United States now has approximately two-thirds of the entire gold supply of the world. We are still receiving gold in payment for our exports. As our possession of the world's gold supply increases, thereby decreasing the purchasing power of the rest of the world by use of this medium, it becomes apparent that if we are to continue to have foreign trade, it must be increasingly from an exchange of goods.

Now if we are to preserve the American market to the American farmer, American labor, and American industry—maintain our wage scale and our standard of living—we cannot admit in direct competition with our own production an uncontrolled volume of products of other countries, produced on a lower wage scale, a lower standard of living, and without the sanitary and other regulations with which we have to comply. As a matter of fact, that is just what we have been doing under these reciprocal-trade agreements, while, at the same time, the New Deal administration is spending millions of dollars of the taxpayers' money in a futile attempt to control an uncontrollable surplus.

The following table of imports of farm products for the years 1938 and 1939 shows the tremendous increase in direct competition with our own agriculture—creating more surplus, depressing our markets, which, in turn, affects adversely both labor and industry, decreases our domestic purchasing power, and increases unemployment.

Farm imports

[U. S. Department of Commerce figures]

	Unit	1938	1939
Cattle	Head	424,022	753,570
Canned beef	Pounds	78,597,000	85,863,000
Mutton, fresh	Pounds	43	105,000
Cattle hides	Pounds	59,650,000	134,107,000
Sheep and lamb skins	Pounds	32,649,000	63,776,000
Silver-fox skins	Number	16,468	133,251
Barley	Bushels	126,000	776,000
Oats	Bushel	7,183	4,293,000
Wheat	Bushel	3,829,000	10,747,000
Wheat byproduct feeds	Tons	58,394	458,957
Hay	Tons	18,954	48,348
Potatoes, white or Irish	Pounds	45,820,000	93,859,000
Potato starch	Pounds	6,746,000	10,984,000
Tapioca	Pounds	230,879,000	382,803,000
Peas, canned	Pounds	450,000	1,159,000
Pineapples, prepared	Pounds	31,524,000	74,991,000
Cherries, fresh	Pounds	855,000	1,482,000
Wool, unmanufactured	Pounds	104,274,000	245,970,000
Wool noils, wastes, and rags	Pounds	3,803,000	18,343,000
Maple sugar and syrup	Pounds	3,984,000	12,268,000
Milk, dried and malted	Pounds	80,735	2,465,032
Casein (milk product)	Pounds	417,000	15,832,000

NOTE: 1939 increases over 1938.

The Fortune Poll for April

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

OTHER CONCLUSIONS ARE ALSO IN ORDER

Mr. ELLIS. Mr. Speaker, the Fortune Survey, or Fortune Poll, as reflected by the April issue of Fortune Magazine is most interesting. However, a study of the figures presented indicates that, while most of it appears to be splendidly done, there are a few instances where the full picture is not reflected in the conclusions reached by Mr. Roper. Both for the purpose of the figures reflected and the conclusions reached by Fortune, as well as other conclusions which I think are evident, I quote the heart of this month's report:

I. WHAT TO SPEND FOR

Bearing in mind that our problem is to build the strongest nation possible in order to meet any situation, on which of these four groups of things do you think the Government is warranted in spending the most money—increasing armaments, dealing with agricultural problems, reducing poverty and unemployment, or public construction? Which second? Third? Fourth?

First:	Percent
Reducing poverty and unemployment	43.0
Increasing armaments	31.5
Dealing with agricultural problems	16.3
Public construction	5.5

Listing first choices only.

It is interesting to note that Fortune gave four choices in the above and that three of the items are nonmilitary and for the general public good while one item is listed as increasing armaments.

In other words, Fortune could have concluded—and it is in order to conclude—that 64.8 percent believe that "to build the strongest Nation" it is better to spend to reduce unemployment, to relieve agricultural problems, and for public construction, as against the 31.5 percent who believe in attempting to attain the same goal by increasing armaments.

II. FOR REDUCING POVERTY AND UNEMPLOYMENT

Of these things having to do with reducing poverty and unemployment—providing work relief, providing old-age pensions, clearing slums and providing better housing, and training skilled labor—which do you think is, or might be, the most important on which to spend money in order to build up a better and stronger Nation? Which second? Third? Fourth?

First:	Percent
Old-age pensions	24.4
Slum clearance and better housing	20.2
Training skilled labor	24.9
Work relief	27.3

Only first choices listed.

III. FOR INCREASING ARMAMENTS

Of these things having to do with armaments—the Army, the Navy, the air force, training civilian pilots—which do you think is, or might be, the most important on which to spend money in order to build up a better and stronger Nation? Which second? Third? Fourth?

First:	Percent
The Navy	34.5
The air force	32.9
The Army	17.1
Training civilian pilots	11.5

Only first choices listed.

IV. SPENDING FOR AGRICULTURE

Of these things dealing with agricultural problems—removing poor farm land from cultivation, reforestation and preventing soil erosion, controlling pests that destroy farm crops, encouraging farmers to raise all they can by paying them a subsidy, keeping farmers from raising too much in order to keep prices from falling—which do you think is or might be the most important on which to spend money in order to build up a better and stronger nation? Which second? Third? Fourth?

First:	Percent
Reforestation and soil conservation	28.1
Controlling pests	15.7
Removing poor farm land	11.4
Subsidizing farmers	23.6
Controlling farm production	10.8

Only first choices listed.

V. A GUIDE TO PUBLIC WORKS

Of these kinds of public construction—Federal power plants, flood control, big national highways, airports—which do you think is or might be the most important on which to spend money in order to build up a better and stronger nation? Which second? Third? Fourth?

First:	Percent
Flood control	38.0
Big national highways	21.0
Airports	18.1
Federal power plants	13.9

Only first choices listed.

I am happy to see flood control take the lead as the most popular form of public works, but I submit that especially in view of the present national policy of dual development—flood control and power combined—it would be fair to combine these two items and that would give you a total of 51.9 percent. I submit that it was unfair to list "Federal power plants," for strictly speaking there is no such thing in the Nation. There are combined flood control, irrigation, and power projects; there are combined flood-control-power projects, but there are certainly no outstanding Federal power projects as such. One would naturally conclude that by this item receiving 13.9 percent of firsts that there certainly is an overwhelming sentiment in favor of public power development. Fortune concludes that "Federal power projects are not approved." This is not a proper conclusion and as stated borders on propaganda.

VI. QUANTITATIVE SPENDING CHARTER

Here the question was:

Which 3 of the 17 subdivisions (listed above) do you think the Government should spend most money on?

There were 13,062 specific votes as follows: the Navy, 1,435; the air force, 1,420; providing work relief, 1,293; providing old-age pensions, 1,173; slum clearance and better housing, 988; training skilled labor, 953; reforestation and soil conservation, 888; flood control, 865; the Army, 733; subsidizing farmers, 710; big national highways, 457; training civilian pilots, 454; controlling farm-crop pests, 416; airports, 361; removing poor farm land from cultivation, 351; controlling farm production, 311; Federal power plants, 254.

VII. BALANCING THE BUDGET

The most unpleasant political subject that will come up during the year, when politicians dare mention it at all, is taxation. And the public's answers to a question on that will appear below. But between spending and taxes there is the Budget, which at least two of the Republican hopefuls are hinting they would be prepared to balance if put into office. In making such a promise, does the G. O. P. have a convincingly popular proposal, or does the public cleave to the Rooseveltian doctrine that we can wait for prosperity to bring us an $80,000,000,000 income, and that the Budget will then balance itself? Which of these statements comes closest to describing your feelings?

	Total	Prosperous	Upper middle	Lower middle	Poor	Negro
	Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
The Federal Budget should be balanced immediately at all costs	9.1	12.3	10.3	9.3	6.0	9.1
The Government should make whatever changes are necessary in spending and taxation to bring the Budget into balance within a few years	48.4	63.7	60.7	50.4	38.1	23.5
We should continue with an unbalanced Budget until real recovery has set in	25.9	16.7	19.6	27.0	33.4	25.9
Do not know	16.6	7.3	9.4	13.3	22.5	41.5

VIII. PAYING THE BILL

Suppose it became necessary to increase taxes—which one or two of these methods would you prefer?

	Total	Prosperous	Upper middle	Lower middle	Poor	Negro
	Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
Increase taxes on tobacco, luxuries, and liquor	40.5	42.6	45.6	41.7	36.4	31.3
Increase taxes on corporation profits	20.9	10.7	18.0	22.3	25.6	17.8
Increase the number of people paying an income tax by having people with lower incomes pay at least a small income tax	17.1	35.3	23.0	15.8	11.8	8.7
Place a Federal sales tax on all retail sales	14.2	23.7	16.9	15.5	9.6	6.6
Increase taxes on those now paying income taxes	14.0	7.9	11.5	14.6	18.4	8.7
Don't know	12.5	6.3	6.5	10.3	15.4	33.7

It will be noted that the listing here includes actually three different forms of income tax:

(1) Increase taxes on corporation profits; (2) increase the number of people paying an income tax by having people with lower incomes pay at least a small income tax; (3) increase taxes on those now paying income taxes.

It is also true that two forms of sales tax are included by listing a suggested increase on tobacco, luxuries, and liquor.

The interesting observation is that a total of 51 percent prefer increasing the income tax while a total of only 14.2 percent prefer a Federal sales tax on all retail sales.

Railroads Seek Only an Even Break

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

EDITORIAL FROM THE CARBONDALE (PA.) LEADER

Mr. VAN ZANDT. Mr. Speaker, the editor of the Carbondale (Pa.) Leader hit the nail on the head when he wrote the following editorial appearing in his paper of February 6, 1940. We who come from railroad communities ask that the railroads be given an even break, and this editorial speaks for America's great railroad family who are in favor of early passage of S. 2009—the Wheeler-Lea railroad bill—and is as follows:

[From the Carbondale (Pa.) Leader of February 6, 1940]

RAILROADS SEEK ONLY AN EVEN BREAK

American railroads, hamstrung by restrictions and bound up in Government red tape, have a just basis for the complaints they are registering against the policies which hold them back, and they have logic and reason on their side in urging that a bill now pending in Congress looking toward relief from the situation be passed.

It has escaped general attention, perhaps, but railroads presently are restricted in certain operations that not only are fostered but actually subsidized by government, among some of their competitors. An oil company, for example, is granted permission to become a common carrier through the medium of pipe lines; various barge lines, notably the one on the Mississippi River, are direct beneficiaries of Government largesse through subsidies; many trucking corporations are mere adjuncts to businesses which need transportation to make them prosper. But railroads are forbidden to engage in any sort of private enterprise, aside from cutting and selling timber on land they may own, except the sole business of transportation.

All they seek is that their competitors be restricted in proportion to the hamstringing that keeps the rails from prospering. They are certain that if given an even break in competition, they can get along. This is a reasonable hope on their part and one the Government should give ear to, for certainly this business of making one portion of our social or economic life prosper at the expense of another portion is not American, nor will there be a return to harmonious normal business until the condition is changed to one of equality all around.

Businessmen Speak Out Concerning the N. Y. A.—Its Program and Future Needs

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

REPORT OF A COMMITTEE APPOINTED BY THE CONFERENCE ON THE PROBLEMS OF YOUTH, CALLED BY THE ADMINISTRATOR OF THE FEDERAL SECURITY AGENCY, PAUL V. McNUTT, AND HELD IN WASHINGTON, D. C., ON DECEMBER 13–14, 1939

Mr. JOHNSON of Oklahoma. Mr. Speaker, yesterday I made some rather extended remarks in support of the appropriation for the maintenance of the N. Y. A. program on its present basis, and in opposition to the proposed cut of $15,000,000 below the sum being expended for the same purpose during the present fiscal year. In support of my position I mentioned a report of a committee appointed by a conference on the problems of youth called by the Administrator of the Federal Security Agency, Paul V. McNutt, held in Washington, D. C., on December 13–14, 1939. In my speech yesterday I mentioned some of the business leaders who participated in that conference, and also quoted briefly from the report of the committee appointed from that conference. I am pleased to submit, herewith, the report in question, believing it will be of special interest to Members of Congress, as well as millions of other citizens who are interested in the program of the National Youth Administration. The report follows:

A conference of leaders in business, labor, and education, the list of whose names is appended to this report, met in Washington on December 13–14, 1939, at the invitation of the Administrator of the Federal Security Agency, Paul V. McNutt, for the purpose of considering the problems which confront the Nation with respect to unemployment among youths from 16 to 24 years of age, inclusive.

The conference was so much impressed by the extent to which youths are unable to secure jobs that it passed a series of resolutions and appointed a committee to make a detailed study of the statistics of unemployment among youths and to determine the amount of appropriation necessary to make effective the recommendation formulated by the conference as follows: "It is quite impossible to meet the urgent needs of unemployed young people at the present time without the expenditure of larger sums of

public money than are now devoted to the solution of the unemployment problems of young people."

The committee met in Washington, D. C., on January 10–11, 1940, and examined recent reports that had been assembled for its consideration. It found:

(1) Unemployment among young workers below 25 years of age who are actively seeking jobs is more severe than among the members of any other age group in the United States.

(2) More than one-third of the unemployment in this country is among youths less than 25 years of age.

(3) Conservatively estimated, there are not less than 3,700,000 unemployed youths looking for jobs. Of this total number 3,000,000 are 18 to 24 years of age; 700,000 are 16 and 17 years of age.

(4) At least 70 percent of the unemployed youths included in the numbers cited belong to families the incomes of which are insufficient to provide basic needs.

(5) Needy youths 16 and 17 years of age, out of school, unemployed, and seeking jobs number at least 500,000.

(6) Needy youths 18 to 24 years of age, out of school, unemployed, and seeking jobs, number at least 2,100,000.

(7) Registered as pupils in secondary schools, and therefore not counted as unemployed, are many youths who would quite certainly be on the labor market if it were not universally recognized that it is difficult, and often impossible, for a youth to secure employment. The attendance at secondary schools has increased from less than 700,000 in 1900 to more than 6,500,000 in 1939. This increase is due in no small measure to the fact that youths cannot find places in private employing enterprises.

(8) The Federal Government provides part-time employment for about 800,000 out-of-school youths through the Work Projects Administration, the Civilian Conservation Corps, and the National Youth Adminstration. In other words, the Federal Government is supplying some work for not more than 22 percent of all out-of-school unemployed youths or 31 percent of such youths from needy families.

(9) There are now on the waiting lists of the National Youth Administration, certified as in need, 300,000 youths who are out of school and unemployed. This number is equal to the number for which the National Youth Administration now supplies work for out-of-school unemployed youths.

In the light of the facts, it is evident that the present provisions made by the Federal Government for unemployed, needy youths who are out of school are inadequate. It is evident that the Nation must take more effective measures than are now taken for the induction of young people into adulthood if these young people are to become self-respecting, self-supporting citizens. The presence of large numbers of youths who are unable to find their proper places in society can only lead to increased costs in the crime bills and relief bills of the future. Nineteen is the age, even under present conditions, at which more crimes are committed than at any other age. So long as young workers are not provided with jobs by private business, industry, and agriculture, public employment and guidance are clearly necessary.

The committee reviewed the methods and costs of the existing Federal programs for unemployed youth. The cost per youth of operating the program of the National Youth Administration is $263 per year for out-of-school youth engaged on work projects and $57 per academic year for youths who are given work and wages that make it possible for them to remain in school. In the judgment of this committee these costs are too low for the conduct of an adequate program. They demonstrate, however, the possibility of providing at a very small cost a part-time work program for a great many young people.

If the Federal Government undertook even a reasonably complete program for unemployed youth the cost would amount to more than $1,000,000,000 a year. The committee recognizes that the immediate appropriation of such an amount is not feasible. It recognizes also that too rapid an expansion of the present program might result in inefficiency and waste.

It believes that the existing program of the National Youth Administration can be expanded to the great advantage of the Nation. The procedure for the selection of desirable projects and the machinery for operating these projects has already been established. Plans for the coordination of these projects with local school facilities are being developed in many communities and should be systematically extended.

The committee, therefore, recommends that $200,000,000 be appropriated to the National Youth Administration for the fiscal year 1940–41. This sum would permit the National Youth Administration to continue its student-work program at an increased level, and would permit the employment of the 300,000 youths who are now certified as unemployed, out of school, and in need. It would also make possible more effective cooperation with local school systems.

If the foregoing recommendation is not accepted and the appropriation proposed for the National Youth Administration in the Federal Budget for 1940–41 is adopted, it will be necessary to reduce by 30 percent the funds devoted to aid for students in high schools and colleges and to reduce by at least 10 percent the employment of youths on the out-of-school work program. In the light of the need for the employment of these youths, and in view of the proposed reduction in the appropriations for the other two Federal agencies that employ youth, a reduction in the appropriation of the National Youth Administration will be nothing less than a disaster.

If, on the other hand, the funds made available for the National Youth Administration are increased as recommended, the committee is confident that the Nation will be fully repaid in goods and services which will benefit young people and the communities in which they live. The morale of young people will be restored, conservation of national resources will be promoted, and work experiences that contribute greatly to the employability of young people will be provided.

The committee believes that a part of the increase which it recommends should be explicitly allocated to the training in public schools of the youths on the work projects organized by the National Youth Administration. To this end, it recommends that a part of any increase in the appropriation made for the National Youth Administration be expended for the training in public schools of enrollees of the National Youth Administration.

A final recommendation which the committee has to make is the result of its experience in securing reliable statistics on unemployment of young people. A periodic survey should be made of the number of young people and their status with respect to education and employment. Such a periodic survey will furnish the only safe basis for the determination from year to year of public policy with respect to the youths of the Nation. It is recommended that the National Resources Planning Board be requested to prepare a plan for a periodic sampling survey of youths and that suitable arrangements be made for the conduct from time to time of such a survey.

Members of the committee: Henry I. Harriman, of Boston, Mass., former president of the United States Chamber of Commerce, chairman; H. M. Taliaferro, Grand Rapids, Mich., president of the American Seating Co.; Charles W. Taussig, New York City, president of the American Molasses Co., and chairman of the National Youth Administration National Advisory Committee; Dr. Edwin A. Lee, of Teachers College, Columbia University, New York; Matthew Woll, New York, vice president of the American Federation of Labor; Ralph Hetzel, Washington, D. C., director of unemployment for Congress of Industrial Organizations; Dr. George F. Zook, Washington, D. C., president, American Council of Education; Dr. Floyd W. Reeves, Washington, D. C., director of the American Youth Commission of the American Council on Education.

Where Does Arkansas Stand in Education?—And Why?

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

EDITORIAL FROM SOUTHWEST AMERICAN ON STATEMENT OF DR. A. M. HARDING

Mr. ELLIS. Mr. Speaker, more and more we are coming to the proposition that American wealth must be taxed where it is to educate American children where they are. Some of the most interesting facts and comparisons which have yet come to my attention are set out in an editorial by C. F. Byrns, one of the South's ablest and clearest thinkers, appearing in the Southwest American, of Fort Smith, Ark., on February 9, 1940. Mr. Byrns quotes Dr. A. M. Harding, who is one of the South's ablest educators. I quote the article in full:

A great deal of fuzzy thinking and talking goes on in Arkansas about the amount of money spent on our schools.

It has been said so often that Arkansas stands forty-sixth in public education that many people inside the State as well as outside it get the idea the State is woefully deficient in its educational effort, and is in fact a State of illiterate hoodlums who want nothing better than they have. That, of course, is not true.

Dr. A. M. Harding, director of the extension service of the University of Arkansas, has written a statement on this situation, published in the current University Extension News, which is so sensible and realistic that it merits reproduction here and careful thought by everyone who reads it. Here it is:

"Forty-sixth in education. How often I have heard this expression from people who know nothing about the problems of Arkansas. Too many people refer to our so-called educational shortcomings and put the blame on lack of enterprise and ability in our citizens. These critics, to my way of thinking, are not only harsh but uninformed. They place Arkansas forty-sixth educationally because we spend fewer dollars on education than most other States.

"Instead of noting the unprecedented growth of educational facilities in Arkansas since 1900, they compare what the State

now has with what New York can offer. They fail to take into consideration two factors which have a significant bearing on the composite educational picture. These are the wealth of the State and the ratio of children to the adult population.

"In 1936, the people of Arkansas had a total accountable income of $462,000,000. That same year Louisiana's income was $770,000,000; Oklahoma's, $769,000,000; Texas', $2,247,000,000; California's, $4,291,000,000; and New York's, $10,111,000,000. Even Mississippi, which traditionally trails Arkansas in State rankings, had a higher income in 1936, $466,000,000.

"New York spends more money per year on automobiles than Arkansas but our cars are just as good as theirs. The only point is that we lack the money to buy as many cars as they do.

"Why cannot these educational statisticians compare the different States on the basis of the percentage of accountable income spent on education? On this basis, Arkansas ranks twenty-seventh. Even when Arkansas spends a greater amount of her income proportionately on schools, still the total sum is much less than in the wealthier States.

"New Jersey, which ranks forty-sixth by this scale, is able to spend five times as much as Arkansas on the intellectual development of her children. While this does not necessarily mean that the New Jersey child receives more than five times as much education as the child brought up in Arkansas, or that his education is five times better, it does mean that, other things equal, he has better trained teachers, more up-to-date libraries, better equipped laboratories, more instruction in art and music, and more vocational training.

"At the same time, Arkansas has a much heavier educational burden than the high-ranking States in other sections of the country. There are marked differences in the ratio of children to adults. The last census showed there were 602 children of elementary and high-school age per thousand of adults in Arkansas, compared with 319 per thousand in California or 363 in New York. Arkansas is one of the States in the rural South whose people, largely agricultural, are trying to educate 13 percent of the Nation's children with only 2 percent of the national income.

"Arkansas, along with other States in the South, has a vital interest in the bill for Federal support of public schools. That, in addition to assistance from philanthropic agencies, is the only solution to the problem. Dr. Donald Davidson, of Vanderbilt University, states the answer succinctly in his new book, The Attack on Leviathan, when he says: 'Blood transfusion must replace the blood sucking of the last 70 years.'

"I join other southern educators in giving my unqualified support to the recommendation of President Roosevelt's Advisory Committee on Education that Congress provide generous grants for State and local education."

National Unemployment—Its Cause and Cure

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1940

MEMORANDUM ON NATIONAL UNEMPLOYMENT

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I submit herewith a letter from Hon. Robert L. Owen, who for many years represented Oklahoma with distinction in the United States Senate, together with a memorandum he has kindly prepared on national unemployment. I trust that this will be given careful and thoughtful consideration by the Members. Senator Owen, author of our Federal Reserve Act, is an internationally known authority on money and banking.

The letter and memorandum follow:

WASHINGTON, D. C., *March 4, 1940.*

Hon. JED JOHNSON,
House of Representatives.

MY DEAR MR. JOHNSON: Your letter of March 2 requesting my views on our great national problem of unemployment received.

I enclose a memorandum which may be useful. It gives me the more pleasure to do this work for you because of the distinction you have achieved in your 12 years of service in the Congress of the United States. The action of your colleagues in the last Congress in making you chairman of the Democratic steering committee of the House of Representatives, and your selection this Congress as chairman of the speakers' bureau, Democratic congressional campaign committee, bear the highest testimony to your personal worth and ability as a leader among men. I am glad to see you one of the leaders of the Committee on Appropriations of the House of Representatives, and your present charge of the appropriation for the Interior Department is a great responsibility.

I feel proud of the Oklahoma delegation in Congress, for the State is ably represented, and it has by virtue of its services established a powerful influence in the House of Representatives.

Hoping that the memorandum I enclose may be of service to our country, I remain with the greatest respect,

Yours sincerely,

ROBERT L. OWEN.

NATIONAL UNEMPLOYMENT—ITS CAUSE AND CURE

(By Robert L. Owen)

Informed students of modern monetary science understand perfectly well the cause of 10,000,000 unemployed in the United States. And they understand equally well the cure for it. They know that it can be quickly cured, because they know the cause. Both the cause and the cure have been set forth by me, among many others, in Senate Document No. 23, prepared by me and submitted on the twenty-fifth anniversary of the signing of the Federal Reserve Act.

The Federal Reserve Act was framed by me after taking 3,000 pages of testimony, and within 4 days after I obtained a vote by the Senate in favor of the bill I submitted as a substitute for a House bill, it was signed by the President and became the Federal Reserve Act.

This act was intended to establish public control over the volume and value of money by regulating and stabilizing the price level through stabilizing bank credit, which functions as money. Woodrow Wilson's demand for public control over private control of the volume and value of money—that is, bank credit—will be found on page 100 of Senate Document No. 23, as follows:

"* * * the control of the system of banking and of issues which our new law is to set up must be public, not private; must be vested in the Government itself so that banks may be instruments, not masters, of business and of the individual enterprise and initiative."

This view of President Wilson had been entertained by such men as Benjamin Franklin, and by the great convention which established the Constitution and imposed on Congress the duty of coining, creating, and regulating the value of money. Quotations will be found in the appendix of Senate Document No. 23 from Presidents John Adams, Thomas Jefferson, Andrew Jackson, Abraham Lincoln, Garfield, and Hon. James G. Blaine.

Under Woodrow Wilson's management, up to 1920 when reactionaries got personal control of the Federal Reserve machinery, the Reserve System was a grand success. It brought abounding prosperity. It raised $40,000,000,000 and won the World War by financing the Allies. This great fund was over half liquidated before the forces of reaction caused the panic of 1921 through the deliberate and willful contraction of credit and currency in 1920–21, which threw 5,000,000 people out of employment.

Under Calvin Coolidge an overexpansion of credit took place as a reaction to the contraction of 1921, which resulted in inflating securities listed on the exchanges, the borrowing of billions of dollars for speculating in securities with the unavoidable collapse of October 1929, which resulted in throwing out of employment by 1932–33 about 14,000,000 people through the contraction of bank credit, or the contraction of our money supply, since 95 percent of our money supply consists of bank checks on demand deposits.

Let us look at the record. On October 23, 1929, a crash in the stock market took place, and within 6 weeks $6,000,000,000 of call loans contracted credit in the stock markets of the country resulting in a fall in the valuation of listed securities of $30,000,000,000 within 2 months. The financial airplane went into a tailspin. A violent wave of pessimism and stringent economy swept the Nation. People everywhere cut down consumption and caused production to fall off, which threw millions out of employment, and the lack of wages and salaries caused still further contraction in consumption, contracting further production; so that our national production fell from an estimate of $81,000,000,000 to $38,000,000,000 within 3 years. Within that time the banks contracted credit to the extent of over $20,000,000,000. The dollar increased in purchasing power 600 percent in terms of listed stocks on an average. Farm products fell far below the cost of production. The campaign of 1932 followed, and the Hoover administration was overthrown because of the depression and the failure of that administration to correct it.

The House of Representatives in May 1932 passed the Goldsborough bill, after taking 500 printed pages of testimony, in which a remedy was proposed by restoring the purchasing power of the dollar to the predepression normal and maintaining it. This bill instructed the Federal Reserve Board and the Secretary of the Treasury to make effective the policy. The Goldsborough bill passed the House by 289 to 60—117 Republicans voting for it. Of the 60 who voted against it, 48 Members were retired in the succeeding election. Never was there a more nearly unanimous declaration of policy by the representatives of the people on an issue so important. This bill was advocated by the National Farmers Union, the National Grange, the American Farm Bureau Federation, and the present Secretary of Agriculture supported this policy at that time in his testimony before the committee. The restoration of the dollar index to a predepression normal meant the restoration of the price level. The restoration of the price level meant expanding the supply of money through the expansion either by currency or by credit through the Federal Reserve banks.

When the people are unable to obtain wages and salaries, when their income from rents and profits is cut off by depression, they have not the means with which to buy, and under these conditions production and employment must cease in ratio or pile up unsalable inventories. The consumers' buying power must depend upon the increasing of the volume of money in circulation and a rising price level. Please remember that the price-level index is a percentage in 1939, for example, of the volume of money required in 1926 to buy a fixed volume of 784 listed commodities, which meant the index of 79, in 1939, meant that it took 21 percent less money to buy the same goods in 1939 as in 1926. Raising the price level means increasing this volume of money by 21 percent. In other words, the volume of money in the turn-over of the wholesale primary markets required an increase of over $10,000,000,000.

Every man of common sense ought to know that the value of property in terms of dollars depends on the number of dollars in circulation. When the dollars in circulation are cut down for whatever reason, it means that the price of property goes down. Improved property in the towns and villages of the country has fallen to less than half of its predepression value because of this contraction of credit. The rents have fallen off to a point where they are unequal to paying the maintenance, taxes, and the administration of shops and stores and dwellings.

The proof of the shortage of money is so shown by the fact that the check money actually emitted and debited by the banks against the demand bank depositor in 1939 was only $530,000,000,000; whereas, in 1926 it was $845,000,000,000, 14 years ago. And since that time the volume of money should have increased in the rate of 4 percent per annum under normal conditions of uninterrupted growth, or it should be now 50 percent more than $845,000,000,000. In other words, our money supply in 1939 should have normally had a turn-over of over $1,300,000,000,000 instead of $530,000,000,000.

In the years 1926, '27, and '28, up to July 1929, preceding the panic, the average turn-over of the demand deposits on the books of all the banks in the hands of private depositors was about 40 times per annum. The conditions of 1939 justify, therefore, the assertion that $530,000,000,000, divided by 40, would give the volume of demand deposits in actual circulation at about $13,000,000,000; while the total of demand deposits in the hands of private depositors is now about $24,000,000,000. In other words, eleven or twelve billion dollars of hoarded demand deposits are held as reserves, held on account of fear, and held for speculative purposes expecting a further crash in property values.

The cause of unemployment is a contraction of available money supply, through which alone the consumers may have wages, salaries, and income with which to buy the products created by the same people who consume them.

Under our present system, the banks and their customers create over 95 percent of all the money we use (check money). And they cancel check money when the loans are paid off, for whatever reason. Ninety-five percent of our check money is based on deposits created by debt. This creates an irresponsible monetary system where private persons create and destroy money according to their hopes and expectations of profit, or their fear of loss and lack of confidence. Chairman Marriner Eccles, of the Board of Governors of the Federal Reserve System, truly said, page 102, Senate Document No. 23, "The banks can create and destroy money. Bank credit is money. It is the money we do most of our business with, not with that currency which we usually think of as money."

The financial catastrophe of the panic of 1929 caused the liquidation of 10,000 banks, hundreds of thousands of commercial enterprises, and the bankruptcy of millions of individuals, thereby causing a profound loss of confidence resulting from the destruction of national income and the destruction of the value of property of all sorts.

What Chairman Eccles says is true—that the banks create our money and can create our money—but it is also true that privately owned banks cannot act in complete concern and control and regulate the volume and value of money, because they have no adequate means of cooperation. The only banking structure that has the power and the means with which to correct these conditions arising from a contraction of the money supply are the 12 Federal Reserve banks, backed by the power of the Government. These banks can create money just as easily as a private bank, and more easily; they can create the money precisely in the same way as a private bank. A private bank lends money to a private individual on a mortgage, or on stock-exchange collateral, or on Government bonds. Private banks can buy Government bonds, which means lending money to the United States at interest, and in doing so the private bank creates a demand deposit in exchange for the Government bond. The bank puts the Government bond in its portfolio and gives the Government a checking account. The Federal Reserve banks can do the same thing. They can buy outstanding bonds of the United States in the open market and thereby convert a nonliquid security into a liquid demand deposit, or money subject to check. The immediate effect of such a policy by the Government would be to raise the price level. An example of this took place when the Federal Reserve banks in the 4 weeks of September last bought $475,000,000 of Government bonds and notes. The immediate result was that the price level rose and the dollar index fell from 133 to 126. This action by the Reserve banks stimulated public confidence, excited the hopes of those who saw the prospects of a rising market, or rising price level. But this favorable action on the price level ceased when the Reserve banks disposed of the $475,000,000 and the price level began to fall again and the dollar index to rise. The price level was 75 in August last and went up to over 79 when the Federal Reserve banks expanded credit in the manner described. The effect was psychological. The restoration of confidence can only be achieved by a congressional declaration of monetary policy, such as declared by the Goldsborough bill of 1932, which was defeated in the Senate by a conservative vote.

President Roosevelt approved the Goldsborough bill. I personally presented to him the bill and the evidence upon which it was based. The friends of the monetary policy declared in this bill supported Mr. Roosevelt and secured his nomination and election in 1932. Mr. Roosevelt favored that policy, as appears from his statement in October 1933, in which he said:

"When we have restored the price level we shall seek to establish and maintain a dollar which will not change its purchasing and debt-paying power during the succeeding generation."

This was the substance of his famous telegram to the London Economic Conference.

One of the greatest weaknesses of our Government is that Senators and Members of the House are so intensely occupied with political, legislative, and departmental duties and other preoccupations that it is extremely difficult for them to study such a question as monetary science. They can, therefore, be misled by propaganda, which is furnished them abundantly in methods so adroit that it does not seem to be propaganda.

The same thing is true with regard to the President and the members of his Cabinet. Their administrative duties are enormous, their preoccupations urgent and imperative. Therefore, this question and the solution of it is left in the hands of the Board of Governors of the Federal Reserve System. The Board is afflicted by the same nature of administration preoccupations. These interferences with study are not true with regard to men like Professor Fisher and the professors of political economy who have been working with him and corresponding with hundreds of professors of political economy studying this question. Now there has been assembled at least 300 professors of political economy who support the theory of public control of our money supply instead of private control, who favor the public creation and control of the volume and value of money instead of the private creation and destruction of money through private hopes and private fears. Private persons can have no policy which they are capable of carrying out for the welfare of the public and of themselves in a broad sense.

The cure of unemployment will be found in bills already pending in the Congress and introduced by Congressman Jerry Voorhis, of California, Congressman Wright Patman, of Texas, Senator M. M. Logan, of Kentucky, and Congressman Brent Spence, of Kentucky. Some years ago, in 1932, I believe, Congressman KENT E. KELLER, of Illinois, and Congressman JOHN E. RANKIN, of Mississippi, introduced such bills declaring a monetary policy.

The restoration of the spirit of confidence of the business people of this country can be completely accomplished by a sound, sensible, and sane declaration of monetary policy by the Congress and the requirement that the officials of the Board of Governors of the Federal Reserve System shall be subject to the control of Congress and removal from office if they fail to maintain the confidence of the lower House, which comes fresh from the people every 2 years. A vote of no confidence should be sufficient to remove any administrative officer who holds a position of such vast importance as the life and death powers of the Board of Governors over the business of this country.

The correctness of the principles which I am expounding to you here of the public control of the volume of money and value of money is now fully recognized by the Governments of Great Britain, France, Italy, Sweden, Finland, and even Germany has used these principles to expand its power enormously.

NATIONAL DEFENSE

Our citizens are deeply concerned over the question of national defense. There is no question of national defense which surpasses the problem we are now considering. The incompetency of monetary government led to the stock-market crash of October 1929. And our national production fell from $81,000,000,000 to $38,000,000,000 per annum. A total loss during the last 10 years of approximately $200,000,000,000 of production we should have had. And if we had advanced at the rate of 4 percent per annum, it would have made nearly as much more. (See S. Doc. No. 23, p. 48.) The restoration and maintenance of national maximum employment is the most powerful factor of national defense. We have the factories, equipment, power, and working force that could easily produce $130,000,000,000 per annum if fully employed in production.

To say that nobody knows what makes the value of money is a self-evident and ridiculous error. To say that nobody knows how to end unemployment has no substantial truth in it. There are thousands of scholars who know, and as one of the students of monetary science, I call your attention to Senate Document No. 23, Seventy-sixth Congress, in which this whole subject matter is explained so simply, so plainly, and so clearly that a high-school student should easily understand it. The difficulty has been that the preoccupations above described of the Members of the House and Senate, the Board of Governors, and the President, have prevented a complete mastery of the subject matter, and steps necessary to restore to a maximum national employment.

Our failure to solve this problem has resulted in the disclosure of 60 subversive organizations in this country discontented with their Government and seeking a change as a means of relief from distress.

I congratulate the Members of the House who are now studying this question of unemployment. I am positive that the solution is immediately available to them by the passage of an act establishing a national monetary policy and providing the simple means by which to enforce its faithful observance.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ADDRESS BY JOHN C. BEUKEMA

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address made March 9, 1940, before the Town Hall meeting at Buffalo, N. Y., by John C. Beukema, of Muskegon, Mich., secretary of the Michigan Great Lakes Tidewater Commission and chairman of the executive committee of the National Seaway Council, on the subject of the St. Lawrence seaway. Mr. Beukema's address follows:

In discussing the question before us, it must be remembered that an agreement between the two Governments has not yet been concluded; that we have no knowledge of what the contents of the treaty may be; and that we must, therefore, discuss the project rather than the treaty itself.

The paramount issue in the St. Lawrence seaway project is:

"Shall 45,000,000 people in the Great Lakes Basin and upper Mississippi Valley be denied the right to participate on equal terms with other sections of the country in world markets, as well as our own coastal and intercoastal markets?"

Corollary to it is the question:

"Shall the issue be decided on local or sectional considerations, or from the broad standpoint of national welfare?"

The seaway area comprises 17 States. It has the highest per capita production of any region on the globe. It produces 38 percent of all our manufactured products. It contains 32 percent of all our arable land. It produces between 65 and 70 percent of our principal staple crops, excluding cotton and tobacco. Forty percent of all United States retail trade is done in this section. Forty-five percent of all wages paid in manufacturing industry are paid here. It is Buffalo's primary market.

Yet this highly productive area finds its progress retarded by lack of the one attribute common to all great commercial regions since the world began—access to the sea.

Excessive transportation charges on practically every item entering world markets and domestic intercoastal markets obstruct its further expansion.

You doubt this? Then may I point out that the Midwest manufacturer—as far back as the Mississippi River—saves 20 to 35 percent of freight charges on goods forwarded to Pacific coast points by shipping via Philadelphia and the Panama Canal, a distance of 6,700 miles, as against shipping by rail direct west, a distance of 2,500 miles. The differential against him is the rail rate to Philadelphia, usually about half the total rate.

Further, the Midwest manufacturer, by shipping via the recently developed St. Lawrence all-water route to north European ports, finds it possible to deliver goods to far-off Tallinn in Esthonia, or Riga in Latvia at substantially the same transportation charge as he delivers these goods to Macy's in New York.

Last fall prize Delicious apples brought as low as 25 cents a bushel in the orchards of western Michigan. Thousands of bushels rotted on the ground. Yet this country sold Europe over 2,000,000 bushels of apples last fall. None of them came from Midwest producers. Why? Because of prohibitive transportation charges via Atlantic ports.

The bare cost of rail-water transfer at the port of New York, as determined by the Interstate Commerce Commission a few years ago in the New York Lighterage cases, is $2.75 per ton. To quote the language of the presiding examiner, this cost is "equivalent to 42.5 percent of the fifth-class rate from Buffalo to New York City."

Six years ago the first Norwegian freighter built for St. Lawrence Canal use entered the Lakes. This past year 13 paper mills in the Kalamazoo River Valley saved over $500,000 a year in freight charges on essential imports of Swedish and Finnish pulp, by bringing this pulp in via the St. Lawrence. Without this saving some of them would find it difficult to survive.

Opponents of the seaway agree that savings on wheat will be in the neighborhood of 4 to 5 cents per bushel on direct continuous water haul. Friends of the seaway claim greater savings. But do you realize what even 4 to 5 cents a bushel means to the Dakota farmer? It means the difference between want and a subsistence level. It means the difference between a new suit of clothes and a dress for the wife or no suit and no dress. It means the difference between shoes for the children and no shoes.

You cannot forever hold so productive and populous an area in economic thralldom. Not if you expect recovery and national prosperity.

II. THE SEAWAY AND BUFFALO

Buffalo is a great manufacturing city—one of the greatest. Its primary market lies not in the competitive East, it lies west. West, in this rich and productive region that I told you about; west, in the world's great market basket, the upper Lakes and Mississippi Valley. Situated at the foot of Lake Erie, Buffalo—once the seaway is opened—is in a strategic position to attract to itself those coast-bound industries that today must cling to the Atlantic seaboard because of their dependence on foreign raws. From Buffalo these industries can ship both east to the coast and west to the Rockies. Here they can ship from the center, instead of from the rim.

On what plea did Albany obtain the assent of the United States engineers to the deepening of the Hudson River at a cost of $21,000,000? On the plea that this improvement would bring tidewater 143 miles nearer to—I quote from the record—"the inland empire of the Middle West, which requires improved water transportation route, both for its domestic and foreign trade." If Albany had this vision, do not even greater possibilities present themselves to Buffalo?

I am aware of the fact that certain commercial interests of this city are opposed to the seaway. I believe (1) that their fears are largely imaginary; (2) that their prominence obscures the basic economics of the seaway as applied to this community. They have magnified fancied injuries; ignored major benefits. What is the Biblical phrase? "Straining at a knat and swallowing a camel."

This is a city of industries, of small businesses, of homes and workingmen. Let us, therefore, translate the seaway into terms of cost of living.

Most people eat bananas. It costs about $3.50 a ton to transport bananas across the Caribbean to New Orleans. The rail freight rate to my home city of Muskegon is $16.60 a ton, giving us an over-all rate of about $20 per ton.

If the seaway were opened and refrigerated ships permitted to come in, we could have these bananas unloaded on our docks on a direct haul from Belize, British Honduras, for about $7 a ton, or about one-third the present freight rate. Would not this cut the cost of living? The savings at Buffalo would be comparable.

Last year National Tea Co. saved $3.20 per ton in transporting canned pineapple from Honolulu to Chicago via the all-water route—Panama Canal, Hudson River, Barge Canal, Great Lakes route—as against direct-rail haul from San Francisco. Deepen the St. Lawrence and the saving will be $7 to $8 per ton.

Approximately two-thirds of the cost of the average pile of Pacific-coast lumber in a Great Lakes retail yard represents freight charges. Open the seaway and you will cut $5 to $7 per thousand off the cost of lumber. Does this not mean something to the home builder?

I might continue with instance after instance, commodity upon commodity. The proof is clear, the seaway will help the consumer.

Local opposition emanates, I believe, largely from two groups: (1) ship operator and milling interests, and (2) railroad interests.

I shall not attempt to answer the ship operator and milling interests on my own authority. I shall quote one of your own former citizens—one of the largest ship operators on the Great Lakes engaged in this trade, an officer and director in a dozen or more steamship companies, president of one of your large storage elevator companies—Mr. James E. Davidson, of Bay City, Mich.

Mr. Davidson testified as follows before the Senate Foreign Relations Committee at the last treaty hearing, and he told me only a few days ago that his sentiments are no different today:

"The Buffalo Chamber of Commerce, and certain other representatives, appear on record as opposing the completion of this project. I was born in Buffalo, my people once lived in Buffalo, I have large financial interests at the present time in Buffalo. I personally do not believe that the completion of the St. Lawrence project will have any damaging effect upon Buffalo. I think this statement is particularly true when grain is considered. I say this as an owner of elevators in Buffalo.

"In the first place, Buffalo has grown to be the principal milling center of bread wheat in the United States. In addition to this there are feed mills of various kinds and there are projects on foot for extension of the feed-milling industry at Buffalo. With this development of the flour-milling and feed-milling industry, I believe, that irrespective of the completion of the St. Lawrence project Buffalo will continue to draw for milling purposes a large portion of the bread-making wheat of the United States for domestic consumption of flour in the East. I believe that Buffalo will always be the logical place for the drawing of Canadian wheat to be milled in bond for the export trade.

"The completion of the St. Lawrence project, as I see it, will have no bearing whatsoever upon Buffalo's milling industry; and as long as the milling industry is not affected the movement of spring wheat cannot be affected. On the contrary, I can see where the St. Lawrence Waterway will furnish for Buffalo a cheap outlet for flour going into foreign trade. This would be applicable both with reference to domestic wheat which is milled and Canadian wheat which is milled in bond. So I have no hesitancy in advocating the completion of the project at the earliest possible date,

for I am reasonably sure that Buffalo not only will not be hurt but will, in the long run, be benefited."

Hence, on the economics of the seaway as applied to Buffalo, may I summarize as follows:

(1) The seaway won't hurt Buffalo, it will help Buffalo.

(2) Buffalo's Midwest markets will be expanded through the new prosperity which the seaway will bring. This implies increased employment and pay rolls in present Buffalo industries.

(3) New industries will be attracted here.

(4) Building of the seaway will cut the cost of living for every citizen of Buffalo.

(5) Buffalo's grain trade won't be hurt, in the opinion of one of the ablest and most experienced operators on the Great Lakes, with large investments in Buffalo.

III. BUFFALO'S HISTORY PROVES SEAWAY WILL BE BENEFIT

Your own maritime history should persuade you that the seaway will be of great and outstanding benefit to Buffalo.

On what does your present water-borne commerce rest? On the traffic in coal and ore and grain from the head of navigation at Duluth to this gateway at Buffalo.

What made this commerce possible? Was it not the piercing of the rock barriers at Sault Ste. Marie in my own State, which made continuous navigation from Superior's farthest rim to the Niagara frontier possible, and which converted these separate and commercially disconnected lakes into an inland ocean?

In 1844, when my State of Michigan broached this project, the great Henry Clay told the United States Senate: "It is a work quite beyond the remotest human settlement in the United States, if not in the moon." And a New England legislator declaimed: "Aye, build it so that the Ojibway, paddling down in his canoe, may gaze on the utter folly of the white man."

That was a hundred years ago. But fortunately, we had men of great vision in the United States Senate in that day, as I believe we have today. So the first canal was built. Today the locks at St. Marys carry the greatest tonnage of any waterway in the world; 50 percent more than Suez and Panama combined. On this commerce the greatness of Buffalo rests.

When the Welland Canal was built, Buffalo feared the loss of its commerce. Has that event transpired? In 1932, the year the canal was opened, the water-borne tonnage of the port of Buffalo was 11,146,000 tons. In 1937 it was 21,017,000 tons. Would this indicate that the piercing of the second rock barrier that separates the Great Lakes Basin from the coast injures Buffalo?

Now comes the question of the removal of the third and last barrier. The port of Buffalo is to be opened to the ships of the world. The world's cheapest form of transportation—ocean carriage—is to be brought to your very doors. It will cut the costs of the goods you consume. It will give your manufacturers lower freight charges to foreign, coastal, and intercoastal markets. And these savings will not be in freights alone. We, in Muskegon, save as high as $1.50 per box on office furniture, refrigerators, washers, and ironers, etc., through the use of a domestic container for export shipment, instead of the heavier and costlier export box. You can do this when you load on your own wharves. There are several other savings of direct loading I might mention if time permitted.

I recall that 20 years ago the manufacturer of an interurban electric-railway line serving my community came to my office and solicited our support for a bill barring all commercial trucks from the highways. I told him frankly: "I cannot support you. If trucks can render a cheaper and more flexible service, coupled with store-door delivery, than you can render, your business will have to make way. Your job is to prove that steel tires are more economical than rubber tires."

I sometimes wonder if those who oppose the seaway fail to realize that there is an evolution in transportation, as well as in everything else.

These defenders of the status quo remind me a great deal of the Boston legislators of a century ago who banned bathtubs, and the Postmaster General who solemnly reported to Congress that railroads would never replace the pony express.

My plea to you tonight, men of Buffalo, is: In the upper lakes and Mississippi Valley lies your true heart of empire, and when you build it you build your community.

Let us not forget that these same channels are open to lake shipping. The size of the present "lakers" is not limited by any feature of ship construction. It is solely limited by the navigable depths of channels and harbors and lock capacities. Bigger "lakers" of greater capacity, thereby reducing unit costs of haul, will be constructed when the deeper channels provided in this project are dug.

I know of no place in the world where freight is carried so cheaply as on the Great Lakes. Hence the bogey of foreign competition does not impress me. Nor does it impress experienced ship operators like Mr. Davidson. There is also the prospect that deeper channels will give a decided impetus to ship building on the Lakes, thereby stimulating employment in steel and allied industries.

When you study the history of the Great Lakes Basin, ladies and gentlemen, you cannot help but be impressed that transportation has always been its problem, and lack of adequate transportation the greatest single factor retarding its growth. Because of these rock barriers the original French conquest of the upper lakes was not by way of Ontario and Erie, it was by way of the Ottawa River and Georgian Bay. La Salle, when he built Fort Frontenac, sent La Motte to this vicinity to find a portage around Niagara and a shipyard location on Lake Erie.

Southern Planter, in his Notes on Political Economy, written a century ago, points out that half our national debt created in the War of 1812 was due to lack of transportation facilities in the Great Lakes region. In supplying the American forces on the Canadian frontier, he says, "every barrel of flour cost $50, every barrel of pork $8, and every cannon used there twice as much in the cost of transporting it as the cost of making it."

When the Erie Canal was built freights from New York to Great Lakes points dropped from $100 a ton to $8 a ton, and the great migration westward occurred.

So today this generation wrestles with a new problem—the problem of broadening its markets through reducing its transportation costs.

"The difference between the United States and China," the late John Hays Hammond once remarked, "is the difference between $1 per ton-mile on the Chinese coolie's back and 1 cent per ton-mile on our American railroads." He might have added, "or 1 mill per ton-mile on the bulk carriers of the Great Lakes."

This 1 mill per ton-mile made possible the marriage of Minnesota and Michigan ore and Appalachian coal. It made possible the wedding of Dakota wheat fields and Buffalo flour mills. Extend this 1 mill per ton-mile advantage to the ports of the world and you increase Buffalo's markets and promote Buffalo's growth proportionately.

IV. EXPORT-IMPORT COMMERCE AVAILABLE

Opponents of the seaway have said that there is no available export-import commerce in the Great Lakes Basin. The Michigan customs district ranks fourth in the United States in volume and value of imports-exports, despite the fact that a large proportion of Detroit's automobile exports are credited to New York and Philadelphia.

A Detroit Board of Commerce representative recently testified before the House Ways and Means Committee that every seventh dollar spent in Michigan comes from foreign trade. Over 600 industries in Michigan are interested in foreign trade, and one-eighth of our factory pay roll depends on it.

Need I call your attention to the exports of Chicago's packing-house industry, the manufactures and dairy products of Wisconsin, the exports of Illinois' agricultural-implement industry? The commerce is there, but too much of it moves at an excessive transportation cost.

The economics of this project have been repeatedly studied by the United States Department of Commerce, the United States engineers, United States Maritime Commission, Federal Power Commission, and other governmental agencies. These studies have been conducted under both Democratic and Republican regimes for 20 years. One of these studies was made by a board headed by former President Herbert Hoover, who is today an advocate of the project. The conclusions have always been the same, namely, that tremendous benefits would accrue to both the Midwest and the country as a whole.

United States engineers estimated the tonnage to be carried after the seaway is opened at 23,000,000 tons. Then, to be conservative, they reduced it to 13,000,000 tons. In 1938 the present outmoded canals, only 14 feet deep, carried 9,236,318 tons. At estimated savings of from $4 to $5 per ton, aggregate savings would be in the neighborhood of seventy to eighty millions of dollars per annum.

V. SEAWAY A MODERNIZATION PROJECT

Another vital point overlooked by our opponents is that we are not asking for a new seaway route. We are asking for the modernization of a present sea route. We are requesting that these ancient canals, originally dug approximately 100 years ago, be enlarged and deepened to admit modern shipping. It is the same sort of request that Buffalo has repeatedly made of the United States engineers, namely, that its harbor be deepened to accommodate new and larger ships.

Since we began expending money on the improvement of rivers, harbors, and channels, this country has invested approximately $3,000,000,000 for this purpose. Of this amount there has been expended $800,000,000 on seacoast harbors and channels, $250,000,000 on intercoastal canals, nearly $1,000,000,000 on the Mississippi River system, another $550,000,000 on flood control, and $260,000,000 on the Great Lakes.

The Great Lakes proportion of total Federal expenditures for this purpose is approximately 8 percent. Surely no undue proportion for roughly one-fourth of our population, excluding the more westerly States. We, in the Midwest, paid our share of Federal taxes for these improvements. Are we unreasonable in suggesting that we receive like consideration? Has the Midwest ever opposed a legitimate appeal for funds for the improvement of New York Harbor, or Philadelphia Harbor, or Baltimore, or Boston? Why, then, the dog-in-the-manger attitude of these ports?

Sectionalism, gentlemen, will never originate in the West, but it is a dangerous thing for the East to teach.

What was it Shylock said to Salarino? "The villany thou teachest me I shall execute, and it shall go hard but I will better the instruction."

VI. FEDERAL POLICY ON INTERNAL IMPROVEMENTS

The obligations of the Federal Government in a matter of internal improvement of this character were fully established 120 years ago in Henry Clay's memorable address delivered in the Senate on

March 13, 1819. In 1830 President Andrew Jackson in his annual message to Congress, said:

"It may sometimes happen that the interests of particular States would not be deemed to coincide with the general interest in relation to improvement within such States. * * * It may be assumed as a safe general rule that such improvements as serve to increase the prosperity of the respective States in which they are made, by giving new facilities to trade, and thereby augmenting the wealth and comfort of their inhabitants, constitute the surest mode of conferring permanent and substantial advantages upon the whole."

A viewpoint with which President Franklin D. Roosevelt apparently concurs in the present instance, for in his message to the Senate under date of January 10, 1934, in reference to the St. Lawrence seaway project, he says:

"It is, I believe, a historic fact that every great improvement directed to better commercial communications, whether in the case of railroads into new territory, or the deepening of great rivers, or the building of canals, or even the cutting of the Isthmus of Panama, have all been subjected to opposition on the part of local interests which conjure up imaginary fears and fail to realize that improved transportation results in increased commerce directly or indirectly benefiting all sections."

Let us pursue a broad national policy in this matter, rather than accept local sectional and selfish pleas. This, as Henry Clay pointed out, is "the American way." In so doing we may, in the words of another great American, Daniel Webster, "do something in our day and generation worthy to be remembered."

VII. THE SEAWAY AND THE RAILROADS

One question more: Will this take freight from the railroads? To assume so is to fly in the face of all experience. Every time you reduce the price of a product, you increase the range of possible purchasers. On that theory the automobile industry was built. Every time you reduce transportation costs, you expand consumption. Thereby you increase the volume of freight to be moved. Cut the freight costs of bananas 60 percent, as you can via the seaway, and see consumption of bananas increase in the entire Great Lakes Basin. Reduce the transportation cost on lumber from the Pacific coast by $6 or $7 per thousand, and see the construction industry expand.

After all, ships move goods only to ports. Railroads and trucks carry these same goods to interior points. Ports are always the greatest producers of rail and truck freight. Witness New York, Philadelphia, Baltimore, and New Orleans. Hence rail lines and sea lanes are complementary, not competitive. Railroads may lose some through freight, but they will be more than compensated by the increased volume of other freight, due to inevitable industrial and commercial expansion, after the seaway is opened.

The rails should be the last to urge a static condition. What made our western roads prosper but tourist traffic and the industrial development of the Pacific coast? What brought back our southern roads but the industrialization of the South and Florida's development as a winter resort? What brought back the thrice bankrupt Pere Marquette Railroad, in my own State, but the growth of the automobile industry? Railroad prosperity depends upon industrial expansion and the movement of populations, and any development that will produce these will benefit the rails.

Americans—Take Your Choice!

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I want to call attention to the following extract clipped from my home town newspaper, the Madison Daily Leader, which in turn had reprinted this item from the Indiana Food Merchant. In the few words contained in that newspaper item, I believe is to be found food for thought for all America.

Next November, America must make its choice. It must select the philosophy of government which it prefers. It can choose either socialism, communism, fascism, or new dealism, with their striking similarities of technique, and their futile reliance on one superman to do the thinking, planning, and legislating for an entire people, or it can reject these archaic, reactionary, and Tory tenets of government.

America, in my opinion, will not choose in its popular referendum next November, any of these history-disproved forms of statism; this land of free and independent people will not shackle upon itself the totalitarian technique; it will not use the third term as an entering wedge to replace representative government with hereditary rule by a family dynasty. Neither will it install the economic system of unregulated capitalism as its political philosophy without guarding the operation of capitalism by the political methods of true Americanism which respects capitalism for its economic value and refines it by representative government, so that its products and profits can bring happiness and security to the greatest number.

That is the system of Americanism which has made this country great. That is the traditional form of Americanism which had made the American way of life the envy of all the world. That is the type of Americanism for which both of our major parties have always stood in the past but which, unhappily, the New Deal has now discarded for a dangerous imitation of the one-man governments of Europe and Asia.

It is the American way of life, with the people serving as rulers and the Government officials functioning as servants of the people, that provides the creed for the Republican Party of 1940. And it is for the continuation of government of, by, and for the people that the American people will vote when they make their choice next November.

Mr. Speaker, the following newspaper extract packs into a few short words the teaching of thousands of years in the art of self-government. It presents in simple language the choice which America must make in the Presidential election of 1940. It merits the careful consideration and serious study of every American who wants to see this Republic survive as the greatest demonstration in the world that men can govern themselves and that indespensable supermen and ruling family dynasties have no part in the American system of free enterprise:

[From the Madison (S. Dak.) Daily Leader]

TAKE YOUR CHOICE

Socialism: You have two cows; you give one to your neighbor.

Communism: You have two cows; you give both to the government, and the government gives you the milk.

Fascism: You keep the cows, give the milk to the government, and the government sells it back to you.

Nazi-ism: The government shoots you and takes the cows.

New Dealism: The government shoots one of the cows, milks the other, and pours the milk down the sewer.

Capitalism: You sell one cow and buy a bull.

Americanism: You keep both cows, drink some of the milk and eat the butter from some of it and sell the balance to buy new clothes and a new automobile. You raise your own bull and more cows, stay at home, keep out of Europe's squabbles, mind your own business, and live happily ever after.—Indiana Food Merchant.

Our Foreign-Trade Policies

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

RADIO ADDRESS BY HON. AUGUST H. ANDRESEN, OF MINNESOTA

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on March 16, 1940:

I am extremely pleased to have this opportunity of taking part in the National Grange program. Mr. Brenckman, the Washington representative of the Grange, has requested me to make a few observations on Our Foreign-Trade Policies—that is, the present foreign-trade policies of the United States.

There can be no question over the fact that foreign trade has a definite effect on our domestic economy. Failure to export surplus commodities such as cotton, wheat, tobacco, and pork create domestic surpluses and lower prices in this country. On the other hand, excessive imports of other farm commodities, which are competitive, like dairy products, beef, pork, eggs, poultry, etc., also produce surpluses in the United States and distressingly low prices. We have both situations today. As a consequence, agricultural

distress, unemployment, relief, excessive public expenditures, increased taxes, a huge mountain of debt, and depression still hang over this country.

Many ill-advised and short-sighted policies affecting our domestic and foreign trade have been put into operation during the past several years. We are now suffering from their effects. Among the most important of our undesirable policies which now threaten to destroy export markets, as well as the home market, for the average American producer are the programs which reduced tariff duties on competitive farm and manufactured imports; our monetary policy that provides for the purchase of foreign gold and silver at a premium; and the Government's failure to protect our American economy from the detrimental effect of depreciated foreign currency. I will briefly discuss these policies.

FOREIGN TRADE

A great deal has been said on the subject of foreign trade during the past 6 years—for in 1934 a Democratic Congress gave to the President of the United States absolute authority to lower tariff duties on competitive farm and manufactured products and to negotiate trade agreements with foreign nations, without any congressional interference or sanction. As an inducement to foreign nations to make concessions and negotiate with our country, the President was authorized to lower tariff duties as much as 50 percent of existing rates so as to make it easier and cheaper for foreign producers of competitive products to sell their commodities in this country in competition with American farmers and laboring men.

Of course, every foreign producer knows that the United States provides the best market in the world and therefore all foreign producers are clamoring to dump their cheaply produced products upon our doorsteps. The reduction in the tariff duties made by the President to any foreign country in a trade agreement immediately brought our "most-favored-nation" policy into operation, and every nation in the world except Germany was given the full benefit of all reductions in our tariff duties without giving any concession to us in return. To illustrate: When the duty in the Canadian agreement on dressed poultry was cut 4 cents a pound, and on eggs reduced 5 cents a dozen, Japan, Russia, and Italy, as well as all other countries except Germany, received the same concessions as were given to Canada in the treaty. Twenty-two trade agreements have thus far been negotiated by the President. As a concession to foreign producers, our country has lowered or reduced tariff duties on approximately 1,100 competitive products.

The administration has reduced the duties on more than 160 competitive farm commodities, and some farmers still wonder why our farm prices have not advanced. I just want to name a few of the farm commodities upon which duties have been drastically cut. These are: Cattle, pork, milk, cream, cheese, poultry, eggs, barley, oats, rye, apples, strawberries, potatoes, cabbage, and other vegetables, and many more competitive farm products which are now being produced in surplus quantity in the United States.

Because of the lower duties in the trade agreements, and the depreciation of foreign currencies, and despite the war in Europe, our country is being flooded with cheaply produced foreign farm products. A few illustrations might serve well at this point. In 1939, foreign producers exported to this country and sold to the American people 754,000 head of cattle; 86,000,000 pounds of Irish potatoes; 16,000,000 pounds of casein, made from milk; 59,000,000 pounds of cheese; and scores of other competitive farm products.

I may belong to the "horse and buggy" day, but it seems extremely idiotic to me that our country should have a policy of encouraging the importation of competitive farm products at a time when agricultural production is being curtailed in this country because of surpluses and low prices. Our farmers and laboring men cannot compete with cheap production in foreign countries and at the same time maintain any semblance of an American standard of living.

Truly, under the present operation of the trade agreements, American farmers are being sold into peasantry and laboring men into continued unemployment and distress. The latest figures show nearly 11,000,000 unemployed American citizens. Our relief load is growing daily. Who, then, is profiting by our foreign-trade policy? None other than those who are engaged in the manufacture of war materials and other machine-made articles. Foreign producers ship into this country competitive farm and manufactured products and use the American money which they receive as pay for their commodities for the purchase mostly of war materials. This may be a good horse trade for the manufacturers engaged in the war-material business, but our farmers get less than the traditional rabbit out of the transaction. We all want a healthy foreign trade, but why should the farmers be called upon to bear the brunt of the sacrifices in order to secure the type of business which is being done today?

A sound foreign trade can be reestablished and should be based upon the sale of our surplus commodities in exchange for the type of foreign products needed by us of which we do not produce a sufficient quantity to satisfy domestic requirements. Amongst the commodities we do not produce can be listed coffee, tea, rubber, tin, nickel, spices, and many others unknown to American production.

NEUTRALITY LAW AND FOREIGN TRADE

Our short-sighted foreign-trade policies have hurt American producers in many respects. The much-heralded neutrality law forced through Congress in the special session last November has brought the United States closer to the European war than most people realize. Instead of opening up a strong foreign market for American farm products, as promised by administration advocates, these exports have diminished to a vanishing point, and the United States has become the military arsenal for belligerent and other nations in the world.

Instead of the Allies buying farm products from this country, as was promised by England and the New Deal, they only buy implements of war and war materials. They have placed a virtual embargo against the purchase of any farm products grown here, and now secure their pork from Hungary, their beef from the Argentine, their tobacco from Turkey, their wheat from Canada, and the final order came through this week when England closed down entirely upon the purchase of fresh and canned fruits from the United States. Secretary Wallace predicts a decrease in our exports of farm commodities, and therefore a sad picture confronts us in getting rid of our farm surpluses in the world trade.

DEPRECIATED FOREIGN CURRENCY

Another important foreign manipulation which automatically shuts off exports from this country is the prevailing depreciation of foreign currencies. Our dollar has become high priced in foreign exchange. We now hold three-fourths of the world's supply of gold, and foreign nations must secure dollar exchange to pay for war materials purchased in this country. Therefore, they must sell more of their competitive products in our domestic market in order to secure the necessary dollar exchange. To accomplish this end, they have lowered the value of their money, which means that our dollar is worth from 13 to 66 percent more in the various foreign countries of the world. The final result of this clever manipulation will bring a flood of cheap foreign goods into our own market and a serious curtailment in our exports of American products. We can, if we will, protect ourselves from this foreign raid upon our American economy.

As a matter of fact, all trade agreements and detrimental foreign-trade policies should be canceled or suspended during the continuation of the European war, and as long as monetary instability prevails throughout the world. We should make it our business to first take care of American citizens in solving domestic problems, instead of continuing a Santa Claus policy for the rest of the world.

PREMIUM PAID FOR FOREIGN GOLD

We have played Santa Claus altogether too long. Foreign nations engaged in war or preparing for war still owe us a debt of over $11,000,000,000 from the last war. Six years ago, the administration in Washington established a new policy with reference to the purchase of foreign gold. The President boosted the price of foreign gold from $20.67 an ounce to $35 an ounce—paying a premium for foreign gold of $14.33 an ounce. We now have $18,250,000,000 worth of gold, or nearly 75 percent of the world's supply, buried in the ground down in good old Kentucky. Of this staggering King Midas hoard, we purchased more than $11,000,000,000 worth of gold from foreign gold speculators, and made them the magnificent gift up to January 1 of this year of nearly $4,500,000,000 from the United States Treasury. This gift to foreign gold speculators and international bankers represents 50 percent more than the sum paid out as soil conservation and parity payments to 6,000,000 farmers during the same period.

Yes; we are writing history in the United States, and when the war in Europe is over and millions of men now engaged in the war go back into productive employment, our troubles in America will begin on a grand scale, unless we immediately change our ill-advised foreign policies. Congress itself should assume independent leadership and get down to brass tacks for a sound solution of our domestic problems, considering the future welfare of our own citizens and the preservation of our American democracy.

Dedication of Post Office at Harrisonburg, Va.

EXTENSION OF REMARKS

OF

HON. THOMAS G. BURCH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ADDRESS BY HON. A. WILLIS ROBERTSON, OF VIRGINIA

Mr. BURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of my colleague the gentleman from Virginia [Mr. ROBERTSON] at the dedication of the post office at Harrisonburg, Va., on March 23, 1940:

Mayor Swank, Senator Byrd, Assistant Postmaster General Purdum, and other honored guests, ladies, and gentlemen, it has frequently been said that the people of this Nation have enjoyed constitutional freedom for so long a period of time they take their political blessings for granted and forget the struggles and hardships through which they were won. It is still easier to take for granted conveniences that make of life an orderly process and which

enable a complicated and vast economic structure to successfully function.

One of the most widely used and most essential of modern conveniences is our postal system, which now reaches into every obscure hamlet of the United States, and furnishes prompt and efficient service to 130,000,000 people on the democratic basis of equality. For the price of a 3-cent stamp—the widow's mite, so to speak—the mother can communicate with her son in the Philippine Islands, 10,000 miles away, on the same basis that the sugar baron communicates with his Manila factory.

But it has not always been so. In the days of our first President it cost 25 cents to send a letter from Harrisonburg to New York City and the time of delivery was about 5 days. Rates increased with the distance. In those days a letter from Maine to Georgia took 20 days and from Philadelphia to Nashville 22 days. What a contrast with our present 18-hour air-mail service from New York to the west coast and 2-day service from New York to the Philippine Islands.

It is not beyond the realm of possibility that we will live to see the day when our Postal Service will include in its communication facilities delivery of letters by radiophotography, by means of which a radio transmitting set can send in perfect secrecy and instantaneously to any adjusted receiving set within its short-wave radius an exact reproduction of the letter filed with the transmitting set. Such a letter, of course, will carry the authentic signature of the writer, thus eliminating the uncertainty that occurred in the mind of a sweet young thing at one of our Virginia girls' schools before the days of the typewriter, when telegrams were written out in longhand by the operator. When this charming young lady was delivered such a telegram carrying her father's signature she said, "I don't believe this is from papa because it is not his handwriting."

To demonstrate its efficiency in the use of this new means of communication, the Navy Department sent each morning to the President on his recent South Atlantic fishing trip a complete newspaper. That remarkable device was perfected by a junior officer of our Navy, based on his study of the inefficiency of methods of communication, employed by Admiral Jellicoe in the famous Battle of Jutland in 1916. On that occasion had the British destroyers, which are the eyes of the fleet, been equipped to send a photographic chart of the position of every vessel in the German Fleet to each unit of the British Fleet, to be recorded in the chart-room not only of the flagship but in that of every other unit of his command, Admiral Jellicose would have been enabled to deploy his heavier battleships in a method that would have completely crushed the German Fleet and saved the British Fleet from the most costly casualties in its entire history.

What a far cry it is from the present methods of communication to the early days of postal service, and how necessary it is for us to remember the inscription upon the walls of the United States Post Office in New York City: "Through storm and night, through snow and sleet, these couriers make their appointed rounds." And before the days of the iron horse these couriers who made their appointed rounds fulfilled the dictionary definition of the word "post," which means a messenger or carrier of letters. That name comes down to us through the centuries in the account of Zenophon, that the great King Cyrus employed posts throughout his dominions and erected large structures for post stations. The Syrians and Persians established stations or posts a day's distance apart, at which horses were kept ready, saddled, with waiting couriers for the transmission of public orders and edicts.

The postal service in China is one of the oldest in history, antedating that of the children of Israel. Of the latter we find-for instance, in the Book of Kings that Queen Jezebel wrote letters in Ahab's name, sealed with the king's seal, and sent them to the elders and nobles in the city. In the Book of Esther mention is made of sending letters by post to all the king's provinces. The Romans employed couriers for the promulgation of military and public orders to their scattered provinces and Charlemagne did the same. It is to be noted that these mail services of antiquity and even during the early centuries of the Christian era were for the benefit of the rulers and not for the benefit of the people. It does not appear from the record just how St. Paul got his epistles to the various churches with which he communicated by letter, but it is safe to say the Government did not send them for him. Public couriers handled only government letters until the fourteenth century. The tremendous stimulus given to the development of commercial conditions by the crusaders made business intercourse necessary and the post riders who had surplus horses soon found use for them in the conveyance of passengers and ultimately in the transmission of general information at a fixed compensation. But the real beginning of letter posts for private and business purposes dates from the year 1516 when Roger, county of Theru, established riding posts in the Tyrol, connecting Germany and Italy. England, from which we inherited our colonial postal service, did not have a postmaster general until 1533. During Queen Elizabeth's reign the foreign mail from Great Britain was mostly handled by a private corporation called Merchant Strangers that had its own postmasters and post stations. When James I of Scotland came to the throne he wanted better mail service with Scotland so he issued an order that posts should travel not less than 7 miles per hour in summer and not less than 5 miles per hour in winter.

In 1619 a separate postmaster general for foreign posts was appointed. At that time it took 2 months to get a letter from Scotland or Ireland to London. Our ancestors, as you will recall, came to Jamestown in 1607 and brought with them but hazy ideas about how a postal system should be operated. Each colony had its own postal system until 1691 when the control of the American posts was by the British Crown vested in Thomas Neale. Neale acting with the Royal Postmasters General appointed Andrew Hamilton, a former Governor of New Jersey, Postmaster General of America.

But Virginia declined at first to function under this new American Postmaster General. It continued to operate under a law of the Colonial Court, passed in 1657, which required every planter to provide a messenger to convey the dispatches, as they arrived, to the next plantation under penalty of a hogshead of tobacco for default. But on March 2, 1692, the Virginia House of Burgesses passed an act, known as the Neale Patent, conferring upon Neale the right to establish a general post office and operate a postal service in Virginia. On May 1, 1693, Neale's Postmaster General Hamilton established a post route from Portsmouth, N. H., to Williamsburg, Va. But we didn't have any postal service worthy of the name until ex-Gov. Alexander Spottswood became Postmaster General in 1730, with headquarters at Philadelphia. He selected Benjamin Franklin as his assistant in charge of rural mails. Franklin established many new post routes and opened the mails to the newspapers; and that was a bigger step in man's progress toward personal freedom than many realize—gunpowder, by which the weak could protect itself against the strong; the printing press as the basis for the education of the masses; the circulation of printed newspapers through which new ideas might be disseminated and concerted action aroused—all these were stepping stones to representative democracy—stepping stones to the drafting of that great charter of our personal liberty, the Constitution of the United States. In the Convention at Philadelphia that drafted that immortal instrument we find his First Assistant Postmaster General, later appointed along with William Hunter as joint Postmasters General for the Colonies, inserting a provision authorizing the Congress to provide for post offices and post roads. The first Postmaster General under President Washington was Samuel Osgood. It was made a Cabinet office in 1829.

The first Postmaster General, Benjamin Franklin, was a distinguished man of whom the present Postmaster General, James A. Farley, is a worthy successor. Under his able administration our Postal Service has reached the highest degree of efficiency in our history, and under his administration Harrisonburg has been given a post-office building which in beauty of architecture and convenience of appointments is rivaled by few and excelled by none. It will long stand as a silent witness to the fact that our representative democracy is dedicated to the constructive principles of peace. But as enduring as such a monument is, let us not forget the admonition of Daniel Webster, who said:

"If we work upon marble, it will perish. If we work upon brass, time will efface it. If we rear temples, they will crumble to dust. But if we work upon men's immortal minds, if we imbue them with high principles, with the just fear of God and love of their fellow men, we engrave on those tablets something which no time can efface, and which will brighten, and brighten to all eternity."

F. C. C. Order on Television

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ARTICLE BY DAVID LAWRENCE

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Star of Monday, March 25, 1940:

[From the Washington Evening Star of March 25, 1940]

F. C. C. ORDER ON TELEVISION IS CRITICIZED—MORE UNEMPLOYMENT SEEN IF ORDER ON RECEIVING SETS STANDS

(By David Lawrence)

Another governmental commission has joined the wave of arbitrariness and usurpation of power which has swept Washington lately. This time it is the Federal Communications Commission which has exceeded its powers and gone beyond the law. And this time, too, a big industry has been struck down, with the inevitable result that more unemployment will follow.

The Federal Communications Commission was empowered by Congress to allocate wave lengths for broadcasting and for television, but it was never given any power or control over the sale or merchandising of receiving sets. It now seeks to grab that control. In fact, if its present order is not upset by the courts the F. C. C. will exercise complete control next over what the owners

of radio sets may or may not do. There is as much legal justification for what the F. C. C. has just done to kill off or retard television—a pioneer industry in which millions have been spent in research—as there is for telling people what programs they may listen to with their receiving sets.

Encouraged perhaps by the liberties and license given governmental commissions by the Supreme Court, now controlled by five New Deal appointees, the Federal Communications Commission has really reached out for power over the whole television industry. The theory which Congress had in mind in creating the F. C. C. was that mechanical interference in the use of one wave length as against another and purely technical collisions would be avoided by governmental supervision. But the only man on the Commission who knows anything about technical problems, former Commander Craven of the United States Navy, dissented on the latest F. C. C. edict, so all technical requirements were doubtless met.

SUDDEN DECISION INJURES COMPANY

What is most surprising, however, is not so much the decree ordering that television development in effect be suspended, but the manner of its issuance. Instead of giving a hearing to the interested parties or any previous notification, the F. C. C., in a sudden decision, injures the good will of a leading company which has spent millions in research and development. The Logan-Walter bill now pending before Congress is designed precisely to prevent governmental commissions from doing what the F. C. C. has done. This latest abuse of power will give further ammunition to the advocates of that measure when it shortly comes before the House of Representatives for a vote.

What really is needed is a congressional investigation of the F. C. C. in its entirety to determine the extent to which the present law is being distorted. The F. C. C., for instance, declares it has authority over radio program content and it bases that on the vague phrases of the law, "public interest, convenience, and necessity," which were never intended by Congress to cover anything but the mechanical problems involved in allocating wave lengths. Despite the fact that Congress has written a specific prohibition of censorship, the F. C. C., through the public utterances of its members, claims the right to pass on program content in renewing licenses so that the broadcasting industry is under the thumb of a governmental commission.

MORE POWER USURPED

In the case of television, the usurpation of power has gone further than ever before. The F. C. C., in its latest order, comments on the merchandising plans of one of the leading companies which was ready to put television on the market. If there is anything wrong in the announcements of that company to prospective purchasers, the Federal Trade Commission is the agency to take care of anything misleading. But the Communications Commission in a public statement undertakes to interfere in the merchandising problem and even raises the question of obsolescence. Every automobile company makes cars which become obsolete in a year or so. Will the Government soon prohibit new models in automobiles? The F. C. C. declares that the first television sets may become obsolete. Yet the seller of new television sets knows that and has more at stake than the F. C. C. if there should be ill will because new sets are introduced in a year or so. And besides the sets are to be sold to people of means anyhow, who probably would be glad to pay a few hundred dollars for television sets, knowing that new models will come out subsequently. The seller, however, has already arranged a system of rebates should new sets be introduced.

Fundamentally the F. C. C. probably isn't interested in the merchandising problem as such, but in getting complete control over the recipients as well as the transmitters in television. The present law gives the Commission control only over transmitting instrumentalities. Once the F. C. C. acquires control over all receivers as well, the way is opened for a governmental control of all television, which is wholly at variance with the existing law.

WORK FOR IDLE MEN

There has been much talk of idle men and idle money. Television is a new industry. Some persons familiar with the recent inventions think an industry is about to be built that will attract much capital and afford much employment. Radio broadcasting could never have been brought to its present stage if a governmental commission had insisted first on passing on what is or is not the right kind of a receiving set or what the sets should cost or who should have them or how they might be used.

The actual order of the F. C. C. refers to permission previously granted for commercial sponsorship of television after September 1 next. But the Radio Corporation of America, for instance, which has developed the latest technique in television, was not going to furnish commercial programs for the present, anyway, and was merely getting ready, at its own expense, to handle the programs for the public in limited areas.

Europe has had television for 3 years. America has been getting ready to push ahead of what Europe has done, but the Federal Communications Commission has interposed its influence so as to establish the precedent of its alleged power over the merchandising of receiving sets.

Congress never delegated such authority to the F. C. C. but assumption of power is the habit of governmental commissions nowadays. Congress has not yet waked up to the fact that it is no longer the law-making body. The F. C. C. now must be added to the S. E. C. and the Labor Board as having transgressed the powers of Congress in interpretation of statutory authority.

Stabilization of Employment

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ARTICLE FROM THE EAGLE MAGAZINE

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Eagle Magazine for March 1940:

[From the Eagle Magazine for March 1940]

WE WERE RIGHT! LABOR, CAPITAL, AND GOVERNMENT CONSIDER WAYS TO STABILIZE EMPLOYMENT

After 10 bitter years of the great depression, the people of the United States no longer ask for a "way out" of this depression. Today the country asks for a "way out" of all depressions. It asks for insurance against the reliving of the tragic years that began in October 1929 and continue even to this day.

A way out was actually offered to the country a few months after that fateful day in October 1929. Yes; a way out similar to that which Government and financial and labor leaders are now agreed must be taken if our country is to pull itself permanently out of depressions. That way out is the plan set forth by the Fraternal Order of Eagles in the Eagles-Ludlow bill.

Here is a brief history of the bill: In August 1930 the Grand Aerie unanimously adopted a resolution which declared that "the economic stability of our country is based upon the right of every American adult to work continuously at a saving wage." To put this resolution into effect the Grand Aerie commissioned four past grand worthy presidents, Conrad H. Mann, Frank E. Hering, Otto P. Deluse, and John M. Morin, to prepare and to introduce in Congress a bill that would have in purpose to stabilize employment, to insure a saving wage to the industrious worker, and to protect the dollars of the honest investor.

The bill that these Eagle leaders prepared is what is known as the Eagles-Ludlow bill. It was first introduced in the House of Representatives on December 1, 1930, by an Eagle Congressman, LOUIS LUDLOW, of Indiana. On December 3, 1930, an Eagle Senator, John J. Blaine, of Wisconsin, introduced an identical bill in the Senate. Soon thereafter, members of the Eagles' Stabilization of Employment Commission went before various committees of both Houses of Congress to urge adoption of the bill. These committee hearings were held on December 17, 1930, December 11, 1931, and March 2, 1932. After the last hearing, a subcommittee of the House appointed to study our bill unanimously recommended that the Eagles-Ludlow bill be adopted.

What does this bill seek to do? It provides for the creation of a Federal industrial commission of five members to be appointed by the President, by and with the advice and consent of the Senate. Members of the commission would be men chosen for their thorough knowledge of the problems of labor, industry, agriculture, and commerce. Through surveys and investigations, the commission would analyze economic problems in the light of both group and national interests. For instance, the problems of labor would be studied not only as they affect the workingman, but also as they affect the farmer, the merchant, the professional man, and the investor who puts his savings in business.

From these studies, the commission would make recommendations to the President and the Congress as how best to balance production and consumption in industry and agriculture; to encourage capital; and to give to labor steady jobs at a saving wage.

In other words, what the Fraternal Order of Eagles is really saying in its Eagles-Ludlow bill is this: We can prevent depressions. But to do the job, we need two things. First, we must have cooperation among labor, capital, and government. Secondly, we must have a commission of unbiased men who will see to it that whatever government, or business, or labor undertakes to do is for the good of all rather than for the good only of a group, or some special interest. Such an agency is the Federal Industrial Commission that the Eagles'-Ludlow bill advocates.

Today the Eagles-Ludlow bill is where it was 10 years ago—awaiting congressional action. There is, however, one important difference: Labor, capital, and government—grown wiser through experience—are now convinced that unemployment can be solved only by such a plan as is set forth in the Eagles'-Ludlow bill. Here are the proofs for this assertion.

On January 17, 1938, the National Association of Manufacturers advocated "the formation of a committee on a national policy of coordination and cooperation" in industry.

On April 29, 1938, President Roosevelt asked for a "bureau of industrial economics which would warn against the dangers of temporary overproduction and excessive inventories."

On June 16, 1938, the Temporary National Economic Committee was created. Its chairman is Senator JOSEPH C. O'MAHONEY, of

Wyoming. The first recommendation made by the committee was "the establishment of a Federal industrial research bureau to make constant studies of economic trends." More recently—on February 6, 1940, to be exact—Senator O'MAHONEY announced that the Temporary National Economic Committee would hold an economic hearing "in which employers, employees, and the investing public may be represented."

On June 23, 1939, Congress appropriated $225,000 to be used by Secretary of Commerce Harry Hopkins "to hire business experts to advise him on industrial economics." The administration hopes that this group of experts will be the nucleus of a projected bureau of industrial economics, which will become "a vast and vital storehouse of data to assist operations of American business and guide businessmen in planning their future courses."

On January 16, 1940, Senator ROBERT F. WAGNER, of New York, proposed in Congress the creation of a council representing "employers, employees, and the general public," which will study "our foremost domestic problem—full employment security."

On January 28, 1940, Donald R. Richberg, former N. R. A. Administrator and onetime member of the President's inner circle of advisers, wrote in the New York Times: "Our economic system is working badly because * * * we have not established the ways and means of cooperation between business managers, workers, property owners, and government. * * * We should establish a national institution for statistical information, research, and long-range planning that would cooperate with the representatives of investors, managers, and workers in promoting a healthy expansion of business and in planning for the steady increase of production and employment."

On January 29, 1940, the 2,400 delegates to the Golden Jubilee Convention of the United Mine Workers of America unanimously adopted a resolution urging the "White House to call a conference of labor, industry, agriculture, and government to solve unemployment."

On January 31, 1940, the executive council of the American Federation of Labor, speaking for 4,000,000 American workingmen, made this formal declaration: "The American Federation of Labor has come to the conclusion that it would be suicidal for this Nation to continue groping in the dark about unemployment. * * * We recommend that efforts to reduce unemployment be integrated. To this end, we urge Congress to create a national advisory council on unemployment which would have representatives of government, business, labor, farmers, and consumers. Such a council could bring about unity of purpose and unity of action on a constructive program."

Labor, business, and Government have been slow to recognize the soundness of the Eagles' plan for stabilizing employment; they have been too busy knifing one another in the back to see the wisdom of our proposal. Business tried retrenchment, and labor suffered. Labor tried the only weapon at its command—the strike—and business suffered. Government tried relief and work projects—at a huge cost to taxpayers. In the past 8 years the Federal Government has spent $66,000,000,000. That is the same amount of money that 28 administrations—from George Washington's to Woodrow Wilson's—spent in 131 years.

Yet 10,000,000 persons are still without jobs. Millions more have jobs but are without job security. We still do not have stabilization of employment.

However, after 10 years of groping in the dark, the country is beginning to see the light. All sane thinking and planning for the curing of our sick economy are now patterned after the economic principles set forth in the Eagles-Ludlow bill.

Southwest To Celebrate Four Hundredth Anniversary of Coronado's March

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ARTICLE BY MARTELLE W. TRAGER

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an article by Martelle W. Trager which appeared in the Washington Post of March 24, 1940, as follows:

[From the Washington Post of March 24, 1940]

SOUTHWEST TO CELEBRATE FOUR HUNDREDTH ANNIVERSARY OF CORONADO'S MARCH—TRAVELING PAGEANT TO FOLLOW TRAIL SPANIARD BLAZED IN QUEST FOR RICHES

(By Martelle W. Trager)

Four centuries ago Gen. Don Francisco Vasquez de Coronado rode out of Compostela, Mexico, in search of the Seven Cities of Cibola, where the walls of the houses were said to be encrusted with precious jewels and the streets paved with gold. The imaginations of the Spanish nobles in Mexico (the New Spain) were fired by stirring tales of fabulous wealth in the country to the north of them and they induced the Spanish Crown to finance an expedition into the unknown country, and Coronado, then governor of Nueva Galicia, was selected to lead it.

The departure of the party of Spanish dons on February 23, 1540, was the occasion for great celebration, and Viceroy Mendoza came over the mountains from Mexico City to Compostela to see them start. Coronado, in golden armor and a long flowing velvet cape, was followed by a dazzling procession of Spanish nobles outfitted in splendid raiment and armor, 70 footmen, several hundred friendly Indians, a group of gray-robed friars, a commissary laden with silken tents, pack trains, and great herds of cattle, sheep, goats, and pigs. Camp supplies and provisions were loaded on the backs of 1,000 horses and mules.

Moving up the Pacific coast of Mexico and passing through what is now the State of Sonora, the colorful party went across what is now eastern Arizona and entered New Mexico from the west. For 5 months they rode over barren wastes, across trackless deserts, and through unbroken tracts of wilderness before they saw anything that looked like a town. Exhausted and weary they reached what is now western New Mexico only to find the glittering cities were primitive adobe pueblos, the jewels were chunks of turquoise, and the cibola were buffalo.

Failing to find the promised riches in the Zuni pueblos, Coronado moved westward to the Rio Grande and camped at Tiguex, an Indian pueblo near the present town of Bernalillo, during the winter of 1540–41. Exploring parties visited Tusayan (the Hopi country of northern Arizona) and the Grand Canyon of the Colorado. In the spring they crossed the plains of Texas. Finding nothing here but prairies and bison, most of the forces retraced their steps but Coronado and 30 companions were lured to western Oklahoma and Kansas by stories of a wonderful place called Quivira. An Indian named Turk said that in this land there were fish as big as horses, that dishes were made of gold, and that the lord of the country took his afternoon nap under a great tree on which was hanging many little golden bells that put him to sleep as they swung in the air.

FINDS FABULOUS STORY A SNARE

After enduring several months more of unbelievable hardships, the small party of men reached Quivira. Again they were disappointed, finding the golden city of Quivira to be only Wichita tepees. At last realizing the quest for the mythical treasure was only a snare, they killed the Indian guide who told them such untrue tales and returned to the Rio Grande. In the spring of 1542 Coronado led a tattered remnant of his expedition home feeling that his trip had been a failure because they had not found a country as rich as Mexico. On his return he reported to the viceroy that the wonderful stories about the fabulous wealth of the Seven Cities of Cibola were untrue.

Even though the expedition appeared to be a failure to Coronado, it blazed a trail for later Conquistadores and laid the foundation for the Spanish colonies that were established in the Southwest, the first one being Santa Fe, N. Mex., founded in 1610, 10 years before the Pilgrims landed in America.

From May to November of this year the Cuarto Centennial of Coronado's amazing overland trek will be celebrated in New Mexico, Arizona, Texas, and Oklahoma, spreading into Kansas in 1941. The celebration will be formally opened April 15 with a special ceremony at the spot where Coronado crossed from Mexico into the United States. The Mexican and United States Governments will participate in the ceremonies, which will include the dedication of an international monument at this point.

Plans are now under consideration to set aside 7,000 acres in both Mexico and the United States for the monument which is to serve as a stimulus to international friendship as well as a historic marker. The Mexican Government will send 75 cadets from Chapultepec (the West Point of Mexico) to participate in the opening ceremonies, and a group of them will continue over the trail followed by Cardenas when he discovered the Grand Canyon. Eventually a Coronado museum will be built at a point overlooking about 50 miles of the old trail.

The exact spot where Coronado entered the territory of what is now the United States has long been a matter of controversy. To reach a solution, the matter was referred to the National Park Service and early in January a special party of historians, headed by Dr. Herbert E. Bolton, director of the Bancroft Library at the University of California, drove to Compostela, Mexico, and retraced mile for mile the original route of the Coronado expedition of 1540. They determined the explorers entered the United States at Naco, Ariz., which is on the east slope of the St. Pedro Valley, about 10 miles south of Bisbee, Ariz.

SERIES OF FIESTAS, PAGEANTS PLANNED

Other plans for the observance of the four hundredth anniversary of Coronado's expedition include a series of pageants and fiestas, the erection and enlargement of museums, the development of interest in Southwestern folklore, rodeos, Indian dances and the presentation of traditional dramas. Plans of the Texas commission include bringing the Mexico City police band to some of the towns in the Panhandle.

Of the greatest popular interest doubtless will be the Coronado Entrada, a pageant recreating Coronado's expedition, written by Thomas Wood Stevens, author of the Magna Carta pageant given by the American Bar Association and the Yorktown sesquicentennial pageant. It will be presented on a large outdoor stage which

will be taken from city to city during the summer and fall, opening at Albuquerque, N. Mex., May 29, 30, 31, and June 1. Paul Horgan, author and playwright, will assist Stevens in the presentation of the entrada which will take 1½ hours. A small group of professional actors and speakers will go from place to place with the cavalcade but local people will be used for most of the parts.

The Jerome Cargill organization of New York is serving as production managers and is furnishing a staff of directors, electrical engineers, sound technicians, and stage craftsmen.

In the presentation of the eighteenth century historical pageant, costuming will play an important part. More than a thousand period garments designed by Miss Lucy Barton, author of Historic Costumes for the Stage and member of the faculty of the Traphagen School of Design in New York, will be used in the pageant. The costumes are to be exact copies of those worn by members of Coronado's party. The copying of the garments required extensive research except in a few instances.

The Coronado commission has released the following tentative dates for the presentation of the pageant: Albuquerque, N. Mex., May 29, 30, 31, and June 1; Clovis, N. Mex., June 4, 5; Pampa, Tex., June 13, 14, 15; Raton, N. Mex., June 22, 23; Santa Fe, N. Mex., June 28, 29, 30; Espanola, N. Mex., July 1, 2; Las Vegas, N. Mex., July 12, 13; Roswell, N. Mex., July 17, 18, 19; Taos, N. Mex., July 25, 26; Tucumcari, N. Mex., August 1, 2, 3; Dalhart, Tex., August 5, 6; Amarillo, Tex., August 15, 16, 17; Fort Sumner, N. Mex., August 20, 21; Hot Springs, N. Mex., August 24, 25, 26; Farmington, N. Mex., September 6, 7, 8; Hobbs, N. Mex., September 13, 14, 15; Portales, N. Mex., September 19, 20; Socorro, N. Mex., September 27, 28; Lubbock, Tex., September 30, October 1, 2, 3, 4, 5; Las Cruces, N. Mex., October 4, 5, 6; with special events at Ruidoso, N. Mex., June 15; Lincoln, N. Mex., June 22; and Grand Canyon, Ariz., August 10.

FOLK FESTIVALS WILL PLAY PART

Towns, schools, and civic organizations in the Southwest are cooperating with the Cuarto Centennial Commission in the celebration by presenting a series of folk festivals. More than 165 have been announced already and others are planned. The development of the folk festivals was chiefly under the direction of Sarah Gertrude Knott, of Washington, D. C., founder and director of the national folk festivals, the first of which was held in St. Louis in 1934.

The festivals, which are to be held in New Mexico, west Texas, Arizona, and Oklahoma, include traditional dramas, cowboy ballads, Spanish dances, Indian dances, Spanish and Anglo folk songs, community storytelling, and religious dramas. In some places in New Mexico it will be possible to see several of the same Indian ceremonial dances that were practiced in Coronado's time. Indian celebrations that will attract many tourists this summer will be the corn dance at Taos July 25; the annual intertribal ceremonials at Gallup August 14, 15, 16, and 17; and the annual fiesta at Santa Fe August 31 and September 1 and 2, inaugurated by Governor Penuela in 1717.

Land O'Lakes and the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

RESOLUTIONS FROM THE LAND O'LAKES CREAMERIES, INC.

Mr. H. CARL ANDERSEN. Mr. Speaker, the Land O'Lakes is an organization of which Minnesota has a right to be proud. I am inserting for the RECORD copies of five resolutions adopted at the last annual meeting of this great cooperative, built by the dairy farmers of Minnesota. These resolutions were forwarded to me by Mr. John Brandt, president of Land O'Lakes Creameries, Inc., and I consider them as well representing the viewpoint of the average farmer for Minnesota and the Midwest.

They are as follows:

While reciprocal-trade treaties can be made a valuable asset in establishing trade relations between the United States and foreign countries, they can likewise become a national liability if they are not made in conformity with the principles we have established for the American standard of living, which cannot be maintained unless we protect the American producer and the American worker against the competition of low-paid foreign labor and depreciated foreign currencies which permit of lower costs of production.

We are not opposed to the principles of trade treaties if such agreements, when consummated, deal with such items of production or manufacture which we do not produce at all or cannot produce within the economics of our American standard of living or when such treaties do not effect parity price levels as compared with this standard.

We believe that the trade agreements already entered into and those contemplated by the Federal Government are and will be of further detriment, particularly to the dairy, livestock, and poultry producers. The progressive reduction of duties on these items threatens not only to limit the opportunities for American farmers to find markets in the United States, but to force a minimum rate of income to these producers far below the needs of farmers if they are to have anything that approaches a rightful share of the national income.

Prices of domestic products can never be higher at any time than the international price plus the "tariff wall." We protest against our interests being traded off for the benefit of a few large industries, such as the automotive, chemical, machinery, and other groups in order to enable such industries to increase their exports. We believe it is a short-sighted policy for these groups to support the downward revision through reciprocal-trade treaties of tariffs on agricultural products because of the fact that their increased exports under these arrangements will nowhere equal the increased demand for their manufactured products on the part of American farmers if they have parity prices with which to purchase these items.

We urge the Senators, Representatives, executive, and administrative departments of our National Government to recognize and adhere to the aforesaid principles with respect to trade treaties and that full hearings be given to the spokesmen for agricultural commodities affected in any way by treaty concessions, with a guaranty that the views of such spokesmen will be given every consideration and that no treaty will be consummated until a full and complete record of such hearings has been made available to the public.

And, furthermore, that the United States Senate must approve every proposed trade treaty or agreement in its entirety in order to make it effective.

We urge the enactment by Congress of legislation to prohibit the importation of dairy products from countries which do not have in effect cattle-disease programs that equal the standards set up for domestic producers by the Bureau of Animal Industry of the United States Department of Agriculture.

We reiterate our recommendation to Congress to extend the present emergency interest rates on Federal farm loans and to extend to agriculture a most favorable credit service until agriculture attains an income on a parity with industry and labor.

In our opinion national prosperity is largely dependent upon the foundation that can be built for it through prosperous agriculture.

A great deal of our planning is aimed at a 75-percent parity for agriculture. Seventy-five percent parity in agriculture will never bring about the desired results. Therefore, we urge a Federal policy which will bring agricultural groups into a position of parity with industrial, distributive, and organized labor groups whose present position is insecure, as it rests upon a foundation of 75-percent parity for agriculture.

We favor revision of the National Labor Relations Act so as to insure equal and fair treatment to both employee and employer. Such revision should be definite in its provisions so as to eliminate all arbitrary administrative interpretations of its provisions or the regulations adopted thereunder.

The revision should unquestionably follow the course of guaranteeing the constitutional rights of all groups or individuals and definitely forbidding acts of force or coercion, yet permitting to the fullest degree the rights of collective bargaining through organizations of their own choosing.

It should also provide for fair and impartial procedure and conduct of hearings with full review by the courts and, in this manner, insure the liberties and constitutional rights of all concerned.

Why the Millions for Farm Parity Pay

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

EDITORIAL FROM THE BLOOMINGTON (ILL.) PANTAGRAPH

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial which

appeared in the Bloomington Pantagraph, Bloomington, Ill., under date of March 24:

WHY THE MILLIONS FOR FARM PARITY PAY

The $212,000,000 appropriation for parity payments in 1941, subject of much discussion in Congress, represents an attempt, only partially achieved, to secure for farmers the same purchasing power they had before the World War, 1909 to 1914. The Senate has already approved this item in its total farm appropriation of nine hundred and twenty-three millions.

Fair exchange value is, according to Secretary Wallace, that price for farm commodities which has the same purchasing power in terms of things farmers buy as these commodities had in the 5 years before the first World War.

The net income of persons living on farms was around three-fourths of parity in 1939, not counting Government payments.

In January the average price of farm commodities was 99 percent of pre-war, yet the average price of things farmers buy was 122 percent of pre-war, and if taxes and interest were included it would have been 128 percent.

Work shirts that sold for 57 cents before the World War now bring 73 cents.

Back in 1913 it took 31 pounds of hogs to buy 100 pounds of 8-penny nails, but in 1940 it requires 70 pounds of hogs to exchange for the same quantity of nails. We are quoting Secretary Wallace.

Corn planters that sold for $31 in 1913 now sell for $65. It formerly required 63 bushels of corn to buy a planter; now it requires 124 bushels.

So parity is an ideal toward which the A. A. A. program is working. The goal or parity price today would be around $1.13 for wheat, corn 82 cents, 51 cents for oats, 30 cents a dozen for eggs, $9.24 per hundredweight for hogs, and $6.67 for beef cattle.

Farmers did receive that parity price level for 4 years following the World War. They have not received that parity purchasing power for the last 20 years, however. It is argued that factories and stores and city employment would now be enjoying a better level of prosperity were their good customers, the farmers, getting actual parity prices.

Americanism

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an address which I recently delivered in my home town of Asheville, N. C., over radio station WISE.

My colleague, who sits at my rear, Hon. WILLIAM H. SMATHERS, happens to be a native of my State; and while I was making my remarks and mentioned Asheville, he said "The little gem city of North Carolina." I am indebted to him for that remark, because the little gem city is only about a stone's throw from the birthplace of our distinguished colleague.

I thank our colleague.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I wish to thank the management of radio station WISE for providing me with the opportunity to acquaint its audience and my listeners with my five-point all-American program for keeping America for Americans. These fundamentals I have consistently advocated for many years. I shall discuss each of the five major points briefly.

You have probably heard of The American Vindicator, of which I am editor. Well, The American Vindicator, published monthly at Washington, D. C., is sponsoring my five-point all-American program. It is likewise supporting just as enthusiastically legislation proposed by other Members of Congress whose bills, such as mine, have as their objectives the keeping of our country out of war, restriction of immigration so that American workmen may have American jobs, deportation of alien criminals and undesirables, registration and fingerprinting of all aliens, noncitizens, so that spies and saboteurs may be more easily apprehended, etc.

I should like to hear by letter from those who favor this program without reservation. Likewise, I should appreciate hearing from any person who may have ideas different from mine on how best to safeguard America.

This five-point program is as follows:

Point No. 1. Keep America out of war: To date, our part in the last World War has cost the American taxpayers approximately sixty-eight billions of dollars and more than 100,000 lives. Even now, 21 years later, our hospitals are insufficient to provide beds for our World War veterans requiring hospital care. Our veterans certainly should come first. Regardless of our personal opinions or sentiments, the United States should remain absolutely neutral. The age-old quarrels of Europe are no concern of ours, and we must not get mixed up in the present conflict. After all, this is only one of the many hundreds of wars in Europe within the past several centuries. We should devote our time, attention, and energies to the many problems here at home. Why should we waste effort in endeavoring to solve the problems of Europe? We must not let our sentimental attachments to the Old World lead us astray. We cannot be American and at the same time be pro-anything else. In a recent column by the pen of Gen. Hugh Johnson, he asserted that it was high time that all of us became pro-American. I am in thorough accord with that direct from the shoulder statement by that able writer who has the interest of the American people at heart.

Point No. 2. Fingerprint and register all aliens: At the present time no one knows how many aliens there are in the United States. Some say there are only 4,000,000. Others declare there are 7,000,000. Of these millions some arrived legally, while others came illegally. We should know how many aliens there are within our borders. We shoud know where they came from and when. We should know why they came and whether they arrived legally or illegally. But more important, we should know where they are now and what they are doing. This information can only be obtained by a law requiring the registration and fingerprinting of all aliens. Just stop and think for a moment. If we were to become involved in a war today we would have millions of potential enemies and spies within our midst. There are now, even while we are at peace, thousands of aliens in the United States who are charged with espionage and who are accused of sabotage.

I have repeatedly stated that if we ever became involved in war there would be countless acts of espionage and sabotage. It would be difficult to lay hands on these enemy alien criminals because we have no registration and fingerprinting law in this country. We know virtually nothing about the whereabouts or the activities of these enemy aliens. My prophecies have been borne out 100 percent by the records of the Bureau of Investigation, Department of Justice, which is under the able direction of the Honorable J. Edgar Hoover. The American people owe Mr. Hoover a vote of thanks for having built up the finest law-enforcement organization in the world. He deserves the undivided support of all true Americans.

Information provided by the Federal Bureau of Investigation reveals that, in protecting our national defense, this Bureau is now receiving daily 217 complaints of espionage, sabotage, and violations of our national defense laws, or at the rate of 78,000 annually. The rapid increase in this type of work is reflected in the figures which show that for 5 years before 1928 the Bureau handled on an average only 35 espionage and sabotage cases yearly. But in the year 1938, 250 of these cases were investigated. That is bad enough, but look at the record for 1939. In that year a total of 1,651 new espionage and sabotage acts were investigated. How our aliens are directly loyal to their home countries is best proved by the official figures of the Department of Justice. Note these facts. From July 1, 1939, to January 10, 1940, a total of 5,799 cases were received by the Bureau of Investigation for investigation. If we had a law providing for the mandatory registration and fingerprinting of all aliens, the work of this Department would be materially lessened. Agents of the Bureau could locate these aliens now engaged in espionage and sabotage, with much less trouble and expense to our taxpayers.

Point No. 3. Stop all immigration for the next 10 years. Our own American workmen should first be given an opportunity to get a job. With more than 10,000,000 Americans unemployed and additional millions working only part time, 3,000,000 on W. P. A. rolls, 300,000 young men in C. C. C. camps, and 750,000 boys and girls graduating annually from schools and colleges who cannot find work, here is a problem we all must face. So why should we permit the thousands upon thousands of refugees and foreigners from all sections of the world to enter the United States and take the jobs which rightly belong to our own people? Yes; it is high time that we became pro-American and looked after our own before we shed any tears about the unfortunate of other lands. American jobs should go first to American citizens.

Point No. 4. Deport all alien criminals and undesirable aliens: Our jails and penitentiaries are filled with alien criminals at the expense of American taxpayers. There are thousands of these aliens in our insane asylums and in our institutions for the treatment of those who have become habitual narcotic addicts. They are cared for, housed, clothed, and fed, and provided medical treatment with money taken from the pockets of the American people. We have too many law violators of our own without harboring those of other nations.

Crime costs the taxpayers of the United States more than $15,000,000,000 a year, according to the estimation of the Department of Justice. This includes not only the direct costs, such as the maintenance of penal institutions, the losses occasioned by criminal acts, racketeering, and other unlawful activities, but the indirect

costs, such as losses occasioned by the death of individuals through criminal activities. This is appalling. When will the American people awaken to this deplorable condition? No doubt the total cost will exceed fifteen billion in 1940 when the toll includes the destruction wrought by alien saboteurs. We should empty our prisons and asylums by sending these aliens, dope fiends, and dope peddlers back home. They should be the burden of their own nations instead of a useless and costly burden on the American people.

Point No. 5. Abolish all "isms" except Americanism: Wipe out nazi-ism, fascism, and communism with equal enthusiasm. America should know only Americanism. Sweep from our shores every alien "ism" that would destroy the foundation of our form of government. Why should we permit these false doctrines to be spread in our midst? We are the only people upon the face of the earth who submit to these false doctrines which are being daily spread by outspoken enemies of the American Government.

I believe that the Dies committee has actually done more to uncover the poisonous groups engaged in un-American activities than any other movement. That committee has revealed the activities of the Nazis, Fascists, and Communists alike. That committee has rendered a great service to the people of America, and the people owe a debt of gratitude to Congressman MARTIN DIES and his associates. I am glad that Congress several days ago voted to continue this committee by providing an additional appropriation of $75,000 for its expenses during the year.

Harry Bridges, of Australia, the west-coast labor leader, has been whitewashed of the charge that he is a Communist. He is still with us and no doubt will be permitted to remain here to carry on the same way he has for years past.

Earl Browder, the Communist leader, who stated before the Dies committee that if the United States and Soviet Russia should become involved in a war that he would do everything he possibly could to stop such a war—even to turn such a war into a civil war. Think of it. This Communist leader declares without reservation that in case of a war between the United States and Soviet Russia he would try to stop it, even if he had to create a civil war or revolution in the United States. Communist Browder has been convicted and sentenced for falsifying passports. He is now a candidate for a seat in the Congress of the United States.

Fritz Kuhn has been sent to prison; and he, at least for several years, can't participate in any un-American activities.

How much longer will the American people continue to remain the laughingstock of the world? How much longer will they allow minority, un-American organizations, possessed of unlimited funds from Moscow and elsewhere, to work night and day, like a lot of termites, with the avowed objective the destruction of the American Government?

Let's have more pro-Americans fighting for Americanism.

Let's have action.

Let's clean house.

Let's put our own affairs in order, attend to our own business, and look after our own people first.

Our citizens, our country, first.

I thank you.

Federal Bureau of Investigation

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE BRISTOL (VA.-TENN.) HERALD-COURIER

Mr. BILBO. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a very able article on the F. B. I., appearing in the Bristol (Va.-Tenn.) Herald-Courier, of March 24, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Bristol (Va.-Tenn.) Herald-Courier of March 24, 1940]

ATTACKS ON F. B. I. FOMENTED BY LEADERS OF COMMUNISM—BEST OF ALL AGENCIES SHOULD HAVE UNITED SUPPORT OF CITIZENSHIP; HAS LIFTED LAW-ENFORCEMENT EFFICIENCY AND PERSONNEL

(By the Onlooker)

Some Members of the United States Senate and House have been sharpshooting recently at the Federal Bureau of Investigation, the law-enforcement branch that ran Dillinger to earth, has practically eliminated big-time gangsterism, and is shielding the Nation's banks with a cloak of protection that is making them almost inviolable because of the quick and voluminous apprehension of violators by the F. B. I.

Some of the tripe to which Congressmen are lending an ear is so ridiculous that the average citizen, interested in protecting the United States from "isms," is amazed that Representatives in the Congress will entertain it; practically all of the criticism originates from Communistic sources and certainly that is not a recommendation for action by the Congress against the most efficient agency of the Government. Rather, it alarms the general public that a minority advocating overthrow of the present form of government can by an inboring process gain a large voice in Congress against the very agency which has exposed its un-American activities to the Nation.

The Review, "a little paper with a big message," published by New Age, for the National Council, Young Communist League, and the New York Daily Worker, printed by the Communists of New York, appear to be the most prolific sources behind the criticism of the F. B. I.; and actually all that the G-men have done is in the course of its routine business; it has checked upon aliens who have not been naturalized, checked on naturalized aliens who are advocating subversive activities, and the result is that the Department of Justice at Washington has a thorough catalog of practically all such persons.

It would be food from heaven if the Communistic-inspired move could get through Congress a resolution investigating the F. B. I. Such a resolution could serve to restrict the agency's work; it could result in caution on voting any increase in funds.

Actually, additional funds should be granted the agency at its reasonable request and poppycock like the Review and the Daily Worker preachings should be answered with Congress approving more appropriations to safeguard against further dissemination of bosh that would tear away the very tenets of American life.

A pert example of abuse appears in the Review under the caption of G-men or Gestapo?

Of course, the Communists assail every existing agency and contrast the G-men to the Gestapo without explaining how subservient people in Germany and Russia are to their Gestapo and Ogpu, and that if they were citizens of either Russia or Germany they would be condemned and executed as traitors for voicing the very thoughts they are privileged to speak in the United States.

The Review, in its fifth volume, carried on its first page a scurrilous attack against the F. B. I.

"While the G-men wield the club and gun in the North, the Ku Klux Klan rides again in the Southlands," boldly declared the publication, "but the G-men refuse to stop this mob violence, vigilantism, and lynching."

That is a base attack, maliciously made and with the intent to deceive.

The Ku Klux Klan does not ride in the South, nor has any act of violence been even remotely laid to that organization in some years.

The F. B. I. has no power over local law enforcement and could not be concerned with a lynching unless State lines were crossed in the act of commission.

The Review article continues: "This is an attack upon you, upon your organization, upon your liberties. Be vigilant. Watch for this un-American, antilabor activity. Expose it wherever you find it," in reporting the arrest of several persons at Detroit. Along with it was a picture of the arrested persons as they appeared in manacles.

Hugh S. Johnson, former N. R. A. Administrator and vigorous critic of many New Deal measures, commented on the Detroit case thusly:

"The arrests were made after indictment by a Federal grand jury. * * * This group was accused not of being Communists but of recruiting, examining, and forwarding men to fight with the Communist forces in Spain. * * * F. B. I. was ordered by Attorney General Cummings to investigate this activity. As soon as Frank Murphy became Attorney General he ordered the F. B. I. to go ahead. Arrests were a result. There is a faint odor of politics, religion, and 'red' influence throughout, but it nowhere touches the F. B. I., which is under the absolute control of the Attorney General."

As to third-degree methods, General Johnson declares: "They have never been used by F. B. I. This particular attempt (the Detroit arrests) to smear the G-men will prove a complete dud."

Actually, the F. B. I. had nothing to do with the manacling of the Detroit prisoners. Their duty was ended when the prisoners were arraigned and they became charges of the United States marshal, who handcuffed them to a chain along with six other Federal prisoners who were being taken to a cell block.

Recently on the floor of the United States Senate, Senator REYNOLDS, of North Carolina, brought to the attention of that body the work of the F. B. I. and the distinguished Carolinian made this statement:

"I know of no other man in the United States who could adequately fill the place that is so ably occupied by J. Edgar Hoover (who is in charge of the F. B. I.). This is the time of all others in the history of this country when we need in that position a man of his character, his courage, his ability, and his experience. Particularly will we be convinced of that fact when we recall that prior to the declaration of war in Europe on September 3 the Bureau of Investigation of the Department of Justice received on an average only 250 complaints of espionage and sabotage annually whereas, since then, Mr. Hoover's bureau with its limited force of law-enforcement officers, now receives as many complaints of sabotage and espionage every day as it did every year prior to the declaration of war in Europe on September 3. I think the American people owe J. Edgar Hoover a vote of thanks for that which he has accomplished in this country in the protection of the American people, and I say again that of all times in the history of our Nation we were never more in need of a man of his character, ability, courage, and experience than now, as we realize when we

recall that last year there was issued by the Attorney General of the United States a statement in pamphlet form in which he said that crime today costs the American taxpayers $17,000,000,000 annually, and when we recall that the same report included a statement to the effect, according to my recollections, that there are today in this country more than 4,500,000 people engaged in the commission of crime."

Of the F. B. I.'s vigilance he said: "Those fellows are busy night and day looking after the interests of the American people and endeavoring, as best they can, to stamp out crime and to protect the homes of the fathers and mothers of this country."

The average American knows how well the Federal Bureau of Investigation has accomplished this purpose. The southwestern Virginia and east Tennessee region is a lofty and not isolated example of the advancement of law enforcement on the part of local authorities with the assistance of the Federal Bureau of Investigation.

The Bureau has trained numerous local officers in the latest of modern methods of crime detection; its fingerprint service alone, available to police departments in every city and county in the Nation, has helped solve innumerable crimes, and this facility, as well as other scientific studies of physical evidence, are available to the accused who is unjustly accused, as well as to the State which is trying to fix the blame for a criminal act.

In one case the Bureau helped prove that a Bristolian was not guilty of firing a fatal gunshot, an offense of which he had been accused by the State.

While the Communists may shout to the housetops against routine investigations of their conduct in their effort to destroy the present American form of government, every mother and father realizes, if only through the F. B. I. record in bringing kidnapers to the bar of justice, the great worth of this unimpeachable arm of law enforcement which could boast the fact that never has the charge been made, much less proved, that any of its members has allowed his palm to be crossed with a tainted penny.

In 1932 the Congress passed a kidnaping act, and as of June 30, 1939, 156 cases of kidnaping and plots to kidnap were investigated by the Federal Bureau of Investigation, and all but 2 of them have been solved. In the solved cases there have been 317 convictions in Federal and State courts. The sentences included 42 for life terms, 12 for the death penalty, and other penalties aggregating 3,649 years. Eight of the culprits committed suicide, 8 were killed, 7 died by murder at the hands of their gang members, and 2 were lynched.

The F. B. I. has brought additional protection, too, to the national banks under a law adopted in May 1934 making it a Federal offense to rob or attempt to rob a national bank or a member bank of the Federal Reserve System. Since passage of the act 647 bank robberies were reported to the F. B. I., resulting in 431 convictions in Federal courts, numerous other convictions in State courts, and fines amounting to $248,299. Thirty-seven of the bank robbers were killed while resisting arrest, and more than 19,000 banks have the protection of this arm of the Federal Government.

The value to local police of the F. B. I. is beyond calculation.

Bristol has a good example, its departments matching metropolitan methods of detection. Training courses offered by the F. B. I., the generous support given by the Bureau to local authorities, and the remarkably high caliber of the F. B. I. personnel have lifted the level of law-enforcement officers all over the Nation. The adage might be that one cannot assemble 40 men without having a traitor, but the fact remains that J. Edgar Hoover has assembled 1,600 men who are examples to the whole Nation in integrity, efficiency, and fairness in law enforcement.

And to have such a national asset assaulted and maligned by an alien group that has for its purpose the overthrow of democratic government! Forbid it!

The National Youth Administration—Splendid Accomplishments and Benefits in Southwest Washington

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

LETTER FROM JOHN H. BINNS

Mr. SMITH of Washington. Mr. Speaker, the National Youth Administration has made a splendid record in the State of Washington, and I know of many young men and women in my district who have greatly benefited from the program. I therefore supported the Johnson amendment to increase the appropriation to $102,000,000; in fact, I would gladly vote to appropriate an even larger sum to carry on the fine work being done by this organization in the interests of the young people of our country.

In order to present the facts regarding the operations of the National Youth Administration in my congressional district I insert a letter addressed to me by the able administrator in our State, Hon. John H. Binns, reading as follows:

FEDERAL SECURITY AGENCY,
NATIONAL YOUTH ADMINISTRATION FOR WASHINGTON,
Tacoma, March 25, 1940.

Hon. MARTIN F. SMITH,
House of Representatives, Washington, D. C.

DEAR MARTIN: I was glad to get your letter of March 21 expressing a desire for additional information concerning the N. Y. A. program in your district. We have prepared the figures which you desire and are sending them herewith. I am also sending you an additional copy of a more general report dated February 1.

The figures on the out-of-school program and the school work program truly reflect actual earnings by young people living in your district. The figures on the college work program do not take into account students living in your district but attending college elsewhere. There are, of course, a great many young men and women from your district at the University of Washington, the State college, and elsewhere, and I am sure that a break-down from these institutions would show that they are getting their full share of the college work funds. To obtain this information from the 19 colleges not listed would take several days and require a tremendous amount of checking by the institutions. I have hesitated to ask them for it unless you consider it vital. If you do, please advise me and I shall try to get it for you.

Yours very truly,

JOHN H. BINNS,
State Administrator, National Youth Administration.

The figures referred to by Mr. Binns are as follows:

National Youth Administration out-of-school work program, Third Congressional District, Washington, as of Mar. 20, 1940

County	Total number youth workers	Male	Female	Total monthly earnings	Average county wage	Number supervisors
Clark	250	189	61	$4,750	$19	4

Curtailment of C. C. C. and N. Y. A. Programs

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

TELEGRAM FROM GOV. GEORGE D. AIKEN, OF VERMONT

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram from Gov. George D. Aiken, of Vermont, with respect to the discontinuance of C. C. C. camps and curtailment of the National Youth Administration program.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

MARCH 25, 1940.

Senator ERNEST W. GIBSON,
United States Senate:

Wired Congressman PLUMLEY this morning: "Reports indicate that work of C. C. C. and N. Y. A. may be seriously curtailed by Congress. These two activities, judging from work done in Vermont, have been about the most valuable of all Federal innovations of recent years, building character in our youth while furnishing employment. I hope the work of these two organizations may continue as heretofore."

GEORGE D. AIKEN, *Governor.*

The National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

ARTICLE BY ERNEST K. LINDLEY

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Washington Post of this morning by the very eminent writer on political, economic, and social problems, Mr. Ernest K. Lindley. The article is headed "Strangling the N. L. R. A."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 27, 1940]

STRANGLING THE N. L. R. A.

(By Ernest K. Lindley)

CONGRESS AND BOARD

Many proposals for amending the National Labor Relations Act are before Congress. Some are complex. Some, in the proper mixture, would amount to repeal of the law. But nobody is openly advocating its repeal.

Without waiting for the orderly consideration of proposed amendments, the House Appropriations Subcommittee has apparently decided that the law is not worthy of effective enforcement. It has set out to dispose of it by a combination of strangulation and amputation. It has cut about $330,000, or 10 percent, from the appropriation requested for an agency which for several years has been overworked as few agencies have been overworked since Hugh Johnson was managing the Blue Eagle. In spite of long hours at high pressure, the N. L. R. B. has not yet been able to catch up with the demands on it.

One slash of $57,000 would require dropping about one-fourth of the N. L. R. B.'s trial examiners. At present they number 39, and each of them takes testimony in about 30 cases a year. It is inconceivable that the number of cases heard by each examiner can be increased. If the cut stands, fewer cases will be heard. Although the number of cases brought to the Board shows signs of slacking off, many of the new cases are more complicated, or, to borrow Chairman Madden's word, more "subtle," than those sometimes heard in the earlier days.

Many employers started off on the assumption that the N. L. R. B. was unconstitutional. So they were advised in 1936 by some 58 of the highest-paid lawyers in the country, who obliged the American Liberty League by going on the record on this point. About a year later, the Supreme Court—the old Court, before a single Roosevelt appointee sat on it—emphatically decided that these lawyers and their clients, actual or prospective, were wrong. In those early days, employers and their lawyers openly challenged the law. They did not resort to the more refined evasions, the detection and determination of which naturally requires the taking of elaborate testimony, and therefore uses up the time of trial examiners.

While, on the whole, the House subcommittee rested on slow strangulation, through reduced appropriations, it resorted in one case to outright amputation. In effect, it decided to abolish the use of the N. L. R. B. of the Brandeis brief. The Brandeis brief is one packed with facts, usually economic data. Louis D. Brandeis, retired Associate Justice of the Supreme Court, developed it 30 years or so ago.

The Brandeis brief recognizes that intelligent interpretations of law cannot be made by logic operating in a vacuum. The courts must know not only the bare facts of a case, but the economic setting. In many types of cases involving finance, industry, and labor the Brandeis brief has come close to being the standard.

In its profound wisdom, however, a House subcommittee has decided, in effect, to repeal this great legal advance insofar as the N. L. R. B. is concerned by abolishing its economics division. It has cut out $45,900 for the 15 economists employed by this division. Apparently it overlooked $23,700 for the clerks and stenographers who now work for these economists, so that the net effect of this bit of discriminating economy would be to pay the salaries of 14 clerks and stenographers who would have no work to do.

Whether the N. L. R. B. needs 15 economists, or 10, or 5, or 20, I haven't the slightest idea. Chairman Madden, of the N. L. R. B., told the subcommittee he did not and could not know exactly how many it needs. He relies on the head of that division, David Saposs,

to tell him. He did say that every economist employed was employed only after Mr. Saposs had made a strong case to the Board members.

What is certain is that the N. L. R. B. cannot operate intelligently without the aid of economists. If it does not employ economists it must employ lawyers who are familiar with economics, or it must rely on another agency for its economic information. Some members of the subcommittee apparently thought it should rely on the Bureau of Labor Statistics in the Labor Department. Dr. Lubin, Chief of that Bureau; Chairman Madden, of the N. L. R. B.; and other persons assert that the work of the Economics Division of the N. L. R. B. does not duplicate that of the Bureau of Labor Statistics.

Economic facts probably were decisive in the test cases in which the Supreme Court upheld the N. L. R. A. in 1937. What part of an industry's raw materials was imported across State lines, and what part of its finished products was exported across State lines? These were basic facts in determining whether the industry was engaged in interstate commerce and, therefore, subject to Federal law. They were economic facts.

In the University of Chicago Law Review of last June, David Ziskind, a senior attorney in the Department of Labor, analyzed the results of the use of economic briefs in labor cases. He found that in 19 cases before Federal circuit courts of appeals, where one side used economic data and the other did not, the side which used them won 16 times and the side which did not won only 3 times. He found also that when the N. L. R. B. used them it usually won, and that when, for one reason or another, it had neglected the economic side, it had lost.

The effect of the proposed cut would be to deprive the N. L. R. B. of economic assistance and leave this powerful weapon to the exclusive use of violators of the law. This is a slash too significant to be explained under the heading of "economy."

That's Where Your Money Goes

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

UNITED STATES DEPARTMENT OF AGRICULTURE FARM SECURITY ADMINISTRATION

Resettlement projects—Expenditures by States and fiscal years

States and Territories	1936	1937	1938	1939	Total cumulative as of June 30, 1939
Alabama	$805,010	$4,697,596	$2,521,912	$819,996	$8,844,514
Arizona	104,671	864,743	383,525	126,178	1,479,117
Arkansas	315,368	2,329,971	1,811,818	839,757	5,296,914
California	205,457	21,422	15,557	857	243,293
Colorado	36,636	565,397	703,344	413,260	1,718,637
Delaware	150	1,130	35	158	1,473
Florida	23,187	91,610	380,193	134,028	629,018
Georgia	226,635	756,741	1,266,662	307,761	2,557,794
Idaho		139,676	254,730	113,298	507,709
Illinois	102,509	422,651	47,792	33,723	606,675

Washington suspense account	114,812				
Total	12,735,437	52,220,119	36,820,451	10,676,067	112,452,074

The foregoing table shows where our money goes to buy the New Deal's baby clothes. At least the table shows where plenty of money has gone. The resettlement projects, like the one at Arthurdale, W. Va., were conceived in the minds of scatterbrained idealists, and reared under a profligate spendthrift attitude.

Millions of dollars have been wasted. Dollars that will have to be repaid in the sweat of the brow of Americans still unborn. I have wondered how much of the money expended for these projects is carried on the books of the Government as assets at 100 cents on the dollar; and how much money will ever be recovered.

The following article from the Washington Times-Herald throws additional light on these ill-conceived experiments.

(By George Rothwell Brown)

Mrs. Roosevelt's public utterances are nearly always worthy of the most careful examination.

What she says, often in an off-hand manner, frequently becomes revealed later on as having been the forecast of a policy.

She was quoted in the Washington newspapers last week as having said at the Town Hall forum, that the Nation is facing "a period of insecurity in some of the material things," to make "a little more security for those who have been insecure," and to have added that women must prepare to sacrifice things "we have come to take for granted as part of the necessities of modern life."

It is certainly true that the Nation is facing a period of insecurity, but the hint here, by the first columnist of the land, that women must prepare for sacrifices is nonetheless disquieting.

One wonders what sacrifices Mrs. Roosevelt has in mind, what they are to be, and how soon we shall all be called upon to make them.

One thought that comes to mind is that the Nation must soon face the problem of debt payment, to the tune of more than twenty billions incurred by New Deal squandering policies.

To those who must make sacrifices in order that these blown-in billions may be paid, the process will seem simply that of back-breaking taxation.

To the New Deal it will mean the attainment of the main New Deal objective, the redistribution of the Nation's wealth from the haves to the have-nots.

It so happens that Mrs. Roosevelt herself, in one of the most striking services she has ever rendered in Washington, disclosed how badly the New Deal has operated to make a little more security for those who have been insecure.

Just across the Maryland line is the little socialistic community known locally as Tugwelltown, where a favored few families of low income not to exceed $2,000 annually have been given the privilege of residing in low-rent model houses in a project which, in total cost, figures out around $16,000 per family unit. Very soft for those enjoying these advantages, although the number is infinitesimal. Let us look at the other side of the picture.

Some time ago, Mrs. Roosevelt called attention to the shocking conditions existing at Blue Plains, Washington's home for the aged and infirm.

Investigation followed upon her disclosure, and a revolting condition among the city's most helpless and needy people was brought to light. The place was found to be a dumping ground for human derelicts, some of them feeble-minded, herded together like forgotten cattle, and lacking in medical attention, with only one half-day doctor for an institution that required a large staff.

Congress is going to do something about it, thanks to Mrs. Roosevelt.

Now, it so happens that one of the District Commissioners under whose term of office these conditions had existed at Blue Plains for 7 years of the New Deal, was reappointed by the President while Mrs. Roosevelt's revelations were stinging the consciences of the people of this city.

And a complacent Senate promptly confirmed him, without troubling to inquire why he had not discovered these frightful conditions himself, since that, presumably, was his job.

What shall we say of a political regime in Washington which spends a fortune at Tugwelltown, giving $16,000 houses to a favored few people (all deserving Democrats, no doubt), while permitting

for 7 long years such conditions to exist at Blue Plains as Mrs. Roosevelt brought to light, and which never would have been brought to light, in all probability, if she had not done it out of the goodness of a large heart and a restless energy?

When the time comes for the people of this Nation to make the sort of sacrifices Mrs. Roosevelt now hints at, let us hope the affairs of the Government will be in the hands of public officials endowed with at least a modicum of common sense.

SOME ILLUMINATING LOSSES

The following excerpts from the hearings before the Appropriations Committee in December 1939 give some evidence of the size of these undertakings and a picture of some of the losses that are sure to result. On page 968, we find:

Dr. ALEXANDER. I submit the following justification:

Appropriation Act, 1940	$1,987,400
Budget estimate, 1941	1,500,000
Decrease	487,400

DECREASE

The estimates provide for a decrease of $487,000 in the funds to be available under this appropriation for 1941. Approximately $200,000 of this reduction will be offset by a corresponding increase in the amount of income to be derived from the operation and management of these projects, which income will be used for the purposes of this appropriation as authorized under the Bankhead-Black Act approved June 29, 1936 (40 U. S. C. 431–434). It is contemplated that the balance of the decrease, approximately $287,400, will be accomplished through a reduction in the personnel located on the projects and in the regional and Washington offices presently engaged in the carrying out of the purposes of this appropriation.

It appears that with all these millions invested it is still necessary to appropriate additional funds. The returns will not even pay the overhead, to say nothing of any interest on the investment. Again, on page 968, we find the following:

Mr. CANNON. Under this item there has been a reduction of $487,400, most of which you have allocated to the first project, technical services and supervision of land-development maintenance. However, you do not expect a reduction in your project expenditure by that amount, I judge, as you have doubtless taken into consideration income which will be available this year from the operation of projects under the provisions of the act of June 29, 1936.

Mr. BALDWIN. There will be a net reduction in the operation of projects of about $287,000 that will result from savings largely in personnel.

On page 970 of the hearings the following table appears which shows the loss encountered in selling 8 of the 160 projects.

Projects conveyed to homestead associations or sold to individual clients as of Dec. 1, 1939

State	Name	Development cost	Selling price
Alabama	Jasper Homesteads	$1,038,885	$194,370
Minnesota	Austin Acres	226,185	63,796
Mississippi	Magnolia Homesteads	80,275	60,000
Do	McComb Homesteads	86,292	24,035
Do	Hattiesburg Homesteads	78,570	49,720
Texas	Dalworthington Gardens	301,790	150,000
Do	Three River Gardens	160,290	82,650
Do	Wichita Gardens	209,605	131,716
Total		2,181,892	756,287

This shows a 34-percent recovery when sold, to say nothing about the millions of dollars lost in operating these projects.

It must be remembered that there are large overhead expenses and carrying charges which are not shown in these tables.

The following editorial from the Milwaukee Journal of March 23, 1940, shows the ridiculous, unsound, and impractical policy followed by the New Deal spendthrifts in trying to solve the United States housing problem.

[From the Milwaukee Journal of March 23, 1940]

WAY BEYOND GREENDALE

Having "solved" the city low-rent housing problem, the United States Housing Authority is now tackling the rural low-rent problem. And in about the same way, except that this new scheme does not have even a nodding acquaintance with arithmetic.

The U. S. H. A. has picked six counties—in Arkansas, Georgia, Mississippi, South Carolina, Indiana, and Illinois—where it believes farm laborers should have new homes. The Government, through local housing authorities, is going to build these dwellings.

The house itself is to cost $1,600, set on an acre of land that is put in at $400. The total will thus be $2,000, with the U. S. H. A. furnishing 90 percent and the local housing authority 10 percent. The rural dweller—he who works on somebody else's farm for hire and is classed as a day laborer—will rent this home at approximately a dollar a week, or $52 a year. But he will not have to pay that much if he fixes the front porch or nails a board on the fence, now and then. He can scale the total down through bills for maintenance and repair to around $36 a year.

Now, here is where the magic part of it all comes in. The money for these homes will bear an interest charge of 2¾ percent. On $2,000 of investment, the interest would amount to $55 a year. The local housing authority and the Federal Government will get a maximum in rent of $52 a year for each home, or more likely they will get the minimum of $36 a year. (It would be a dull farm hand, indeed, who couldn't think up an adequate bill for repairs.) And the investment will be amortized in 60 years.

Pass over the fact that in 60 years the bungalow construction of this house will no longer exist as a habitable dwelling, the composition shingles on the roof will be gone—gone long ago—and the farm laborer will be gone unless he was a newlywed when he got the house and is lucky enough to become an octogenarian. Leave out the facts of life and just fiddle with arithmetic.

It is a marvelous answer these New Deal mathematicians get. Government lays down $2,000 on the line, counts $55 a year as expenses for the money, loses from $3 to $19 a year on operating expenses, to say nothing of the loss on principal, the property wears out completely, and at the end of six decades the New Deal magicians have the whole thing amortized. The $2,000 is back in the Federal Treasury, the interest has been paid the rural-housing problem has been solved, and nobody has lost a cent.

A government that can get that answer need not worry about deficits, the debt limit of $45,000,000,000, or anything else that has to do with financing. For it can perform miracles. Since the Federal housing program began, with its Greenbelts and its Greendales, we have seen nothing so marvelous as this.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

ARTICLE BY LINDSAY CRAWFORD

Mr. MINTON. Mr. President, in a recent issue of the Nautical Gazette there appeared a very interesting article by Lindsay Crawford, secretary of the Federal Trade Council of New York, entitled "Tariff Controversy Revived." I ask unanimous consent that the article may be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nautical Gazette for March 1940]

TARIFF CONTROVERSY REVIVED

(By Lindsay Crawford, secretary, Federal Trade Council of New York)

It was too much to expect that a Presidential-election year would be allowed to pass without reference to the Reciprocal Trade Agreements Act, which expires in June, and the renewal of which will come up for discussion on resolution now before the Congress. It came as a surprise, however, to find that a leading candidate for Presidential nomination had introduced a bill (S. 3238) which proposes to make sweeping changes in the foreign commercial policy of the United States and in the procedure to be adopted in making future trade agreements.

The bill introduced by Senator VANDENBERG is a repetition, word for word in many parts, of the main provisions of the rejected Lewis bill of 1935 (S. 3464), with some additions which already have been subjected to severe criticism. This bill would abolish the United States Tariff Commission and transfer from the Interdepartmental Committee of the Department of State to a foreign-trade board all the powers and functions now centered in the State Department and its coordinated committee for the negotiation of trade agreements.

In policy, Senator VANDENBERG's bill would substitute the "conditional" form of the most-favored-nation principle for the "unconditional" form of the present trade-agreement program. While somewhat obscure in the language employed, it is apparent that the new bill aims also at restoring to the Senate the powers of ratification that body delegated to the Executive under the present act—within defined limits as to tariff changes—and aims further at carrying into effect the barter system of trade so long advocated by Mr. George N. Peek, former president of the Export-Import Bank—for some years a voice crying in the wilderness peopled by exiled members of the White House official family of other days. The Lewis bill of 1935 bears all the earmarks of Mr. Peek's authorship and, word for word, corresponds with addresses by Mr. Peek, as to its main provisions. Mr. Peek was a former foreign-trade adviser to the President, but his theories were found to be incompatible with the spirit and letter of the Reciprocal Trade Agreements Act.

The mandatory powers proposed to be conferred on the new Foreign Trade Board would enable it to "compel every person within the United States"—individuals, firms, banks, trusts, and Government departments and their officials—to produce books, contracts, letters, or other documents relating to (a) any transaction in foreign exchange; (b) transfer of credit or payment between American and foreign banks; (c) or the export or import of securities and of gold or silver. This is regarded in financial circles as a proposal to institute exchange control and to embark upon an ambitious scheme of economic planning which would bring the United States into line with those initial steps in governmental control which led to the totalitarian state, and control both of trade and all financial transactions. It is pointed out by critics of the Vandenberg bill that no country except Soviet Russia has willingly resorted to this extreme measure and that even Nazi Germany, as voiced by Dr. Schacht, looked upon this exchange-control system as an undesirable necessity.

Confronted with sharp criticism of his bill, Senator VANDENBERG predicts that "the Hull reciprocal-trade treaties would be extended for 3 years, but that the Hull treaties and his proposed Foreign Trade Board were not necessarily in conflict." In further explanation of the objects of his bill, the Senator says:

"The Hull treaties cannot handle the situation as it is today with its blockades, blocked exchanges, embargoes, and bilateral treaties. Unfortunately we can't set the international trade tempo for everybody."

Reference to the trade "agreements" and "treaties" is apparently carefully chosen as an argument that ratification of all tariff changes should be made by the Senate. Senator VANDENBERG frankly concedes to Mr. Peek authority for the soundness of his bill. He says in an interview (Herald-Tribune, February 13, 1940):

"* * * The Foreign Trade Board plan has specific machinery for the reduction of tariff on any industrial product that carries an import price higher than the cost of production here. It is not a one-way street. It is a two-way street. The plan provides machinery for the reduction of industrial tariffs wherever the tariff puts an import price up above the American cost of production of a like or similar commodity. For authority on the subject the plan is unequivocally endorsed by George N. Peek, who was for several years Mr. Roosevelt's foreign-trade adviser. I do not expect any free-traders or internationalists to approve it. * * *"

In adopting Mr. Peek as his foreign-trade adviser, Senator VANDENBERG is taking on a liability, as Mr. Peek ceased to be foreign trade adviser to the President because of fundamental differences in policy. Incidentally, Mr. Peek has found no support for his views among any large section of those engaged in foreign commerce. Under the Lewis bill, Mr. Peek as president of the Export-Import Bank would have been chairman of the proposed Foreign Trade Board. It is interesting to reflect that, under the Vandenberg bill, Mr. Peek might possibly be the one to supplant Secretary Hull as the one responsible, as chairman of the proposed new board, for administering an act "so unequivocally endorsed" by him.

The proposed definite exclusion of the State Department from foreign commercial and financial affairs is in itself a revolutionary change in the recognized functions of the State Department as the channel of communication between our Government and those of other sovereign states. The pretext put forward, that this will separate foreign commercial and financial matters from the political and diplomatic activities of the State Department, does not face the facts in the case: That these are frequently so interwoven as to be inseparable, and that no board can take the place of the State Department, where the influence and prestige of our Government abroad necessitates action through the recognized diplomatic channel. What, for example, would be the reaction in Tokyo, where the relations between the respective Governments have involved diplomatic representations by our State Department in which it is not possible to separate political from trade matters? What would be the reaction in Berlin or Mexico, or any other country that has been the subject of protests or other action by our Government?

A chief objection to the Vandenberg bill is its reactionary tendency, the obvious desire being to revive the policy underlying the 1930 Tariff Act, resort to a barter policy, revival of the discarded "conditional" treaty clause, and a general regimentation of the inquisitorial type of the N. R. A. to which American business was subjected by its official administrators. The change in policy outlined by the Vandenberg bill is somewhat vague and will be subject to searching analysis if and when the bill reaches the House and Senate. Clause 2, section 2, for example, "to promote policies with respect to foreign commercial and financial activities of the United States that will supplement and conform to national domestic policies," is far from being self-explanatory. What are the "national domestic policies" which Senator VANDENBERG has in mind?

Perhaps the most serious change proposed by the new bill is the control it would give to the Board over governmental lending and all foreign commercial and financial transactions now conducted through governmental agencies. Is it proposed to make the chairman both of the Export-Import Bank and of the Foreign Trade Board the Government agency in all foreign financial transactions, with the power to prohibit or modify these at the discretion of a Board, not more than three members of which shall belong to the same political party?

Although obscured by the wording of the bill, it seems apparent that present agreements will be allowed to expire. In other words, our trade agreements with 21 countries will be abrogated and negotiations opened bilaterally on a "conditional" most-favored-nation basis. This means, of course, that instead of the Board making an agreement with one country as chief supplier of commodities, subject to concessional bargaining and generalizing all concessions to other countries with whom we have most-favored-nation relations, the proposed Foreign Trade Board will negotiate separately with the 60 or more countries which at present benefit by generalization of agreement concessions. How this will relieve the Board from the pressure on its time and energies, as distinguished from the present simple method, only Senator VANDENBERG or his adviser, Mr. Peek, can explain.

There is no use disguising the fact that the Vandenberg bill puts the tariff issue back into politics. It is just as well, perhaps, that the defects of the Lewis bill should again be subjected to critical examination and that the broad principles and philosophy of the Hull policy and program should be brought into sharp perspective in contrast with Peek tariff doctrines which hitherto have failed to impress American businessmen as deserving of support.

Emphasis upon retaliation by the Vandenberg bill is far from being a constructive approach to the solution of the world's economic ills. The Senator appears to favor a nationalistic attitude on the tariff question. All who differ from him he classifies as 'internationalists." He seems to ignore or overlook the fact that his own bill is international in character, as it necessarily relates to the conduct of our foreign commercial and financial relations with other countries and governments. A first-class Senate debate on the issues raised by his bill could not fail to expose its isolationist tendencies and the incompatibility of the inquisitorial powers it seeks to confer on the Board, with the present system of trade agreement negotiations as conducted by the Inter-Departmental Committee of the State Department. The reorganization and coordination of Government foreign services, carried out recently, should not be set aside in favor of a Board which, obviously, will be divided politically and which can never attain the status of the State Department in the eyes of foreign governments.

In his statement in the Senate (CONGRESSIONAL RECORD—Senate, February 1), Senator VANDENBERG, in explanation of his proposal to create a Foreign Trade Board to take the place of the Inter-Departmental Committee of the State Department for negotiation of trade agreements, says: "The advantages of such a Foreign Trade Board are strongly suggested by the success of the British Board of Trade over many decades. * * *" The accompanying chart represents the British interdepartmental plan related to export trade, in which board-of-trade activities through the Department of Overseas Trade are carried out in cooperation with the Foreign Office and the Treasury, somewhat similar to the Inter-Departmental Committee organized under the State Department at Washington.

Peace and Neutrality

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

LETTER FROM RICHARD L. NEUBERGER TO SENATOR CLARK OF IDAHO

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an illuminating letter written to me by Richard L. Neuberger, of Portland, Oregon.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PORTLAND, OREGON, *March 18, 1940.*

Hon. D. WORTH CLARK,
United States Senator from Idaho,
Washington, D. C.

DEAR WORTH: Let me congratulate you on your continual efforts to keep our country out of war and at peace with the world. That is the major issue confronting the United States. It confronts all people, whether they be Democrats as you and I are, whether they be Republicans, Independents, or members of any other political group.

War would endanger our precious democratic form of government, guaranteed by the Bill of Rights of the Constitution. War would threaten the lives and security and happiness of countless millions. It would imperil the child in school, the worker at his job, the merchant in his store, the housewife in her home, the farmer in the fields.

War would consume and destroy the national income of America. It would waste and squander money which is needed for useful, humanitarian causes. There are innumerable requirements right here in our own country to which we must direct our attention and our energy.

1. The development program started in the West by President Roosevelt must be continued. Reclamation, power, and irrigation projects are necessary to water thirsty acres and provide low-cost electricity. We must prevent soil erosion and save the land, which is our main heritage.

2. Adequate educational facilities are needed by thousands of children. It would be folly to spend money for shot and shell when that money is needed to build school buildings, employ teachers, and construct playgrounds.

3. Social-security benefits must be extended to more people. More generous old-age pensions are required by many needy Americans who are past 60 years of age. Unemployment insurance must go to every person who is conscientiously willing to work and has lost his job through no fault of his own.

4. We need to preserve and defend the gains made in the last few years—such gains as collective bargaining for workers, the guarantee of bank deposits, the advancing of loans to small-business men, the stabilizing of farm production.

5. No effort should be spared to bring about the security and happiness which are so essential to the American way of life. There must be opportunity for all people to make a decent living, an American standard of living.

Entanglement in war would take away our attention and efforts from these pressing problems at home. It would spend lives and resources in a futile cause. It would raise to unbelievable heights the public debt which now is a source of worry to so many of us. It would harass America and American democracy for generations to come.

That is why I am so appreciative of the manner in which you have persistently insisted upon peace and neutrality for the United States.

With kindest personal regards.

Sincerely,

RICHARD L. NEUBERGER.

Copyright Legislation

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

LETTER FROM THE COMMITTEE FOR THE STUDY OF COPYRIGHT

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter from the Committee for the Study of Copyright in explanation of the origin, character, and fundamental provisions of S. 3043, which I introduced in the Senate at the request of that committee on January 8, 1940.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 25, 1940.

Hon. ELBERT D. THOMAS,
United States Senate, Washington, D. C.

MY DEAR SENATOR THOMAS: The Committee for the Study of Copyright welcomes this opportunity to explain the origin, character, and fundamental provisions of the proposed copyright bill (S. 3043) that you were good enough to introduce at its request on January 8.

Origin: Because of the conviction that the present copyright law of the United States makes it exceedingly difficult for the works of American authors to receive adequate protection when distributed in foreign countries and, reciprocally, for the works of foreign authors to secure similar protection in the United States, the National Committee of the United States of America on International Intellectual Cooperation in January 1938 set up a special committee for the study of copyright to investigate the problem of assuring to the United States its share, on a basis of equality with other nations, in the cultural development of the contemporary world.

The problem: Initial researches of this committee revealed not only that pirating of American works is increasing with the demand for such works in South America, in Europe, and in Asia, but that ill-feeling is continually being engendered against the United States because works of foreigners are constantly falling into our public domain. And to foreign authors, who fail because of lack of knowledge or ability to fulfill all the formalities required for copyright protection under the present law, the effect of works falling into the public domain is the same as of the piracy complained of by American authors. In consequence, the protection that some American authors have enjoyed under the Berne Convention through simultaneous publication in Canada has been resented and violated, especially by non-British countries of the International Copyright Union. Yet, solution through membership in the International Union for the Protection of Library and Artistic Works is not possible under the Copyright Act of 1909, nor is it possible under that act to improve inter-American relations regionally and outside the Berne Convention. The problem is primarily a problem of domestic copyright legislation.

Existing copyright system: Yet, quite apart from this need of finding a basis for reciprocal international copyright protection, investigations of the committee revealed that our copyright law is itself in need of revision. It learned that authors have long complained of inequities of the present system, whereby certain works (e. g., dramatic works, musical compositions, works of art, addresses prepared for oral delivery) may be protected when deposited and registered in the Copyright Office before publication, while others may be protected only after they have been published with notice, that fact registered, and two copies deposited in the Copyright Office. In addition, these last requirements are cause of grievance because copyright is frequently lost through failure on the part of printers, or other agents for the author, to perform all these formalities according to the letter of the law. Furthermore, under the present law copyright is one indivisible right. As such it may be assigned to an owner other than the author, in which case the assignee must record his assignment in the Copyright Office to assure its validity. But there is no provision for the protection of more than one assignment, nor for record of the transfer of his right to another by the first assignee. These provisions of the act of 1909 in regard to the assignment of copyright, which were suited to the methods of use and publication of the nineteenth century and the first decade of the twentieth, are no longer adequate, because they antedate the widespread use of the cinema and the advent of radio and television. Users, consequently, and with reason, have complained that the system of registration is insufficient to their needs. They urge a more complete registration of facts concerning copyrighted works in order that they may readily and surely ascertain ownership of the rights they wish to buy.

Character of the proposed bill: The thoroughgoing revision of the copyright law that the committee for the study of copyright is proposing is, however, the result of its method of drafting the bill it has presented. Since the various efforts that had been made to change the law were well known to the committee, it decided to try to avoid, if possible, a repetition of the conflicts that arose after every new bill was drafted, as was the case in the hearings on the Duffy bill. The committee for the study of copyright, therefore, invited representatives of the different groups interested in copyrighted works to try to reconcile their differences before, not after, the drafting of a copyright bill. S. 3043 is the result of such round-table conferences, and represents an honest attempt to rethink the theory and practice of copyright protection, nationally and in relation to international experience and practice; it also represents the harmonization of divergent interests in relation to the theory and general principles of practice that representatives of those interests themselves defined. In consequence this bill, which proposes complete revision of the copyright law, is not a compromise measure in the sense that someone outside the parties concerned formulated provisions unrelated to experience and consequently unsatisfactory to everybody; instead, it is a composite of provisions that record the adjustments that were made by the parties themselves who are concerned with copyrighted works. Only on a few points was there unwillingness to acquiesce in the adjustments which are described in the provisions of the bill; these have been indicated in the marginal notes and covering letter that were printed with the bill in the CONGRESSIONAL RECORD of January 8. Since absolute reconciliation of interests did not prove to be possible, the committee for the study of copyright presented a bill that it believes is suited to serve the public interest of the United States.

Nature and duration of copyright: A brief statement of copyright theory and practice is probably the best way to explain the reasons for the basic provisions of the new bill. In practice no search is

ever made to establish the originality of a work, nor is complete monopoly ever granted as in the case of patents. Copyright recognizes the right of the author to his form of expressing his ideas; similar ideas, even similarly expressed, by another may also be copyrighted. But the author wants the works which express his ideas recognized as his from and after creation and by virtue of such creation. When others wish to use his literary or artistic works for profit the author desires to be guaranteed the exclusive right to permit such use, whether it be for printing, for performing, for motion pictures, for broadcasting, for television, or for all these uses of the same work as is possible in the case of a drama. If, then, the author has copyright on creation in statutory law as in common law he can grant such rights to use his works whenever he has opportunity, without formalities as a condition of enjoying his copyright; and recordation in the Copyright Office of the grants of rights to use by grantees of such rights can be provided for the protection of those rights. In the application of such theory to practice the Copyright Office would be able to record facts concerning copyrighted works useful to users of such works without the possibility of penalizing the author or endangering authors' rights. Accordingly, the term of copyright becomes important; if grants of right to use works by means of modern methods of diffusion bring the author adequate income, he can continue to produce literary and artistic creations. But if he does this he also wants to be sure that his heirs will be provided for. Therefore he asks that copyright in his works be recognized by virtue of his having created them, and that the term of this right be for life and 50 years. In asking these two things the American author is only requesting for himself what authors in more than 50 countries of the world have had for upward of half a century. Moreover, experience has shown that reciprocal international copyright protection is only possible on the basis of the recognition of copyright existing in a work upon creation without requiring any formalities as a condition of that protection. The term of life and 50 years has been found practical, because it is always possible to know the end of the term. To accept a shorter term would put American authors in a disadvantageous position even at home, because the practice under all international conventions or agreements is to recognize the term prevailing in the country of origin.

Recordation of grants of rights to use a work: For these reasons, the new bill, S. 3043, provides that "authors shall have copyright in all their writings, whether published or unpublished, from and after the creation thereof, without compliance with any conditions or formalities," and that the term of this copyright shall subsist for the life of the author and 50 years thereafter. Then, since the author is the first owner of his works, it is provided that he may grant the right or rights to use such works, in whole or in part, and for any specified time or place. Owners other than authors may do likewise. But all such grants of a right or rights to use must be in writing. The grantee may record the same in the Copyright Office. This arrangement, patterned after the registering of deeds to real property, protects users and authors alike. The user may go to the Copyright Office for information about the ownership of literary and artistic works he may wish to buy. If he buys a right to use a work that has not been recorded, and if he records his grant, his right is to prevail over a prior unrecorded grant of the same right.

Common-law and statutory copyright: When the new bill provided copyright on creation without formalities, it made the principle of common-law copyright to apply to statutory copyright. Therefore, the drafters of the bill were faced with the problem of determining how far the jurisdictions of common-law and statutory copyright overlapped. At the time of a similar revision of the copyright law of Great Britain it was declared that common-law copyright became statutory copyright. But under our Constitution this procedure seemed to be neither possible nor advisable. The following adjustment was therefore made: Existing common-law rights are recognized; in fact, the provision of section 2 of the act of 1909, declaring that "nothing in this act shall be construed to annul or limit the right of the author * * * at common law or equity * * *," has been incorporated in S. 3043 (sec. 45); but this provision is followed by a proviso which states that when an author shall elect to have statutory copyright he surrenders his common-law rights. The proviso stipulates that "such election shall be deemed to have been exercised by, and shall be binding upon, an author or other owner who has made or authorized" certain specified acts ,such as publication of a work, deposit of copies, recordation of a grant in respect of any work, or "assertion in writing of any claim to copyright under this act, or of any right to remedies or proceedings for infringement of any such right or rights."

Deposit of manuscripts: Permission to deposit manuscripts in the Copyright Office is offered as an inducement to authors to elect statutory copyright. By such deposit works can be protected while being marketed, for statutory damages are provided for infringement of statutory copyright.

Statutory damages: Statutory damages, in turn, have taken on a new importance. Heretofore, they have been advocated as a deterrent to infringement. For this purpose they have been incorporated in every copyright bill passed by the Congress of the United States. In the proposed bill, however, statutory damages are retained not only for that reason, but, in addition, their availability is offered as a reward for conformity to the provisions of the law. Contrariwise, failure to fulfill the regulations of copyright protection is penalized, in most instances, by the loss of right to statutory damages.

Minimum statutory damages: Since the justice and reasonableness of minimum statutory damages as determined in the act of 1909 have long been subject of debate, it may be too much to hope that all interests will be completely satisfied with the revised provisions of the new bill. This is particularly true in view of the fact that broadcasters wish no minimum statutory damage for infringement of performing rights of music over the radio. They ask that the matter be left to the courts as is done in several countries that are members of the Berne Convention. The reasons advanced against doing this are that in European countries, where no minimum is set, performing-rights societies have government sponsorship, performing rights are recognized as important and their value is appreciated; and that in Canada, where performing rights have no such recognition, courts have awarded damages for less than a dollar, which authors claim is equivalent to a license to infringe.

American manufacture: The manufacturing provisions of the act of 1909 have also been subject to attack. Advocates of the adherence of the United States to the Berne Convention have been especially opposed to them because, by prescribing American manufacture for all works in the English language as a condition of copyright protection, they have stood in the way of our membership in the International Union for the Protection of Literary and Artistic Works. But by approaching the matter pragmatically and with the active cooperation of a representative of the printing trades, it has been possible to propose revision. American manufacture, of course, continues to be required of works by American authors and by persons resident in this country. But the ad interim clause has been omitted. This clause allowed authors of English-language works published abroad protection of their works in the United States until it was possible to republish here, which must take place within 6 months of first publication abroad, the Register of Copyrights being informed of this intention within the first 2 months of that interval. Then, in order to retain his copyright, the author must publish with notice, register that fact, and deposit two copies in the Copyright Office. The new bill permits importations of foreign newspapers, periodicals, or magazines; copies for libraries; works which form parts of private collections purchased en bloc, if not for sale or hire; works in raised characters for the blind; illustrations of a scientific work or reproductions of a work of art where the subjects represented are located in a foreign country; motion pictures with or without sound; and 12 copies in manuscript, typescript, mimeographic, or photostatic form. Works in a foreign language by authors not resident in the United States at the time of the creation of the work do not come under the manufacturing clause, nor do authorized translations in a foreign language of a work previously published in the United States. Works in the English language may be imported in limited quantities, if not for sale or hire; one copy per person imported in personal baggage, two copies for the author's own use; and one copy on any one invoice for personal use if no person other than a retail book dealer in the United States shall act as agent of the consignee in the acquisition of such copy. In addition to this list, which was designed to be in the public interest without harming labor, 500 copies are permitted through the usual trade channels if accompanied by an affidavit authorizing the importation, signed by the author or other owner. The purpose of this quota is to permit a trial sale to test the marketability of a work in this country, and thus to ascertain if republication by American labor might be profitable. If importations beyond the quota are made with the consent of the author, no remedies shall be available for infringement of future printing, publication, distribution, or vending of such work; but, all other rights within the copyright are retained to the author or other owner of such rights. For example, if the work is a novel, the author or other owner may lose his book-publication rights, but this loss does not affect the rights to dramatize the work and to publish the dramatization, to make a scenario out of it, to use episodes from it for continuities or for radio skits. But if the work is not republished and the quota is not exceeded, copyright in publication rights as well as in other rights may be retained until publication here is desired.

Deposit of copies in the Library of Congress: Abolition of formalities as a condition of copyright protection does not eliminate the requirement for deposit of copies in the Copyright Office. On the contrary, the regulations proposed by S. 3043 are designed to assure such deposit, for it is the publisher, whose right to publish will be recorded in the Copyright Office for his own protection, and not the author, who is made responsible for the deposit of copies of any work offered for sale in the United States. This arrangement will enable the Register of Copyrights to know from whom to require deposits of copies, should such request become necessary.[1] This should seldom be the case, for the requirement to deposit is tied with the obligation to give the Copyright Office proof of manufacture by American labor. The bill provides that the publisher at the time of deposit shall furnish the Copyright Office with proof of manufacture by American labor, either by having the name and location of the printer upon all copies or by filing an affidavit to that effect at the time of deposit. It is also required that a deposit of copies shall be made for any subse-

[1] At present the Copyright Office is handicapped in this regard because the Supreme Court ruled, on January 30, 1939, in the case of the *Washingtonian Publishing Co., Inc.*, v. *Pearson and Allen* (vol. 306, U. S. Repts., 30) that copyright in a work published with notice is valid although its owner fails to make the required deposit until the moment of bringing suit for infringement.

quent printing of a work that contains a revision thereof or a substantial addition thereto or any material change in the text or format. Failure to deposit is punishable by fine and by loss of the right to statutory damages in case of infringement. The drafters of the new bill believe it is important that the Library of Congress preserve a complete record of national achievement in literary and artistic works; they also believe this can be assured by the method proposed more readily than under the present system, even though the latter makes deposit a condition of copyright protection. Furthermore, the committee holds it to be an injustice to deprive an author of all his rights in his work because either the author or, as is often the case, someone other than the author failed in the fulfillment of the obligation to deposit two copies of the published work in the Copyright Office.

Fees: The Copyright Office is to be paid for its services. Fees are required at the time of deposit of copies, for the privileges of recordation of grants, and for any registration of claim to copyright that is desired. Fees are also required for copying and certifying copies of records, and for any requested search of Copyright Office records. But no fee is required as a condition of copyright protection, as is true under the provisions of the act of 1909, for, as already explained, copyright is granted in recognition of the creation of artistic and literary works.

New provisions: Among the new provisions of S. 3043, the noninfringing uses permitted to libraries for the benefit of study and research are of especial importance. The new bill clearly describes the conditions under which libraries may copy manuscripts and out-of-print books by means of microcopy and other photographic processes for those at a distance who would otherwise have no access to the desired resources for study. Noninfringing uses, especially by motion pictures and radio, when depicting public scenes or broadcasting public events, are also included. Diffusion by new methods hereafter known or devised is provided in order to make it possible for S. 3043 to meet new ways of using literary and artistic works without requiring revision of the law.

International copyright protection: And finally, reciprocal international copyright protection has been made possible. For the system designed for the improvement of copyright protection within the United States, which provides for copyright on creation, divisibility of copyright, and recognition of new methods of diffusion, is equally suited to serve as the basis for reciprocal international copyright protection through agreement or convention, inter-American or universal. S. 3043, when compared with the Berne Convention, appears to meet its requirements. Moreover, until the United States adheres to the Berne Convention or to an Inter-American Convention, bilateral interchange under presidential proclamation is possible, if the foreign country grants to the citizens of the United States the benefits of copyright on substantially the same basis as to its own citizens. Under the provisions of the proposed bill this means that foreign authors will no longer be required to fulfill all the formalities as at present, and relations with countries members of the Berne Convention can approach the reciprocal protection possible under that treaty. Moreover, it is hoped that the elimination of formalities from our law may encourage the simplification of copyright requirements on the part of countries wishing reciprocal relations with the United States. The proposed revision of the copyright law of the United States according to the provisions of S. 3043 is therefore offered by the Committee for the Study of Copyright as the solution of the problem of assuring to the United States its share, on a basis of equality with other nations, in the cultural life of our contemporary world.

Respectfully yours,

COMMITTEE FOR THE STUDY OF COPYRIGHT,
WALDO G. LELAND, *Chairman,*

Reciprocal Trade Agreements Act, Etc.

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27 (legislative day of Monday, March 4), 1940

STATEMENT BY HOWARD I. YOUNG BEFORE THE SENATE FINANCE COMMITTEE, AND COMMUNICATIONS FROM VARIOUS SOURCES

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the statement of Mr. Howard I. Young, president of the American Zinc Institute, before the Senate Finance Committee in opposition to the extension of the Trade Agreements Act, as it appeared recently in the Western Mineral Survey, published at Salt Lake City, Utah.

I also ask unanimous consent to have printed in the Appendix of the RECORD a number of communications I have recently received from farm groups in my State. All of these statements are from groups which have experienced at first hand the ruinous effects of the trade-agreements program.

There being no objection, the statement and communications were ordered to be printed in the RECORD, as follows:

STATEMENT OF AMERICAN ZINC INSTITUTE, INC., BEFORE THE SENATE FINANCE COMMITTEE, MARCH 1, 1940

The operations of the American zinc industry are Nation-wide. Zinc mining is carried on in 18 States in the western, central, and eastern sections of the United States. More than 30 States in all are concerned in the production and manufacture of zinc and its products. About 25,000 men are employed, and it is, therefore, reasonable to assume that at least 100,000 persons are directly dependent upon the zinc industry.

INFORMATION FILED

Almost 2 years ago the American Zinc Institute, on behalf of the domestic zinc producers, filed a statement with the committee for reciprocity information in connection with the trade-agreement negotiations with Canada. Supplementary briefs were filed, and oral presentations were made by various divisions of the industry in an attempt to defend the tariff rates on zinc ore and slab zinc established by the Tariff Act of 1922, which were unchanged by the Hawley-Smoot Act of 1930.

UNUSUAL ACTION

The zinc industry was puzzled at the contemplated concessions to Canada, as one of the stated principles of the trade-agreement program is that concessions shall be made only to the chief source of imports. As a matter of fact, imports had been unimportant except in 1937, when extraordinary drought conditions in Montana curtailed domestic production. Even in 1937, zinc imports from Canada were in fourth place, and represented less than 15 percent of total imports, Belgium, Peru, and Mexico each being responsible for a larger share. Furthermore, at no previous time had Canada been the chief source of our imports, nor has this situation changed to date.

OTHERS BENEFIT

In its statement filed with the Committee for Reciprocity Information on March 12, 1938, the Institute emphasized the probabilities of third country benefits as follows:

"We must expect immediate importations from other countries, particularly Mexico. * * * The low wage rates prevailing in Mexico justify current duties as a means of protection for American labor * * *."

The institute then quoted the following statement made in 1921 by the United States Tariff Commission, when zinc rates were discussed:

"Here (in Mexico) we find large deposits of high-grade zinc ore that have not been worked. As soon as there is adjustment of the unrest in those regions these deposits can furnish enormous quantities of desirable zinc ore at extremely low cost. The freight from these mines to the American zinc smelters is high, but in view of the low cost of producing the ore it can be delivered at Mississippi Valley points for less cost than much of the output from the mines even of that section of the United States."

ESCAPE CLAUSE

As a response to our expressed fears of third country benefits, we had to depend upon the answer that was given at the hearing time and time again when Senators, Congressmen, and representatives of industry mentioned the threat of a general invasion of our markets. They were told not to worry, that there would be the usual escape clause in the agreement which would insure against that risk. The zinc industry accepted this statement at its face value and it seemed to be the only ray of hope when on November 17, 1938, the announcement was made that the duties on zinc ore and slab zinc had been cut 20 percent.

NOT IN PUBLIC INTEREST

Because we believed a great wrong had been done and that a serious error had been made, energetic protests were filed promptly and continuously with the State Department. We felt sure that the soundness of our position would be recognized upon review. Adding to this assurance was the public statement of Dr. John W. Finch, Director of the Bureau of Mines, who in April 1938 pointed out that a reduction in the tariff on zinc could hardly be considered in the public interest. This opinion, it will be noted, was offered by Dr. Finch 6 or 7 months before the announcement of the duty cut. Dr. Finch's views were greatly amplified by the report issued by the Bureau of Mines under date of June 27, 1939, in the form of a detailed analysis of the reduction in the tariff on zinc. It is far too long to quote here, but this analysis supports the position of the industry and, in its final paragraph, states:

"The foregoing analysis of the zinc industry indicates clearly that domestic producers are confronted with a critical situation resulting primarily from unsatisfactory conditions abroad, the effects of which on the domestic market have been intensified by the 20-percent reduction in tariff."

(The full text of the Bureau of Mines analysis will be found on pages 2732–2735 of the hearings before the Ways and Means Committee.)

Months went by and we persisted in our protest with the result that we were invited to furnish data to permit of a special study of zinc by the Trade Agreements Division of the Department of State. We furnished everything which was requested, and more. In fact, we have continued to do so to date.

PRESENT DATA

As a result of direct representations to Secretary Hull, an informal hearing was finally arranged for September 18, 1939. The industry took great pains to see that a representative group of actual producers were present to discuss every phase of the industry. Quite a number of the members of the trade-agreements organization and various Government departments met with us, but the Bureau of Mines was not represented. Frankly, the industry was disappointed. We had to do most of the talking. Very few significant questions were asked. A great deal of information was voluntarily offered by the industry, and after the meeting a 19-page statement, supplementary to the conference, was submitted by the industry. Five months and more have passed. We are still waiting for the answer.

ASKS EXAMINATION

We insist that a thorough examination of the facts was not made before the duty concessions on zinc ore and slab zinc were determined upon. We submit that the fact that the Bureau of Mines was not consulted is a strong indication of the correctness of this statement. Furthermore, apparently the analysis since published by the Bureau of Mines, the Government authority on metals and minerals, has carried no weight with the trade-agreement organization; and this, we believe, warrants our vigorous protest.

Finally, we point to clause XIV of the Canadian agreement, which reads in part as follows:

"The Government of each country reserves the right to withdraw or to modify the concession granted on any article under this agreement, or to impose quantitative regulations on the importation of any such article if, as the result of the extension of such concession to other foreign countries, such countries obtain the major benefit of the concession, and if in consequence imports of the article concerned increase to such an extent as to threaten serious injury to domestic producers."

We submit:

(1) That third countries have obtained the major benefits of the duty concessions, as evidenced by the fact that 1939 imports show that Canada was responsible for 12 percent; Peru, 14.5 percent; and Mexico, 59.4 percent.

(2) That in consequence imports have increased to such an extent as to threaten serious injury to domestic producers.

(3) That the industry has applied for relief under clause XIV, but without result.

In presenting its case to the Ways and Means Committee, the American Zinc Institute emphasized that there are provisions within the Canadian agreement itself—the agreement responsible for the duty concessions on zinc—which could and should have been exercised to rectify the error and repair the damage. We reiterate this point, but because of the fact that in no case has the escape clauses on any item in any agreement been exercised, we are beginning to despair of any exception in our case, regardless of the facts. Therefore we respectfully urge this committee to consider suitable curbs or mandatory provisions to be included in the act, if it is extended, which will insure review and revision of duty concessions when indicated. We believe that the amendments suggested by the American Mining Congress would afford established American industries this vitally needed protection.

GROWERS & SHIPPERS ASSOCIATION OF IDAHO,
Nampa, Idaho, February 20, 1940.

Hon. JOHN THOMAS,
Senate Office Building, Washington, D. C.

DEAR SENATOR: It has been brought to our attention that in the negotiations of reciprocal-trade agreement with Chile one of the commodities involved is onions. While we are refraining from expressing any opposition relative to the reciprocal-trade agreements, we thought it advisable to advise you gentlemen who are representing the industry in Idaho of the fact that the growers of onions of the State of Idaho for the past 2 years have suffered tremendous losses due to the extreme low price of the commodity.

We would appreciate it if you would investigate and see if our information is correct and, if so, use your good influence in protecting the welfare of the Idaho onion industry.

I might add that the production of onions from Idaho must of necessity increase in quantity as the new land coming under cultivation is adapted to our standard commodities of potatoes, onions, sugar beets, and each must bear its relative increase in acreage.

Thanking you for past considerations and with kind personal regards, I remain

Sincerely yours,

GROWERS & SHIPPERS ASSOCIATION OF IDAHO,
DAVE L. BUSH, *Secretary-Manager.*

THE IDAHO STATE DAIRYMEN'S ASSOCIATION,
Boise, Idaho, March 19, 1940.

Hon. JOHN W. THOMAS,
United States Senator,
Washington, D. C.

MY DEAR SENATOR THOMAS: I wrote you some time ago, asking that you support the Pittman amendment, providing for Senate ratification of all future trade agreements.

Again I urge that you use all your influence to pass this amendment. You no doubt will hear from other dairymen and creamery operators in regard to this matter.

Thank you for any cooperation which you can give.

Very truly yours,

W. L. HENDRIX, *President.*

CALDWELL, IDAHO, *February 3, 1940.*

Hon. JOHN THOMAS,
United States Senate, Washington, D. C.

DEAR SENATOR THOMAS: At the regular meeting of Canyon County Pomona Grange, held January 18, the following resolution was passed.

Whereas the Canyon County Pomona Grange is in favor of true reciprocal agreements with other countries, whereby the products of each country are required by the other to fill their mutual needs, and

Whereas the grange believes the American farmer is entitled to the American market to the extent of his ability to fill the requirements of the same, and

Whereas the reciprocal trade agreements program, which will soon expire, does not meet these requirements or conditions, and a continuation of the same will be asked.

Therefore, the Canyon County Pomona Grange asks our delegation to throw its influence against the extension of the program and bring about a repudiation of all treaties entered into under this program that have not been ratified by the Senate.

Mrs. ANDREW SMITH,
Secretary, Canyon County Pomona Grange.

DAIRYMEN'S CO-OP CREAMERY OF BOISE VALLEY,
Caldwell, Idaho, March 11, 1940.

Hon. JOHN THOMAS,
United States Senate, Washington, D. C.

DEAR SENATOR THOMAS: We regret passage of the bill by the House of Representatives extending the Trade Agreements Act for 3 more years. We are depending on you to vote for an amendment to the bill which will provide for the Senate ratification of trade agreements.

The dairy industry gives year-round employment for a large number of people, and we know of no other product that gives the farmer a steady income every month, every week, and every day of the year.

The reciprocal-trade agreements have been very detrimental to our people, and we believe that no individual not familiar with agriculture can understand how much damage trade agreements can injure Idaho farmers.

Very truly yours,

J. R. BROWN, *Manager.*

Civilian Conservation Corps—One of Most Popular Activities of Federal Government

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. SMITH of Washington. Mr. Speaker, I have vigorously favored an increase in the appropriations for the Civilian Conservation Corps and supported the Scrugham and Leavy amendments, on account of the outstanding accomplishments of this agency throughout the Nation and particularly in my own congressional district in southwest Washington. The useful and constructive work performed by the young men in the C. C. C. camps has received universal praise. In my State and district in addition to building trails, roads, bridges, the prevention of floods and soil erosion, and other public improvements, their services in effectively fighting forest fires has resulted in a saving of millions of dollars. The young men themselves have benefited greatly from the training and instruction which they have received, and, of course, their own compensation and the allotments to their dependents have provided added purchasing power. The expenditures for materials and supplies in the vicinity of the camps have been a direct benefit to numerous business firms and merchants.

I am advised that new camps will be established in my district for the summer of 1940 as follows: Camp NP–10, at Quinault, in the Olympic National Park, and reestablishment of the camp at Packwood, Mount Rainier; and the following camps will be continued in operation: Camp P–208

at Elma, Camp SCS–12 at Montesano, Camp F–34 at Randle, Camp P–223 at Doty, Camp F–40 at Carson, and Camp P–219 at Rainier.

I regret that if the reduction in the appropriation is restored in the Senate, which I hope it will not be, the following camps will likely be discontinued, which will be a serious loss and detriment to all concerned: Camp at Yacolt, camp at Skamania—known as Beacon Rock, Camp P–213 at Cathlamet, and the Millersylvania Camp in Thurston County where the project work has been completed.

Mr. Speaker, the fine record of the Civilian Conservation Corps under the able direction of the late Robert Fechner is being continued under his able successor, Hon. James J. McEntee.

Special Joint Congressional Forestry Committee

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. FULMER. Mr. Speaker, on yesterday the House passed House Concurrent Resolution 51, extending the time for making a report by the Special Joint Congressional Committee on Forestry until the Seventy-seventh Congress.

This committee is composed of five Senators, as follows: Senators J. H. Bankhead 2d, Alabama, chairman; W. J. Bulow, South Dakota; C. L. McNary, Oregon; E. D. Smith, South Carolina; D. W. Clark, Idaho; and five Congressmen, as follows: Congressmen H. P. Fulmer, South Carolina, vice chairman; Wall Doxey, Mississippi; W. M. Pierce, Oregon; D. A. Reed, New York; H. L. Englebright, California.

We held hearings at Jacksonville, Fla., Syracuse, N. Y., Mobile, Ala., San Francisco, Calif., Portland, Oreg., Madison, Wis., and several hearings here in the city of Washington.

These hearings were completed some 10 or 12 days ago. The information gathered is now being printed in various volumes.

The request for this extension of time was necessary because the committee would not be able to write a report by April 1, 1940, at which time the life of this committee was scheduled to expire.

For the information of the Members and those who are deeply interested in our natural resources, our forestry resources being one of our major national resources, I will state that we were able to gather valuable information in the various sections of the United States where hearings were held.

I am one who conscientiously believes that the natural resources of the country belong to the people and should be utilized in the interest and welfare of all the people.

Not only were we able to get a real picture of the forestry situation from numerous witnesses appearing before the committee at these various hearings, but we were privileged to cover considerable territory adjacent to the place where we held hearings, during which time we had the opportunity of observing just what is happening to the forestry resources of the country. I want to state to you that unless something is done to stop the ruthless destruction of the forests of this country the years will not be many before the country as a whole will find itself in the position of certain definite sections of the country where large sawmill operators and pulp mills, who apparently are interested only in the dollar, have cut millions of acres clean.

You have heard about the Ozark tenant farm problem in Missouri. Certain operators moved into the southeast of that great State, and they have utterly destroyed the forests, which has brought about unemployment, delinquent-tax lands, and the closing down of many furniture factories, necessitating these folks securing forest products over long hauls from other sections.

NORTH LAKE STATES

The Northern Lakes region, often called the cut-over area, is a vast empire of some 57 million acres in northern Michigan, Minnesota, and Wisconsin. The region takes in 86 counties, the total population is slightly over one and one-half million, or about that of Detroit.

Here lives a population of one and one-half million. Many of these people suffer from lack of economic opportunity. Many are unemployed. Too many have to have relief of one kind or another. The people and the region, faced with excessive costs of local government, high taxes, and relatively low income, constitute one of the Nation's critical social and economic problems.

Woodsmen, miners, farmers, and others once made a good living in this region; some prospered, but with the turn of the century the trend of opportunity declined. Even before 1929 there were more workers than jobs. Today the region holds a stranded population.

The area of old-growth saw timber in the region has been reduced from fifty-seven million to two and seven-tenths million acres by logging and fires. Sixty-five percent of the second growth has little use at present. A program of restoration and protection for the forests will help industry to maintain its present position and insure its increased importance in the future.

Up until recent years the Lake States softwood furnished most of the construction timber, fence posts, telephone poles, and ties for an expanding agricultural and railroad empire. Its hardwoods made furniture, flooring, and other household articles for the Nation. By 1900 most of the pine was gone, and 20 years later the cream of the hardwoods had been removed. In 1890 Lake States lumber production was 35 percent of the Nation's total. Thirty years later it was but 8 percent. Today it is 4 percent.

In the North Pacific area, including the redwoods in California, Douglas fir in Oregon and Washington, we still have considerable valuable timber. However, most of it is in the hands of large operators who own large areas. While some few of these operators are doing a fairly good job in properly cutting, there are numerous operators, including large operators, who are cutting everything clean.

I passed through one section containing 35,000 acres owned by a large corporation. This area is covered by a logging railroad, and all of the timber is being cut, after which it will pass into the hands of the State of Oregon, as tax-delinquent land, and perhaps unpaid taxes for 3 or 4 years will be included in the tax delinquency.

At the time we held hearings at Portland, Oreg., a local paper in Coose County had to add 52 pages for the purpose of advertising tax-delinquent lands. These lands were owned by individuals, not by large operators or nonresident owners. Now, what does this mean? It means that those who own these lands will become nonlandowners. This will mean unemployment and the necessity for relief funds on the part of the Federal Government.

The next move I find on the part of the people of the great State of Oregon will be to place these lands in the Federal Forest Service. I, also, find that because of so much of the land having gone into the hands of the Forest Service, and because of so many thousands of acres being tax delinquent, the counties are now coming to the Federal Government requesting a larger tax payment for the purpose of helping the counties to defray their expenses.

In the meantime, the pitiful thing that is happening is that they are increasing the tax on those who are continuing to hold their lands, which, naturally, sooner or later will force them to give up, and again we have more tax-delinquent lands and more nonlandowners, as well as additional unemployed people.

WHAT ABOUT THE SOUTH?

One of the greatest resources we have in the Southeast is and has been our forest resources. I find, however, that practically all of the virgin timber has been destroyed, and thousands and thousands of acres have been cut clean, with tax-delinquent lands increasing, farmers becoming tenant

operators, and unemployment increasing by leaps and bounds.

Recently we have had forty-odd pulp and paper mills move into the Southeast. Many of our people were happy because of these industries coming to the South, believing that it would mean employment, increased purchasing power because of income from forest products and wages to the wage earners.

WHAT IS HAPPENING?

These mills operate under a hog-tied monopolistic program in buying pulpwood. Let me give you this concrete example: These mills divide the area into what is called regions, perhaps composing several counties. They then make connection with some party—a banker, merchant, or some other person who is financially able to carry out their contracts with the mills in buying and shipping pulpwood from that area.

This agent or contractor receives the price paid by the pulp mills, and the price is on a uniform basis in every State, out of which this agent or contractor proceeds to employ additional agents or contractors to purchase pulpwood direct from the farmers.

Practically all of the pulpwood is bought from the farmer in what is known as hog-round lot, containing so many acres. This contractor then proceeds to hire cheap labor; in fact, he is forced to hire cheap labor because of the price that he receives from the regional agent, and then they proceed to cut everything from the size of your arm on up. In a great many instances quite a lot of the timber thereon would make sawmill timber, which is much more valuable than pulpwood.

The price that is paid to the farmer ranges from 50 cents to $1 per unit. A unit contains 160 cubic feet, instead of 128 cubic feet, which is a standard cord of wood.

Farmers have tried to sell direct, but they are forced to sell through these agents; and, so far as having any bargaining power or being able to secure a price in line with the value of their products, they are just as helpless and as hopeless as a man who is confined to a chain gang.

This morning I had in my office the Assistant Administrator of the Wage and Hour Administration, securing information out of the investigations which we had made in the South about the pulpwood situation.

It is the purpose of the Wage and Hour Administration to thoroughly investigate and, if possible, prosecute the pulp and paper mills on the grounds that they are not complying with the wage and hour law for the reason that their agent representing the pulp and paper mill is not paying a fair wage.

I do not believe that the agent or the contractor operating under the regional agent should be held responsible for the ridiculously low wages which are being paid in the South, in that it is impossible to pay a halfway decent wage and pay farmers even the price that farmers are now receiving for their pulpwood, which is, as stated, far below the actual cost of producing pulpwood.

The trouble with the large operators, as well as the pulp and paper mills is that they all belong to their various associations, and they are operating under trade-practice rules and regulations, which naturally brings about a hog-tied monopoly in not only buying forest products but in selling their manufactured products. In fact, this is the serious trouble in our country today. Practically every one of these large and well-organized groups not only control their production but they control their distribution and the fixing of prices, all of which is at the expense of farmers and the consuming public generally.

During these hearings I have made statements along this line; but in every instance the representatives of these various groups, who were always present, stated that such views were ridiculous. To bear out my contention, the following clipping from the press may be of interest:

SOUTHERN PINE INDUSTRY RUNS AFOUL OF LAW

NEW ORLEANS, February 21.—The Federal Government, moving against an alleged monopoly in the southern pine industry, today fined the Southern Pine Association, comprising more than 275 mills in 11 States, and 2 affiliated organizations.

United States Judge Wayne G. Borah fined the association $10,000, and the Southern Pine Lumber Exchange, of New Orleans, and the National Association of Commission Lumber Salesmen, of Cleveland, Ohio, $1,000 each when they entered nolo contendere pleas to charges of violating the Sherman Antitrust Act.

The judge ordered the defendants to discontinue grading, inspection, and grade-marking practices by which the southern pine industry was allegedly controlled.

The indictment charged the Southern Pine Association and the Southern Pine Lumber Exchange compiled and distributed reports on production, orders, and shipments "which did not reflect the true southern pine industry"; and that the defendants, by "approving" certain dealers, grade-marking lumber after inspections, agreeing on price standards, and other practices, controlled the industry in Virginia, the Carolinas, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Oklahoma, and Tennessee.

I regret exceedingly that the committee was unable to write its report and make its recommendations to the Congress at this time. I make this statement for the reason that I hoped very much that we would be able to consider some helpful legislation—legislation which would tend to build up and preserve our forest resources in the interest of the people.

Some time ago I introduced a bill (H. R. 8550) known as the forest restoration bill.

I regret that we shall not be able to get any consideration of this bill during the present session, for the reason that I believe that not only will this bill work very successfully in every State in the Union; but, as far as the South is concerned, it would save us from the same situation that I have referred to in the State of Missouri, the North Lake States section, and other sections of the country where the forest resources have already been destroyed.

The Case for Labor

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

ARTICLE BY WILLIAM GREEN, PRESIDENT, AMERICAN FEDERATION OF LABOR

Mr. ANGELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by William Green, which was published in today's issue of the Washington Post:

[From the Washington Post of March 27, 1940]

A. F. OF L. AND UNIONS

(By William Green)

Westbrook Pegler's charge that the American Federation of Labor condones and protects dishonest unionism is a deliberate falsehood.

The American Federation of Labor denounces the miserable few who manage to worm their way into the labor movement for dishonest purposes and personal advancement. We call upon our affiliated unions to root out and expel any individual found guilty of a betrayal of trust. In addition, we call upon the constituted public authorities of our cities, States, and Nation to enforce the law that applies to all our citizens without fear or favor.

The American Federation of Labor is a union of trade unions. It is composed of the following groups of organizations:

One hundred and six national and international unions, which have 33,744 local unions.

Forty-nine State federations of labor (including Puerto Rico).

Eight hundred and six city central bodies.

One thousand five hundred and sixty-eight directly affiliated local trade and Federal labor unions.

Four departments, which have 942 local councils.

The national and international unions, many of which antedate the American Federation of Labor itself, hold charters of affiliation with the American Federation of Labor, which gives them full autonomy and full authority to govern their own internal affairs. Their relation to the American Federation of Labor is like that of the States to the Federal Government. Their elected officers are responsible to the members of the union, not to the American Federation of Labor. The officers of the American Federation of Labor have no legal or constitutional authority to supersede the officers of a national or international union or to

give them orders. The American Federation of Labor has no power of compulsion over these unions. Their association with the American Federation of Labor is an entirely voluntary one.

That is as it should be. The underlying principle of the American Federation of Labor is voluntarism. These unions are represented in the annual conventions of the American Federation of Labor on the basis of their membership. They can, if they wish, vote to change the constitution of the American Federation of Labor so as to give the central authority police powers over them. They have not done so and they probably will not do so because they are jealous of their independence. They fear dictatorship. They reason that in a democratic organization supreme power should be vested in the membership rather than a small group of officers at the top.

Under these circumstances, if control of a national or international union passes into bad hands the American Federation of Labor must rely on the public authorities and the membership of the individual union to correct the situation. True, the other organizations in the American Federation of Labor can vote to expel a union from the federation, but that would punish the members of the union rather than the real culprits. That is not a cure, but amputation.

Experience has demonstrated that cases of this kind are extremely rare and that they are quickly remedied. Crooks cannot get away with it indefinitely in unions any more than in public life. The members of organized labor feel they are capable of governing their own unions. They do not consider it wise to sacrifice self-government to dictatorship for the sake of protection from the possible danger of racketeers.

The American Federation of Labor does have power to regulate to some extent the affairs of directly affiliated Federal labor unions, State federations of labor, and city central bodies. This power is effectively exerted whenever the necessity arises. I challenge Mr. Pegler or anyone else to point out a single case where the American Federation of Labor failed to act against wrongdoing in any of these organizations over which it possesses regulatory powers.

Mr. Pegler further charges that the American Federation of Labor demands public prosecution of union offenders in one breath and then, in the next, opposes the current antitrust campaign against unions conducted by Assistant Attorney General Thurman Arnold.

The American Federation of Labor does oppose this campaign. It will never agree that organized labor comes within the scope of the Sherman Antitrust Act, which was adopted to break up corporate and financial trusts. When this law was applied against unions, the American Federation of Labor secured the enactment of the Clayton Act, which specifically exempted labor unions from the provisions of the Sherman Act.

The American Federation of Labor and its affiliated unions condemn collusion, price-rigging, and monopolistic combines between local unions and employers. We insist, however, that such manifestly illegal practices, if they exist, should be prosecuted under the properly applicable laws, not the antitrust laws. We fear, with good reason, that the antitrust laws can be used as an instrument to destroy organized labor and place it under the thumb of the Federal Government. No legal prestidigitation can ever convince us that working men and women associated in a union for their self-protection against the entrenched power of industry and capital constitute a trust inimical to the welfare of the Nation.

President Roosevelt recently declared that most newspaper columnists are wrong 80 percent of the time. I would raise that estimate to 100 percent with respect to Mr. Pegler's baseless attacks on the American Federation of Labor.

The Reciprocal Trade Agreements Program Has Failed

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

RADIO ADDRESS BY HON. BERTRAND W. GEARHART, OF CALIFORNIA

Mr. GEARHART. Mr. Speaker, though I firmly believe that American enterprise, both agricultural and industrial, is entitled to the protection of a high tariff on competitive items from low-cost countries, I am also quite convinced that our export market can be expanded through the judicious use of the reciprocal trade agreements method—by "hoss trading," to make use of a popular and thoroughly understood colloquialism. I would be happy to support a proposal, constitutional in form, which is purposed to that end if I could be assured that it would be administered with due regard for and in recognition of the traditional tariff policy of the United States.

My opposition to the continuance of the so-called Trade Agreements Act of June 12, 1934, is based primarily upon my objection to the philosophy which has controlled the administration in its negotiation of agreements under the authority conferred by its enactment. The law has never been administered—as its fervent friends assured us it would be—in recognition of the give-and-take principle—that is, the granting of concessions within our own market in return for specified privileges in markets beyond our borders—but rather merely as an instrument for the accomplishment of a horizontal leveling of the protective-tariff walls set up by the Smoot-Hawley Tariff Act of 1930.

In other words, in agreement after agreement the tariff schedules on innumerable items have been slashed, with no other objective in view than to reduce our tariff protection to an approximate 50 percent of that which was fixed by the representatives of the people a decade ago.

In the last analysis, the real objection of the opponents of the move to extend this program, which has worked so much to the disadvantage of Americans and so much to the advantage of those who live beyond the seas, lies in the failure of the State Department to make full use, in its negotiations with other nations, of the tremendous bargaining power of the Nation with a view to the widening of our opportunities in foreign markets, and with a firm determination of preventing a disproportionate increase in the importation of competitive items.

I do not believe, Mr. Speaker, that I could better define the kind of reciprocal trade agreements law of which I would approve—one which would make full use of the tremendous bargaining power of our country in the foreign field—than did the late and lamented William McKinley, when he in his famous Cleveland speech said:

> The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves, and which do not involve any loss of labor to our own people but tend rather to increase our employment.

If the State Department had permitted itself to have been guided by this formula, which is so succinctly and persuasively stated, I do not believe there would be today very much opposition to the renewal of the trade-agreements program. It is a pity, indeed, that this program, fraught as it is with such great possibilities, has fallen into the hands of those who have become so infatuated with the indefensible principle of free trade that they can no longer deal with the subject of international trade realistically.

Mr. Speaker, on last Saturday night, because of the courtesy of the Columbia Broadcasting System, it was my privilege to address the people of the Nation on this subject. Though the time that was made available to me was not great enough to do justice to this most intricate subject, because I do treat of two points which I consider of great importance, I ask the unanimous consent of the membership of this body to conclude my instant remarks by reading into the RECORD that which I then had to say:

> Though the debate over the renewal of the reciprocal trade-agreements law has been extensive, there are certain phases of the issue which have not been, in my opinion, adequately discussed, one of which involves the promises made which remain unkept.
>
> Because I would like to discuss the subject from this particular angle, I am grateful indeed to the Columbia Broadcasting System and to station WJSV for the privilege which is, because of their courtesy, now mine.
>
> In 1934, when the proponents of the so-called Reciprocal Trade Agreements Act first urged the adoption of the program, two definite reasons were advanced. The first involved the promise to bring back through the use of this new method of regulating international trade the days of bumper prosperity which the country enjoyed during the 1920's.
>
> The second reason which these enthusiasts advanced was really but a part of the first one. They assured us—promised us, in fact—that the operation of the program would result most certainly in expanding our exports, to the end that farmers and industrialists alike would be able to enjoy again those good old days when everything we touched turned to gold.

In applying the acid test to the trade-agreements program, we must, of course, measure the economic conditions of today, the conditions prevailing under the Trade Agreements Act now in effect, as against the high state of bumper prosperity we enjoyed in the 1920's.

Has the Nation been brought back to that high state of prosperity enjoyed in 1929? Have they, under the administration of the trade-agreement law, been able to lift our Nation out of that abyss into which we plunged in 1932?

If, under reciprocal trading, the Nation has been brought back to a state of prosperity equal to or better than that which we enjoyed in 1929, then, indeed, the program must be counted as a success. But, if on the contrary, the Nation is still wobbling about on that low level of prosperity which was ours in 1932, then, indeed, we must be prepared to admit that the program has not achieved its promised objectives.

So, as a great American used to say a few years ago, "let us look to the record." The test of the pudding is in the tasting thereof.

In December of 1938, the National Industrial Conference Board completed a study which they entitled "Depression and Recovery in the United Kingdom and the United States," which is very, very illuminating indeed.

When we proceed to discuss this matter of recovery, we should remember that it was not only the United States that suffered from the depression; that the economy of the United Kingdom suffered the same shocks in 1929 as were suffered in the United States. As we were toppled from that high pinnacle of prosperity of 1929 down into that valley of discontent, which is represented by 1932, England, Wales, and Scotland tumbled right along with us.

But the United Kingdom, in its efforts to extricate itself, sought no relief through the adoption of any such a fantastic program as is represented in our so-called Reciprocal Trade Agreements Act of 1934. The United Kingdom merely tightened its belt and readjusted its expenditures in relation to its reduced income, applied common sense to its economy.

So it will be interesting indeed to compare the progress toward recovery that was made in the United States where reciprocal trading was the vogue and in England where they would have nothing to do with the fantastic idea at all.

What did this study of the National Industrial Conference Board reveal? Limitations upon time will permit me to refer to but a few startling facts which a comparison of the years of 1929 with 1938 elicited, facts highly favorable to the United Kingdom; tragic ones insofar as these United States are concerned.

Taking 1929 as representing par-100, the rate of recovery as measured by the index of industrial production in the United Kingdom was found to be 115.5 for the year 1938; whereas in the United States the industrial-recovery record for 1938 was at the below-par figure of 72.3.

Consequently, the United Kingdom at the end of 1938 stood fifteenth among the nations and the United States was at the bottom of the list of important nations in the world.

A comparison of per capita national income in these same two countries is likewise highly informative. In 1929, the per capita national income in the United Kingdom was $417; in 1938 it had climbed to $500. In the United States, per capita income in 1929 was $635; in 1938 it had fallen to $500.

Applying still another test, the National Industrial Conference Board found that the wages of American labor, from 1929 to 1938, fell 18½ percent, whereas in the United Kingdom the total wage paid to British labor increased by 20 percent.

And this vast difference cannot be accounted for by pointing to England's national-defense expenditures as these in 1938 only accounted for 6 percent of her total wage disbursements.

Interesting as are the facts and figures which I have just mentioned, it isn't necessary to tell an American audience that 6 years of reciprocal trading has not achieved its first promised objective, that is, a return to the high state of prosperity which we enjoyed during the Republican administrations of the 1920's. As a matter of fact, it is not necessary to cite figures to this result at all. One must merely appraise his own economy, evaluate his own situation, to find all of the proof that is necessary.

If the program has failed—if the promise of returned prosperity has not been kept—why should we persist in giving away the best market in the world to foreigners for nothing more substantial than the iridescent hope that somehow, someway we will, in return, get a foothold in another and far less desirable market on the other side of the world?

Is not the American farmer, the American manufacturer, the American producer, entitled to the American market insofar as he can efficiently supply it?

Because I believe that this market does belong to the Americans, because I believe that Americans should have a first right in their own market, I am opposed to the further reduction of our tariff schedules just to satisfy the whims and hallucinations of that gentry who have wedded themselves to the give-away policy of free trade.

Have our foreign markets been expanded, has the importation of products competitive to that which we produce in the United States been reduced, as promised by the advocates of the trade-agreements program?

If this, the second promise, has failed, what reason remains for continuing the program which has meant so little to Americans, so much to those who live and produce on the other side of the world?

As it is a western agricultural district in far-away California that I represent in the national legislative halls, it is the effect of the trade-agreements program upon competitive agriculture that interests me most. Let us for the moment consider the plight of the farmer under the trade-agreements program.

Though the agriculturists of our country were assured time and time again during the course of the campaign of 1932 by the candidate who was later to assume the highest office in the gift of our people that the tariff levels insofar as agriculture was concerned would not be lowered, the tariffs on hundreds of agricultural items have been slashed, many of them as much as the law will permit.

In 1934 agricultural imports were valued at $821,954,000. In 1939 agricultural imports jumped to $1,117,790,000. In other words, agricultural imports increased by $295,836,000; that is, by 36.6 percent.

Let us now consider agricultural exports. In 1934 our agricultural exports were valued at $733,400,000. In 1939 our agricultural exports fell in valuation to $655,583,000. In other words, while our agricultural imports were increasing, agricultural exports, under the adverse influence of the Trade Agreements Act, fell off in value by $77,817,000, or, by, 10.6 percent.

When we contemplate these figures, we must not forget that one of the purposes of the trade-agreements program was to expand our exports market and to prevent a disproportionate expansion of imports of competitive items.

This cold and stark record discloses beyond the peradventure of a doubt that instead of having expanded our exports of agricultural products that our exports of these items in 1939 was less than our agricultural exports in 1934, the year when the trade-agreements program was enacted into law.

In fact, a further and more detailed examination of the figures disclose that our export of agricultural products in 1939 were not only less than they were in 1934, the year when the trade-agreement program was initiated, but were less than they were in 1932, the bottom year of our economic depression.

And they try to tell the American agriculturist that he is not being hurt; that the importation of competitive agricultural products is not restricting his right to supply his own market; that the encouragement of competition in his own field is increasing his prosperity, expanding his happiness. Well, it is just too hard to understand. The American farmer simply can't see it that way.

And neither can I.

Because the promises have failed in respect to every essential point, the Trade Agreements Act should not be extended.

Southern People Support the Geyer Bill

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. GEYER of California. Mr. Speaker, some people have been wondering what support there is in the South for the move to abolish the poll tax as a prerequisite for voting. As far back as December 1937 there appeared in the Southern Planter, of Richmond, Va., an editorial "The Poll Tax—a Menace to Democracy," excerpts from which read as follows:

A suffrage limitation, called a poll tax, was written into the Constitution of 1902 and thus placed beyond the legislative power of the general assembly to amend or repeal. The following are its essential provisions:

1. An annual levy of $1.50 upon every voter, payable as a condition of registration.
2. Cumulation of poll-tax delinquency over a period of 3 years.
3. Prepayment of all matured poll taxes, at least 6 months prior to the election.
4. Provision for nonenforcement, i. e., easy escape from the tax collector by simple neglect of the voting requirements.

How amenable to the will of the people are these statutes, not one of which is fundamental, organic law, not one of which is not reasonably debatable?

The poll tax has been tried and proven to be a great disqualifier of worthy voters and an instrument in the hands of the majority of suppression of effective opposition. Since it is only through the votes of citizens that the fruits of free speech, free press, and education can be realized in public policy, the vote-destroying poll tax is an instrument of tyranny. * * *

In 1896, 295,000 men voted in the Presidential election in Virginia. By 1904 the voter poll tax had taken effect, and in that year's Presidential election 130,000 citizens were all that voted, only 26 percent of the potential electorate as compared with the untaxed vote in 1896 of 64 percent. Here was a loss to the State, after computing the increase in population, of 180,000 citizens accustomed to vote.

In 1912 Virginia went to the polls for one of the State's most distinguished sons, Woodrow Wilson. For him they cast 90,332

votes, and when this is increased by the votes for all other candidates, the total is only 136,000 out of a potential strength of 520,000, a vote only 25-percent efficient.

Between 1912 and 1920 women were extended the right of suffrage on a par with men. Were women more inclined than men to pay poll taxes and prepare for elections 6 months in advance? No; they were less likely—particularly farm and other rural women—to buy their admission tickets to the voting booth 6 months in advance. Only 230,000 men and women voted in the 1920 Presidential election, just 18 percent of the 1,247,000 persons in Virginia of voting age. * * *

And thus before the bar of public opinion stands arraigned the poll tax: The destroyer of democracy, the natural ally of dictators, Virginia's public enemy No. 1. It is more to be feared than the German propaganda, more threatening than the Russian Comintern, for, if it survives, representative free government in Virginia must ultimately perish.

In introducing my bill, H. R. 7534, I did it in response to an urgent request from a large southern organization, the Southern Conference for Human Welfare. Since that time I have received a flood of letters from all eight poll-tax States, as well as from other States in the Union, sanctioning my action. In addition, I have noticed a growing number of editorials in publications in these and other States, supporting the abolition of the poll tax. The following are a few examples of the letters and editorials in my file:

GARDENDALE, ALA., *February 27, 1940.*

Hon. LEE E. GEYER,
Washington, D. C.

DEAR SIR: I am writing to you in regard to your bill to abolish poll taxes as a requisite to vote. Jefferson County, Ala., has a population of 630,000. It has one Representative in Congress. He was put there on the last election by a little over 22,000 votes. Jefferson County is also one of the most lawless counties in the United States. The small vote is the reason. There are more people on relief in Jefferson County than there were votes cast for the successful candidate for Congress in the last election. I sympathize with the object of your bill. I see no valid reason why it should not pass.

There is a sales tax in Alabama. It hits both rich and poor. I need not remind you that the American Revolution was fought over the principles that taxation without representation is tyranny. Disfranchised people in the South are not all ignorant. They are merely poor. If your bill finally loses the only course left is for Congress to abide by its sworn duty to support the Constitution of the United States. It must reduce the Representatives in Congress of the eight poll-tax States according to the number of disfranchised persons above 21 years of age. The ball has started to rolling and the people of the South must have the right to vote or three-fourths of the Congressmen must lost their jobs.

Respectfully,

C. M. HARDING.

An excerpt from an editorial, Favoring a Free Ballot, Macon Telegraph, Macon, Ga., March 9, 1940, reads:

Attention has been called to the fact that the registration books for the 1940 primaries will close on May 5, and in this connection it is recalled that a drive is being made in Congress to prohibit any State from collecting a poll tax as requisite to register and vote.

Commenting on this drive, Governor Rivers is quoted as saying that he is in favor of such legislation and he has always felt that three things should be free—schools, highways, and the ballot.

MARKED TREE, ARK., *March 2, 1940.*

Hon. LEE GEYER,
Representative From California,
Washington, D. C.

DEAR MR. GEYER: My attention has been called to the fight you are making in Congress for the abolition of the poll-tax receipts for a prerequisite for the right to vote.

Please accept my hearty congratulations and my endorsement. I wish I were up there to help you.

Very truly yours,

C. T. CARPENTER.

DEAR CONGRESSMAN GEYER: I understand that your bill dealing with the poll tax is now before the committee in Washington. The sentiment is unanimous among those with whom I associate that such a bill as yours, which prohibits the requirement of a poll tax for voting in Federal elections, would be a splendid advance in achieving democracy. It will not be long before our State will make a determined effort to abolish it for local voting purposes, but the Federal Government could make that advance now by passing the bill as proposed by you.

The poll-tax requirement in Texas disfranchises at least one-third of our people each year and, in fact, forbids them the right of citizenship. I endorse fully your bill.

Very truly yours,

W. J. HAMMOND.

HOUSTON, TEX.

Hon. LEE E. GEYER,
Washington, D. C.

DEAR SIR: I have just listened to your very good hard-hitting address in regard to poll tax. I believe your bill—H. R. 7534—a timely and badly needed remedy for a situation which has seemed to grow worse instead of better. However, it was a surprise to learn that only eight States—and those States southern—charged for the right to vote.

This year I paid $3 for my wife and myself for poll-tax receipts. Last year I did not feel we could spare the extra dollar and a half and so paid only my own. What you can do to rectify a regrettable situation will be remembered each year by the people of the South.

What I can personally do to help your bill you may depend upon my doing, and I will bring it before the members of Local No. 7.

Sincerely yours,

C. P. MARION, *Secretary.*

GREENSBORO, N. C.

Hon. LEE GEYER,
Washington, D. C.

DEAR MR. GEYER: I herewith submit copies of a resolution which was adopted in Burlington, N. C., March 10, at the State-wide legislative conference of the North Carolina League for Progressive Democracy.

Present were 300 from 25 C. I. O. unions, 13 A. F. of L. unions, 5 independent unions (railroad brotherhoods, etc), 2 farm organizations, 8 college faculties, 6 youth groups, 3 Negro organizations, 2 Y. W. C. A. units, and 3 old-age pension groups. Our registration records show that, in addition, individual lawyers, doctors, and merchants attended the day's session.

I hope that you will be able to use this resolution in behalf of your bill aimed at abolishing poll tax.

Sincerely yours,

MIKE ROSS,
Assistant Secretary-Treasurer.

An excerpt from the inaugural address of the Governor of Mississippi reads:

CORRUPT PRACTICES ACT

The expressed will of the people in Mississippi is supposed to be the law of the land. It is the source of all legitimate government. If we would protect our people against oppression and corruption, we should keep our Government in the hands of the masses. Why should we disfranchise a man because he is poor? Why should we, by law, penalize poverty? Think of making a man and his wife pay $8 before they can participate in an election. That is the law today. Many who voted last year were required to labor for several days in order to obtain poll-tax money. A voter in a primary now is required to pay $2 each year for 2 years before he can vote.

Thousands of our good citizens in Mississippi are working on relief or receiving support from the Federal Government. It is wrong and oppressive to demand that they take relief money, and that is the only kind they have to pay poll tax in order to participate in the primaries. I am absolutely opposed to a poll tax being required of our citizens in order for them to participate in the primaries.

I can see a marked tendency in this country to deprive the masses of participating in elections. Such oppression should not be tolerated in a free State any longer. The best and safest form of government is that which most nearly represents the voice of the people. Why should a man, who is required to work and help support his State and all its great institutions be deprived of the right to participate in the choosing of the officers who are to govern the State?

I recommend that you repeal that part of the so-called "Corrupt Practice Act" which requires the payment of poll taxes before participation in the primary election.

NASHVILLE, TENN.

Mr. LEE GEYER,
Washington, D. C.

DEAR MR. GEYER: I have been reading in the Southern Almanac about your good work to eliminate the poll tax in the South. I hope you will succeed in this because when we get the right to vote we will feel that the country is more like the democracy which we hear so much about.

Sincerely,

RICHARD HARD.

An excerpt from the Birmingham News, Birmingham, Ala., March 7, 1940, reads:

Now that the city commission election is well past, with the result and the way Cooper Green has taken hold of his new duties as commission president, it should not be considered captiously critical to point out that Mr. Green was chosen in an election in which only 5.7 percent of Birmingham's population participated. The official vote was 17,721, and Birmingham's estimated population is 304,884.

There are other figures worth looking at, however. In 1930, 61 percent of Birmingham's population were 21 years of age or over, and were either native-born Americans or naturalized aliens. Assuming that percentage still holds, Birmingham today has 186,000 potential voters. Of that number slightly less than 9 percent took part in the recent election.

FEBRUARY 24, 1940.

Hon. LEE E. GEYER,
Washington, D. C.

MY DEAR SIR: We recently learned that you shall do your utmost to have legislation passed by the Congress to abolish the nefarious and un-American poll tax, now disfranchising countless citizens in eight Southern States. * * *

Will you kindly send us a copy of the bill which you have introduced in the above particular? * * *

If we may be of any assistance to your noble efforts, please do not hesitate to call upon us.

With best wishes, I am,

Most sincerely yours,

J. L. LEFLORE,
Chairman, Regional Conference of Southern Branches, National Association for Advancement of Colored People, Mobile, Ala.

An excerpt from an editorial, Highlights of Virginia Suffrage History, in the Southern Planter, Richmond, Va., February 1938, reads:

People who oppose poll-tax repeal in North Carolina, Virginia, or anywhere else, are not afraid of the Negro, they are afraid of democracy. They are unwilling that government shall be of the people, by the people, and for the people.

FORKSVILLE, VA., *March 4, 1940.*

Hon. Mr. GEYER,
Washington, D. C.

DEAR SIR: The writer extends greetings and wishes to congratulate you regarding your efforts to do away with the poll tax in Virginia and other seven Southern States. * * *

The writer assures you that he will appreciate, and I feel sure 90 percent of the Virginians will also, if you can get your bill through Congress.

Yours very respectfully,

V. GARLAND DAVIS.

An excerpt from The Commonwealth of Virginia in an editorial, The Poll Tax—A Burden Upon Education, reads:

The outspoken defenders of the voter poll tax are, as a rule, quite insincere; for in clever speech they voice their desire for the tax as a support for the public schols, but in their hearts they cherish it as a sort of central wheel in a vicious political machine—a device for keeping the electorate small and readily controllable. Clothed in the guise of the defenders of education, they smugly decline to discuss the issue further than to pose the question, "What would our free schools do without the revenue from the poll tax?"

Our answer to this poser is, Have three times as much revenue for the schools by disconnecting the tax from elections. Treated strictly as a tax the yield of the poll tax would be three times as large and its burdens far more equitable. From one-third of the adult population of Virginia the public schools and local treasuries now receive, on a 4-year average, about $700,000 annually; from the other two-thirds they receive nothing; but if the poll-tax collections were made fair and equal upon all persons over 21, they would receive more than $2,000,000.

In addition to the above letters and editorials the following letters and excerpts from the press give personal testimony as to the effect of such a tax upon individuals or their communities:

ENSLEY, ALA.

Hon. LEE GEYER,
Washington, D. C.

DEAR SIR: This is to inform you that I registered August 18, 1933, and have not been able to vote on account of unpaid poll taxes.

Very truly yours,

G. H. LUCIUS.

PARIS, ARK., *March 1, 1940.*

DEAR CONGRESSMAN: We go on record congratulating you and your bill, which is to go before the Judiciary Committee March 4, to keep a State from levying a poll tax to vote for Federal elections. We are in need of such a bill, due to the fact that there is not over 30 percent of all people who have the right to vote, due to the fact that they haven't got the money to buy a poll tax.

Such a bill would be appreciated by this local, United Mine Workers of America, and we want to again thank you for introducing this most important bill.

Signed by the committee.

O. R. NELSON.
G. L. CONNAUGHTON.
LAURENCE REDDING.

An open letter from Ralph Sanders, minister of the First Christian Church, Cullman, Ala., to the Cullman Democrat, published February 8, 1940, discusses the poll-tax evil in his community:

Before the expiration of the period for paying poll taxes on February 1, 1940, more poll taxes were paid than at any other time in the history of the county. It is common knowledge that a large part of this excess was made by persons or their representatives who paid taxes so that the voter could qualify in the coming elections. It is such common knowledge that one of our papers recently carried, as a joke, an item about a certain citizen who paid his own poll tax. Jokingly the paper accused him of trying to be different from everybody else, or of trying to get notoriety for himself. Another issue of the paper gives striking inference that its editors know about the practice for in its news story about the large number paying poll taxes this year it says, "Those without funds or unwilling to pay out of their own pockets 'some-way' found funds immediately available with which to become voters."

You do not need to be long in a group of men who are discussing community enterprise before you will find out everybody in the group knows about some person or their representative engaged in the widespread payment of poll taxes. During the past several days person after person was approached by other persons as they sought to find out where to go to get their taxes paid. * * *

RALPH SANDERS.

Endorsed and signed by: John E. Marion, R. B. Lavendar, J. H. Brown, Theo. F. Mehl, Cecil C. Hemly.

MONTGOMERY, ALA., *March 7, 1940.*

Hon. LEE GEYER,
Washington, D.. C.

DEAR SIR: Enclosed you will find some newspaper clippings from Montgomery Advertiser on your bill to kill the poll-tax collections in the States. You are doing a good job. Keep it up. The tax on voting is the dirtiest law ever forced on a free people. I was for years an A. F. of L. organizer. I know these rotten politicians as well as anyone. * * *

This depression is 10 years old and hundreds and thousands in Alabama have less than a hundred dollars a year cash income—give them all a chance to vote and by the help of God they will elect people to office who believe in a half-way decent living for his fellow man. The politicians know now who to depend on voting. * * *

I believe that the gallant men of 1776 meant for every citizen of America to vote and vote free without taxes. You are on the right track. Give both the white and colored who can qualify the privilege to exercise his (God) given right as a freeborn American citizen, the tax-free vote.

Most respectfully,

CLARENCE W. WALLS.

Since the introduction of H. R. 7534 to amend an act to prevent pernicious political activities a growing sentiment for poll-tax repeal within the States has been reflected in the press. The following are some of the press comments within the poll-tax States:

From the Nashville Tennesseean, Nashville, Tenn., March 7, 1940:

J. Ridley Mitchell, former Fourth District Congressman, said today he was not a candidate for the Democratic nomination for Governor but would become one "if the people want me."

He said he favored abolition of the poll tax as a prerequisite for voting, asserting "the poll tax disfranchises too many persons who should have the same political right to cast a ballot as the person who has the money to buy the tax."

From the Fort Worth Star Telegram, Fort Worth, Tex., March 8, 1940:

The poll tax is, of course, a head or personal tax that has been employed for centuries. The idea of using the ballot box as a collection agency originated in this country. A much more practical means of bringing in revenue from a head tax would be to fasten the poll levy on the drivers' license certificates. Thereby Texas would collect more than 2,000,000 poll-tax assessments rather than less than a million, at present.

From the Knoxville News Sentinel, Knoxville, Tenn., March 5, 1940:

George H. Cate, former Tennessee welfare director, declares that the chief issue facing Tennessee right now is the repeal of the poll-tax requirement for voting.

Says Mr. Cate: "We should begin working right now to elect a legislature that is definitely committed to poll-tax repeal. Once that is done, all good things will follow." * * *

No man should pay a tax for the right to vote. The poll tax is at the root of many a governmental ill, and its repeal will put people in a position to make the fight for democracy that should be made.

From the Richmond Times Dispatch, Richmond, Va., Tuesday, March 5, 1940, a reprint of editorial, End the Poll Tax Racket, Newport News Daily Press:

Will the legislature find time to enact into law the Walton bill setting penalties for the payment of poll taxes en bloc?

As sound as the measure is, there is strong opposition to it in some quarters. Certain politicians have made a practice of paying poll taxes en bloc for many years, and the voters have come almost

to expect this payment as their right. Such a practice, of course, is undemocratic. But it exists, and some are tenaciously clinging to it.

The Democratic Party must correct poll-tax abuses or the day may not be far distant when the poll tax as a prerequisite of voting is done away with. There already is a strong movement in this direction, and abuses give the abolitionists valuable ammunition in their fight.

From the Nashville Times, Nashville, Tenn., March 7, 1940:

Governor Cooper has stated that a special session of the legislature for the purpose of repealing the poll-tax requirement for voting is out of the question. If our chief executive is not wholeheartedly in favor of this step toward more popular government, we believe he is wise not to call such a session. The gesture is futile unless the Governor is enthusiastic over the reform. Hostility on his part, or even lukewarm endorsement, would probably mean the repeal would be voted down.

We must confess to a certain disappointment. The Governor detects hidden political motives in the letters urging him to act now. We do not doubt but that these exist in certain quarters. But the best way to take the issue out of peanut politics is to have it endorsed by all factions. If Mr. Cooper were to put himself at the head of a movement to do away with the poll tax, he could accomplish more than anyone who aspires to run against him.

However, even though the poll tax seems to be with us for some time longer, repeal cannot be deferred indefinitely. This is an archaic law prevailing in a few Southern States, which for no good reason prevents us from having a real democracy. Economic conditions of today serve to make the levy a tremendous obstacle to voting in the case of a number of citizens. The South is becoming too progressive to permit that obstacle to exist forever. No King Canute of the twentieth century will be able to turn back the tides.

Comments on the bill have not been confined to the poll-tax States alone as illustrated by the following press excerpts and letters:

From the San Francisco Chronicle, San Francisco, Calif., March 4, 1940:

If more than lip service were given to democracy and if the search realy was to uproot whatever subverted and sabotaged the democratic processes, the eyes of the Nation would be centered today upon congressional hearings in Washington on the Geyer bill.

The right of millions of persons, now disfranchised, to be represented in their local, State, and National Governments will be under discussion Wednesday before the House Judiciary Committee. * * *

At the request of the Southern Conference for Human Welfare, which with a large number of southern women's organizations has been trying to obtain repeal of the poll-tax laws in eight States, Congressman GEYER of California introduced H. R. 7534 last session.

This bill is a direct appeal to Congress to declare the poll tax illegal in all general elections for Presidents and for Congressmen. * * *

As the voting law stands in Texas, Arkansas, Alabama, Georgia, South Carolina, Tennessee, Virginia, and Mississippi, two-thirds of the voting population is disfranchised.

These are not simply laws to insure race supremacy, they are economic and political above all else.

From the San Francisco Bay Area District Council No. 2, Maritime Federation of the Pacific:

FEBRUARY 27, 1940.

Mr. LEE GEYER,
Washington, D. C.

DEAR MR. GEYER: We wish to assure you of our support for H. R. 7534, entitled, "An act to prevent pernicious political activities," which you have introduced in Congress.

Payment for the privilege of voting is a disgrace to our claims of being a democratic nation and is a flagrant violation of the rights of the people in those States where poll taxes are levied. You may rest assured that the maritime workers in the San Francisco Bay area are appreciative of your efforts in behalf of abolishing this openly discriminatory practice.

We would greatly appreciate your keeping us informed as to the progress of this bill in Congress.

Sincerely yours,

REVELS CAYTON, *Secretary.*

DEAR MR. GEYER: We, of the Forty-fourth Assembly District Democratic Club of Los Angeles, want to commend you for your poll-tax bill, H. R. 7534.

We believe that this is a great step forward to give the Negro element of our population the rights and standards of living to which they are entitled as American citizens.

Therefore, we urge the immediate passage of H. R. 7534.

FORTY-FOURTH ASSEMBLY DISTRICT DEMOCRATIC CLUB.
CHARLES A. NELSON, *Secretary.*

[Wire]

CHICAGO, ILL., *March 9, 1940.*

DEAR SIR: We offer our wholehearted support regarding your poll tax bill; also we urge you to fight the antialien bills now before the House. We are opposed to any change in the Wage-Hour Act and trust that you will continue to contest un-American policies respectfully.

PACKINGHOUSE WORKERS ORGANIZATION COMMITTE, LOCAL 24.

SAN FRANCISCO, CALIF., *February 29, 1940.*

Hon. LEE GEYER,
Washington, D. C.

DEAR CONGRESSMAN GEYER: We wish to express our appreciation for the introduction of H. R. 7534, entitled "An act to prevent pernicious political activities," and assure you of our support.

Payment for the privilege of voting is a disgrace to our claim of being a democratic nation and is a flagrant violation of the rights of the people in those States where poll taxes are levied.

You may rest assured that the thousands of workers organized in the C. I. O. and represented by this council are appreciative of your efforts in behalf of abolishing this openly discriminatory practice.

We would appreciate your keeping us informed as to the progress of this bill in Congress.

Respectfully yours,

SAN FRANCISCO DISTRICT INDUSTRIAL UNION COUNCIL.
GERMAIN BULCKE, *Secretary-Treasurer.*

UNIVERSITY OF CALIFORNIA FACULTY CLUB,
March 4, 1940.

MY DEAR CONGRESSMAN: Your efforts to remove poll-tax requirements for voting are appreciated in your own State. I enclose clippings from this morning's San Francisco Chronicle as evidence.

You are entitled to full support in your effort to have a full investigation of the effects of the poll tax.

Sincerely,

PAUL S. TAYLOR.

SAN FRANCISCO, CALIF., *March 1, 1940.*

Congressman LEE E. GEYER,
Washington, D. C.

DEAR MR. GEYER: We have learned that you have introduced in the House of Representatives a bill entitled "An act to prevent pernicious political activities."

It is our understanding that the passage of this measure would eliminate the levying of poll taxes against Negroes and whites in certain Southern States. Such poll taxes have been used effectively to prevent citizens of the United States from voting as is their constitutional right.

The 4,000 members of this union appreciate your efforts on behalf of these people who have been prevented from voting by the poll-tax evil and we assure you that we will render all possible support to assure its adoption by the Congress of the United States.

Very truly yours,

HENRY SCHMIDT,
President, International Longshoremen's and Warehousemen's Union, Local 1–10.

UNITED FISHERMEN'S UNION OF THE PACIFIC,
SAN FRANCISCO BRANCH,
San Francisco, Calif., February 28, 1940.

Congressman LEE E. GEYER,
Washington, D. C.

DEAR MR. GEYER: It has come to our attention that H. R. 7534, entitled, "An act to prevent pernicious political activities," introduced by yourself in Congress, is being held up in subcommittee of the House Judiciary Committee.

We are writing to Representative FRANCIS WALTER, chairman of this subcommittee, a vigorous protest against holding up this bill in committee any longer, and urging that it be reported favorably out of committee.

We wish to assure you of our sincere support in your efforts to do away with the undemocratic poll tax as a condition of voting in Federal elections, and thus give the vote to millions now disfranchised in eight Southern States where this evil practice now exists.

We would appreciate hearing from you as to the progress of this bill in Congress.

Sincerely yours,

JOHN SMIRCICH, *Agent.*

FEBRUARY 29, 1940.

DEAR MR. GEYER: The Warehouse Union, Local 1–6, I. L. W. U., assures you of its support of H. R. 7534, entitled "An act to prevent pernicious political activities," which you have introduced in Congress.

The fact that, in the South, people have to pay for the privilege of exercising their democratic rights is, we feel, a shame and a disgrace upon our Nation. We wish to extend our congratulations to you for attempting to rectify the situation and give back to the people in those States where poll taxes are levied their democratic rights.

Truly yours,

JOE OWENS,
Recording Secretary.

After the Deficit—What?

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

EDITORIAL FROM THE SATURDAY EVENING POST OF FEBRUARY 24, 1940

Mr. GEARHART. Mr. Speaker, in the February 24 issue of the Saturday Evening Post there appeared a most remarkable editorial, one which the editors entitled "After the Deficit—What?"

Because of the kindness of Mr. Allan P. Matthew, a public-spirited citizen of San Francisco, Calif., in calling this editorial to my attention, I am able to offer it for inclusion in the CONGRESSIONAL RECORD as a part of my instant remarks.

The editorial follows:

[From the Saturday Evening Post of February 24, 1940]

AFTER THE DEFICIT—WHAT?

It is a sign that so nearly everybody begins to believe, at least a little, in Fortunatus' purse. The deficits go on piling up—twenty-seven billions in 9 years—and nothing happens except that Secretary Morgenthau now suggests that the statutory debt limit, fixed 23 years ago at forty-five billions, be increased to fifty billions. The more the Government lives beyond its income the higher its credit goes. The more it borrows the less it pays, so that now you see the United States Treasury discounting its notes at the bank for less than 1 percent. This is the house of magic. Why balance the Budget?

It is a sign that the President is no longer annoyed, only slightly amused, when the words he uttered in 1932 are quoted. Speaking then of the puny Hoover deficit, he said: "Let us have the courage to stop borrowing * * * stop the deficits. It is my pledge * * * a stern and unremitting administration policy of living within our income." For, alas, how often it had befallen the good ship Liberal to be forced on the rocks by an unsound fiscal policy. All he needs now to say is that times have changed. "Following 1933," he says, in his last Budget message, "the fiscal policy of the Government was more realistically adapted to the needs of the people."

It is a sign that the President now says the Government cannot balance the Budget by reducing its expenditures. That is quite out. It would be socially wrong to try. It might, in fact, be ruinous. But if those who keep talking about it in "glib generalities," saying the Government ought to do it, will only go to work and earn more money with which to pay taxes, then "they will be in a position to anticipate balanced budgets without curtailing essential social programs." Meanwhile the deficits will be met by borrowing as much as is necessary.

And these are signs of what?

We wish we could say they are signs only that we are playing with national bankruptcy. That is true. The house of magic has no other exit. Even so, there is that way out. You can pay and forget it. But from a worse thing that could happen there is no such easy escape. These signs are telling us what that is. They say to us that we are losing control of government, if, indeed, we have not already lost it.

The long story of man's struggle first to gain freedom and then to keep it turns upon the single truth that freedom and government are by nature antagonistic. This is so because one limits the other. The more government, the less freedom; the more freedom, the less government. You cannot have absolute freedom because that is anarchy. Government, therefore, is necessary to freedom. But you can have absolute government with no freedom at all.

There exists in all government, latent or active, a passion to do innumerable things, to administer the affairs of people, to extend its power and authority infinitely. What hinders it is the idea of freedom. And long before government dares to attack freedom, it will begin instinctively to undermine it by holding out to people in exchange for it such baubles as security, instant pain killer, the pink bottle, relief from the anxieties of self-responsibility.

Thus, the first thought of a free people must always be how to limit government, else it will swallow them up; and the conclusion of experience is that the only practical way to limit government is to limit its purse.

This Government of ours was set up to be constitutional in principle, representative in form, and limited in fact, with emphasis on limitation; and it was not a democracy, as we now say. It was a republic. It was limited by word of the Constitution, by a balance of the executive, legislative, and judicial powers, and, very importantly, by tight strings on the purse. That is to say, its power of taxation was limited.

And so it endured for a long time, unique in the world, successful beyond any other, as if at last the problem of how to reconcile freedom and government had been solved. All that we are, our greatness entire, is owing to freedom in the American measure. The spirit was grimly kept, as it had to be, and the slightest break in it was strongly rebuked; once by Cleveland, who vetoed a bill appropriating $25,000 out of the Public Treasury to buy seed for drought-stricken farmers, saying as he did it that it was well, even in a little matter, so big was natural sympathy, to assert the principle that it was the part of the people to support their Government, not the part of government to support its people.

Then a time comes when the country is in terrible pain. A law of correction is acting, but it is a very hard law. False members of the economic edifice that were erected in ecstasy are falling, and as these fall they threaten to involve the good members too. The Government is ready, eager, to put forth a supporting hand, and the hitherto jealous spirit begins to waver. Why not, for only once in a way? Is it not the people's own Government? Is it not as if the people were putting forth their own hand to support themselves? Yet the jealous spirit that is saying "no" must be quieted, and that is done by saying to it: "This is a national emergency, like war."

So it begins; and that member of our political edifice which you may call historic wisdom falls without a crash, silently. It is forgotten that the hand of government, touching a thing to give it support, fastens upon it and is unrelaxing.

But in what way does the Government support anything? It produces nothing. It has no wealth of its own. In its supporting hand there is only what it takes from the people. How, for example, does it support the unemployed of the cities but by taking from the cities in taxes what the cities might have taken from themselves, and then giving it back to them to be distributed among their unemployed?

Well, besides having now an unlimited power to levy taxes under the income-tax law, the Government has also an unlimited power to borrow. The States and cities have exhausted their credit; they cannot borrow any more. But the Government has credit, the last credit there is. It can borrow for the general welfare, from the future for the present. This is dangerous. It is a way of buying time. But it shall be for the duration of the emergency only. It shall stop before it is too late; the future shall be paid back with interest. This is the forethought of solvency, an old habit among us; but the Government is not interested in solvency. Its interest lies in all doing, for the good of the people, who cannot do it so well for themselves.

Now, look again at the deficits, not as an astronomy of money but as current history.

They tell how a government that, as a matter of principle, was supported by the people, because not otherwise could they control and limit it, has become a government that supports its people. Its supporting hand now touches the entire life, discharging with equal zeal responsibilities both social and economic. Under the head of one it brings support to the unemployed, because there is not enough work; to the young because they were never well started; and to the old because they have never had enough comfort. Under the head of the other it supports agriculture, with subsidies and aids amounting to more than a billion and a quarter a year, because it was too ill-rewarded; then business, with billions poured into the pump because it needs priming. When many debtors cannot afford to pay their debts and their creditors cannot afford to forgive them, then the Government must support the private debt structure, because, as the President says, although "isolated debts can be defaulted without great harm to the general economy," this is not true "when, as in 1933, a large part of our private debt was in danger of default." It follows, as he adds, that "a part of the existing public debt * * * is in fact accounted for by the necessary assumption by the Government—through the familiar bailing-out process—of private debts on the verge of default."

Mark the word "necessary." Mark also what he is saying. Private debt was converted into public debt. At the same time the debt structure of States and cities was about to break down, and the Government found it necessary to support that, too, and to borrow in their stead.

All the effects are hypnotic, stealing away the jealous tradition and putting in place of it habits of dependence; States, the richest cities, business, debtors, agriculture, classes and groups, the unemployed, the young, the old, and the halt, all depending on the Government for support.

As this change takes place and becomes definite the language of the Government begins to change. It no longer pretends, as at first, that it is ever going to balance the Budget by reducing its expenditures. Let those who say it can be done indicate the victims. Shall the supporting hand of government be withdrawn from these and not from those? And if from all at once, who will answer for the consequences? There now is that challenge in the President's Budget message. The recession in 1937, he says, was owing to the fact that the Government did "curtail its net expenditures too sharply." It expanded them again, and all was well—except for another deficit.

Now, if Government expenditures cannot be reduced, and since, in the nature of things, deficits cannot go on forever, what can the sequel be? What will come after deficits?

The deficit phase is temporary. While it lasts, people have the delusion of getting something for nothing. They are eating up tomorrow, but tomorrow also will come, lean and starved. Then reality.

When the Government is no longer able to borrow, it will have to increase its income by taxation. To do this, it will have to compete more and more with the States and cities for control of the sources of tax revenue. The taxpayer now pays local taxes, State taxes, and Federal taxes. This triple squeeze of him is wasteful and unscientific. Now it is proposed that there shall be but one squeeze; the Federal Government shall collect all the taxes and apportion back to the States and municipalities what is fair. At the same time the President is proposing that rich areas and communities shall be taxed according to their ability to pay, in order that poor, underprivileged communities shall have more.

But we are not talking about taxes. What we are saying is that the unbalanced Budget is not primarily a problem of public finance. It is an opiate administered by Government, inducing false dreams of security and well-being forever, with no pain of responsibility.

What could happen within the lullaby—"our frame of government"—is already more than we had been able to imagine. From where we were 10 years ago, when, as the President says, "the relatively low and constant level of expenditures through the 1920's accurately reflected the relatively minor role played by the Government"—from there to where we now are was a longer step than it would be from here to a complete surrender of the spirit of self-responsibility and a debacle of liberty.

When the deficit phase ends and the people come awake, they will find themselves supporting government again, as always before, because no government supports itself, let alone the fantasy that it can support people; but when they come awake, what kind of government will they be supporting—one that they control or one that controls them?

Anniversary of Greek Independence

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

RADIO ADDRESS BY HON. HERMAN P. EBERHARTER OF PENNSYLVANIA

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on March 23:

The second Grecian civilization was ended when, on May 29, 1453, the Turks captured famous Constantinople, the capital of the 1,000-year-old Byzantine Empire. A period of 368 unhappy years followed. Then on the 25th of March 1821 Archbishop Germanos, of Old Patras, blessed the widespread revolution of continental Greece and the islands which at that time formed a part of the mighty and cruel Ottoman Empire.

For more than three and one-half centuries the historic land of Greece was darkened by the sinister clouds of barbarian rule. Fate had it that the enlightened and progressive Grecian people should become subservient to a race of religious fanatics, who descended upon the Greek Empire's thriving Provinces in Asia Minor, in Europe, and throughout the Mediterranean, rushing from far-off Turkestan with a fury and lust for blood unprecedented in the history of the human race.

During that period, despite fierce persecution and untold suffering, the Greeks never lost faith in the future of their proud race. Thoughts of a brilliant past kindled their patriotism and their undying love for liberty. Throughout those disheartening centuries they found comfort and hope in their devotion to the religion of the Nazarene. Thus the church had become the nation's ark.

The book of history records in countless pages the unparalleled sacrifices and the superhuman efforts that the Greeks exerted in their uneven struggle to free themselves from the tentacles of the Turkish octopus that had gradually become deeply entrenched over vast parts of Asia, Europe, and Africa. There were times when the road to liberty seemed endless and hopeless. Nevertheless, the struggle went on from 1453 to 1821, mostly without effect. But the conflagration that began 119 years ago today and lasted until 1829 resulted in the liberation of continental Greece, the Peloponnesus, and several of the islands, and brought about the beginning of the end of the once formidable empire of the Turks.

The human mind will forever remember and revere such places as:

Missolonghi, where a small army of brave men repulsed the Turks during three sieges and blockades, which kept the city under the fire of a large Turkish army and navy from 1822 to 1826, bringing death to 50,000 Turks. When finally the defenders, lacking food and ammunition, decided on an exodus, only 1,300 managed to break through the Turkish lines alive. The aged, the disabled veterans of many battles, as well as the emaciated women and children, who remained in the city, applied the torch to the powder magazine, choosing a gruesome death rather than surrender to the Turks. Deservedly, therefore, Missolonghi is known as the Sacred City of modern Greece.

Psara, a tiny island, but the birthplace of Constantine Canaris and many other fearless men of the sea, whose ships worked wonders against the oppressors during the revolution. There, to avenge the victories of Canaris and his renowned sailors, the Turks sent an army of 14,000 men and 140 men-of-war that devastated the island. Of its 53,000 inhabitants and refugees from Chios and Smyrna, only about 3,000 escaped. The others were butchered.

Chios, where the people hoisted the flag of liberty, although they completely lacked means of warfare and defense. Their love of freedom resulted in rivers of blood, when 70,000 of its population of 100,000 were massacred or sold as slaves by Rear Admiral Cara Ali, who was subsequently burned to death when Canaris destroyed his flagship.

Spetsae and Hydra, the two small islands whose merchant marine, led by Admiral Miaoulis and by Bouboulina, the only woman admiral in the history of the world, cooperated with that of Psara in routing the Turkish Navy in almost every engagement, and in bringing food and supplies to the besieged cities, towns, and islands.

The human mind will never forget Theodore Colocotronis, who shattered Turkish forts and dispersed Turkish armies in the Peloponnesus; Marcos Botsaris and his indomitable Suliotes, the beloved George Caraiskakis, who swept the tyrants from continental Greece; also, among other great patriots, Alexander Ypsilantis, who relinquished his high office with the Russian Government and hastened to fire the first shot of the insurrection in distant Rumania, where he and his 300 scions of prominent Greek families, living in that then Turkish Province, challenged the supremacy of the barbarians and died in glory.

The cause of freedom found the Grecian women playing as important a role as the women of ancient Sparta played. Suffice it to mention only the women of Zalongon who, on realizing that their proud little town, high in the mountains of Epirus, was about to fall into the hands of the enemy, danced the dance of death. One by one they danced over the high precipice adjoining their town, and down they went, to certain death.

To such men and such women, not only the greater Greece of our day but the nations of the world as well, pay reverent tribute today for theirs was the most cherished of causes—the cause of priceless liberty!

"From the sacred ashes rising
Of the Greeks great and free,
Valiant as in olden ages,
Hail! all hail, O Liberty!"

Exposing the Truth About Antialien Legislation—Intolerance, the Hand-Maiden of Antialien Legislation

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

ARTICLES FROM THE NEW YORK POST AND THE FORT WORTH STAR-TELEGRAM

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herein two articles which have recently appeared in the daily press, which articles discuss the pending antialien legislation in Congress, and forcefully depict the danger inherent in such legislation. The bills, to which reference is made, indicate an intolerance which is altogether incompatible with the spirit of our American institutions. Personally, I fear the effect upon the Bill of Rights and upon our democratic processes of the enactment into law of the pending bills. Visiting upon the helpless alien our hatred, disgust, or indignation because of economic conditions in America is analogous to Hitler casting the blame upon the helpless Jew for economic, post bellum conditions in Germany, against which he perennially inveighed prior to his coming to power in 1933 following the end of the Weimar Republic.

[From the New York Post of March 5, 1940]

SEEKING A SCAPEGOAT

In his first public speech as a member of the Supreme Court, Associate Justice Frank Murphy said that the greatest danger to this democracy lies in the belief "that our national troubles are attributable to one group or another of the population. It

is the danger born of the tendency to seek a scapegoat in a religious or racial or political or economic group."

By coincidence Justice Murphy made his speech at the same time that a special conference met in Washington to protest against passage of any of the group of 70 antialien bills now pending in Congress. His words have special pertinence to the proposed legislation. The 70 bills, several of which have been passed by the House of Representatives, would deny jobs to aliens, fingerprint and register them. One even provides for the establishment of a concentration camp for noncitizens in the United States.

In general, these antialien bills have been framed on the erroneous theory that noncitizens are responsible for many of our economic difficulties. The alien is the scapegoat. The alien is blamed for the Nation's unemployment problem, despite the fact that during the past decade the unnaturalized immigrant population of the United States has decreased in size by some 880,000 persons.

Instead of looking for some positive solution for unemployment, those who are responsible for the introduction of the antialien bills merely attempt to fix the blame on a politically inarticulate group. These noncitizens, they say in effect, are the cause of the trouble. Let's discriminate against them; let's deprive them of their civil rights; let's fix some stigma upon their status.

It is a poor, stupid idea. It is precisely the tactic of the Nazi Government. We cannot believe that the United States Congress can conceivably make the mistake of passing any of the antialien bills which await its attention.

[From the Fort Worth (Tex.) Evening Star-Telegram of March 8, 1940]

ORIGINS OF INTOLERANCE

President Roosevelt, in his message to the American Committee for Protection of Foreign Born, painted an accurate picture of the tendency of racial and other groups to live together fairly satisfactorily in a democracy. In other words, there is a human tendency among people, left to their own devices, to "live and let live."

Intolerance, which was deplored in the President's message, springs up among a people who are living fairly satisfactorily together when leaders or agitators come on the scene. Until Hitler appeared in Germany, Jews and "Nordics" lived together for years without great discord. When agitators stir up disaffection, racial, industrial, or even religious, they create intolerance, which is a product of fear, envy, and ignorance.

The tolerant person has his attitude because he is enlightened. Life is richer, fuller, and more fathomable for him. The intolerant person, therefore, must realize that his views and prejudices are the manifestations of his own deficiencies, failures, and frustrations. He is the dupe of the false leader who stirs up the tool's passions. By tracing the origins of intolerance, one can readily see that it has two victims.

Airplanes

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

EDITORIAL FROM THE ADRIAN (MICH.) DAILY TELEGRAM

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Adrian (Mich.) Daily Telegram:

[From the Adrian (Mich.) Daily Telegram of March 16, 1940]

AIRPLANES

The War Department recently released for export to England and France a high-speed pursuit airplane known as the Curtiss P–40, and it is said that certain other modern types have been, or will be, released.

As might be expected, various Members of Congress are greatly stirred up. The grounds of their objections, or their alarm, are summarized in Senator LA FOLLETTE'S demand for an investigation to determine whether sales of airplanes abroad will (1) delay American defense plans, (2) give away military secrets, or (3) raise the cost of our own building program.

These questions are pertinent. To many they may seem vitally important. But there is another question paramount to them all, and which must dominate American policy in such matters. It is this: Which is more important, to prepare to fight a future war without help, or to assist the Allies to win the present war?

In our opinion the arguments are overwhelmingly in favor of the second policy. If the Allies are defeated, we shall have to make ourselves ready to fight a most formidable European and Asiatic combination. That means that we must rapidly make America the greatest fighting power in the world on the sea and in the air. The cost will be colossal; but we can do it, and regardless of cost it must be done.

If the Allies win, on the other hand, no such early conflict is in sight. Our armament program will be more moderate, less hurried, and less costly. And, more important still, our national security will be enormously increased.

This forecast is so sound and probable that it may be accepted, not as a bit of imagination but as a fact. It follows, therefore, that it is vitally to the interests of the United States that we should give the Allies every possible help in the way of war materials.

What, then, as to the three objections raised by Senator LA FOLLETTE?

1. As to delaying our own air program, building planes for the Allies probably would not have that effect. But it would not matter if it did. At the very worst, our great air forces would not be used for at least a number of years in any war against a victorious Germany. Therefore whether we build more or fewer planes this year would have little effect upon our own future war. But whether we supply more or fewer planes to the Allies this year might have an immense effect upon the present war. It might determine whether or not we have to fight a war of our own later all alone.

If we actually should have to fight such a war several years hence, our air power would not depend on the number of 1940 and 1941 planes we might have on hand; it would depend on our capacity for rapid production then. And that would depend on the amount of skilled labor then available. The more planes we build now for the Allies the larger force of skilled labor will be built up and the greater our productive capacity will be.

2. As to giving away secrets, that is much less important than it might seem, for the secrets of today are not the secrets of tomorrow. Even if we gave the Allies the benefit of our very latest airplane designs, they would be out of date long before we had a war of our own to fight.

The Curtiss P–40—one of the newest Army planes, which we have released to the Allies, and which stirred up all the furor—is already out of date. A new plane is being brought out which the Secretary of War says is of definitely superior performance. In short, P–40 is not vitally important to us any more; we shall be building something better. But P–40 is immensely valuable to the Allies, for it is better than what they have. They need it now, and it is to our interests and safety that they should have it now.

3. As to raising the cost of our own airplane program, selling planes abroad would not affect the cost of those already contracted for by our Government. Whether it might make costs higher in 1941 or 1942 is problematical. But even if it did, such an increase would be a low price to pay for the advantage of strengthening the Allies against Germany. It would be cheap national defense for the United States.

The greatest value these new airplanes can have for us is in the hands of the Allies. If we withhold them, they are of no use to us until we go to war; but in the hands of the Allies they would help to save us from having the kind of war that we are afraid of.

The interests of this country in the war are clear, and American sympathy is equally clear. It is so overwhelmingly on the side of the Allies as to be not far from unanimous. Nine Americans out of ten fear and dread a German victory, and would be glad to help the Allies in any way short of actual involvement in the war. Fortunately the greatest help we can give is in supplying airplanes. The Allies are ready to pay for them in cash. No question of neutrality is involved. Our Government can help the Allies by making efficient planes available to them, without any cost, danger, or detriment to our own national interests.

That should be the American policy. Any other course would be a mistake which might later prove to be colossal.

Labor-Security Appropriations

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. CONNERY. Mr. Speaker, the Appropriations Committee, in this bill which is before us for discussion, is attempting to slowly strangle both the Wage and Hour Act and the National Labor Relations Act. This is being done by cutely cutting appropriations for these two agencies for the coming fiscal year, beginning July 1, 1940, thereby making it impossible for the personnel of these organizations to properly enforce these statutes, which mean and have meant so much to the workers and the underprivileged of this country.

If this House sanctions these cuts, it will proclaim to the country that, regardless of the fact that the vast majority

of our people throughout the length and breadth of the land favor the Wage and Hour Act and the National Labor Relations Act, in fact, welcome them as a boon, a small minority of this House constituting an antilabor bloc is in control. The people of the country want both of these great pieces of labor legislation to be continued, and therefore it is the duty of this House to restore to this bill the cuts in appropriations which this unfriendly committee has made.

Only recently the membership of the House was apprised of the fact that I have introduced a resolution, which is now before the Rules Committee, calling for an inquiry by the Committee on Labor into the activities of the so-called Bata interests, which have already encamped themselves nearby at Belcamp, Md., and are threatening to spread themselves across the country in a Nation-wide exploitation of men, women, and children who toil for a living. This Bata Shoe Co., which comes to us from Nazi-controlled Czechoslovakia, while having begun operations at Belcamp only last September, already is afoul of our wage and hour law. It is charged that this company has openly and willfully violated the provisions of the Fair Labor Standards Act in that less than the mandatory minimum wages provided by such legislation has been paid to the workers at the Belcamp plant and at other places.

With conditions such as these existing, the great necessity of this House taking appropriate action toward adequately granting sufficient funds for proper investigation of cases of this nature by the Wage and Hour Division is very evident. I cite but this one case at the moment but there are countless similar situations existing throughout the country and an adequate force and personnel must be maintained to protect those whom we seek to protect through the wage and hour law.

At this point I wish to call to your attention certain excerpts dealing with the Bata matter in order that the House may have a better understanding of the situation. I am desirous of emphasizing the fact that these excerpts are from an official Government publication, the Leather Fortnightly, published by the Bureau of Foreign and Domestic Commerce of the Department of Commerce:

[Department of Commerce, Harry L. Hopkins, Secretary. Bureau of Foreign and Domestic Commerce, F. H. Rawls, Acting Director; N. H. Engle, Assistant Director. The Leather Fortnightly. Issued the 1st and 15th of each month. Washington, D. C., June 15, 1939. Prepared by J. G. Schnitzer, business specialist for leather and leather manufactures, leather and rubber division, E. G. Holt, Chief]

[From the Leather Fortnightly of June 15, 1939]

GERMANY AND THE BATA SHOE CO.

The position of the Bata shoe concern within the economic and industrial framework of the present German boundaries represents one of the outstanding problems created by the new conditions. While as a consequence of the incorporation of Sudeten Germany, in September 1938, not less than 536 Bata chain stores and repair shops were closed, the situation since Germany took over Czechoslovakia is entirely different, involving the inclusion of the main Bata factories into the German economic system. The Bata concern has the reputation of being the world's largest footwear export organization, and for former Czechoslovakia this firm represented a very important producer of foreign exchange. It must not be overlooked that this firm's export capacity depended to a very large extent upon its extensive domestic sales which were made through an efficiently organized network of chain stores with annual sales on the home market in 1938 valued at almost $36,500,000, and export trade amounting to $7,870,000. By the closing down of the Sudeten stores the firm lost 20 percent, and by cessation to Hungary and Poland about 9 percent of the domestic volume; if Slovak sales of about 14¼ percent are added, the total deficit of domestic sales amounts to about 43 percent. Under these circumstances it will prove a more difficult problem for the concern to maintain export volume since some of the export trade was effected at some loss, but without government subsidy. To what extent it will be possible to open the German market for Bata is as yet an unsolved problem, particularly since the opposition to this firm and its products by the German shoe industry and trade continues to be very strong. It is hoped, however, that with Bata's ability and export experience, that some success in developing other foreign markets and regaining some of the lost territory will be attained. There can be no doubt as to the seriousness of the matter, the more so if it is considered that the Bata factories employed about 30,000 workers, produced from 175,000 to 200,000 pairs of footwear daily, and retailed their products at an average price of 2.86 marks as compared with an average of 5.76 marks for German-made shoes. This enormous price reduction for Bata was only possible by means of a wage cut of 40 percent, to which was linked the obligation to bring down the cost to workers of all daily necessities by one-half. To adapt this system, entirely foreign to economic wages developed in Germany, will call for the closest scrutiny and consideration by government and industrial quarters. That the ultimate solution of this complex problem is a matter of considerable concern for the German shoe industry is borne out by the annual report of a large German shoe manufacturing concern in which it is emphasized that the question as to what extent the inclusion within the German industrial and economic framework of the Bohemian and Moravian protectorate which, as is well known, had an extensive export of footwear at lowest prices, will affect the entire shoe industry, will depend upon the measures decided upon by the Government. It is expected, or at least hoped, that the settling of this problem will take into full consideration the vital interests of the German shoe industry. The German retail footwear trade appears to hold more optimistic views on the question at issue, inasmuch as at a recent convention of the shoe retail trade which took place in Hamburg, the Reich leader for this trade pointed to the increased production and sales of footwear in Germany. Increased domestic demand could now be supplied by Bata's export losses since an essential part of these will find its way into the German Reich. In the meantime, certain adjustments within the organization of the Bata concern appear to be already contemplated, inasmuch as the present stock capital of the company is to be reduced, and the board and management to be enlarged by the inclusion of new members, probably of German nationality. (American Consulate General, Frankfort, May 10.)

BATA SHOES UPSET HUNGARIAN MARKET

Shoe production in Hungary continued at high levels during the first quarter of this year, as orders for army shoes remained at favorable volume. There has been, however, a slight decline in the production of civilian shoes due, it is reported, to the large stocks which the Bata firm was able to bring into the area that was annexed by Hungary. Local producers estimate these stocks at as high as 3,000,000 pairs, and report that they are being retailed at about one-half the price of Hungarian shoes. There has been considerable discussion of the advisability of permitting the Bata factory at Ersekujvar to continue to operate, but at present it appears that permission will be granted over the objections of the local shoe manufacturers, inasmuch as nearly all of the employees are Hungarian. Exports of shoes increased from 218,475 in the first 3 months of 1938 to 253,302 pairs in the similar months of the present year. In the early months of 1939, Hungarian leather-footwear exports to the United States amounted to 28,476 pairs. Imports of shoes by Hungary in the first 3 months of this year amounted to less than 3,000 pairs. (American Legation, Budapest, May 19.)

[From the Leather Fortnightly of October 1, 1939]

POSITION OF THE BATA SHOE CO. IN GERMANY

By the incorporation of Sudeten Germany and the subsequent dissolution of the Czechoslovak State, the Bata firm at Zlin lost a substantial part of its domestic market. The political changes also adversely affected the export business of this large shoe-manufacturing firm. As the Bata Co. naturally constitutes a vital factor in the protectorate's industrial and economic life, the Reich Government considered it in the general interest to open the German market to this firm's products, and it is hoped that the loss suffered by the elimination of its Sudeten chain-store system will thereby be made good. Under the arrangements arrived at, it appears that Bata obtained a fixed sales contingent on the German market. The German retail trade will be supplied from a central delivery store and the establishment of retail chain stores will not come into the question. The Reich will, moreover, assist the firm in the development of its export trade, since the latter also represents a valuable factor in Germany's own export trade. All things considered, the political changes appear to have in no way impaired the concern's vitality, and the executives confidently expect that the loss in exports will not only be regained but even enlarged. Moreover, Bata's known policy of gaining a foothold in foreign countries is energetically continued. Factories have been established in the United States and Canada, and sales organizations, through subsidiaries, are further developed in Slovakia, Hungary, Rumania, and Yugoslavia. While at one time the name of Bata was taboo on the German market, its products, although they may hardly be called popular, are greeted as a welcomed relief, as the German shoe factories are flooded with orders with which they are unable to cope, and the entire output for the remainder of 1939 is entirely sold. Incoming orders can only be filled by working overtime, and certain natural limitations prohibit such activity, such as the restricted supply of leather. However, this scarcity is gradually being overcome by increased production of substitute materials, which now appear to be available in large quantities. (American Consulate General, Frankfort, August 23.)

[From the Leather Fortnightly of January 1, 1940]

LEATHER AND LEATHER-GOODS INDUSTRIES IN BOHEMIA AND MORAVIA REGIMENTED

Notice No. 24 (L–1) of the Minister of Commerce of the Protectorate Bohemia and Moravia, dated November 17, published and effective as of November 18, 1939, subjects the production of leather, leather goods, and shoes to strict regimentation. Supplies of hides and skins are to be used primarily suitable for export

goods; then leather for military requirements; and remaining supplies may be used for other purposes. Buffalo hides and leather may only be used for making technical leather products, inclusive of raw-hide articles, but not including belting. Belting leather can only be produced from hides unsuitable for other technical leathers. Imported lamb and similar skins, hides, and leather may be used only for membranes for pressure regulators and gas meters unless a special permit of the Ministry of Commerce is obtained. The notice list places an embargo on the use of specific varieties of leather for certain purposes, including a prohibition on the use of leather for automobile trunks, picnic outfits, steamer trunks, automobile covers, and other products. Likewise, the use of leather for wall coverings and upholstery is also forbidden. It is also prohibited to manufacture patent-leather shoes, and women's shoes of metallic leathers, especially kid. Women's shoes of velvets may not be produced, with the exception of house slippers, and slippers which retail at a price higher than 60 crowns can no longer be manufactured. None of the restrictions cover fish leathers or articles produced for the export trade. The monthly leather consumption contingent has been placed at 80 percent of the 1938 average. This quota is based on the leather processed in 1938 for sale in Bohemia and Moravia, the Sudetangau, Austria, and the Old Reich. No quota restrictions apply to the volume of production of technical leather and leather goods. Sales of leather and leather goods to retailers are restricted to 80 percent of the 1938 average, except for uppers, where the quota is 100 percent. (Office of the American Commercial Attaché, Berlin, November 21.)

Letters Urging Passage of Hall Farm Bill

EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

LETTERS FROM J. T. JOHNSON AND BENJAMIN W. PARKER

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters from two of my constituents with regard to the hay shortage:

CHENANGO FORKS, N. Y., *March 12, 1940.*

Congressman EDWIN A. HALL.

DEAR MR. HALL: I was very much pleased to read in the daily paper today the letter you wrote to Representative JONES of the Agriculture Committee in an effort to get us much-needed help.

Our difficulties may seem of small importance to committee members in Washington but to us it is a calamity. This drought section only covers southern New York and northern Pennsylvania, but that does not make the situation any less serious.

Mr. HALL, although I know that you are fully aware of our situation, I am going to give you a little more information than perhaps you have had up to the present time, and you may use this letter in any way you see fit, to get the truth to the committee.

As you know, our not having rain all last summer resulted in all of our crops being a failure. Corn and hay, our main crops were about 25 percent of normal, and that was fed up before winter set in as we had to commence feeding our stock in July (when most years we do not feed much until November 1).

Since November 1 most of us farmers have been buying all of our hay (and grain) and have had to pay from $18 to $22 per ton for hay and a good many farmers have had to sell their stock to keep them from starving while most of us are compelled to sell our best cows to buy hay and feed, cows which we will need next summer if we expect to exist.

As most of the cattle in this section are in a poor condition, they do not bring much on the market and do not go very far in buying hay at such high prices.

I can truthfully say that a good share of the cattle in this section are on a starvation diet, and some of them have had to go without any feed for some time, as we have had heavy snows in this section, making it impossible to draw hay.

We have about 2 months more that we will have to buy this high-priced hay and grain, and by that time those that have not sold all of their stock will have their herds cut so badly that it will be impossible to pay taxes (which are past due now), other bills, and buy seed, etc., to sow in the spring.

We have had a good many dry summers in this section but never before in the memory of the oldest residents have we had a summer when all crops were a failure and the farmers compelled to start the winter with empty barns and silos.

I think your bill is just the thing to help us or any other section of the country which may need help in the future. In good years we would be glad to help any other section which might be hit as we are now.

Mr. Hall, in closing will say I hope you can get at least a personal investigation of our situation. I can show you a good many farm families that are on a starvation diet along with their stock and expected to pay taxes to keep the Government running.

We read and hear over the radio that everything in other sections of the country is on the gain, which is certainly a good thing at this time.

Respectfully,

J. T. JOHNSON.

DEPOSIT, N. Y., *March 24, 1940.*

EDWIN A. HALL,
Member of Congress,
Washington, D. C.

DEAR MR. HALL: May I take this opportunity to thank you for your recent efforts to get a hay bill passed. While it is true that any legislation passed now won't be of any help to the dairy farmer of the drought area this year we cannot help but think what the future is going to be.

Prospects for the future of the dairy farmer aren't any too bright, and what with the dry summer we have just had a good many of us are mortgaging our future for the next 3 years. I myself had to buy 30 tons of hay, so you can imagine how a good many of us feel, while we didn't want or don't want hay given to us, some arrangements should have been made last fall to help out a bad situation.

The Farm Security Administration has done a good job in lending money to farmers to buy hay and feed with, but as we all know it has to be paid back. As chairman of the F. S. A. Hay Purchasing Co-op, I found hay in New York State very high. Most of the farmers that had hay for sale were holding it for an exceptionally good price. Don't blame them a bit, but, on the other hand, they expected a little too much. Michigan hay could have been put into the drought area, if the Government would have helped out on the freight, for $10.60 a ton. Dealers are having it put into Broome County for from $18.25 to $20.60 f. o. b. By the time it is trucked to farms and dealers get their commission it is costing the farmer about $23 to $24 a ton delivered. With grain at $38 per ton and hay $24, just how is a farmer going to pay his taxes, etc., and live? Sorry to have to take up so much of your time in reading this but again want to thank you on behalf of myself and the rest of the dairy farmers that have seen your article in the Binghamton Press of March 23, 1940. I remain,

Respectfully yours,

BENJAMIN W. PARKER,
Farm Bureau Committeeman.

Do Not Cut N. Y. A.

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. IZAC. Mr. Speaker, now that the National Youth Administration appropriation bill is before us, I should like to comment briefly on the importance of continuing this worthy project and of increasing rather than decreasing the appropriation therefor. In the past we have presumed that because we have made it possible for each American boy and girl to obtain a limited education under the public-school system we have done all that is necessary for the youth of the country. If this theory were tenable, we should no longer interest ourselves in what becomes of the youth after they have passed the mandatory school-age limit.

However, I am proud of the fact that this administration and we of the Congress have united in an effort to recognize our further responsibilities to the youth of the land by providing additional educational facilities and thus better equipping them for their life's work.

I know it must be the aim of every parent to provide the fullest and most thorough education possible for his child, and I am convinced that it is only when material means are lacking that any father or mother would deny this kind of preparation to their children. And so, during the stress of depressed economic periods, I feel that government can no better justify its existence than by interesting itself in providing those things which the fathers and mothers are unable to afford. For better education means better opportunities

in life for the individual; and a better citizenship for a greater Nation.

Recently I asked the National Youth Administration supervisor of San Diego and Imperial Counties, Calif., to tell me something of the work accomplished in my congressional district, and I take pleasure in submitting the fine report I have just received from Mr. Van A. France, N. Y. A. supervisor, area 1, San Diego, Calif.:

FEDERAL SECURITY AGENCY,
NATIONAL YOUTH ADMINISTRATION FOR CALIFORNIA,
San Diego, March 20, 1940.

The Honorable ED. V. IZAC,
Member of Congress, Twentieth District California, House of Representatives, Congress of the United States, Washington, D. C.

DEAR SIR: Thank you for your letter of March 5 in which you expressed your interest in the N. Y. A., and your desire for a summary of the activities of the National Youth Administration program in San Diego and Imperial Counties.

I might point out that in many instances, the general public is confused in regard to the actual function and purpose of the N. Y. A. Work provided by this program is divided into two distinct branches. They are:

I. STUDENT AND COLLEGE WORK PROGRAM

The underlying aim of the student and college work program is to give part-time work to high-school and college students, in order to assist them financially in remaining in school.

As you know, adequate public educational facilities are available for any young person, but we sometimes forget that in order to take advantage of these educational facilities, it is necessary for a student to have some money for clothing, fees, lunches, carfare, and incidentals.

Youths assigned to the N. Y. A. in high schools can earn a maximum of $6 per month and a minimum of $3 per month. The college work program provides jobs which pay a maximum of $20 per month.

The operation of this program has been organized to negate any chance of a centralized bureaucracy. Local school and college administrators are responsible, not only for the selection of students who will participate in the program, but also for the assignment of jobs and the determination of rates of pay. This system has been found to be successful because the benefits of the N. Y. A. program can be adjusted to individual community problems.

In every case the youth assigned to the N. Y. A. program must earn every cent that he is paid through his N. Y. A. job.

Most of the N. Y. A. jobs in this district are along the lines of construction, maintenance, clerical work, and other activities which are of benefit to the individual schools. Each school makes every effort to provide jobs that are not only of value to the institution itself but also of value to the youth worker in giving him work experience which will qualify him for future employment in private industry.

With only one exception, every school in San Diego and Imperial Counties is now operating an N. Y. A. program, and every principal feels that the benefits received through these student work jobs are of real help to the school and to the student.

II. OUT-OF-SCHOOL WORK PROGRAM

Youths between the ages of 18 and 24 who are out of school and unemployed members of relief or lower-income families, can be assigned to part-time jobs through our out-of-school N. Y. A. work program.

In the State of California these young people work 60 hours per month for a wage varying between $18 and $21.

All N. Y. A. projects are cosponsored by local public and civil agencies. Although we are able to take care of only a small percentage of the total number of unemployed youth in this district, for those that we are able to assign we try to provide worth-while jobs which will fit each worker for a useful place in his own community.

We have found that the average youth that applies to us for work does not have a basic understanding of the qualifications required for employment in private industry. For that reason we make every effort to provide jobs that will not only offer work experience which will definitely lead to a permanent private job, but we also attempt to set up related training courses that will further equip them educationally for going out into private industry.

It is interesting to note that the average length of time that a youth remains on the program in California is 7 months, and that the majority of the youths leaving the program find permanent or temporary private jobs.

It is often erroneously believed that the N. Y. A. carries the entire burden of financing N. Y. A. projects. This is not the case. In this district every project which is now in operation is supervised by local cosponsors. Although N. Y. A. provides the funds for actual payment of youth workers' wages and for general supervision, the cosponsors in most cases provide all of the material costs and all direct and technical supervision.

As an example, I might mention the fact that the San Diego County Board of Supervisors provides the N. Y. A. with an annual fund of $2,500, which is used for purchasing materials for N. Y. A. projects sponsored by San Diego County.

Perhaps you might be interested in a few of the outstanding project units which have been completed or are being completed by N. Y. A. youths. A few of them are:

(1) Chula Vista Park: Under this project, cosponsored by the city of Chula Vista, a new public park has been constructed. The park facilities include not only equipment for recreational purposes, but also a lagoon and an outdoor amphitheater used for community functions.

(2) Visual Education: The city of National City has sponsored this project employing thirty N. Y. A. young people to prepare visual education aids, such as models, dioramas, charts, and posters for local schools.

(3) Construction, Balboa Park: Forty N. Y. A. youths have been assigned to construction and development in Balboa Park. This project is cosponsored by the city of San Diego.

(4) City Shops: This project is cosponsored by the city of San Diego, under which N. Y. A. boys act as shop assistants to the regular employees in the San Diego City Shops. You might be interested in knowing that in the past 6 months, nearly 50 percent of the youths who have been assigned to this work have received sufficient training to go out into private jobs.

(5) Holtville Union High School: Thirty N. Y. A. youths are constructing recreational facilities for the use of the Holtville Union High School and the community of Holtville.

(6) Migrant Labor Camps: Youth members of migratory labor families in Imperial County are assigned to construction, landscaping, and general development work at the three Farm Security Administration migrant camps in Imperial Valley.

A variety of other activities, such as aircraft construction, training, domestic work experience, drafting, stenography, arts and crafts, laboratory technique, and farming are in operation through the cooperation of local agencies.

To the above work project activities are now assigned 745 youths. Two months ago our total assigned figure was 1,100, but it has been necessary to reduce our rolls because of the general lack of funds.

I have tried to make the foregoing summary as concise and to the point as possible.

I would like to bring out the fact, however, that under the decentralized operation policy of the National Youth Administration, we have been able to very closely integrate our activities with local public schools and other public agencies.

Although the program is young, I feel that we have done a real job in developing useful American citizens, and it has been encouraging to know that the local people and agencies with whom we deal are favorable to the N. Y. A. program.

For your information, I am attaching one clipping from the San Diego Union, which has covered some of our N. Y. A. activities in San Diego County.

May I express my sincere appreciation for this opportunity of explaining a few of the high lights of our N. Y. A. projects in this district. I hope that you will find it useful.

Yours very sincerely,

VAN A. FRANCE,
N. Y. A. Supervisor, Area 1.

Appropriation for National Youth Administration

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1940

TELEGRAM FROM THE PRESIDENT OF ST. JOSEPH'S COLLEGE, PHILADELPHIA, PA.

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from a college in my district:

PHILADELPHIA, PA., *March 19, 1940.*

Hon. FRANCIS J. MYERS,
Representative Building, Washington, D. C.:

May I respectfully request that the Members of the Philadelphia representation in Congress oppose any reduction in the appropriation for the National Youth Administration inasmuch as the tangible beneficial results for needy students would be lost with no apparent substitute to take their place.

THOMAS J. LOVE,
President, St. Joseph's College.

The Wage and Hour Appropriation

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1940

Mrs. ROGERS of Massachusetts. Mr. Speaker, yesterday afternoon I spoke in favor of the Norton amendment to restore the appropriation to the Labor Department bill for the Wage and Hour Division. And today I worked and voted for the Casey amendment to restore the necessary number of inspectors to carry on the service of that division. To vote against the appropriation would mean industrial suicide for the industries and workers in Massachusetts. The wage and hour law would have no effect without proper personnel and inspectors to enforce it. It might mean, and undoubtedly would mean just that—that the act would be enforced in Massachusetts and not enforced in some other parts of the country, which would be an injustice and hardship to Massachusetts industries and workers.

I shall ask for time to speak in favor of the appropriation when the bill is taken up by the Senate Committee on Appropriations, as I believe it is vital for the Wage and Hour Division to have the necessary money and personnel in order to enforce the law. What a farce to have the law on our statute books and then to nullify—and what folly for Massachusetts to vote against it. In order to secure the minimum wage of 35 cents an hour for shoe workers, I appeared at the hearings and have worked steadily on the matter, and was delighted when Colonel Fleming announced it. It will be a great benefit to our Massachusetts industries and workers and both groups are pleased with themselves.

The following are some of the telegrams I have received from Massachusetts showing the interest in adequate appropriations for inspection and enforcement:

BOSTON, MASS., *March 25, 1940.*

Hon. EDITH NOURSE ROGERS,
House of Representatives, Washington, D. C.:
We, the Boston Joint Board, Amalgamated Clothing Workers of America, having a membership of 5,000 clothing and cleaning and dyeing workers, urge you to cooperate with us in protesting against any cut in appropriations for wage, hour, and labor boards.

FRANK LERMAN,
Assistant Manager.

LOWELL, MASS., *March 26, 1940.*

EDITH NOURSE ROGERS,
House Office Building, Washington, D. C.:
Any cuts in the appropriation for the N. L. R. B., or the Wage and Hour Administration are tantamount to crippling amendments to the acts. We expect you to favor the original appropriation.

JEAN J. BEAULFILLE,
Secretary, Lowell Industrial Union Council.

LOWELL, MASS., *March 26, 1940.*

Hon. EDITH NOURSE ROGERS,
House Office Building, Washington, D. C.:
The slash one million eighty thousand from the Wage and Hour Administration means no enforcement of the recent Fleming decision for the shoe industry. We expect your support to the full appropriation for the N. L. R. B. and Wage and Hour Administration.

RALPH MOTARD,
President, American Federation of Hosiery Workers, Branch 105.

LOWELL, MASS., *March 26, 1940.*

EDITH NOURSE ROGERS,
Member of Congress,
Washington, D. C.
The slash $1,080,000 from Wage and Hour Administration means no enforcement of the recent Fleming decision for the shoe industry. We expect your support to the full appropriation for the N. L. R. B. and Wage and Hour Administration.

HORACE BAILEY,
Secretary, Joint Council 15, United Shoe Workers of America.

BOSTON, MASS., *March 25, 1940.*

EDITH NOURSE ROGERS,
House Office Building:
Labor's Nonpartisan League of Massachusetts is opposed to any cuts in present appropriations for the Wage and Hour Administration and the National Labor Relations Board and requests you to vote against any cuts for these two important agencies. League also opposes Smith amendments as designed to wreck Wagner Act.

CLIVE KNOWLES,
Executive Director.

BOSTON, MASS., *March 25, 1940.*

Representative EDITH NOURSE ROGERS,
House of Representatives:
New England shoe manufacturers advise full restoration Budget appropriation Wage and Hour Division imperative for proper enforcement act. Your cooperation appreciated.

MAXWELL FIELD,
Secretary, New England Shoe and Leather Association.

BOSTON, MASS., *March 26, 1940.*

Hon. EDITH NOURSE ROGERS,
House of Representatives, Washington, D. C.:
One thousand furniture-worker members of our organization demand that the underhanded attempts to cripple the National Labor Relations Board and Wage and Hour Administration by slashing appropriations to these bodies be defeated. The eyes of all working people are on Congress. We call upon you to vote against the proposed cuts now pending.

W. ROBERT MCCARTHY,
Secretary, United Furniture Workers of America, Local 136B, C. I. O.

San Francisco Chronicle Columnist Discusses the Use of Experts by the Labor Board

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1940

Mr. VOORHIS of California. Mr. Speaker, I have not taken the position that the National Labor Relations Act was perfect nor that it should not under any circumstances be amended. But I have taken and do take the position that the basic structure of the act should not be destroyed. I think the right of collective bargaining is essential to labor and should be fully protected.

I have said on occasion that I believed there were weak spots in the personnel employed by the Labor Board. I think Dr. Leiserson, a member of the Board, has made some constructive suggestions regarding this matter.

But I believe the proposal to take from the Board its research staff would be a serious mistake. Not only do I believe that such a step would seriously cripple the work of the Board, but I am also of the opinion that Mr. David Saposs, head of the Research Division of the Labor Board, against whom this proposal is apparently in part directed, has been unjustly charged with holding views which are not in fact his views at all. From what I can learn, Mr. Saposs is not only no Communist but a most effective opponent of communism wherever he finds it.

The observations of Mr. Arthur Eggleston in his column, The Labor View, in the San Francisco Chronicle, are pertinent in this connection. I quote a portion from that column for the 12th of March 1940:

[From the San Francisco Chronicle of March 12, 1940]
(By Arthur Eggleston)

Main objection to the National Labor Relations Board as well as to other administrative agencies is obviously directed to the one characteristic which marks them all off from the courts.

The National Labor Relations Board and the other quasi-judicial boards and commissions are possessed of the kind of expert specialized knowledge which enables them to see a little further into the record than the courts which must review their orders. To the violator, actual, prospective and possible, that ability is obviously a drawback. The real argument for overturning this administrative process, which has grown up because a need existed for it, is based on this very simple fact.

It is not that the judges of the circuit or other courts are any less sincere or any less willing to accord labor or any other group protected by a special expert tribunal, the rights due them. It is rather that the experts know the subtle ways in which unfair labor, trade, or other practices are made to appear something else and something legal.

The way in which the Smith committee majority amendments are linked together is a beautiful example of contemplated legislative mayhem at its best. Not only is it proposed to bypass the experts with specialized knowledge of labor relations by forcing the courts to weigh all evidence and decide which testimony and evidence should be accepted. But in order to prevent the courts from obtaining real insight into the record, it is proposed to strip the Labor Board of its right to use economic experts to assist the courts in understanding social and economic implications of the cases.

The proposal is undoubtedly the most revealing of all. It is as though the board of trustees of a great university, under cover of encouraging scientific research, would go into the physical and chemical laboratories and break the fine precision instruments. It would be an act of cultural vandalism. That is exactly the term to describe what the Smith committee majority proposes.

Sale of Airplanes

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

STATEMENT BY THE SECRETARY OF WAR

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Secretary of War:

STATEMENT OF THE HONORABLE HARRY H. WOODRING, THE SECRETARY OF WAR, TO THE MILITARY AFFAIRS COMMITTEE OF THE HOUSE OF REPRESENTATIVES, MARCH 27, 1940

By way of preamble, gentlemen, let me say that the policies of the War Department regarding the sale of military matériel, and particularly of airplanes to foreign governments, are designed primarily to strengthen our own arrangements for national defense. The fact that these transactions aid business by creating a profitable industry is important, but that is not a military consideration, except for its obvious contribution to the national defense.

There are two major considerations involved in this present matter relating to national defense in the air. One relates to the modernization of planes now under contract for the Air Corps and the other pertains to development of our capacity for the construction of planes. Conditions affecting both these considerations have altered greatly within a year. Early in 1938 there was general agreement on the need, not only for a large addition to our strength of active airplanes but also for the establishment of a large reserve of modern types. At that time changes in design involved a relatively slow process. Today, 1 year later, active warfare has greatly speeded up improvements of airplane types. We must now protect our investment with reference to the planes we have under order and yet to be delivered. I mean that we should employ every legitimate means to insure, for our own defense, the delivery of the latest and most modern types, rather than passively to await delivery of planes which have already been superseded by more advanced models.

We are the last people in the world to wish to benefit by the misfortunes of others, but we would be blind if we failed to realize that the war in Europe is a great laboratory in which all types of munitions, and especially aircraft, are being given a critical service test, with the result that many unanticipated weaknesses and deficiencies are becoming apparent.

With respect to our production capacity, the orders placed in this country by foreign governments, both neutral and belligerent, have resulted in large additions to our airplane factories, and in thousands of mechanics being trained. American production of airplanes, which a year ago was decidedly limited, is now increasing very rapidly. This condition changes last year's picture, because the increase in our productive capacity reduces the emphasis on delivery of planes in excess of operating requirements, and renders it not only permissible but advisable for us to accept delay in the delivery of such planes, in order to obtain through the medium of change orders, the most advanced types for later delivery.

Our problem is to meet this change in conditions; to conserve the interests of national defense, and to obtain the best possible equipment for the Air Corps from orders already placed with industry. The present situation is favorable to the solution of this problem, and sound business judgment, consistent with national security and public opinion on the subject, demands that we take advantage of the developments in aircraft and so adjust our policy that we can give our country an air force of the most modern type.

Authority to permit American manufacturers to export airplanes and munitions of war is vested in the National Munitions Control Board, by the Neutrality Act of 1939. This Board consists of the Secretary of State, who is chairman, and the Secretaries of Treasury, War, Navy, and Commerce. The Board exercises its functions through the Division of Control, State Department, in accordance with the rules incorporated in a document entitled "International Traffic in Arms," a copy of which I have here.

A license from the State Department is required for export shipment of planes and munitions of war, and the State Department will not issue a license until the War and Navy Departments have stated that there is no objection on the ground of military secrecy of the item covered.

Prior to December 1939, all matters relating to the release of military items were handled through joint written agreements between the State, War, and Navy Departments. Due to the enormous increase in foreign orders, the President, in December 1939, appointed a liaison committee consisting of representatives of the Treasury, Navy, and War Departments, to coordinate all foreign government purchases in the United States. The operation of this committee has not altered the responsibility of the War Department in recommending what items should or should not be released.

The recommendation of the War Department in connection with the release of any item is taken after full consideration of the circumstances in each case, based on its merits. In general, this action is governed by the following policies:

There are certain items which, by reason of the importance of the military secrecy involved, should not be released under any consideration. With respect to certain other items, it is realized that the creation of substantial additional productive capacity for our industries is of sufficient importance to the national defense to warrant, as a justifiable consideration, disclosing some otherwise restricted design.

Generally speaking, there is little about any plane or airplane engine which can be maintained a military secret for more than a few weeks after tests have been made. Actually, we know a great deal about the latest types of planes being produced by all foreign nations, and it is to be presumed that foreign nations know at least as much about our own planes. While protecting to the best of our ability the secrecy of a few important devices, we must at the same time realize that planes and their engines turned out in quantity production do not fall with the category of secrets which can long be kept. Nevertheless, in the past airplanes and aeronautical equipment have not been released for foreign sale until similar types of superior performance have been tested and are under contract for the United States Government. Also in the release of designs to manufacturers we have stipulated that the manufacturer shall acknowledge the priority of present and future orders of the United States Government—the exercise of such priority to be entirely at the discretion of the United States Government agency concerned.

We have refrained in general from releasing our designs for manufacture or detailed assembly abroad, as this would neither improve our own productive capacity nor contribute to the strengthening of the national defense. Neither, for the same reasons, have we agreed to the release for manufacture or detailed assembly abroad of the designs owned by private manufacturers, if such release could legally be prevented.

Inquiries have recently been received from foreign governments for the purchase of obsolete or surplus War Department arms and armament. The Secretary of War is charged with the responsibility for such sale of surplus War Department matériel, and the following provisions of law and policy which have governed the administration of this responsibility, will, I believe, be of interest to you:

Sale of War Department property is limited to those items declared surplus by the War Department at prices and under conditions fixed by the War Department. Property is declared surplus only upon advice of the General Staff. No War Department property will be sold to individuals, but only to foreign governments not actually engaged in conflict. Initial negotiations for the purchase of surplus War Department property are made between the foreign government concerned and our State Department. On tentative approval of the transaction by the State Department, the War Department continues negotiations with the accredited representative of the foreign government and arrives at a tentative agreement as to the terms and details of the sale. This tentative agreement is submitted to the State Department, and, after formal notification from the Secretary of State that such sale is in conformity with our foreign policy, the War Department completes it.

As a result of the aircraft procurement policy of which this committee and I were joint authors, and which provided for design competition and especially competitive bidding, we have today possibly a half dozen types of planes superior to any in the world. This is a gratifying accomplishment.

We now have a great many planes under contract for delivery to the Air Corps, but because we are acquiring an increasing productive capacity, the necessity for early delivery of other than operating equipment is no longer so pressing. Therefore, we are adjusting the Government's foreign sales policy to conform to the following:

When it is to the advantage of the national defense the War Department will negotiate for deferred deliveries on contract planes. If manufacturers take advantage of foreign orders, then prior to release for sale abroad, manufacturers shall agree to accept change orders on existing War Department contracts. The Government

must be fully protected, and any authorized delays must not interfere with the delivery of equipment for units immediately necessary for our defense needs.

The release policy for foreign sale of our most modern designs will be liberalized to accomplish the foregoing, to further stimulate productive capacity and to insure improved types of planes for our forces. Each such case must be decided on its merits. Prior to the release of any of our designs for sale abroad, the manufacturer must negotiate with the War Department for such changes in those models which are under contract for the United States Army in order to insure that improved types of airplanes are delivered to the War Department.

No military secret will be divulged or released to any foreign purchaser of military airplanes.

Neither designs owned by the War Department nor manufacturer-owned designs over which the War Department has control, will be released for manufacture or detailed assembly abroad.

Foreign governments must agree to furnish us full and complete information on the design, equipment, and combat performance of American-made planes.

To summarize: The productive capacity for military planes is of vital importance to the national defense. The Air Corps augmentation of last summer and the war in Europe have increased this capacity, to an extent which makes it desirable for us to accept delays in the delivery of planes in order to secure later models.

Development of plane types is today so rapid that the acceptance of certain models now being manufactured, involves the possibility of our Air Corps receiving in quantity types which would soon be surpassed in performance by later models.

As I have already stated, to put the foregoing in simple business terms, we must protect our investment. Coupled with this thought is the helpful fact that planes available for early delivery at this moment are of more interest to foreign purchasers than are prospectively better models yet to be manufactured.

It appears not only a safe policy but a highly desirable policy for our Government to accept later delivery dates for certain planes in order to secure the advantage of "change orders" which will give our Air Corps improved equipment. It is believed that by taking advantage of the existing market for military planes, we can secure the necessary changes in types by negotiation. Such a procedure should assist in maintaining us progressively in a situation where we will have the most modern equipment, whatever the later developments.

It must be understood in carrying out such procedure that before manufacturers would be permitted to delay delivery of planes for our Army in order to fill foreign orders, they would have to agree to accept the modifications in the contracts which would give us an improved type of plane. Also it should be understood that we should enter into no delays that would interfere with the equipment of units immediately necessary to our defensive needs.

To make this change in policy fully effective, the War Department may find it necessary to ask Congress for authority to extend the time during which present appropriations will be available for obligation and expenditure.

There are questions honestly asked by many people, to which the public, and particularly the Members of Congress, are entitled to have answers, and I should like to reply very frankly on behalf of the War Department that military secrets have not been released to foreign governments; that foreign orders have not delayed Army aircraft orders, nor have these orders increased the cost of Army planes.

On January 24, 1939, when I appeared before the House Subcommittee on Appropriations, I stated: "I feel it my duty to emphasize the fact—one that is apparent to all of you gentlemen—that regardless of international conditions, technical developments in means of warfare in the past 5 years now compel a readjustment and reorientation of our plans and preparations for adequate national defense." I should like to emphasize again that during the past 14 months such rapid strides have been made in the development of military aircraft that a further readjustment and reorientation of our plans appear to be necessary. I have endeavored in this statement to outline the direction which we believe this readjustment should take.

What the N. Y. A. Appropriation Amounts To

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. VOORHIS of California. Mr. Speaker, the $100,000,000 which the Collins-Johnson amendment offered today in the House would provide for the National Youth Administration is just about equal to the cost of one really first-class battleship. If for national-defense purposes the battleship is necessary, then it is surely even more necessary that the youth of America be kept in school or at work rather than condemned to confusion and unemployment. Without this amendment, 123,000 such young people must be laid off by the N. Y. A. to join the army of the unemployed. I do not believe we can justify our action if we vote against this amendment and against the opportunity of these young people to earn their way.

Appropriation for National Youth Administration

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. KEFAUVER. Mr. Speaker, when the Federal Government makes an investment in its young people, some people call it spending. I would like to suggest that such spending is a gilt-edged investment in the Nation's future—an investment in democracy and peace and prosperity. As President Roosevelt said of the National Youth Administration in 1935 when it was established, "The yield on this investment should be high."

Such spending should be chalked up on the credit side of the ledger rather than in the red ink, for in addition to the many local public works which the National Youth Administration have carried out, the young people employed are given training in skills which greatly increase their contribution to the industry and economy of the country.

It is becoming evident to many people that the problem of unemployment among young people is a permanent rather than an emergency situation. For many years, starting long before 1929, the age at which young people obtain jobs has been increasing. It is a matter of common knowledge that a man or woman is lucky now if he is able to get a job at the age of 20. Yet the large mass of our youngsters drop out of school at 16, most of them because of lack of money.

What happens to our young people in the 4 years between 16 and 20? Some of them do get jobs. The Federal Government through the National Youth Administration is providing jobs through the high schools and colleges, which enable hundreds of thousands to continue in school. This has the double result of keeping this great number off the labor market and out of mischief, and of enabling the young people better to prepare themselves for life.

The other millions who do leave school present an equally troublesome problem. You can find them in every city, at every crossroads, some of them loafing, some of them looking for work, all anxious to take their places in the world. A job in private industry means to them the only chance they have to marry and to establish their homes. Most of them stay at home, where their presence although a comfort to their parents, makes it harder for the family to make ends meet.

Working for the National Youth Administration, some 500,000 of these out-of-school, out-of-work, out-of-luck young people are being trained this year in work habits, and how and why it is necessary to get to work on time and to apply one's self to the job in hand. Furthermore, they are contributing to their own communities by developing useful facilities for education, recreation, conservation, adding to the services of relief agencies and other public institutions.

The National Youth Administration appropriation this year is $100,000,000, and its benefits have been extended to nearly three-quarters of a million young people, both in school and out of school. But this program is able to reach only one in four or five of the young people who need such opportunities. Instead of slashing this fund, and instead of throwing hundreds of thousands of young people back into the street and bar rooms, the Congress should increase

this appropriation to more nearly meet the need that has developed.

In my own State of Tennessee, there are 18,840 young people employed in both the student work program and the out-of-school work program. Of this number, 10,392 are working their way through schools and colleges under the N. Y. A. and 8,448 out-of-school very needy young people are employed on work projects sponsored by the local communities. For every one employed on this out-of-school work program, there are four youths who are not employed. A total of 35,000 young people in Tennessee are in need of N. Y. A. work and cannot get it because of insufficient funds. In my own district there are almost 4,000 young people who are in need of this N. Y. A. employment and are unable to secure it. A reduction in youth employment means a real catastrophe to these youth. I cannot accept a reduction in the funds which are available to the State of Tennessee for the employment and education of youth.

Pete Jarman, of Alabama

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. RAMSPECK. Mr. Speaker, an illustrious Member of this body who established a great record here, both as a Member and as an occupant of the Speaker's chair, and who probably came as near being President of the United States as anyone ever has without enjoying that distinction, indulged in a most interesting and worth-while address to the Washington Press Club on March 16, 1916, an address which I consider it worth while for everyone to read. Consequently, I insert here as a part of my remarks the address of the Honorable Champ Clark on that occasion:

It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor.

"Poeta nascitur non fit"—a poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

The old Charlotte district in Virginia knew this and kept John Randolph of Roanoke in the House till he became a great national figure. Then the Old Dominion sent him to the Senate, and General Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.

It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possesses these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the "top-notchers."

Let us take the present House and see how long the men who hold the high places have served. I cannot name all, but will cite a few as examples.

Mr. Speaker Cannon is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt," for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker 8 years, only one man, Henry Clay, having been Speaker longer.

I am serving my twenty-second year; Minority Leader Mann is serving his twentieth year; Mr. Kitchin, chairman of Ways and Means, his sixteenth; Mr. Fitzgerald, chairman of Appropriations, his eighteenth; Mr. Moon, chairman of the Post Office and Post Roads, his twentieth; Mr. Jones, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. Flood, chairman of Foreign Affairs, his sixteenth; Mr. Hay, chairman of Military Affairs, his twentieth; Mr. Glass, chairman of Banking and Currency, his sixteenth; Mr. Adamson, chairman of Interstate and Foreign Commerce, his twentieth; Mr. Stephens, chairman of Indian Affairs, his twentieth; Mr. Slayden, chairman of the Library, his twentieth; Mr. Henry, chairman of Rules, his twentieth; Mr. Lever, chairman of Agriculture, his sixteenth; Mr. Padgett, chairman of the Navy, his sixteenth; Mr. Lloyd, chairman of Accounts, his twentieth; and Mr. Sparkman, chairman of Rivers and Harbors, his twenty-second. There are other big chairmanships, but these will suffice to show that as a rule the big places go to old and experienced Members, for most of the men who rank close to the chairmen are old-timers. The same thing holds good with reference to Members of the minority. As an illustration, Messrs. Gillette and Cooper, who are serving their twenty-fourth year, are the ranking Republicans on Appropriations and Foreign Affairs, almost certain to be chairmen thereof should the Republicans ever again have a majority in the House, as in that event, in all probability, Mr. Mann will be Speaker, unless he is nominated for President next June.

Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and, having elected a fairly good man to Congress; they keep him in the harness.

The Member of longest consecutive service is called "the father of the House." Five Philadelphians in immediate succession bore that honorable title—Randall, Kelley, O'Neill, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When General Bingham announced the death of General Harmer, his immediate predecessor as "father of the House," he stated that the five Philadelphia "fathers of the House" had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

In the second and third Congresses in which I served, Maine, with only four Members, had the Speakership and the chairmanships of the great Committees on Ways and Means, Navy, and Public Building and Grounds—a most remarkable circumstance, giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country.

The best rule, it seems to me, is for a district to select a man with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things.

I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in "mending my fences." My constituents have attended to that. God bless them.

Time changes many conditions but what Speaker Clark said with reference to seniority is just as true now as it was when he made that speech 24 years ago. Let us refer to the present House and compare the service of those now holding the major assignments referred to by Speaker Clark.

The gentleman from Alabama, Speaker BANKHEAD, is serving his twenty-fourth year; the gentleman from Texas, Majority Leader RAYBURN, the fourth Member of the House in point of service, his twenty-eighth year; the gentleman from Massachusetts, Minority Leader MARTIN, his sixteenth; the gentleman from North Carolina, Mr. DOUGHTON, chairman of Ways and Means, the third Member of the House in point of service, his thirtieth; the gentleman from Colorado, Mr. TAYLOR, chairman of Appropriations, second Member in point of service, his thirty-second; the gentleman from Missouri, Mr. ROMJUE, chairman of Post Office and Post Roads, his twenty-second; the gentleman from New York, Mr. BLOOM, chairman of Foreign Affairs, his eighteenth; the gentleman from Alabama, Mr. STEAGALL, chairman of Banking and Currency, his twenty-sixth; the gentleman from California, Mr. LEA, chairman of Interstate and Foreign Commerce, his twenty-fourth; the gentleman from Illinois, Mr. SABATH, dean of the House, which was evidently referred to as "father of the House" in Speaker Clark's day, chairman of Rules, his thirty-fourth; the gentleman from Texas, Mr. JONES, chairman of Agriculture, his twenty-fourth; the gentleman from Georgia, Mr. VINSON, chairman of Naval Affairs, his twenty-eighth.

Just as was the case then, the same is true of the minority because the gentlemen from New York, Messrs. TABER and FISH, the ranking Republicans on Appropriations and Foreign Affairs, who would become chairmen of these committees in case of a Republican victory, are serving their eighteenth and twenty-second years, respectively.

Of course, there is one outstanding and very unusual exception to this rule, but it is always the exception which

proves the rule. The distinguished gentleman from Alabama, Mr. JARMAN, who is now serving in only his fourth year, accomplished the heretofore unheard of feat of becoming chairman of the Memorials Committee when the first committee assignments were announced during the first few weeks of his service. As he commenced his second term, he relinquished that chairmanship to become chairman of the more important Committee on Printing. He is also vice chairman of the very important Joint Committee on Printing. Of course, I do not mean to compare the Memorials and Printing Committees with Ways and Means, Appropriations, Foreign Affairs and so forth, but there is also no comparison between the lengths of service of this outstanding legislator and those of the older members of this House who occupy those exalted positions.

Congressman Green's Record

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, our colleague from Florida, the Honorable R. A. (LEX) GREEN, has a record of achievement which is worthy of our commendation. Under leave to extend my remarks in the RECORD, I include the following statement of Mr. GREEN's record and services:

The value of a Member of Congress rests largely in his understanding of the needs of his people and of the Nation; his vision to foresee the needs of the future and to meet these needs by appropriate action. His value is tested not by the number of bills introduced but by the importance, directly and indirectly, of such bills, and their bearing upon legislation finally enacted.

His more than 15 years' service here has given him power and influence. He has most efficiently served as assistant Democratic whip for more than 10 years. I, as a ranking member of the House Appropriations Committee, know the value of his seniority here and his worth to the country as a whole. I feel that our administration here in Washington owes him a debt of gratitude for his splendid work and outstanding achievements.

During his services in Congress Mr. GREEN has sponsored many bills. Of great importance among these measures are the following:

AIR BASE FOR JACKSONVILLE, FLA.

On March 25, 1938, he introduced H. R. 10031, which provided for the construction of an air base at Jacksonville. Soon after the introduction of this legislation, by an act of Congress, the Secretary of the Navy appointed a special board to make a survey of naval air base needs throughout the country. This board consisted of Rear Admirals A. J. Hepburn, E. J. Marquart, Capts. J. S. Woods, A. L. Bristol, Jr., and Ralph Whitman.

Mr. GREEN persuaded this board in the fall of 1938 to twice visit and inspect possibilities at Jacksonville, Fla. He accompanied them on both inspection tours and stressed to the board the wisdom of the establishment of the air base there.

On January 3, 1939, this board, known as the Hepburn board, recommended to Congress that the air base for the southeastern part of the United States be located at Jacksonville at the old Camp Foster site. It further recommended carrier piers and berthing facilities at the mouth of the St. Johns River and an auxiliary base at Banana River. On January 4, 1939, Mr. GREEN introduced H. R. 1654 to carry out the Hepburn board's recommendations for the Southeastern Naval Air Base for Jacksonville. He appeared before the House Naval Affairs Committee and plead for the establishment of this base there. Other cities in South Carolina, Georgia, and Florida were contenders for this establishment. Florida's two Senators, statesmenlike, refrained from taking sides against one Florida city for any other Florida city and gave out press statements to this effect.

In a leading Florida newspaper the following Associated Press story was carried:

WASHINGTON, D. C., March 1, 1939.—Senator ANDREWS, Democrat of Florida, emphasized he had no choice between the two cities (Jacksonville-Miami) but would seek to get authorization for whichever site the Hepburn board recommended.

Both of Florida's Senators fought for Florida to get the base but could not take sides with any city in Florida. Thus, Mr. GREEN had to fight his battle single-handed for Jacksonville.

The House Naval Affairs Committee during the course of this deliberation made two inspection trips of possibilities at the competing cities. Mr. GREEN accompanied the Naval Affairs Committee on both trips and stayed constantly in touch with and before this committee until on March 28, 1939, the House Naval Affairs Committee by a vote of 15 to 7 designated Jacksonville for this naval air base. This vote ended the contest both in the House and Senate, and Mr. GREEN had won a signal victory and carried to his district the prized Federal establishment of the past several years.

Chairman VINSON of the House Naval Affairs Committee, who has served so long as chairman of this committee, and has been a Member of Congress 28 years, gives the following brief history of this great accomplishment by Mr. GREEN.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C., February 2, 1940.

Hon. GEORGE C. BLUME,
Mayor, City of Jacksonville, Jacksonville, Fla.

DEAR MR. BLUME: As suggested, I am glad to give you a brief summary of the legislative history of the southeastern air base.

On March 25, 1938, Congressman LEX GREEN introduced H. R. 10031, which provided for the construction of an air base at Jacksonville, Fla. I suggested to Congressman GREEN soon after the introduction of his bill the possibility of special legislation for creation of a Board of Naval Experts; and provision for this Board was had in the next expansion bill of 1938.

Pursuant to this legislation, Secretary of the Navy Swanson appointed for such a Board Rear Admiral A. J. Hepburn, Rear Admiral E. J. Marquart, Capt. J. S. Woods, Capt. A. L. Bristol, Jr., Capt. Ralph Whitman, and Commander W. E. Hilbert. These naval officers made a survey of naval air-base needs for our country and on several different occasions visited the Southeast. Upon the urgent request of Congressman GREEN, close inspection was made of the Jacksonville, Fla., area.

On January 3, 1939, this Board reported to the Congress its recommendations, among which was that we would have a southeastern air base and that it would be located at Camp Foster, Jacksonville, Fla., together with carrier piers at the mouth of the St. Johns River and an auxiliary base at Banana River. On January 4, 1939, Congressman GREEN introduced H. R. 1654, to carry out the Hepburn board's recommendation insofar as a southeastern air base was concerned.

My committee made two official inspection trips of the proposals offered in the Southeast including places in South Carolina, Georgia, and Florida. Hearings were held by the committee and due consideration given to the various sites available in the Southeast. On March 28, 1939, my committee by a vote of 15 to 7 designated Jacksonville as the place for the air base. Upon this affirmative action by my committee, I informed Chairman WALSH of the Senate Naval Affairs Committee and requested him to include Jacksonville in the naval bill which was then before the Senate. He did this in his committee and there was no further contest in either the House or the Senate concerning the location of the southeastern air base.

During this entire procedure, Congressman GREEN was most diligent in his efforts for the air base to go to Jacksonville and without his experience and tactful methods of handling this matter Jacksonville might have lost the air base.

The entire Southeast is proud of this great national defense establishment and you are assured that our efforts will be had for its full development for usefulness for the purpose for which it was established.

With kind personal regards, I am,

Sincerely yours,

CARL VINSON,
Chairman, Naval Affairs Committee.

Approximately $7,000,000 worth of contracts will be awarded and construction at the Jacksonville Naval Air Base is going

on rapidly. It is estimated that between $25,000,000 and $40,000,000 will, in the reasonable near future, be expended here. This is giving employment to hundreds of persons, many of whom would be otherwise unemployed. This base will add from five to ten thousand in population and the pay roll will mean several millions annually.

Mr. GREEN's efforts for this base have been praised by many. Congressman O'Connell said:

Mr. Speaker, the Committee on Naval Affairs, of which I am a member, feels justly proud of the recent passage of our huge naval-expansion bill. The American people are awake to the eminent need of our national defense and security. A very large percentage of the world's population is now at war. Our best assurance of security is national preparedness.

Looking to the security of our Nation, my colleague from Florida, Congressman LEX GREEN, has introduced H. R. 10031, which has for its purpose the establishment at Jacksonville, Fla., of a naval air base. Members of our committee planned a few days ago to inspect there these possibilities. This meeting was necessarily postponed on account of important program in the House. Members of the committee plan to visit Jacksonville in the near future and inspect sites for the location there of these national-defense assets. We are deeply interested in adequate defense of the southeast section of our country, and, in fact, all parts of it. We are interested in the possibilities at Jacksonville, Fla., and feel that Congressman GREEN is doing a great service in this matter for national defense.

NATIONAL DEFENSE

Mr. GREEN is a strong advocate and supporter of adequate national-defense measures. He has on every occasion supported measures for appropriations for the enlargement and strengthening of our national defense. He has also given his full force and support to legislative efforts to combat un-American and subversive activities and foreign "isms."

RURAL ELECTRIFICATION ADMINISTRATION

On January 20, 1936, the House of Representatives passed H. R. 8300, introduced by Mr. GREEN which provided for the survey of flood control and power possibilities in the Suwannee River. Army engineers are now completing this survey to establish a little T. V. A. on this stream and give cheaper electrical current to every farm in that area. His district was the first one in Florida to have an R. E. A. project and the only one in the State to have a farmer-owned R. E. A. generating plant. Two of the five R. E. A. projects in Florida are in his district. It is Mr. GREEN's ambition to offer cheap electrical current to every farmer in his district.

One of the Federal R. E. A. administrators recently wrote him as follows:

WASHINGTON, *February 28, 1940.*

The Honorable LEX GREEN,
House of Representatives, Washington, D. C.

DEAR LEX: I am enclosing an interesting tabulation of information about the Florida R. E. A. projects. I cannot help noticing the large number of areas in your district that have been served already by our projects. If anyone accuses us of favoritism, we shall, of course, have to explain that your great activity and interest in this project made you first on the scene.

You are represented, in part, in five out of our eight existing projects, and the first cooperative project developed in Florida was in your district. I understand that another project is now brewing in Baker County.

You are one of those Congressmen working with and instructing their constituents in such a manner that the Federal agencies are able to serve the people.

Yours very sincerely,

BOYD FISHER,
Special Assistant to the Administrator.

In Florida Mr. GREEN is considered the father of rural electrification.

The gentleman from Mississippi [Mr. RANKIN] recently said of him:

Mr. Speaker, under permission granted me to extend my remarks, I am inserting a letter addressed to the distinguished gentleman from Florida [Mr. GREEN] on the subject of rural electrification.

The gentleman from Florida has been most diligent in his support of rural-electrification legislation, and I am delighted to note that he has been successful in securing this project for the people of his own district.

I can say from experience that there is nothing a Congressman can do that will be of greater benefit to the people in the rural sections than to secure for them the blessings of cheap electricity. I congratulate the gentleman from Florida and hope that every other Member who represents a rural district will follow his example. The letter reads as follows:

RURAL ELECTRIFICATION ADMINISTRATION,
Washington, April 12, 1938.

Refer to: Florida 14, Clay, Alachua, Bradford, Putnam, and Union; Florida 15, Lafayette, Suwannee; Florida 20, Madison.

The Honorable LEX GREEN,
House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: Further reference is made to your interest in the above projects. On February 24, 1938, $205,000 was allocated for Florida 14. This will build approximately 143 miles of line to serve 390 signed customers and an additional 523 prospective customers. Included in this amount are funds to purchase and rehabilitate existing lines in and around Keystone Heights, as well as generating equipment in the town. It is expected that this project will be enlarged to take care of additional needs of this locality in the future as demand increases.

Your aggressive effort and cooperation for these projects is appreciated. Florida 14 was the first project approved in Florida.

Yours very truly,

C. O. FALKENWALD,
Director, Examining Division.

Hon. George Carver, manager of the Suwannee Valley Cooperative Association, Inc., recently wrote:

SUWANNEE VALLEY ELECTRIC COOPERATIVE ASSOCIATION, INC.,
March 12, 1940.

Hon. LEX GREEN,
Member of Congress, Starke, Fla.

DEAR SIR: I wish to take this opportunity of expressing my high regard for your effort toward the advancement of rural electrification in Florida. I sincerely believe I express the thoughts of the majority of, if not all, our cooperative members.

Your continued efforts in behalf of the wonderful program of "electricity on the farm" cannot help but be appreciated by the thousands of farmers throughout the State.

Very respectfully yours,

GEORGE CARVER,
Project Manager.

CANAL ACROSS FLORIDA

In his campaign for Congress 16 years ago, he promised his constituents to work for a canal across Florida, connecting the waters of the Atlantic Ocean and the Gulf of Mexico. On February 1, 1926, a few weeks after he was sworn in as a Member of Congress, Sixty-ninth Congress, first session, he introduced H. R. 8742 which provided for preliminary examination of the proposed waterway across Florida. This bill was included in the general rivers and harbors bill and passed.

Upon completion of preliminary examination by the War Department, he introduced on February 7, 1930, H. R. 9650, which provided for actual physical survey of the proposed canal across Florida. This bill passed, became a law, and surveys involving the expenditure of about $400,000 and several years' work by the Board of Army Engineers were made.

Upon the basis of this survey, on January 3, 1935, he introduced H. R. 2785 providing for actual construction of a sea-level ship canal across northern Florida, connecting the waters of the Atlantic Ocean and the Gulf of Mexico.

During the past 15 years he has traveled, at his own expense, to different parts of the United States and addressed many audiences, including the National Waterways Association, in the interest of this project.

Through his efforts and the efforts of other friends of the project, endorsement was obtained by such important waterways organizations as the Atlantic Deeper Waterways Association, the Mississippi Valley Association, and the National Rivers and Harbors Congress.

He has addressed the House of Representatives a large number of times, but one of the most effective addresses ever delivered on the subject was made by him on the floor of the House on February 14, 1935. He spoke at length on the subject, using charts, maps, and diagrams, and explaining in detail the feasibility, the practicability, and the economic soundness of the project.

He has discussed the subject a large number of times over radio. On February 9, 1935, speaking over a national hook-up.

He conferred several times with President Hoover, urging the President's approval. As a member of the Rivers and Harbors Committee of the House, he had discussed this subject a number of times with President Roosevelt prior to April 5, 1935. At a lengthy conference held with President

Roosevelt on this occasion, he pointed out to the President the national importance of the project, and also the national support which the project had, and urged the President to begin construction. At the conference he was joined by Senator Fletcher and other members of the Florida delegation. The President that day gave assurance that the project would be begun. On the 3d day of September 1935 actual construction was begun on the project as a result of allocation of $5,000,000 by the President from special funds. Since construction began, Judge GREEN, as a member of the Rivers and Harbors Committee of the House, has been active and aggressive in his efforts to carry on the project to completion.

On February 12, 1936, he addressed the House of Representatives at length on the subject and urged the Congress to continue appropriations for construction.

In 1938 the Committee on Rivers and Harbors of the House, of which Mr. GREEN is a member, reported a bill for the completion of this project. Likewise, during the present Congress, his committee has again favorably reported the Florida Canal bill and it is now on the calendar awaiting action of the House. This is probably the largest and most important individual project ever to be reported by the House Rivers and Harbors Committee, and this report was brought about through the diligent and efficient efforts of Mr. GREEN.

The veteran Chairman MANSFIELD, of this committee, wrote:

Mr. H. H. BUCKMAN,
Consulting Engineer, Atlantic-Gulf Ship Canal Authority, Jacksonville, Fla.

DEAR MR. BUCKMAN: I am in receipt of your letter in which you refer to the Atlantic-Gulf ship canal across Florida.

In regard to the Atlantic-Gulf ship canal across Florida, as you are doubtless aware, that great project was approved by the Committee on Rivers and Harbors and is now pending upon the calendar. The project is rapidly gaining strength and has recently been recommended by Speaker Bankhead, Majority Leader Rayburn, Majority Whip Boland, and by Judge Driver, president of the National Rivers and Harbors Congress. Certainly a measure that has the support of these eminent gentlemen should be worthy of consideration by Congress and by the Nation. I will say that your Congressman [Mr. GREEN], who is the author of the canal bill, has been most aggressive in his efforts for this project. He is a high-ranking member of this committee and has been instrumental in obtaining important improvements for his district and State.

I consider the ship canal across Florida as a great project for national defense, as well as serving the interests of commerce. It was highly recommended by General Summerall, former Chief of Staff of the Army, and by other military and naval authorities. As an illustration of the part it would perform in national defense, I will call attention to the great Kiel Canal, which Germany constructed almost exclusively for military and naval purposes. If you will take the map of Florida and of the Denmark Peninsula, you will see that these two canals are almost identical. Certainly Germany considers the Kiel Canal of great national importance, and I believe it cannot be reasonably denied that the proposed canal across Florida would be equally important.

I am, with sincere regards,

Very truly yours,

J. J. MANSFIELD, *Chairman.*

Hon. James A. Farley, chairman of the National Democratic Committee, also praises Mr. GREEN for his manner in handling the canal measure and his usefulness.

Hon. R. A. GREEN,
House of Representatives, Washington, D. C.

DEAR LEX: I acknowledge receipt of the data on the Florida Canal.

You are ably handling the Florida Canal matter in the House of Representatives. You are doing it in a splendid fashion and are assisting in exactly the same manner as you have the Democratic Party in the general legislative program. Since President Roosevelt's inauguration more legislation of lasting benefit to the American people has been enacted than during any other period in the history of our country.

Assuring you of my appreciation for your support, I am

Sincerely yours,

JIM.

In addition to his achievements for the Florida Canal Mr. GREEN, as a member of the Rivers and Harbors Committee, has been able to secure large appropriations for the harbors of Fernandina, Jacksonville, Steinhatchee, Cedar Keys, and many other places in the State.

IMPEACHMENT OF FEDERAL JUDGE RITTER

On May 31, 1933, Congressman Wilcox, of Florida, introduced a resolution to investigate the conduct of Halsted L. Ritter, a judge in the southern district of Florida. On the morning of February 14, 1936, the House Judiciary Committee, by a majority vote, adopted a report made by Congressman Miller, a member of the Judiciary Committee. This report turned Ritter loose. On the afternoon of the same day Mr. GREEN took the floor of the House and impeached Ritter for high crimes and misdemeanors. He filed nine specific articles of impeachment and at length discussed Ritter's unfitness for the bench. On March 2, 1936, on the floor of the House, he plead for impeachment and a clean judiciary.

The House that day voted by a substantial majority to impeach Ritter. After several days of trial by the United States Senate, Ritter was, on April 17, 1936, by a two-thirds vote, convicted and removed from office.

Judge Ritter was the fourth one in all the history of our country to be thus removed, and Mr. GREEN has received the commendation for his courageous efforts in this from all parts of the United States.

SOLDIERS' HOME

April 15, 1929, Mr. GREEN introduced a bill for the establishment of a national home for disabled soldiers in the State of Florida. This bill was passed and actually led to the establishment, not only of the home in St. Petersburg, Fla., but of similar institutions in Alabama, Mississippi, and South Carolina. It was one of the most important pieces of soldiers' relief legislation ever passed.

On December 1, 1930, he introduced a bill authorizing the Secretary of the Navy to return to Florida the silver service set donated to the U. S. S. *Florida* by the Florida people. The legislation was passed.

PUBLIC BUILDINGS

On December 12, 1930, he introduced a bill providing for construction of post-office buildings as an unemployment relief measure. His bill gave impetus to the gigantic Federal building program and led directly to the building of the Federal building at Lake City, Fla., and also of many other Federal buildings in Florida.

At his suggestion, a magnificent Federal building was in 1935 erected at Perry, Fla. Since then Madison, Jasper, and Starke have all obtained Federal buildings. The one at Madison is completed and construction will begin in the next few weeks on the ones at Jasper and Starke. His is one of the few districts in the United States which has a Federal building for every town with $10,000 per year postal receipts. He now has a special bill pending for new Federal buildings for several places in his district including one for Gainesville, Fla.

TURPENTINE EXPERIMENT STATION

On December 21, 1929, he introduced a bill directing the establishment of a naval stores experiment and demonstration station on the Osceola National Forest in Florida. The legislation was approved and the station established at Olustee, Fla., and is giving untold benefits to the naval-stores and pine-tree industries. It benefits not only Florida but the entire South.

He has attended practically all conferences between turpentine producers of Florida and Department of Agriculture and R. F. C. officials in an effort to receive surplus commodity loans and all other benefits for the turpentine farmers. He has received an expression of the full appreciation of the turpentine farmers for this aid given them.

CONFEDERATE GRAVE MARKERS

In 1928 and 1929 he introduced legislation providing for the Government to furnish tombstones or grave markers for the graves of Confederate veterans. It led to the appropriation of funds for this purpose, and today thousands of these stones have been distributed to Confederate graves throughout the country.

VETERANS' LEGISLATION

On December 10, 1931, he introduced a bill providing for payment of pension benefits to widows and orphans of World War veterans, regardless of the cause of the veteran's death. The substance of this legislation passed the House but died in the Senate.

In 1933 and 1935 he reintroduced this legislation as well as a bill for straight pension to war veterans. He has now pending H. R. 5074, which bill would give disability allowance pensions to all disabled World War veterans for 10 percent, $12 per month; 25 percent, $20 per month; 50 percent, $30 per month; 75 percent, $40 per month; total permanent disability, $60 per month. The bill would also give automatic increase of 10 percent in service-connected compensation. He has filed a petition to force a vote on this bill and the sentiment in the Congress for passing this legislation is growing rapidly. He also has a bill for nonservice-connected widows and orphans of veterans and it is believed that this legislation will be passed before adjournment.

Mr. GREEN has consistently voted for all measures for benefit or relief of World War veterans, Spanish-American War veterans and their widows and orphans. He voted to pass the bill for adjusted-service certificates (bonus) over the veto of the President.

He daily receives letters and words of appreciation from veterans and their families for his efforts for pension legislation and for helping them present their claims to the Veterans' Administration.

One, today, wrote him as follows:

I am glad to know you still remember us. I often think about you and what you did for us when we really needed your help. I realize you are working for the veterans, and I want you to know that I appreciate it. Words cannot express my appreciation for what you have done for us.

Your friend,

(Signed) E. A. CREWS.

On April 25, 1935, he introduced a bill for an appropriation of $600,000 for added facilities for the veterans' hospital at Lake City, Fla. Since this time he has been instrumental in obtaining adequate appropriations for the expansion of this facility and for its general improvement.

LEGION DISTINGUISHED-SERVICE MEDAL

The American Legion post of his home county awarded him the Legion Distinguished Service Medal for 1933.

FEDERAL AID FOR ROADS

He has supported all legislation for Federal aid to roads, and on May 3, 1933, introduced a bill to appropriate $200,000,000 for highways. A greater amount was appropriated. On April 16, 1936, he addressed the House, favoring passage of the Cartwright road-appropriation bill. The bill passed.

He has consistently and on every occasion voted for Federal participation in highway construction, and his district has received its full portion of Federal road funds. Among outstanding projects which he has helped his district to achieve was the Main Street Bridge at Jacksonville, Fla.

MEDITERRANEAN FRUITFLY DAMAGES

In 1930 Mr. GREEN was the first to introduce a bill looking to survey of fruitfly eradication damages in Florida and for payments therefor. He has consistently worked for payments for these damages and a few days ago appeared before the committee and spoke in behalf of this.

FEDERAL FARM LOANS—SOIL CONSERVATION

On March 10, 1933, he introduced a bill providing for extension of time on Federal land-bank mortgages, and for other purposes. This bill gave impetus to the administration's legislation extending time on loans and permitting additional loans by the Federal land banks throughout the country. He has also been very active for legislation providing for crop loans. He has actively supported every farm-relief measure since he has been a Member of Congress.

The record shows that 77 percent of the cropland in his district last year was operated by farmers participating in the A. A. A. program. Union County, which is the county of his birth, participated up to 94 percent—the highest of the entire State.

SCREW-WORM CONTROL

On January 3, 1935, he introduced H. R. 3020, providing $2,000,000 for screw-worm control and for continuance of the tick-eradication program. Funds were provided for both purposes in the 1935 appropriation bill.

Additional appropriations have been had since this date and Mr. GREEN is now endeavoring to obtain funds to be used in practical ways for screw-worm control this summer. He is also cooperating with Florida cattlemen in their efforts for tick eradication in the Florida Everglades. This was recently acknowledged by the State veterinarian as follows:

MARCH 9, 1940.

Hon. LEX GREEN,

House Office Building, Washington, D. C.

DEAR MR. GREEN: I am pleased to acknowledge receipt of your telegram of the 8th instant, advising that you have conferred with Secretary Wallace and that he will meet the Florida congressional delegation and our committee at 10 Wednesday morning, March 20.

Thanking you and with kind regards, I am

Yours very truly,

J. V. KNAPP, *State Veterinarian.*

TOBACCO QUOTAS—TAX REFUND

In 1937 Mr. GREEN introduced a bill for the refund of taxes paid under the Kerr-Smith Act. This became law and many of these claims were refunded to the growers.

Mr. GREEN has attended practically every conference of the House Members and Department of Agriculture officials in an effort to obtain liberal tobacco quotas for Florida. A number of times on the floor of the House he has spoken in the interest of larger tobacco quotas and through his efforts Florida quotas have on two occasions been raised.

HISTORICAL MONUMENTS

In 1937 Mr. GREEN introduced H. R. 5241, for the establishment of a National Monument at Fort Caroline on the St. Johns River in Duval County. Following recent conferences with Federal park officials in Washington he more recently introduced H. R. 8886, which would authorize the acquisition of land and $250,000 for the purchase of same to mark this historic site.

FISHING INDUSTRY

He has on every occasion supported all measures for loans and benefits for the fishing industry of his district.

OLD-AGE PENSIONS

Early during the Roosevelt administration he introduced a bill giving Federal pension to the aged without State contribution. He supported and voted for the administration old-age pension and security bill, but worked for more liberal provisions, including Federal pension without State contribution.

He has consistently and earnestly worked for adequate pension for the aged and has on every occasion voted for the maximum amount offered for this purpose. He introduced H. R. 9048, new Townsend plan bill, and has on a number of occasions addressed the Ways and Means Committee and the House in behalf of this cause. His speech before the Congress on this subject on February 26, 1940, has received national acclaim. He has received hundreds of letters from all parts of the Nation commending him on his plea for the aged. Several of these letters are as follows:

DADE CITY, FLA.

Hon. LEX GREEN.

DEAR SIR: Thanks a million for your fearless stand and may God bless and keep you is our wish for you.

We certainly do need a champion such as you and want you to know we are pulling for you every minute. We are members of Townsend clubs and pray daily that it will go over. Thanks again.

PETER FALVEY,
San Antonio Club.
HARVEY PARKER,
Richland Club.

JACKSONVILLE, FLA., *March 9, 1940.*

Hon. R. A. (LEX) GREEN,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN GREEN: We Townsendites are grateful to you for your support in our cause, and we are not unmindful of the fact that the time is near at hand when we may show our appreciation through votes cast in your behalf. While there may be some persons who are in doubt, I am striving to win them over, and so far I have been successful in my attempts, and I shall continue to work for you, as I believe in you.

We shall continue in our efforts in your behalf as you have put forth efforts in our behalf.

Very sincerely yours,

J. S. RUSSELL,
President, Townsend Club No. 1.

LOS ANGELES, CALIF., *March 11, 1940.*

Hon. LEX GREEN,
Washington, D. C.

MY DEAR FRIEND: You are certainly a statesman. You are greatly appreciated as the true blue by our people here in California. I got your speech made before the Congress on your view of the Townsend national recovery plan. I am secretary-treasurer of my Townsend club and I read your speech to the club at our meeting last Tuesday. You will never know how much your strong statements in our interests were appreciated.

I am also secretary-treasurer of the organization of the associated clubs of the Townsend Movement for Southern California. At our meeting last Saturday morning it was not necessary to read your speech, for everyone at the meeting knew of your speech and there were plenty of the highest compliments for your wonderful work in Congress. We need to put first things first. It seems that you are in the front ranks. Better government is one of our slogans.

I well know that you are a busy man and I have no desire to trespass upon your time. I thank you very kindly.

Sincerely yours,

Dr. A. L. HUNT.

MARCH 14, 1940.

Hon. LEX GREEN.

MY DEAR MR. GREEN: If I live until our next voting day, I sure vote for LEX GREEN, as I have done always from the first time you went to Congress. I am an old man now, but I believe in LEX GREEN.

I will be 76 my next birthday, next July 15. I only get $15 per month. My wife will be 66 the 14th of April, and they have not done anything for her. Claim they have no funds.

If this bill should become a law, we old men could get us some clothes and a mess of meat sometimes. There is lots I like to write you, but I know you are a busy man.

You have many friends in this little town who will vote for LEX GREEN to get back on the jobs May 7. We can trust you always, Mr. GREEN, to do favors what lies in your power. You are the old peoples' friend, so I will say the good God ever guide you to do the right thing.

From your old friend,

PETER S. LANCASTER.

MUSCATINE, IOWA, *March 9, 1940.*

Hon. LEX GREEN,
Washington, D. C.

MY DEAR SIR: I could use 5,000 of your speech of February 26, but will appreciate any number you may send me.

I would be willing to reimburse you for the expense of printing if you would send me 5,000. Would like to put them in every house in this town and cover the rural routes.

Thanking you, I am,

Yours truly.

W. A. HUDLER,
707 West Fourth Street.

CEDARVILLE, N. J., *March 12, 1940.*

Congressman LEX GREEN.

DEAR SIR: Would you be kind enough to mail me 75 of your speeches made in the House in February?

I call it a masterpiece of Townsend philosophy. I would like to distribute your speech in my Townsend club. Every Townsend member should read it.

Yours very truly,

ELMER BORNE.

The founder of this great organization, Dr. Francis Townsend, recently commended our colleague as follows:

JANUARY 22, 1940.

The Honorable LEX GREEN,
House of Representatives, Washington, D. C.

DEAR MR. CONGRESSMAN: I am happy to inform you that the services in Congress you were elected to perform by the Townsend followers of Florida have been satisfactorily carried out.

You are hereby endorsed for reelection as Member of Congress for your district and I have today heartily recommended that you be given full support by your constituents for another congressional term, and have requested all members of our organization in your district to lend you their undivided support.

You can depend upon me to be of active service to you in your coming campaign; therefore, do not hesitate to command me.

Most sincerely yours,

DR. F. E. TOWNSEND,
Founder and President, Townsend National Recovery Plan, Inc.

LABOR—RAILROAD RETIREMENT PENSIONS

He supported and voted for both of the Crosser railroad employees' retirement (pension) bills, the train-length-limit bill, unemployment insurance, employers' liability law, and has a consistent record favorable to labor legislation. Recently in a public address, Mr. GREEN said: "I believe in the dignity of labor and the majesty of toil. There is no aristocracy except that of honor, and no rable save that of crime. I have wielded both the sledge hammer and the broadax and am not too good to do it again if necessary. I honor the man who earns his bread by the sweat of his brow."

Labor leaders say he has the best labor record of any Floridian. He has consistently been endorsed and supported by labor organizations including the railroad brotherhoods, and now bears their strong commendation for reelection. The president of the American Federation of Labor recently expressed approval as follows:

JANUARY 24, 1940.

Mr. CHARLES E. SILVA,
President, Florida State Federation of Labor,
Tampa, Fla.

DEAR SIR AND BROTHER: Congressman R. A. (LEX) GREEN has represented the Florida Second Congressional District continuously for the last 15 years. During that period of time he has constantly kept in touch with the officers and representatives of the American Federation of Labor at our headquarters and has invariably supported legislation which we were advocating.

He has proven himself by his conduct and votes to be a true friend of the American Federation of Labor.

I wish you would bring this letter to the attention of our members in Mr. GREEN's district, with the request that they and their friends vote for him.

Fraternally yours,

WILLIAM GREEN,
President, American Federation of Labor.

Labor groups consistently commend his efforts as expressed in the following:

NATIONAL FEDERATION OF FEDERAL EMPLOYEES,
LABOR BUILDING, WASHINGTON, D. C., *February 19, 1940.*

Hon. LEX GREEN,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN GREEN: On behalf of the National Federation of Federal Employees we express to you our sincere appreciation of your vote for the passage of H. R. 960, the Ramspeck bill, extending the classified executive civil service of the United States.

Your action with regard to this measure has helped materially to improve the entire personnel situation in the Federal Government.

Sincerely,

LUTHER C. STEWARD,
President.
GERTRUDE M. MCNALLY,
Secretary-Treasurer.

ENGINEERING EXPERIMENT STATIONS

On January 25, 1937, Mr. GREEN introduced H. R. 3629, for the establishment of engineering experiment stations in the land-grant colleges. Throughout the United States this bill met with popular approval, but was held up pending survey of the National Resources Planning Board. On February 1, 1940, he reintroduced this bill as H. R. 8260. It is now undergoing study by the departments of the Government. This bill has strong support of the executive committee of the land-grant college committee and in all probability will become law.

SHORE EROSION

On April 13, 1936, he introduced H. R. 12258, to provide for Federal cooperation to prevent erosion and destruction of beaches and water fronts. The Government is now seriously embarking upon this worthy undertaking.

P. W. A.

Mr. GREEN has been a consistent supporter of the P. W. A. program and has been instrumental in obtaining allocation of funds for his congressional district for a large number of buildings in his district, and the Florida tuberculosis sanatorium at Orlando represents an outstanding P. W. A. accomplishment.

AGAINST CARPETBAGGERS

He has protested against out-of-State Government employees working in Florida. On August 22, 1935, Mr. GREEN introduced House Joint Resolution 398. This resolution made it a criminal offense for a Government official to be employed in any State until he had been a bona fide resident of such State for 2 years prior to his assignment. The effects of this resolution almost broke up Federal-employee carpetbagging in Florida and gave to Florida people Florida jobs.

COAST GUARD STATION FOR CEDAR KEY

On January 18, 1937, Mr. GREEN introduced H. R. 3142, for the establishment of a Coast Guard station at Cedar Key. He has recently reintroduced this measure and favorable action is very hopeful on account of the expansion of the national-defense program. He has also repeatedly urged the reestablishment of Coast Guard facilities at the harbor of Fernandina and owing to emergency conditions at this time Fernandina may soon have Coast Guard service enlargement.

STEPHEN FOSTER MEMORIAL STAMP

On January 23, 1939, he introduced House Joint Resolution 128, which provided for the printing by the Post Office Department of a postage stamp in the honor and memory of the life and works of the renowned composer Stephen Foster. The stamp has been issued.

MARINE HOSPITAL FOR JACKSONVILLE

Realizing the need for a marine hospital at Jacksonville, Mr. GREEN, in 1937, introduced legislation for this purpose. Legislation passed, but was vetoed by the President. On January 20, 1939, he introduced H. R. 2985 for this purpose, and on March 21, 1940, he appeared before the House Merchant Marine and Fisheries Committee in this behalf. The bill has the approval of the United States Public Health Department, and it is believed it will be enacted into law at this session.

In an effort to assist the shipping industry at Jacksonville, Mr. GREEN has introduced H. R. 5682, which has the approval of the Public Health Department, and shall in all probability be enacted into law.

GUARANTEEING OF BANK DEPOSITS

Mr. GREEN voted for the bill to guarantee the deposits in banks and has been consistent in supporting all legislation helpful to the businessmen and industry of Florida, such as the R. F. C. appropriation. Other measures for financial relief have had his support and cooperation for enactment. Chairman STEAGALL, of the House Banking and Currency Committee, has commended Mr. GREEN for his cooperation.

WORK PROJECTS ADMINISTRATION

Mr. GREEN has been a supporter of W. P. A. legislation and advocated appropriation adequate to take care of the needy and give employment to those out of jobs. At the last session of Congress he voted against the 18-month lay-off provision and voted for an increase in the appropriation. He has always, at conferences and by speeches on the House floor, advocated equal payments throughout the United States for similar work on W. P. A. projects. Recently he introduced H. R. 9065, which would compel the payment of equal wages for the same work in all parts of the United States. In a recent speech on the floor he deplored the payment of $35.10 per month to laborers in Florida and $55 per month in some of the other States. The bill would also repeal the 18-month lay-off provision as well as the 25-percent sponsorship requirement, and would put up Federal funds 50–50 with State funds to certify the needy. It would make unnecessary past work history requirement for certification. He has at all times defended W. P. A. workers and advanced their full rights. During the early part of this month he appeared before the House Appropriations Committee in behalf of adequate appropriations for N. Y. A. work. He plead in behalf of dependent children, most of them in school, who would be cut off from employment and school if this appropriation was reduced.

COMMODITY FOOD-STAMP PLAN

Mr. GREEN was the first one from his State to confer with officials of the Federal Surplus Commodities Corporation and make efforts for the beginning of the commodity food-stamp plan for Duval County. As the result of his efforts, this plan is to be established in Duval County during the next month. It will be a great help to the W. P. A. workers and, in fact, increase their food income by the amount of several dollars each month. It is estimated by Commodity officials that this will increase sales of local grocerymen by $200,000 from about May 1 to July 1, and that the increase from July 1, 1940, to July 1, 1941, will be a million dollars. This will be of tremendous benefit to the economic and business life of Jacksonville.

In reviewing the record of my colleague [Mr. GREEN], I am reminded of an address made on March 16, 1916, by former Speaker Champ Clark at the Washington Press Club reception, and printed in the CONGRESSIONAL RECORD on March 17, 1916, as follows:

It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor.

"Poeta nascitur non fit"—a poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

The old Charlotte district in Virginia knew this and kept John Randolph, of Roanoke, in the House till he became a great national figure. Then the Old Dominion sent him to the Senate and General Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.

It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possesses these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the top-notchers.

Let us take the present House and see how long the men who hold the high places have served. I cannot name all, but will cite a few as samples.

Mr. Speaker Cannon is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt," for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker 8 years, only one man, Henry Clay, having been Speaker longer.

I am serving my twenty-second year; Minority Leader Mann is serving his twentieth year; Mr. Kitchin, chairman of Ways and Means, his sixteenth; Mr. Fitzgerald, chairman of Appropriations, his eighteenth; Mr. Moon, chairman of the Post Office and Post Roads, his twentieth; Mr. Jones, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. Flood, chairman of Foreign Affairs, his sixteenth; Mr. Hay, chairman of Military Affairs, his twentieth; Mr. Glass, chairman of Banking and Currency, his sixteenth; Mr. Adamson, chairman of Interstate and Foreign Commerce, his twentieth; Mr. Stephens, chairman of Indian Affairs, his twentieth; Mr. Slayden, chairman of the Library, his twentieth; Mr. Henry, chairman of Rules, his twentieth; Mr. Lever, chairman of Agriculture, his sixteenth; Mr. Padgett, chairman of the Navy, his sixteenth; Mr. Lloyd, chairman of Accounts, his twentieth, and Mr. Sparkman, chairman of Rivers and Harbors, his twenty-second. There are other big chairmanships, but these will suffice to show that, as a rule, the big places go to old and experienced Members, for most of the men who rank close to the chairmen are old-timers. The same thing holds good with reference to members of the minority. As an illustration, Messrs. Gillette and Cooper, who are serving their twenty-fourth year, are the ranking Republicans on Appropriations and Foreign Affairs, almost certain to be chairmen thereof should the Republicans ever again have a majority in the House, as in that event, in all probability, Mr. Mann will be Speaker, unless he is nominated for President next June.

Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and, having elected a fairly good man to Congress, they keep him in the harness.

The Member of longest consecutive service is called the "father of the House." Five Philadelphians in immediate succession bore that honorable title—Randall, Kelley, O'Neill, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When General Bingham announced the death of General Harmer, his immediate predecessor as "father of the House," he stated that the five Philadelphia "fathers of the House" had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

In the second and third Congresses in which I served, Maine, with only four Members, had the Speakership and the chairmanship of the great Committees on Ways and Means, Navy, and Public Buildings and Grounds—a most remarkable circumstance, giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country.

The best rule, it seems to me, is for a district to select a man with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things.

I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in "mending my fences." My constituents have attended to that. God bless them.

The speech of Speaker Champ Clark is deserving of the thoughtful study of every voter of the country.

It is a nationally known fact that those districts which have retained their Representatives in Congress for the longest continuous terms have received the best service and the greatest recognition. The present Speaker of the House, Mr. W. B. BANKHEAD, of Alabama, has been in Congress for 24 years. The majority floor leader, Mr. SAM RAYBURN, of Texas, has been in Congress for 28 years. The chairman of the Ways and Means Committee, Mr. R. L. DOUGHTON, of North Carolina, has been in Congress for 30 years, and the chairman of the Appropriations Committee, Mr. ED TAYLOR, of Colorado, has been in Congress for 32 years, and the chairman of the Judiciary Committee, Mr. HATTON W. SUMNERS, has been in Congress for 28 years—the longer the successive tenure of office the greater the service and usefulness of the Representatives. Why should a constituency exchange experience and efficiency for inexperience? The Congress, since the inauguration of President Roosevelt, has responded nobly to the call of duty and should receive the endorsement and approval of a Nation now upon the high road to recovery.

World conditions are unsettled and all the major powers except the United States are engaged in war. This is of grave significance to our Nation. We are now facing one of the most critical periods in the history of our Republic—men of courage, honor, and experience are needed in public life. Mr. GREEN measures up to the high standards of noble statesmanship; his record and career in the Congress has proven him worthy and dependable. Men of his high character and ability are needed to help guide the destiny of our Nation.

Appreciation of his character, service, and ability is expressed by the gentleman from Pennsylvania, the Honorable PATRICK J. BOLAND, Democratic whip, and the gentleman from Texas, the Honorable SAM RAYBURN, House Democratic leader. as follows:

OFFICE OF THE MAJORITY WHIP,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 18, 1940.

Hon. R. A. (LEX) GREEN,
House of Representatives, Washington, D. C.

DEAR LEX: I wish to extend to you my sincere thanks, as my assistant whip, for the splendid and effective cooperation you gave me during the past 10 years.

At such times when it was impossible for me to be on the floor of the House, I knew that you would perform the duty of assistant whip with such diplomacy and efficiency that desired results would be forthcoming. I feel that our administration here in Washington owes you a debt of gratitude for your splendid work, and I wish at this time personally to express my thanks for your cooperation.

Your long experience here has given you strength and power in the councils of our great Democratic Party. Your aggressiveness, high character, and fair dealings have enabled you to accomplish things of outstanding importance for your district and for the country as a whole. Men of the courage and character of your type are needed in the Congress during the critical period now facing our country. I hope that the voters of your district will continue your services as a Member of Congress.

With very kind personal regards, I am,

Sincerely yours,

P. J. BOLAND, *Majority Whip.*

OFFICE OF THE MAJORITY LEADER,
HOUSE OF REPRESENTATIVES, UNITED STATES,
SEVENTY-SIXTH CONGRESS,
Washington, D. C., March 26, 1940.

Hon. LEX GREEN,
House of Representatives.

DEAR LEX: I do not know when this session of Congress will close, but before it does I want to thank you for your fine spirit of cooperation with the House leadership. Your service here for your State and the country at large has been outstanding.

I want you to know how personally grateful I am to you for your loyalty, not only to the House organization but also to the administration. I have depended on you much, and during the time you have been a Member of the House of Representatives you have impressed yourself upon its membership in a way that has made you very influential.

Your work as chairman of the Committee on the Territories, and as a member of the Committees on Flood Control, Immigration and Naturalization, and Rivers and Harbors, and as assistant Democratic whip has been of great service.

I trust that during this critical period the people of your district will exercise the good judgment to return you to the House of Representatives where, on account of character and ability, you have gained in power and influence.

With every good wish for you personally, I am,

Sincerely yours,

SAM RAYBURN.

EXTRACTS FROM MR. GREEN'S ANNOUNCEMENT FOR CONGRESS

My record is an open book; upon it I stand. There is nothing hidden, and your examination of it is invited. During the past 15 years as your Congressman I have done all within my power to bring to you every possible protection and assistance from our Federal Government. Possibly mistakes have been made, because we all make mistakes, and probably none is without fault. I shall be satisfied, however, if, upon examination of my record, you will give careful consideration to each vote cast and official acts which I have performed, place the good on one side of the scales and the errors on the other side of the scales, and vote for the side that weighs heavier. I have no fear of the outcome of such a ballot, because I feel certain that you will find in my record more merit and perfection than demerit and imperfection.

I bring this high office back to you without stain or tarnish. Even my most severe critics have always admitted that I have been honest and industrious and that I have always been faithful to the interest of the plain people and loyal to my esteemed friends. I trust that it may be your desire to continue me as your Congressman for another term.

ACCOMPLISHMENTS

In my campaign 16 years ago I promised to work toward definite goals. Among these were the following: First, to convert Muscle Shoals into a plant for the production of fertilizer. I voted for the Muscle Shoals bills twice during the Republican administration and it was vetoed by President Hoover and President Coolidge, but under President Roosevelt I voted for the Muscle Shoals bills and he signed them. Second, cheaper freight rates. Freight rates have been reduced and should and will be further reduced in the future. Third, increased loans to farmers.

Since the Democrats came into power we passed the Federal farm-relief bills which have loaned and paid in subsidies and soil-conservation benefits to the farmers of our Nation billions of dollars. Also the A. A. A. and other farm measures, which have increased prices of farm commodities. Fourth, Federal aid to schools. The Government is now expending a greater amount in education, buildings, and extension work. Fifth, increased Federal aid for roads. Since I have been a Member of Congress we have appropriated probably 10 times as much for Federal roads as during any other similar period. Sixth, extended hospital treatment for veterans. Hospital facilities for veterans are 5 times greater since I have been a Member of Congress. Seventh, restriction of immigration. We have restricted immigration about 95 percent since I have been a Member of Congress. Eighth, the construction of a canal across Florida. I have introduced and the Congress passed bills on the canal since I have been in Congress, and considerable work has been done on the canal.

On September 26, 1939, I formally announced my candidacy for reelection as a Member of Congress. Newspapers in my district at that time carried the following statement:

"Congressman LEX GREEN, who has represented the Second District for the past 15 years, announced today that he would be a candidate to succeed himself in the May primaries.

"His seniority in the House has given him strength, prestige, and contacts which is of vital help to the Second Congressional District and the State of Florida. He holds the only chairmanship which is held by Florida in either the House or the Senate—that of the

important Committee on the Territories. In addition to this committee he is a member of the Immigration Committee, also the Committee on Flood Control, and is near the top of the powerful Committee on Rivers and Harbors. He has for the past 10 years served as assistant Democratic whip, and in this capacity has rendered helpful services to the Democratic administration during the past 7 years of this party's control. It is believed by his friends that he is in a position to render valuable services in the House during this critical period.

"Today Congressman GREEN said: 'Our Nation is facing possibly one of the gravest emergencies in its history—about three-fourths of the world's population is now engaged in war, and these wars are not without significance to America. Our Nation is a peace-loving nation, and it is our earnest hope not to become involved in war. Friends of mine have expressed their desire that I should seek reelection, and this I shall do.

" 'With the faithful cooperation of the voters of our district, we have been able to obtain during the past 15 years many substantial benefits to our district and State. Among these are the naval air base at Jacksonville; rural electrification for more than one-half of the counties of our district; surveys for and the beginning of the Florida Canal and other major waterway developments; legislation beneficial to the farmers, the growers, and the industries of our district; benefits for war veterans and their dependents; benefits for the aged and needy; and many other Federal benefits have been realized.

" 'Our earnest and cooperative efforts will be in the future to: First, keep our Nation out of war and at peace with the world; second, developing the naval air base at Jacksonville and the National Guard establishment for our district; third, adequate defense for our Nation and combating things un-American; fourth, a square deal for labor; fifth, adequate pensions and security for the aged, the dependent, and needy, reform of social security and the enactment of the Townsend plan; sixth, adequate pensions for all disabled veterans and their dependents, widows, and orphans; seventh, rural electrification expansion; eighth, completion of the Florida Canal and development of our inland waterways and harbors; ninth, adequate W. P. A. and other emergency appropriations and reforms of W. P. A. law and administration, and hospitals in every place where needed; tenth, legislation for the benefit and protection of our farmers, growers, and livestock men and for forestry and industry. Earnest and conscientious efforts for all things for the welfare, help, and protection of the people of our district, State, and Nation.

" 'If you continue my services here I will do all within my power to accomplish these 10 points, and I hope to make substantial accomplishments in this direction.' "

PRESENT DEMOCRATIC ADMINISTRATION

A clear understanding of the President's emergency-relief program is needed. Please carry your thoughts back 7 years in order to thoroughly understand and fully appreciate the scope and purpose of this gigantic relief program, it is well to refresh our memories of the chaotic condition which faced the American people about 12 months before his election. At this time business and industry was at its lowest ebb since the beginning of the depression. Agriculture was in the depths of despair; ten or twelve million idle men and women were walking the highways and streets in increasing numbers looking for jobs. By the 1st of March 1933 a banking holiday had been declared in many States of the Union. The people had almost lost confidence in the ability of their Government to bring about a recovery. Economic chaos threatened the country to a more alarming extent than in the darkest days of the preceding years. Wheat had sold as low as 18 and 25 cents per bushel; cotton 5 to 6 cents per pound; and corn as low as 10 or 12 cents per bushel; in fact, some of the corn growers of the Middle West were burning their corn for fuel, while the coal miners were without food and in need of this very corn for food for themselves and families. There was an abundance of wheat, corn, cotton, wool and meats; yet millions of people hungry for the want of these foodstuffs and cold from lack of cotton and woolen garments. Granaries and warehouses were filled to capacity, yet railroad cars stood idle and rusting out in the railroad yards, and idle freight boats rode at anchor throughout the harbors of our country. Industry was paralyzed, credit was destroyed. In fact, local credit was almost nonexistent. The old custom of 150 years ago of trade and barter and exchange was in common use. One individual would trade and barter products or commodities for some other needed product or commodity in order to obtain cloth, food, fuel, and necessities of the body. Agriculture was on the very brink of bankruptcy. Money had either gone into hiding or was locked up in bank vaults.

The then-remaining banks in the country were closing in alarming numbers, carrying with them the life savings of honest American citizens. Church and charity funds and the trust funds of orphans were not even spared. There was a deficit even in the Budget of our Federal Government which had occurred for the past 3 years and which aggregated over $5,000,000,000. But what was even worse than all of this, there were forces of doubt, suspicion, and destruction at work in our midst which threatened our social and civic institutions and the very foundation of our Government itself. In part, these were the chaotic conditions which faced the American people in the most trying times in the peacetime history of our country; but our American Government was founded through valor and courage, and in its darkest hours it has always produced leadership. The American people have in this darkest hour of the country's history found courageous and able leadership which has come forth and proceeded unafraid. A New Deal was not only required but a leader of kind heart, firm hand, and quick decision was needed to put the New Deal into effect and to inspire that confidence in the American people which was all-essential to recovery. Such leadership appeared in the person of Franklin D. Roosevelt. Probably the most fateful hour and fateful minute in the history of the American Republic was on the 4th day of March 1933, when, in his inaugural address, he said:

"So, first of all, let me assert my firm belief that the only thing we have to fear is fear itself—nameless, unreasoning, unjustified terror which paralyzes needed effort to convert retreat into advance. In every dark hour of our national life a leadership of frankness and vigor has met with that understanding and support of the people themselves which is essential to victory. I am convinced that you will again give that support to leadership in these critical days."

To this clarion call the American people in all walks of life have responded most nobly and have almost shaken off the shackles of depression. President Roosevelt is a man of action. Through his able leadership the Congress has passed during the past 7 years a series of measures which have reshaped the economic and industrial life of the Nation. I will briefly mention a few of these measures:

AID TO FARMERS

Farm-relief measures, including the A. A. A., Soil Conservation and Benefit Payment Acts: These various acts have more than doubled the incomes of 30,000,000 who dwell on the farms. The purchasing power of this group has been increased about $6,000,000,000; farm mortgages have been refinanced; extensive crop, agriculture, and farm-security loans have been made. Muscle Shoals, which had been idle, now has been converted into an experimental fertilizer-producing plant and into the great T. V. A. power establishment. T. V. A. reduced power rates throughout the country and was the beginning of rural electrification, which has been carried to some 25 percent of the farms in this country. The price of fertilizer has been reduced.

BANK DEPOSITS GUARANTEED

The Glass-Steagall Banking Act, the deposit insurance or deposit guaranty law, and other banking bills have stabilized the currency of our country and reopened banks throughout the country; credit has loosened up in practically all places and banks are now lending money in 10 times the amount lent out in 1933. There is no fear of a bank closing on deposits, and the general public has the utmost faith in the safety of our banking institutions. The banks now have on deposit about twice the money deposited in 1933. The Federal Securities Act has practically stopped the cheating, swindling, and stealing in the sales of securities and stocks.

Under the Home Owners' Loan and Housing Acts, millions of people have been enabled through Federal financing at low rates of interest to own their own homes—and, after all, the home, as such, is the very Gibraltar and strength of our American civilization.

LABOR

Organized labor has probably gained more during the past 7 years than at any other time in the history of the world: the right to bargain collectively, unemployment insurance, employers' liability law, the railroad benefit or pension acts, and many other measures for the protection and benefit of labor.

OLD-AGE PENSIONS

For the first time in the history of our country the Government has recognized its responsibility to the aged and needy. Social-security benefits are extended to the aged, the dependent children, and the blind. Did you ever hear tell of 1 dime being given by the Federal Government to the aged and needy except under the Roosevelt administration? Of course, this job is not half finished, and will not be finished until straight, adequate pensions are paid directly from the Federal Treasury to all the aged in our country. This I shall continue to work for.

P. W. A. and W. P. A. have carried out construction programs which have substantially added to the material wealth in buildings to the Nation, and at the same time these programs have fed the needy and given employment to those who were otherwise unemployed and destitute.

TIMES BETTER

During the past 7 years, under the Democratic administration, we have seen great improvements in business; factory pay rolls have about doubled; five to six million persons who were unemployed are now following gainful occupations. The income of the American people has increased from about $38,000,000,000 to more than $70,000,000,000. Automobile production and gasoline consumption has more than doubled; and, in fact, general business is from 50 to 100 percent better now than 7 years ago. Practically every farmer or businessman in this country is better off now than he was 7 years ago. Stores which were then closed are now doing a thriving business, and thousands of people who were then destitute and hungry are now employed on W. P. A., and otherwise, and have things to eat and use. Of course, this job is not yet done, and it is my hope to see the time come soon when every person in our country desiring to work will have a job, and all want will be entirely banished from our land. There is enough material to make shelter for all; there is enough cotton and wool

to give warm garments to every back in America; there is enough wheat, corn, and meat to give these necessities of life to every hungry mouth in the Nation; there are enough automobiles in our land to take every American, large and small, to ride at the same time. In fact, there is an abundance of every necessity and comfort of life that all may be supplied and cared for. It is my ambition and your ambition to work toward the economic goal of comfort and plenty for all. Our Nation is now traveling in this direction. Let us all go forward instead of turning backward.

WAR CLOUDS

The greatest threat to civilization now is war. More than 75 percent of the world's population is engaged in war, and these people are experiencing the horrors and tragedies of armed conflict. Our Nation is about the only major country which is now at peace with the world. We have recently seen Ethiopia, Finland, Poland, Czechoslovakia, and several other small nations overrun and devoured by powerful and strong military powers. Spain has recently been reduced to ruins by armed conflict of zealous military powers. Cannons are roaring; swords are flashing; airplanes are dropping missiles of death from the air; mines and submarines infest the waters from the Bering Sea through Asia, North Africa, and Europe, to beyond the British Isles. Canada, our next-door neighbor, is a part and parcel of this armed conflict. Any hour or day this struggle may grow more bloody and tragic. Probably 35,000,000 soldiers are now called to the colors of these fighting nations. Innocent children and old people are huddling themselves together in caves and beneath the shelter of rocks and in the dense forest to escape the onslaught of death by modern instruments of war. War has no conscience and is the respecter of no individual or human rights. Our own Nation is feverishly arming to defend itself. Our Nation does not want war; the American people are a peace-loving and noble people. I favor adequate provision for our national defense, but I am opposed to our Nation being drawn into this European war. The best security for our Nation to keep out of this war is to prepare adequately to defend our own Nation here on American soil. This is the most critical period in the world's history, and our Nation must be prepared to meet and surmount the crisis.

DO NOT SWAP HORSES IN THE MIDDLE OF THE STREAM

Our Nation is in the middle of the stream at home and abroad; in fact, civilization may be threatened. I have done the best I could to properly and efficiently serve you in Washington as your Congressman during the past 15 years. I am no stranger to you—practically all of you have known me personally over these many years. I was born near Lake Butler on a little farm; picked cotton at 4 years of age; plowed at 8 years of age; taught school at 16; graduated from the University of Florida and attended law school at Yale University. I served in the State legislature, as county judge of Bradford County, and for the past 15 years here. I am familiar with the conditions here, and earnest in my service for the best interests of the people of our district. I would like to serve you another term. If you had a house almost completed, I do not believe you would change carpenters without good cause. If you were improving from a serious illness, I do not believe you would change doctors if your doctor was faithful and sincere. If you were almost to the end of your journey, I do not believe you would stop to trade automobiles if the one you had was running smoothly. If you had a faithful and experienced employee in your own business, I do not believe you would replace him with one without trial and experience. While I have had 15 years' experience in Congress, I am still only 48 years of age, at the time of life when I should be able to render you the best services. It is my desire to do this, and I hope that the people of our district will see fit to continue my services. I hope you will not "swap horses while in the middle of the stream." You have kept me here long enough for me to be a committee chairman, the only chairmanship held by Florida in the House or Senate. I am very near the top of three other committees—the Flood Control Committee, Immigration and Naturalization, and the powerful Committee on Rivers and Harbors. The Rivers and Harbors Committee assignment is of tremendous benefit to our State, which has a 1,300-mile seacoast and countless streams, and to our district, which borders on both the Atlantic and the Gulf. Last year through this committee we were able to obtain millions of dollars' worth of improvements for our district and State. My assignment as assistant Democratic whip for the past several years is probably the only party assignment held by Florida for the past half century. These assignments and this seniority belong to our district and is held in my name and made possible only through your kind support. If you elect me for another term, I shall continue to labor for things of benefit for our district and for the cause of the plain people.

WHISPERING CAMPAIGN

The special interests have always opposed me by word of mouth and through certain newspapers. They have always tried to mislead my friends into voting against me because I have stood for the masses and worked for the interest of the rank and file. If I were President and possessed a vast fortune, I still would want the same friends which I now enjoy. In Holy Writ we read, "Blessed are the meek, for they shall inherit the earth." In this I firmly believe.

I cannot forget my own handicap and struggle in trying to obtain an honest education. I plowed, hoed, dug ditches, chipped pine gum, and cut cross ties. I am doing all within my power to give you proper and efficient service. Your letters are answered, your interest here cared for; my secretaries work long hours in an effort to help to give you efficient service. Not a single one on my pay roll is related to me either by blood or marriage, and every one is a resident and voter of our district. Do not be misled by the whisperings of the enemy. I will go up or I will go down in the cause of the common people, and I urge that you stand by me. Every victory that I have won and every worth-while accomplishment has been made possible only through the efforts of my loyal friends. You have stood by me in the past and never permitted me to go down in defeat.

Do not be misled by the whisperings, because you have known me these long years. My belief in the fundamental principles of democracy and my sincerity of purpose to serve the plain people of our district shall never change. My sympathy and effort for the laboring man and the underprivileged will be forever paramount. My ardent belief in the true principles of Americanism and white supremacy grows stronger with age, and with a keener sense of the importance of same. In defending the weak and aiding the helpless, I am happy. In honestly serving to the best of my ability my fellow man, I am content. I am the same man you voted for 16 years ago. My faith in you, my friends, is founded upon the strong rock of hope and confidence.

I have kept the faith, and in you my faith now abides.

Calling all Friends of N. Y. A.—Calling all Friends

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

Mr. MURDOCK of Arizona. Mr. Speaker, what is the parliamentary situation with regard to the N. Y. A. appropriation when the committee rose today? Obviously, the friends of N. Y. A. have won a partial victory in carrying the Johnson amendment to the Collins amendment on a teller vote. Let me emphasize that this is only a partial victory and might easily be turned into a defeat within 5 minutes after the committee resumes its session tomorrow or whenever it resumes its session on this bill.

As a friend of the N. Y. A. and one who wishes a generous appropriation for this great constructive work, I deeply regret that the committee rose today just when it did, for with the large attendance in the chamber at the time of rising, the other two amendments on this item already offered probably could have been disposed of in less than 10 minutes. All debate, I understand, has expired and nothing remains on these 2 amendments but a vote.

If the friends of N. Y. A. and the supporters of the Collins and Johnson amendments are not steadfast and alert, the Taber substitute amendment might carry, or the Collins amendment as amended might fail to carry within a few minutes after the committee resumes its sitting. As I understand it, the Taber substitute amendment will be the first to be voted on in the Committee of the Whole, and naturally I think such a drastic reduction should be overwhelmingly voted down. Perhaps there is little likelihood for the Taber substitute amendment prevailing, but the vote then comes on the Collins amendment as amended by the Johnson amendment. With the leadership having this bill in charge opposed to the Collins amendment, both as amended and without amendment, many members who had not given it study might be inclined to "go with the committee."

Therefore, this adequate appropriation for the N. Y. A., which so many of us have striven for, is not "out of the woods." It is not safely assured by the vote taken in the Committee of the Whole before that committee rose today. To follow through to a complete victory for this worthy cause every friend of N. Y. A. must be present when a sitting is resumed on this bill and must adhere steadfastly to his conviction expressed by his vote late today.

Selection of Candidates for the Military Academy

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

LETTER FROM BRIG. GEN. JAY L. BENEDICT

Mr. MILLER. Mr. Speaker, under date of March 7 I inserted in the CONGRESSIONAL RECORD a report made to me by a committee which I had appointed to select candidates for the Military Academy at West Point and the Naval Academy at Annapolis.

Under date of March 18 I received the following letter from Brig. Gen. Jay L. Benedict, Superintendent of the United States Military Academy, which may be of interest to the Members of the House:

UNITED STATES MILITARY ACADEMY,
West Point, N. Y., March 18, 1940.

Hon. WILLIAM J. MILLER,
House of Representatives, Washington, D. C.

DEAR MR. MILLER: Your remarks in the CONGRESSIONAL RECORD of March 7, 1940, on your method of selecting candidates for the Military Academy, have come to my attention.

Methods used in the selection of candidates by Members of Congress are their own responsibility and the Military Academy has no desire to project itself into this field. I cannot refrain, however, from congratulating you upon devising such an excellent method and informing you of the very favorable impression it has made upon us here at the academy. It is considered greatly superior to the ordinary competitive mental examination.

Our own system of determining entrance qualifications is necessarily restricted to tests of mental and physical qualifications. It contemplates that other desirable qualities, such as personality, character, initiative, determination, potential leadership, etc., be determined by the appointing authority before principals and alternates are designated for our mental and physical tests. Your method should be most effective in accomplishing this.

Another very desirable feature is the testing of scholastic aptitude and achievement by methods that do not require special preparation and put a premium upon so-called "cramming." I feel that your fine method is in the best interests of the country and of the Military Academy as well as the young men of your district. We here shall watch with interest the progress of the young men that it sends to us.

With best wishes,
Sincerely,

JAY L. BENEDICT,
Brigadier General, Superintendent.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 26, entitled "A Great Issue":

A GREAT ISSUE

Debate began in the Senate yesterday on a question which overshadows in importance most other issues on the calendar of Congress at this session. This is the proposal to renew the authority under which Secretary Hull has negotiated 22 reciprocal-trade agreements. A measure providing for such renewal was passed by the House a month ago, with the Republicans almost solidly against it. It is already clear that in the Senate the Republicans will have the support of a considerable number of Democrats who are willing to break with the administration on this issue.

It was one of the leaders of the Democratic Party in the Senate, Mr. PITTMAN, who fired the first shot yesterday at the Hull program. To Mr. PITTMAN the power which the President and his Secretary of State enjoy under the Reciprocal Tariff Act suggests a comparison with the power which totalitarian governments enjoy abroad. The comparison is fantastic. The President and Mr. Hull are simply authorized to negotiate agreements under certain definite restrictions and within certain definite limitations fixed by Congress itself. Congress may change these restrictions and limitations at any time it chooses to do so. It may confine the authority of the administrative branch as narrowly as it likes. The only penalty here is that it will get no trade agreements, and no trade expansion, unless it gives the administration at least a little leeway for purposes of negotiation.

It would be a more accurate statement of the case to say that the surest way to bring about some form of totalitarianism in this country is to knock on the head every reasonable and realistic proposal looking toward a revival of our foreign trade. For it is the loss of foreign markets—witness Germany; witness our own experiments with N. R. A. and A. A. A.—that prompts governments to dabble in such devices as "price control" and "production control" and other forms of economic regimentation designed to shape the domestic economy exclusively to the needs of a domestic market. The Republicans who in one breath denounce the administration for "regimenting" the country, and in the next breath denounce it for lowering tariffs which now discourage trade, are more than inconsistent; they are blind.

The Hull trade program is a practical method of removing barriers to trade with a minimum of disturbance to domestic industries which are subsidized by existing tariffs. The program has worked in practice. It has helped our trade. It has benefited the consumer. It offers the one best hope of achieving that closer union of the Pan-American republics of which we hear so much. From whatever point of view it is considered, it meets the needs of a critical time.

The St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

LETTER AND RESOLUTION FROM THE TRI-ABBOTT SOUTH PARK BUSINESSMEN'S ASSOCIATION, OF BUFFALO, N. Y.

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter and resolution from the Tri-Abbott South Park Businessmen's Association, Inc., Buffalo, N. Y., in opposition to the St. Lawrence seaway and power project:

BUFFALO, N. Y., *March 25, 1940.*

Representative PIUS L. SCHWERT,
Washington, D. C.

DEAR "PI": Enclosed you will find a copy of the resolution adopted by officers and members of the Tri-Abbott South Park Businessmen's Association at its last regular monthly meeting.

Citations by seaway proponents of results obtainable through the project are highly questionable. We, as a business organization, strongly condemn the proposed seaway as a death blow to Buffalo and the Niagara frontier shipping and general business.

With best wishes and trusting you will give our resolution due consideration, I remain,

Very truly yours,
TRI-ABBOTT SOUTH PARK BUSINESSMEN'S ASSOCIATION,
JOHN M. DEAN, Jr., *Secretary.*

Whereas it is proposed to construct a St. Lawrence seaway for both navigation and power purposes;

Whereas said seaway project would adversely affect the entire Niagara frontier and would much more materially affect the entire city of Buffalo, creating irreparable damage to the shipping interests, railroads, grain elevators, wharves, and general business of the city, and

Whereas at best the results to be obtained from said project are highly questionable; now therefore be it

Resolved, That the Tri-Abbott South Park Businessmen's Association hereby protests against the construction of said seaway

and strongly urges its representatives in both New York State and Congress to work against the plan as being inimical to the best interests of the city of Buffalo and the Niagara frontier, and also against the best interests of the United States of America.

TRI-ABBOTT SOUTH PARK BUSINESSMEN'S ASSOCIATION,
JOHN M. DEAN, Jr., *Secretary.*

The Hatch Bill

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. SHERMAN MINTON, OF INDIANA

Mr. BANKHEAD. Mr. President, on April 24 last, the Senator from Indiana [Mr. MINTON] delivered an address on a radio broadcast on the Hatch bill.

That speech well states, in a concise way, many reasons entertained by him and other Senators for opposing the passage of that bill. I ask unanimous consent to have it printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Hatch bill was designated by some newspapers as a bill for purity in politics. This was a misnomer, as purity has nothing to do with it. This is obviously true because the act exempts thousands of people from its terms. It's clear that if a thing is pure for "A" to do, it cannot be impure when done by "B." The purity label was just for propaganda purposes, and if the labeling had been done under the Pure Food and Drug Act it would have been an unlawful labeling, and someone would have gone to jail. You must not poison or mislabel food, but you may news.

So I am glad to have an opportunity to discuss over the air what we were trying to do who opposed the bill.

The bill was represented at the beginning as a bill that no one was opposed to and would promptly pass. The bill was earnestly and vigorously debated for 2 weeks, and on the crucial vote—on the Miller amendment—the vote was 44 to 41 against the Miller amendment, and voting for the Miller amendment among the 41 were some of the most distinguished Senators who ever served in the United States Senate. So it wasn't so one-sided as the newspapers represented.

That it was a highly political measure was evidenced by the fact that the Republican Members voted solidly, with two exceptions, in support of the bill through 2 weeks of controversial debate and many amendments, and after the first 2 days not a Republican opened his mouth in the debate. Now, don't tell me that these Republican political heirs and next of kin of Harding, Fall, Daugherty, Denby, Forbes, and Miller supported the Hatch bill because they believed in purity in politics. Perish the thought!

Another false representation about the Hatch bill was the statement that it was an attempt to keep people from playing politics on the job while the Government was paying them for work. If that had been true, we could and would all have joined in support of the bill, but that was not the purpose of the bill. It went further and attempted to control the employee after he was through work and was off the job, and at a time when he owed no duty whatever to his employer. So the bill was not aimed at seeing that the Government's employees didn't play politics on the job.

The original Hatch Act, passed in 1939, made it a criminal offense for any person, whether in politics or business, no matter who he was, to intimidate, coerce, or threaten a voter in the exercise of his right to vote, or certain officeholders to use their official authority to influence or control elections. It made it a crime to coerce W. P. A. workers, or solicit funds from them for political purposes, or for anyone to furnish to anyone else for political purposes a list of W. P. A. workers. It made it a crime to promise a political job in return for political support. All these things were condemned and made crimes under the original Hatch Act. They were directed at coercion, intimidation, and threats to voters, and the overreaching and oppression of W. P. A. workers. These offenses comprised the first eight sections of the original Hatch Act. We were all for these provisions. I, and my colleagues who voted with me in opposition to the pending Hatch bill, voted to sustain these provisions. We were as much against coercion, intimidation, and threats to voters and the imposition upon the W. P. A. workers as anyone. It was in section 9 we found our objection. This section made it an offense for which one would lose his job, and if he lost his job be blacklisted off that job for life, if he voluntarily took an active part in politics, not just on the job but any time—even when he was at home or with his friends and neighbors on his own time.

Now, the Miller amendment, which was crucial in the fight, preserved all the provisions against coercion, intimidation, threats, or oppression of voters and W. P. A. workers, but sought to make it lawful for a Government employee, State or Federal, to voluntarily take part in politics. In other words, we sought to draw the line between intimidation, coercion, threats, and oppression of voters, and voluntary action by that voter. In short, we thought that if an employee of the State or Federal Government wanted voluntarily to take part in politics, on his own time, it was his right as a free-born American citizen to do so.

The curse of democracy is the disinterestedness of the people. The trouble we know we have in a democracy is to get the people to take part in the democratic process. Instead of discouraging and penalizing law-abiding citizens, I think we should be encouraging them to take part in politics, by which the democratic process is made to work. We, who opposed the Hatch bill, sought only to draw the line between force and voluntary action.

The Hatch Act, which is now law, applies to Federal employees. The pending Hatch bill would reach all employees of State, county, or city who are employed in a department that receives funds from the Federal Government, no matter how small the amount. None of these employees, State or Federal, can of their own free will, on their own time, take any part in politics. If one does, he loses his job, and if he is a Federal employee, he is blacklisted off that job forever, and if he is a State employee, he can't get a job in the State, county, or city set-ups for 18 months. So, a man who works on the highway can't come home at night and within the walls of his own home or elsewhere solicit anyone to vote for the party he believes in, or the candidates he believes in, without running the risk of losing his job and being blacklisted. Does that sound like Americanism, or Hitlerism? Is it American to thus muzzle American citizens? What is there impure or pernicious about a free American citizen voluntarily taking part in a political campaign on his own time? We opposed this un-American principle, both in the original Hatch Act and the pending Hatch bill.

It cannot be said that the people affected by the Hatch Act and the pending Hatch bill are in the same position as the civil-service employees, who are forbidden to take part in politics, for the reason that the employees affected by the Hatch Act have none of the advantages or safeguards the civil-service employees have. I offered an amendment to the pending bill to put the Federal employees affected by the Hatch Act under civil service, but it was defeated. Even the Senator from New Mexico voted against it.

In addition to believing that it was unwise and un-American to punish free American citizens for taking part in their own Government, on the penalty of losing their jobs and being blacklisted, we believed that as to the pending bill, which granted or withheld Federal funds so as to control the hiring and firing of State employees, was an attempt by the Federal Government to control the activities of the States in violation of the Constitution. It was freely admitted by the sponsors of the pending Hatch bill that the withholding or granting of Federal funds, under the bill, had nothing at all to do with what the Government was spending its money in the States to accomplish. For instance, if Federal money was granted in aid of roads, it wasn't to be withheld for any reason that had anything to do with the necessity for roads. The purpose of the bill was to see to it that no State employee, in any part of the State, county, or city that received any funds from the Federal Government, however small, should take any part in politics.

In other words, it was an attempt by the Federal Government, by a scheme, apparent on the face of the bill, to coerce the States to do something the Federal Government had no power to require, under its own power, to be done in the first instance. This, the Supreme Court has repeatedly said, is an invasion of the rights reserved to the States, under the tenth amendment. To show you that the Federal Government has no power to do directly what it is trying to do indirectly, we have only to ask ourselves the question: Could the Federal Government pass a law making it unlawful for a State employee to take part in his State elections? It doesn't take a lawyer to know that the Federal Government has no such power. If it hasn't that power, can it coerce the States, that have that power reserved to them under the tenth amendment to the Constitution, into doing what the Federal Government has not been granted the power under the Constitution to do? The Supreme Court says "No." It is a plain, unwarranted invasion of States' rights. In these days, when so much power is of necessity, and lawfully, being transferred to Washington, we should not pass this kind of coercive legislation, to blackjack the States into turning over more of their power to the Federal Government.

"This Hatch bill," said Senator GLASS of Virginia, "is the worst attempted invasion of States rights since the effort was made to pass the Force bill."

So, we are opposed to the Hatch bill because it is a coercive meddling by the Federal Government into the rights of the States.

We are further opposed to the Hatch bill because its enforcement is placed in the hands of the Civil Service Commission. If a person working for the State should commit that awful offense of taking a part in politics, the Civil Service Commission in Washington, upon complaint of some local stool pigeon, will send its snoopers out to pry open the doors of some State employee's home to find out if he got into a political argument in his own home, and urged some of his neighbors to vote for his party, or his candidates. If the Civil Service Commission finds the employee did commit the offense, the Hatch bill, as originally presented to us, permitted the bureaucrats in the Civil Service Commission to say how much Federal funds should be withheld, and on what terms, and to require the employee to be fired, and blacklisted for 18 months.

Furthermore, the Civil Service Commission was given the power, under the bill, to define the offense. This was a clear and unconstitutional delegation of legislative power. The power of the Civil Service Commission over funds, and to define offenses, we were able to curtail some by amendment, but the principle remains.

So, you people out in the States, can expect more Federal snoopers running over your States, looking for what? Someone who has committed a crime? No! Just a poor fellow who wanted to take part in what he thought was a free, democratic form of Government, that's all.

I know it will be said that patronage organizations result from political activities of people holding political jobs. Yes, there are such organizations, and the Hatch bill can destroy such, but that doesn't mean purity, or the end of organizations in politics. It only means another kind of organization will grow up in its place. Political parties have jobs to be done, and if the people who hold political jobs can't do them for the party they believe in and belong to, then another kind of organization will take its place, and that will be an organization of paid workers, paid by the party that's got the money to pay, and that party will have the money that is controlled by the "money bags" of this country. There is the menace. Money is the most pernicious, corrupting influence in politics, and the Hatch bill fosters the building of political organizations with money.

The Hatch bill, as drawn, never had a line in it about the use of money by the "big boys," and over the opposition of the sponsors of the bill, we got the Bankhead amendment, which limits campaign contributions to $5,000.

New York Power Rates Compared

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1940

Mr. RANKIN. Mr. Speaker, I was surprised on yesterday to hear the gentleman from New York [Mr. TABER] in his attacks on the Tennessee Valley Authority, make the bold statement that "we sell electricity there as low as 1.69 mills to householders."

As a matter of fact, the wholesale rate to all municipalities and cooperative associations is more than twice that amount and, of course, the rate to householders is still higher.

During the Republican administration—his administration—the Hoover administration—the Government made a contract to sell power generated at Muscle Shoals to the Alabama Power Co. for 5 years, 1930–35, at less than 2 mills a kilowatt-hour, or less than half what Florence, Ala., is paying for it now, although when the Alabama Power Co. resold this power to the ultimate consumers in Florence, they charged them 10 cents a kilowatt hour or a spread of about 6,000 percent.

Now, the city of Florence is buying this same power from the T. V. A. at 4.18 mills a kilowatt-hour, or almost three times what the Alabama Power Co. was paying for it under that contract with the Hoover administration. It is selling it to the ultimate consumers, the householders, in Florence at a maximum rate of 3 cents a kilowatt-hour, where the Alabama Power Co. charged 10 cents a kilowatt-hour.

Yet the gentleman from New York [Mr. TABER], who was here during the Hoover administration, and was a part of that administration, would have you believe that the T. V. A. is selling power to the householders at 1.69 mills a kilowatt-hour, and that the Federal Government is making up the difference.

It is a strange thing to me that these old guard Republicans continue to oppose, and even misrepresent, our power program, which is doing more for the masses of the American people than anything else this Government has undertaken for the last 100 years.

Cheap electricity is the greatest economic blessing we could bring to the people of this country. These enemies of the T. V. A. and of rural electrification are constantly prating about farm relief and at the same time trying to block our program of rural electrification, which, if properly extended, would provide the greatest measure of relief the farming people have ever known.

They parade from one end of this country to the other attacking Secretary Hull's reciprocal-trade agreements, pretending that they are detrimental to the farmer, when, as a matter of fact, what they are after is to protect the tariff barons of industry, who want to rob the farmer through high protective tariffs and give him nothing in return.

They strain at a gnat and swallow a camel; they strain at a light bulb and swallow the Power Trust. They are constantly inveighing against communism in this country. Communism never had a worse enemy than I am, and have always been. But if there is communism among our American people, it has been produced by the oppressive policies of former administrations that rob the masses for the benefit of the favored few.

Cheap electricity in every home and decent treatment in trade, commerce, and transportation rates will do more to drive communism from this country than all the meaningless platitudes that can be preached from the housetops by those friends of the predatory interests, whose very records indicate that they would keep the word of promise to the ear and break it to the hope of the overburdened masses of mankind.

They even take a mild back-handed slap at fascism and dictatorships; yet they know that there has never been a more complete system of fascism or a more consummate dictatorship than the organized utilities of this country, which attempt to override, destroy, or evade every law which comes in their way, corrupt legislators, control governors, intimidate the courts, and subsidize the press in order to be able to continue their ruthless robbery of the unprotected consumers of electric light and power in every State in the Union. This gigantic Fasci, this huge octopus, that sprawls over the United States, winds its tentacles about every State capitol, and reaches into the pockets of 27,000,000 consumers of electric energy and exacts overcharges of approximately $1,000,000,000 a year for which the American people get nothing in return, is more deadly to American institutions and more dangerous to our form of government than all the foreign power that fascism now commands.

We are spending money for slum clearance in order to give the people in the crowded sections of our cities more decent places in which to live. Give them cheap electricity, make it possible for them to use the necessary electrical appliances, and stop selfish interests from robbing them, and they will clear up their own slums, clean up, remodel, or rebuild their own homes, and make them brighter and better places in which to live.

The old guard even clamors for clean politics, having forgotten the days of Samuel Insull, and overlooking the fact that the most corrupt political influence in this Nation today is that of these organized utilities that are now trying to destroy the T. V. A., trying to get control of Bonneville and Grand Coulee, and trying to cripple or destroy our rural-electrification program.

But these alleged friends of the people tell you that they want to increase home ownership when electric rates, charged by these utilities in their own home towns even, are so high that it virtually amounts to the consumer paying

rent to the Power Trust to get to live in his own house, or do business in his own establishment.

They tell you that they want to relieve unemployment. The policies they advocate would relieve a man of his home, and his personal property, in order that he might continue to contribute to the tariff barons through the prices of the necessities of life, and to the Power Trust through the exorbitant rates he has to pay for electric energy.

They talk about restoring prosperity. Whose prosperity do they want to restore? The program they are advocating would increase the prosperity of the favored few who profit by the tariff, and by the exorbitant rates these utilities compel the American people to pay; but it would impoverish the millions who have to pay the bills.

Last, but not least, they clamor for national defense, and then advocate a policy that would destroy the first line of defense, which is the American home.

They would block the development of our inland waterways, upon which we would have to depend for our transportation in case of war. They seem to be afraid that in developing these waterways we would also develop the electric energy in these streams, that belongs to the American people and is now going to waste, and distribute it to the people of the Nation at rates they can afford to pay. That is why they oppose the St. Lawrence and the Niagara River projects.

Of all the men in this House who ought to support our power program, including the T. V. A. and the R. E. A., the gentleman from New York [Mr. TABER] should lead the way; for the people he represents are overcharged more than 100 percent for their electric energy every time they pay a monthly light bill. If any of you doubt that statement, compare the rates the people of his home town of Auburn, N. Y., pay with the Ontario rates, with the T. V. A. rates, or with the Tacoma, Wash., rates, or with the rates charged by the municipal system in Jamestown, N. Y.

Oh, I know he will throw up his hands in holy horror and shout "Federal subsidy," or raise the tax issue; but just remember that Tacoma, Wash., receives no subsidy, and her electric-light and power system pays a higher rate of taxes than is paid by the average power company throughout the Nation.

Remember also that the municipalities that use T. V. A. power invariably pay a larger percentage of their gross revenues in taxes, or in lieu of taxes, than is paid by the average private power company throughout the country, including the State of New York.

But we do not have to go out of the gentleman's home State of New York for our comparisons. We will simply take the city of Jamestown, N. Y., which has its own public power system, and compare the rates there with the rates in the gentleman's home town, his home district, and throughout the rest of New York.

There are 3,215,000 residential consumers of electricity in the State of New York. If they all received their power at the Ontario rates, these residential consumers alone would save $66,000,000 a year on their light and power bills. If they received it at the Tacoma, Wash., rates, they would save $59,000,000 a year; if they received it at the T. V. A. rates, they would save $49,500,000 a year; and at the Jamestown rates they would save more than $40,000,000 a year. Yet, as I said the other day, the Jamestown system, with a gross annual revenue amounting to $842,752 in 1938, made a gross annual profit of $227,545, which went to the people in Jamestown, who pay the taxes of that city. That is a greater percentage of gross income than any private power company pays in taxes anywhere on this earth—much less in New York.

As I have pointed out before, the people of the whole State of New York are overcharged all the way from $157,872,000 a year according to the T. V. A. rates, to $176,683,000 a year according to the Ontario rates, or the rates charged in the Province of Ontario just across the Niagara River; and about $140,000,000 a year according to the Jamestown, N. Y., rates.

If anyone who is interested in this subject will get the reports of the Federal Power Commission giving these rates in every city, town, and community of 250 people throughout the State of New York, and then get one for the States of Washington, Mississippi, Alabama, or Tennessee, and make his own comparison, then check them with his own light and power bills and with the Jamestown rates, he will find that every statement I have made is correct.

If he will get a copy of the National Electric Rate Book now being published in loose-leaf form by the Federal Power Commission, or get a copy of the one that I have had made into a House document, before they are all gone, he can make these comparisons himself, not only in the State of New York but in every other State in the Union.

Mr. Speaker, this is one of the greatest issues that now confronts the American people—that of providing them with electricity at rates they can afford to pay, at rates based upon the cost of generation, transmission, and distribution—and taking this power to every farm home in the Nation at those rates.

That will aid our program of farm relief more than anything else that has yet been done. It will offset a thousandfold any local injustices that might be suffered as result of the reciprocal-trade agreements; it will help to drive communism and fascism from American soil and preserve democracy for future generations. It will promote slum clearance and help to clean up politics by driving the corruptionists from their positions of power; it will aid the movement toward home ownership as well as relief from unemployment, contribute to our national defense, and give us a new era of national prosperity.

I am giving the residential rates in every city, town, and community of 250 people in the State of New York, compared with the T. V. A. rates, the Tacoma rates, the Winnepeg rates, the Ontario rates, and the Jamestown, N. Y., rates. Read and compare them carefully and you will see that residential consumers in the State of New York are overcharged more than 100 percent.

I am using my home town, Tupelo, Miss., in the T. V. A. area. The Tupelo light and power system pays a greater percentage of its gross income in lieu of taxes than the power companies pay throughout the State of New York and then makes so much profit it has to reduce rates every year. Every time rates are reduced consumption goes up and profits increase.

Domestic consumers of electricity throughout the State of New York use on an average of less than 60 kilowatt-hours a month, and only 48 percent of them have electric refrigerators, while domestic consumers in Tupelo used an average of 227 kilowatt-hours during the month of January 1940, and 86 percent of them used electric refrigerators.

Here are the rate comparisons:

Residential rates compared

Community	Population	25 kilowatt-hours	40 kilowatt-hours	100 kilowatt-hours	250 kilowatt-hours	500 kilowatt-hours
Tupelo, Miss. (T. V. A.)	6,361	$0.75	$1.00	$2.25	$4.25	$6.15

The overcharges to commercial consumers throughout the State of New York are even greater, invariably, than they are to the domestic consumers. But I will not burden the RECORD further. At a later date I will probably give the overcharges to commercial consumers throughout the State.

But for the present I shall rest my case on the overcharges the domestic consumers in that great State have to pay, as I have shown, and most earnestly commend these figures to the prayerful consideration of the distinguished gentleman from New York [Mr. TABER] and to all his colleagues.

The power question, cheap electricity for all, is one of the greatest economic issues before the American people today. Every one of you is going to have to face that question in the coming campaign, and throughout your service in this House. Personally, I have burned all bridges behind me; I expect to continue this battle as long as I am in public life or until we provide electricity to every human being in this country at the proper rates, or at rates based upon the cost of generation, transmission, and distribution—and until we electrify every farm home in America at those rates.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

LETTER FROM THE AMERICAN NATIONAL LIVESTOCK ASSOCIATION AND ARTICLES FROM THE WOOL CLIP AND THE GRAND FORK HERALD

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from the secretary-treasurer of the American National Livestock Association on the pending bill for the extension of the Reciprocal Trade Agreements Act.

I also ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Wool Clip, of March 15, 1940, entitled "United States Wool Fabric Imports Increase." The article states that the increase in the importation of rags from Great Britain since the reciprocal-trade agreement with that country went into effect was over 1,000 percent.

I also ask unanimous consent to have printed in the RECORD an article by Judge Buttz, of Devils Lake, printed in the Grand Forks Herald of February 25, entitled "Trade Pacts Damaging Agriculture, Buttz says."

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

AMERICAN NATIONAL LIVE STOCK ASSOCIATION,
Denver, Colo., March 26, 1940.

Hon. LYNN J. FRAZIER,
United States Senate, Washington, D. C.

DEAR SENATOR FRAZIER: Yesterday's paper carried an announcement that Great Britain may reduce her purchases of United States cotton, possibly creating the necessity for a cotton loan by the Commodities Credit Corporation. Previously it has been shown that the British market is now practically closed to our pork exports and that she is to a large extent going around the United States market in buying her wheat, tobacco, and other agricultural products. Recently announcement was made by Canada that our pork exports to that country were to be limited to a peacetime basis, thereby shutting off any possible wartime benefit for our hog producers. These developments serve better than anything else possibly could to indicate the futility of the reciprocal-trade program, which we were led to believe was to be a cure-all for the ills of trade restrictions of one kind and another between our country and foreign countries.

Advocates of the reciprocal-trade program asserted that through generalization of the benefits to the world at large the interchange of goods between countries would be facilitated to the mutual benefit of all. We are finally coming to understand, with 21 agreements in effect, that no such situation has been created. Instead, most of the countries of the world which have benefited by our trade-agreement program have not reciprocated by carrying on this policy themselves but instead have resorted to other devices to secure trade. Numerous bilateral agreements have been made between such countries, many of them limited to a direct barter exchange of commodities.

With such a condition existing, we shall probably never know whether or not the reciprocal-trade policy advocated by Secretary Hull, if practiced by all countries, could prove meritorious in any degree. We only know now that, with the United States committed to such a policy and the world at large reaping the benefit therefrom through freer access to our market and with our own exports being bottled up by the direct-barter arrangements referred to above and by the purchase of agricultural products for the warring nations in other countries, cutting out the United States to the greatest degree possible, instead of benefiting, we are today being punished for the part we have played.

Before the beginning of the war it was claimed that the trade-agreement program would operate to maintain peace. Now that the world is at war, we are told that we must carry on because the trade agreements will prove the salvation of the world in working out post-war settlements. American agricultural producers are afraid that these claims have no more foundation in substance than those that have previously proved to be false and that, instead of being the salvation of this country and of the world, when peace comes we will find our markets, shorn to a great degree of tariff protection, the dumping ground of a world which will have no money to buy our surpluses and which will be eagerly seeking a means of converting its surpluses into cash.

The remedy for the existing situation so far as the trade agreements already made are concerned will have to be found in the future. We have available today, however, a means to protect ourselves against further error. The bill to extend the Reciprocal Trade Act beyond June 12, 1940, is now before the Senate. It seems to be commonly accepted that it will be passed but with some restriction upon the Executive power imposed in order to prevent the trading away of any more of the American market on such agricultural commodities as livestock, meat products, dairy products, flaxseed, beans, and numerous others. We urge you to use your influence to that end by securing the adoption of either the Pittman amendment requiring Senate ratification or the O'Mahoney amendment requiring congressional approval.

Yours very truly,

F. E. MOLLI, *Secretary.*

[From the National Wool Clip of March 15, 1940]

UNITED STATES WOOL FABRIC IMPORTS INCREASE

On a dollar basis, woven fabrics of wool and other hair, excluding mohair, imported into this country increased last year 72 percent over 1938.

Comparative statistics of wool imports for the first 8 months of 1938 and 1939, compiled by the Department of Commerce, show that since the reciprocity treaty went into effect, imports of wool products from Great Britain have increased 168 to 1,000 percent.

Despite the war, Great Britain is making every effort to maintain these increased imports of wool products at the highest level. The tariff concessions have enabled her to cultivate a textile market in this country and land her woolen goods here below the American cost of production. This provides her with the vitally essential dollar exchange which she can use to purchase her military necessities.

Figures to September 1, the latest available, show that imports of noils, wastes, and rags used in the manufacture of woolen goods have increased in varying percentages. Rags had a phenomenal increase of from 492,125 pounds in 1938 to 5,461,292 pounds in 1939. Imports of manufactured woolen goods also show large increases. Eight million seven hundred and forty-nine thousand five hundred and eighty-seven square yards, or more than double the quantity previously imported, came into this country in the first 8 months of 1939.

Reports from Bradford, England, announce the formation of a committee for the wool textile industry to assist the English government's efforts to increase their exports of worsted and woolen material in a campaign to capture world markets. This committee's activities are directed not only at the attainment of maximum export trade during the war, but also to obtain permanent increases in overseas trade.

TRADE PACTS DAMAGING AGRICULTURE, BUTTZ SAYS

WADENA, MINN.—No trade agreement can be justified which bankrupts one industry to build up another, declared Judge C. W. Buttz, of Devils Lake, in an address Saturday before the Minnesota State Wool Growers Association.

Judge Buttz is a director and executive committeeman of the National Wool Marketing Corporation of Boston, selling agency of 26 State wool organizations and largest wool cooperative in the world with an $18,000,000 business. He is a leading purebred sheep breeder of the Northwest, has been district judge for a quarter century, and is an authority on wool marketing. He addressed the convention on Federal trade agreements.

TWENTY-TWO AGREEMENTS MADE

Twenty-two trade agreements have been made with foreign countries and agreements with South America and Australia are proposed, the judge said.

"Nearly one-fourth of this country's total imports in 1938 were competitive agricultural products," he declared. "In 1939 with these numerous trade agreements operating, our agricultural exports were one-third less than in 1938. In 1939 Argentina and Uruguay alone shipped us over 80,000,000 pounds of canned beef, representing more than 500,000 average steers on the South St. Paul market. You can't possibly buy a tin of canned beef from your grocer unless it was packed in some South American country. If you don't believe me, try it. The British agreement of last year reduced duty on imported woolens and other fabrics. Heavy cattle, calves, pork products, milk, cream, cheddar cheese, eggs, honey, oats and oatmeal, rye, barley, feedstuffs, apples, berries, cherries, seedless raisins, white potatoes, and other importations are permitted under various agreements.

"South American proposals would add corn, flax, turkeys, casein, cheese, hides, and wool.

"The authority of the President to make further treaties of this sort expires June 12, and the administration is turning heaven and earth to get a renewal of power from Congress.

"No trade agreement can be justified which bankrupts one industry to build up another. British negotiations depressed the price of your wool in 1937 and 1938, as its consummation does today. Wool price advance in September has settled back 5 to 10 cents per pound because of the dickering with Argentina, even though negotiations are now camouflaged by suspension while effort is made to have Congress continue the power to make them. Only through our cooperative wool organizations have we been able to sustain present levels."

FLAYS PRESENT SET-UP

In closing Judge Buttz said: "It just does not make sense that this Government spends millions in subsidizing exportation of agricultural surplus and in hand-outs for producing less while another

department makes drastic tariff reductions to foreigners, inviting billions of imports of absolutely competitive products that we already produce beyond our needs. Unless Congress recalls the supervision of treaty making given it by the Constitution so that the elected Representatives of the people may pass on these agreements, agriculture may well be alarmed lest its workers be reduced to peasantry, peonage, or serfdom and that Americas greatest industry go to the shambles. In the Senate of the United States, where his vote is equal to that of the eastern manufacturer, industrialist, and other pressure groups, the wool grower and farmer is a respected citizen. There lies his hope."

Ethyl Gasoline Corporation et al. Against United States

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

OPINION OF SUPREME COURT

Mr. GILLETTE. Mr. President, a short time before the death of the late lamented Senator from Idaho, Mr. Borah, he had introduced in the Senate—in which introduction I had a very insignificant part—a bill looking to the divorcement of pipe-line transportation of oil from other phases of the industry. Three days before his death he asked me to aid in any way I could in bringing the matter to a hearing.

The matter is now before a subcommittee of the Judiciary Committee for consideration and hearing. In that connection I ask unanimous consent to have printed in the Appendix of the RECORD the text of the Supreme Court opinion of March 25 in the Government's suit against the Ethyl Gasoline Corporation. It is of particular interest as showing the control which has been exercised over independent oil jobbers by the Standard Oil Co. of New Jersey and the Ethyl Gasoline Corporation.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. No. 536. October term, 1939. *Ethyl Gasoline Corporation, Earl W. Webb, and John Coard Taylor, appellants,* v. *The United States of America.* Appeal from the District Court of the United States for the Southern District of New York. March 25, 1940]

Mr. Justice Stone delivered the opinion of the Court.

The Government brought this suit in the District Court for Southern New York, to restrain appellant, Ethyl Gasoline Corporation, a Delaware corporation, and the other appellants, who are its officers, from granting licenses, under patents controlled by it, to jobbers to sell and distribute lead-treated motor fuel, and from enforcing provisions in licenses to oil refiners which restrict their sale of the motor fuel to the licensed jobbers, as violations of the Sherman Antitrust Act. (26 Stat. 209, 15 U. S. C., sec. 1, as amended August 17, 1937, 50 Stat. 693.) The trial court granted the relief sought and from its decision in favor of the Government the case comes here on direct appeal under the provisions of section 2 of the Expediting Act of February 11, 1903, as amended (36 Stat. 1167, 15 U. S. C., sec. 29); section 238 of the Judicial Code, as amended (43 Stat. 938, 28 U. S. C., sec. 345).

The case was tried on an agreed statement of facts which was incorporated in the findings of the trial court and, except as noted, there is no dispute as to the facts. The appellant corporation is engaged in the manufacture and sale of a patented fluid compound containing tetraethyl lead, a poisonous substance, which, when added to gasoline used as a motor fuel, increases the efficiency of high-pressure combustion engines in which the fuel is consumed. The Ethyl Corporation owns two patents covering the composition of the fluid, No. 1,592,954 of July 20, 1926, and No. 1,668,022 of May 1, 1928. It has a third patent, No. 1,573,846 of February 23, 1926, claiming a motor fuel produced by mixing gasoline with the patent fluid compound, which is claimed also by the two patents first mentioned. It also has a patent, No. 1,787,419, of December 30, 1930, claiming a method of using fuel containing the patented fluid in combustion motors. The corporation manufactures and sells the patented fluid to oil refiners, solely for use in the production of the improved type of motor fuel. It issues licenses under its patents to refiners and to jobbers of motor fuel on terms and conditions presently to be noted, but it does not charge or receive any royalty for its licenses. It derives its profit solely from the sale of the patented ethyl fluid to its refiner licensees.

THE LICENSING AGREEMENTS

Appellant grants licenses under its patents to most of the large oil-refining companies in the United States, to manufacture, sell, and distribute motor fuel containing the patented fluid. The licenses provide that appellant will sell to the licensees their requirements of the patented fluid. They prohibit the licensees from selling the manufactured product to any except to other licensed refiners, to jobbers licensed by appellant, and to retail dealers and consumers. They require the licensed refiners to mix the patented fluid with the gasoline at their refineries with equipment approved by appellant and in conformity to regulations promulgated by the Surgeon General of the United States and any other governmental body having jurisdiction. The refiners agree to impose obligations on all purchasers to conform to such health regulations and to require them to impose like obligations on those to whom they sell. The refiners agree, upon notice by appellant, to discontinue sales to other refiners or jobbers whose licenses appellant has canceled. The licenses also provide for the maximum amount of the fluid to be used in the gasoline, and that, within that limit, the licensees' regular or "best nonpremium" gasoline shall have a maximum octane rating of 70 [1] and shall be sold as the next highest priced motor fuel of the licensee below the licensee's ethyl gasoline, which shall have a minimum octane rating of 76 and shall be sold at a certain fixed price differential above the average net sales price of the licensee's best nonpremium grade of commercial gasoline. The licenses further provide the conditions under which the name of the Ethyl Corporation and its trade-mark or trade names may be used in connection with the advertising and sale of the patented motor fuel.[2]

Jobbers are generally required by appellant to apply for licenses through the refiners from whom they expect to purchase the motor fuel. The licenses to jobbers purport to grant the right to sell and deliver to retail dealers and consumers within a specified territory regular and ethyl gasoline, manufactured and sold by a designated licensed refiner.[3] The licensed jobbers are required to furnish appellant monthly with a list of all places at which the motor fuel is sold under the licenses. They agree to comply with health regulations relating to the handling of the motor fuel promulgated by the Surgeon General or other governmental agency; to post and distribute any notices concerning the handling of such fuel as required by the appellant; to permit physical examination of employees, and to require customers purchasing for resale to assume similar obligations. Adulteration and dilution of motor fuel distributed under the licenses is prohibited, and requirements similar to those contained in refiner licenses are imposed with respect to the use of appellant's corporate name and trade names in connection with the advertising and sale of the motor fuel. Appellant is given the right to cancel the jobbers' licenses at any time for failure to comply with their terms, and either party may cancel, with or without cause, on 30 days' written notice.

EFFECT OF THE LICENSING AGREEMENTS ON THE OIL INDUSTRY

The licensing system established by appellant affects and controls the business of the major part of those engaged in manufacturing and distributing motor-fuel oil in the United States. Appellant issues licenses to 123 refiners, including every leading oil company, except one, the Sun Oil Co., which does not generally do business through jobbers. They refine 88 percent of all gasoline sold in the United States, and the gasoline processed by them under the license agreements is 70 percent of all the gasoline thus sold, and 85 percent of all gasoline processed to obtain a high octane rating.

Any jobber in the United States desiring to sell lead-treated gasoline must secure a license from the Ethyl Corporation, revocable at its will, before it can procure the gasoline from licensed refiners. Of the 12,000 jobbers doing business in the United States approximately 11,000 are licensed by appellant. The jobber must procure a new license on changing his source of supply. The greater part of all gasoline treated with the patented fluid is sold and transported in interstate commerce. It is sold in part through wholesale and retail outlets owned and controlled by the refiners and in part to individual retailers and consumers. A large volume and a substantial part of the whole is distributed through licensed jobbers to whom it is delivered at their bulk storage plants through the channels of interstate commerce.

---

[1] The utility of lead-treated gasoline for use in high-compression engines is expressed in terms of octane numbers, an arbitrary scale of measurement indicating the relative degree of compression to which the fuel may be subjected without causing "knock" in the engine, which is prevented or reduced by the use of the fuel. The octane rating of motor fuel increases with the amount of the patented fluid added to the gasoline, which, in any case, is small. Appellant's licenses to refiners authorize the manufacture of gasoline of high-octane rating, 68 or more, of two classes, "regular," in which there is 1 part of tetraethyl lead to 4,200 parts of gasoline, and "ethyl gasoline," in which there is 1 part of tetraethyl lead to 1,700 parts of gasoline.

[2] The name of the Ethyl Corporation and its trade-mark or trade names, "Ethyl" and "Q," may not be used in connection with the advertising and sale of regular gasoline. All the licensees, with the exception of the Standard Oil Co. of New Jersey, which markets the product under the name "Esso," are required to use the word "Ethyl" in connection with the sale and distribution of the ethyl gasoline.

[3] The only obligation which the licensor assumes toward the jobbers is to defend them against patent and trade-mark infringement suits.

By their terms the licensing agreements serve to exclude all unlicensed jobbers from the market, and in the particulars already mentioned, and in others presently to be discussed, they control the conduct of the business of licensed jobbers in the distribution of the patented motor fuel and enable appellant at will to exclude others from the business. The refiners' licenses also in terms place restraints on the sales price of refiners by establishing the prescribed differential between regular and ethyl gasoline. From this and from the other stipulated facts the Government argues that the control acquired through the licensing agreements over the refiners and jobbers has been used by appellants to control the business practices of the jobbers, and particularly to maintain resale prices of the patented motor fuel in unlawful restraint of interstate commerce. In support of this contention it relies upon the long-established practice of appellant to refuse to grant licenses to jobbers who cut prices or refuse to conform to the marketing policies and posted prices of the major refineries or the market leaders among them.

DECISION BELOW AND CONTENTIONS OF APPELLANTS

The trial court concluded that in view of the indefinite language of the stipulation it was, perhaps, a permissible, though not a necessary, conclusion that an agreement or understanding for the maintenance of prices existed between the appellant and the jobber licensees. But it considered it unnecessary to decide this issue, since it found that the appellant's licensing practices affecting the jobbers, in conjunction with the agreements and cooperation of the licensed refiners, had been used by appellant as the means of excluding from the market the unlicensed jobbers who do not conform to the market policies and posted gasoline prices adopted by the major oil companies or the market leaders among them, and that appellant uses the control thus established to coerce adherence to those policies and prices generally by the licensed jobbers, and that this restriction upon the industry effected through the license contracts with refiners and jobbers was not within appellant's patent monopoly, and operated unreasonably to restrain interstate commerce in the processed gasoline.

It concluded that the licensing system was not, as appellant argues, necessary for the protection of such legitimate interests as the patentee had in the protection of the quality of the treated gasoline sold upon the market, and its use by the jobbers with safety to the public health. Appellants were accordingly enjoined from enforcing or attempting to enforce, or including in any subsequent agreement provisions that refiners shall sell lead-treated gasoline only to licensed jobbers, and from requiring or attempting to require jobbers to secure licenses, and from enforcing or attempting to enforce the provisions of any outstanding jobber licenses. The decree also declared the jobber licenses illegal and required appellant to notify the jobbers that the licenses have been canceled.

Appellant, insisting that it does not use the jobbers' licensing system to maintain prices, makes two principal attacks on the decree. It urges that the licensing of the refiners and jobbers, the restraints upon the sale of the patented fuel by the refiners, and the restrictions placed upon the jobbers, are all reasonably necessary for the commercial development of appellant's patents and for insuring a financial return from them, and are therefore within its patent monopoly. In any case, it is said that the conditions attached to the refiners' and jobbers' licenses are appropriate and reasonably adapted to the maintenance of the quality of the product and for the protection of the public in its use of a product containing a dangerous poison, and both are essential to the maintenance of the market for the patented fuel, on which the market for appellant's patented fluid depends. And since the jobbers' licenses are a necessary or appropriate means of protecting the interests of appellant and the public in the quality and safe use of the patented product, it is argued that the decree abolishing the whole system of jobbers' licenses went further than was necessary or proper to prevent such restraint as there may have been exerted on the jobbers with respect to prices and marketing policies.

RELATION OF THE LICENSING AGREEMENTS TO PRICE MAINTENANCE

For the moment we may lay to one side the particular restrictions enumerated in the contracts of the refiners with jobbers, and turn to the relation of appellant's licensing policy to the maintenance of price policies by the jobbers. While the trial court found no contract or agreement which purports to prescribe resale prices or to exact any price policy of the jobbers, the stipulation of facts shows that appellant, through its patents, its contracts, and its licensing policy, has acquired the power to exclude at will from participation in the Nation-wide market for lead-treated motor fuel all of the 12,000 motor-fuel jobbers of the country, by refusing to license any of the 1,000 unlicensed jobbers, or by canceling, as it may at will, the licenses of any of the 11,000 licensed jobbers. This we assume, for present purposes, it could lawfully do by virtue of the power conferred by its patent to exclude any or all others from selling the patented product. But it does not follow that it can lawfully exercise that power in such manner as to control the patented commodity in the hands of the licensed jobbers who had purchased it, or their actions with respect to it in ways not within the limits of the patent monopoly, and conspicuously among such controls which the Sherman law prohibits and the patent law does not sanction is the regulation of prices and the suppression of competition among the purchasers of the patented articles. That appellant, by the plan and scope of its licensing policy, has acquired vast potential power to accomplish that end cannot be doubted. And we think the record supports the finding of the trial court that appellant has exercised that power continuously for a considerable period as a means of control over the price policies of the licensed jobbers.

From the stipulation of facts, it appears that since 1929 appellant has pursued the practice of investigating, through field agents, the business ethics of jobbers applying for licenses, and of rejecting such applications upon the adverse report of the agent. Appellant admits that the phrase "business ethics" is used to denote compliance with marketing policies and prevailing prices of the petroleum industry, which are the marketing policies and posted prices of the major oil companies or the market leaders among them. Among these is the Standard Oil Co. of New Jersey which owns one-half of the capital stock of the appellant.[4] While not all applicants who have failed to maintain prices and marketing policies have been rejected, the record leaves no doubt that appellant has made use of its dominant position in the trade to exercise control over prices and marketing policies of jobbers in a sufficient number of cases and with sufficient continuity to make its attitude toward price cutting a pervasive influence in the jobbing trade.

In many instances, although not in all, an adverse report by the investigator as to the applicant's business ethics has been the sole ground for rejecting his application, and appellant admits that the greater number of applications for licenses which have been denied were rejected because of such an adverse report. In the cases in which licenses have been refused, something less than one-half of the rejected applicants were later granted licenses on their assurance that their marketing practices would be changed. The total number of rejections for failure to comply with that standard does not appear, for appellant has failed to keep any record of the ground of rejection of applications for licenses, admittedly because it is reluctant to preserve in its records "the extent to which maintenance of prices and marketing policies by jobbers entered into the granting of licenses."

Jobbers' licenses do not appear to have been canceled because of failures to maintain policies or prices of the major oil companies whenever they have occurred, but it is an established practice of appellant to investigate the business ethics of licensed jobbers in order to ascertain whether they maintain the marketing prices, policies, and practices prevailing or ostensibly prevailing in the industry. Representatives of appellant have from time to time, but not in every case, reported a jobber to his supplier or refiner for not maintaining the marketing policies of the latter, and in some cases they have united in persuading the jobber to mend his ways. Appellant has generally required each licensed jobber to purchase all his treated fuel from a single refiner and in some instances has refused a license to jobbers who wished to change their source of supply from one licensed refiner to another.

These long-continued practices have had the effect upon the industry naturally to be expected. Large numbers of refiners and the majority of jobbers believe that the jobbers must maintain the required business ethics in order to obtain licenses, and a number of licensed jobbers believe that they are required by appellant's licensing practices to maintain prices and abide by the marketing practices of the major oil companies. Appellant, in its printed instructions to field representatives as to the manner of conducting investigations of licensed jobbers, after pointing out that one of the reasons for the investigation of the jobber before the issuance of the license is to insure that he "will not resort to unethical methods in competing with our other licensed jobbers and refiners," and after describing the methods of conducting the investigation,[5] sums up the result as follows: "We have, through these supplemental investigations, been able to correct the ethyl picture to a considerable extent, and have succeeded in eliminating from our jobber lists some of our former accounts who were not a credit to us as licensees of the Ethyl Gasoline Corporation."

SCOPE OF THE PATENT MONOPOLY

It is not denied, and could not well be, that if appellant's comprehensive control of the market in the distribution of the lead-treated gasoline, as disclosed by the record, had been acquired without aid of the patents, but wholly by the contracts with refiners and jobbers, such control would involve a violation of the Sherman Act (*Paramount Famous Corp.* v. *United States*, 282 U. S. 30, 43; *United States* v. *First National Pictures, Inc.*, 282 U. S. 44. Cf. *Frey & Son, Inc.*, v. *Cudahy Packing Co.*, 256 U. S. 208; *Federal Trade Commission* v. *Beech-Nut Packing Co.*, 257 U. S. 441). And so we turn to the consideration of the patents and the patent law to ascertain whether the monopoly which they have given appellant affords a lawful basis for the control over the marketing of motor fuel which the record

[4] The remainder is owned by General Motors Corporation and E. I. du Pont de Nemours Co.

[5] The investigator is reminded in the Field Representative Manual that the question as to "business ethics" "can be answered only if the field representative has obtained sufficient information to be sure of his opinion." "Ethics of the jobber is based on the territory in which he is marketing and the conditions surrounding the sale of gasoline by other ethyl gasoline distributors. Care should be taken, if possible, to find out the instigator of any practices which tend to unfair competition. Business ethics is a relative quality, and no hard-and-fast rule can be given to govern all cases. Information given to field representatives and picked up in the various contacts should be weighed carefully before a final decision is reached. One of the three words, 'good,' 'questionable,' or 'unethical,' is to be used in answering this question."

In January 1935 the question as to "business ethics" was eliminated from the form report of field agents. But business ethics has since continued to be one of the principal subjects of investigation and, as before, the result of the field agent's investigation has been included in his reports, and his recommendations have been generally accepted and acted upon by his superiors.

discloses. (Cf. *United States* v. *General Electric Co.*, 272 U. S. 476.) In considering that question we assume the validity of the patents, which is not questioned here.

The patent law confers on the patentee a limited monopoly, the right or power to exclude all others from manufacturing, using, or selling his invention (R. S. sec. 4884, 35 U. S. C., sec. 40). The extent of that right is limited by the definition of his invention, as its boundaries are marked by the specifications and claims of the patent (*Motion Picture Patents Co.* v. *Universal Film Co.*, 243 U. S. 502, 510). He may grant licenses to make, use, or vend, restricted in point of space or time, or with any other restriction upon the exercise of the granted privilege, save only that by attaching a condition to his license he may not enlarge his monopoly and thus acquire some other which the statute and the patent together did not give.

He may not, by virtue of his patent, condition his license so as to tie to the use of the patented device or process the use of other devices, processes, or materials which lie outside of the monopoly of the patent licensed (*Motion Picture Patents Co.* v. *Universal Film Mfg. Co.*, supra; *Carbice Corporation* v. *American Patents Corporation*, 283 U. S. 27, 31; *Leitch Manufacturing Co.* v. *Barber Co.*, 302 U. S. 458; cf. *United Shoe Machinery Co.* v. *United States*, 258 U. S. 451, 462; *International Business Machines Corp.* v. *United States*, 298 U. S. 131, 140); or condition the license so as to control conduct by the licensee not embraced in the patent monopoly (*Standard Sanitary Mfg. Co.* v. *United States*, 226 U. S. 20; *Interstate Circuit, Inc.* v. *United States*, 306 U. S. 208, 228–230); or upon the maintenance of resale prices by the purchaser of the patented article. (*Adams* v. *Burke*, 17 Wall. 453; *Bobbs-Merrill Co.* v. *Straus*, 210 U. S. 339; *Dr. Miles Medical Co.* v. *John D. Park & Sons Co.*, 220 U. S. 373; *Bauer & Cie* v. *O'Donnell*, 229 U. S. 1; *Straus* v. *Victor Talking Machine Co.*, 243 U. S. 490; *Boston Store of Chicago* v. *American Graphophone Co.*, 246 U. S. 8; cf. *United States* v. *General Electric Co.*, supra, 485.)

Appellant, as patentee, possesses exclusive rights to make and sell the fluid and also the lead-treated motor fuel. By its sale to refiners it relinquishes its exclusive right to use the patented fluid and it relinquishes to the licensed jobbers its exclusive rights to sell the lead-treated fuel by permitting the licensed refiners to manufacture and sell the fuel to them. And by the authorized sales of the fuel by refiners to jobbers the patent monopoly over it is exhausted, and after the sale neither appellant nor the refiners may longer rely on the patents to exercise any control over the price at which the fuel may be resold. (*Adams* v. *Burke*, supra; *Bobbs-Merrill Co.* v. *Straus*, supra; *Bauer & Cie* v. *O'Donnell*, supra; *Motion Pictures Patents Co.* v. *Universal Film Co.*, supra.)

The picture here revealed is not that of a patentee exercising its right to refuse to sell or to permit his licensee to sell the patented products to price cutters. (Compare *United States* v. *Colgate & Co.*, 250 U. S. 300, with *United States* v. *A. Schrader's Son, Inc.*, 252 U. S. 85.) A very different scene is depicted by the record. It is one in which appellant has established the marketing of the patented fuel in vast amounts on a nationwide scale through the 11,000 jobbers and at the same time, by the leverage of its licensing contracts resting on the fulcrum of its patents, it has built up a combination capable of use, and actually used, as a means of controlling jobbers' prices and suppressing competition among them. It seems plain that this attempted regulation of prices and market practices of the jobbers with respect to the fuel purchased, for which appellant could not lawfully contract, cannot be lawfully achieved by entering into contracts or combinations through the manipulation of which the same results are reached by the exercise of the power which they give to control the action of the purchasers. Such contracts or combinations which are used to obstruct the free and natural flow in the channels of interstate commerce of trade even in a patented article, after it is sold by the patentee or his licensee, are a violation of the Sherman Act. (*Federal Trade Commission* v. *Beech-Nut Company*, supra, 453; *United Shoe Machinery Co.* v. *United States*, supra; *Victor Talking Machine Co.* v. *Kemeny*, 271 Fed. 810, 817; cf. *United States* v. *A. Schrader's Son, Inc.*, supra.) Agreements for price maintenance of articles moving in interstate commerce are, without more, unreasonable restraints within the meaning of the Sherman Act because they eliminate competition (*United States* v. *Trenton Potteries Co.*, 273 U. S. 392), and agreements which create potential power for such price maintenance exhibited by its actual exertion for that purpose are in themselves unlawful restraints within the meaning of the Sherman Act, which is not only a prohibition against the infliction of a particular type of public injury but "a limitation of rights which may be pushed to evil consequences and therefore restrained." (*Standard Sanitary Mfg. Co.* v. *United States*, supra, 49; *American Column Co.* v. *United States*, 257 U. S. 377, 400; *United States* v. *American Linseed Oil Co.*, 262 U. S. 371; *United States* v. *Trenton Potteries Co.*, supra, 397, 398.)

The extent to which appellant's dominion over the jobbers' business goes beyond its patent monopoly is emphasized by the circumstances here present that the prices and market practices sought to be established are not those prescribed by appellant-patentee, but by the refiners. Appellant neither owns nor sells the patented fuel nor derives any profit through royalties or otherwise from its sale. It has chosen to exploit its patents by manufacturing the fluid covered by them and by selling that fluid to refiners for use in the manufacture of motor fuel. Such benefits as result from control over the marketing of the treated fuel by the jobbers accrues primarily to the refiners and indirectly to appellant, only in the enjoyment of its monopoly of the fluid secured under another patent. The licensing conditions are thus not used as a means of stimulating the commercial development and financial returns of the patented invention which is licensed, but for the commercial development of the business of the refiners and the exploitation of a second patent monopoly not embraced in the first. The patent monopoly of one invention may no more be enlarged for the exploitation of a monopoly of another, see *Standard Sanitary Manufacturing Co.* v. *United States*, supra, than for the exploitation of an unpatented article, *United Shoe Machinery Co.* v. *United States*, supra; *Carbice Corporation* v. *American Patents Corporation*, supra; *Leitch Manufacturing Co.* v. *Barber Co.*, supra; *American Lecithin Co.* v. *Warfield Co.* (105 F. (2d) 207), or for the exploitation or promotion of a business not embraced within the patent. *Interstate Circuit, Inc.*, v. *United States*, supra, 228–230.

PROTECTION OF HEALTH AND QUALITY OF PRODUCT

The trial court was of opinion that such interest as appellant has in protecting the health of the public in connection with the distribution of the fuel, and in preventing adulteration, deterioration, and dilution of the motor fuel in the hands of the jobbers may be adequately protected without resort to the jobber license device which has been and is capable of being used for other and illicit purposes. (Compare *International Business Machines Corporation* v. *United States*, supra, 139, 140.) This conclusion is, we think, amply supported by the record. The precautions taken to protect the public health in the handling of the motor fuel by jobbers and service stations includes the health restrictions imposed on jobbers by the refiners included in their contracts with jobbers, inspections, more or less perfunctory, by representatives of appellant and the posting by jobbers and distributors of notices supplied by appellant stating that the fuel contains lead and is for use as a motor fuel only. These activities are not interfered with by the decree.

There is no authentic instance of injury resulting from the handling of lead-treated gasoline after its manufacture attributable to its lead content. Extensive expert study, carried on under direction of appellant over a period of years, detailed in the record, resulted in a report that the risk arising from the absorption of lead through the skin in the handling of the lead-treated fuel is so small as to be negligible, and that the use of the fuel made in conformity to the refiners' licenses has not caused or produced any dangers or hazards to health.

The avoidance of such dangers as there may be in the handling of the motor fuel by jobbers and distributors is plainly not beyond control by public-health regulations, and would seem, as the district court thought, to be amply secured, in any case, through the self-interest of the refiners in requiring the purchasers of their gasoline to take proper health precautions including the posting of notices which appellant supplies and by the continuance of appellant's inspection, all of which are permissible under the decree. It is likewise apparent that the interest the appellant has in preventing dilution, adulteration, and deterioration of the treated gasoline in the hands of the jobbers may be similarly protected without continued resort to jobber licenses, which is precluded by reason of their use and the danger of their continued use for other and illegal purposes.

Since the unlawful control over the jobbers was established and maintained by resort to the licensing device, the decree rightly suppressed it even though it had been or might continue to be used for some lawful purposes. The court was bound to frame its decree so as to suppress the unlawful practices and to take such reasonable measures as would preclude their revival (*Local 167* v. *United States*, 291 U. S. 293; *Warner & Co.* v. *Lilly & Co.*, 265 U. S. 526, 532). It could, in the exercise of its discretion, consider whether that could be accomplished effectively without disestablishing the licensing system, and whether there were countervailing reasons for continuing it as a necessary or proper means for appellant to carry out other lawful purposes. Since the court rightly concluded that these reasons were without substantial weight, it properly suppressed the means by which the unlawful restraint was achieved (*Local 167* v. *United States*, *supra*, 299, 300; cf. *Merchants Warehouse Co.* v. *United States*, 283 U. S. 501, 513).

Affirmed.

Mr. Justice McReynolds and Mr. Justice Roberts took no part in the consideration or decision of this case.

The Census

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

EDITORIALS PERTAINING TO THE CENSUS

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD editorials pertaining to the census from the Cincinnati Times-Star, the Easton (Pa.)

Express, the St. Louis Globe-Democrat, the Salem (Oreg.) Journal, the Concord (N. H.) Monitor, the Oregon Journal, the Kennebec Journal, the New York Sun, the Colorado Springs Gazette, the Bayonne (N. J.) Times, and the Ashland (Ky.) Independent.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Cincinnati Times-Star of March 18, 1940]

AS THE BUREAUS BACK OFF

First a subcommittee of the Senate Commerce Committee, and then the full committee, approved the Tobey resolution that the two questions relative to income be deleted from the 1940 census on the ground that they were illegal and never authorized by Congress. Then Census Director Austin ruled that nobody with an income over $5,000 need say how much. Then Commerce Secretary Hopkins announced that persons with incomes under $5,000 a year need not give this information to an enumerator but could inclose it anonymously in a sealed and franked envelope to be mailed to Washington.

All these Senate affirmations and bureaucratic retreats mean nothing to the President, who asserts, through Private Secretary Early, that for the first time within his knowledge a Senator (meaning TOBEY but not naming him) has "openly advised the American people to violate the law." He does not come off well in this controversy with TOBEY, who notes Mr. Roosevelt's apparent position "that an unauthorized ruling of a departmental bureau constitutes a law of the United States," and declares: "It is time to call a halt to attempts of departments to arrogate to themselves the function of a legislative body, especially in matters which threaten the people with imprisonment for not bowing to the will of a bureau."

The President's familiar pose as the man who never makes a break has got him into another jam, and his supporters with him.

[From the Easton (Pa.) Express of March 16, 1940]

FRANKLIN D. ROOSEVELT AGAINST TOBEY

Regardless of partisan politics, it seems to us that Senator CHARLES W. TOBEY, Republican, of New Hampshire, drove Mr. Roosevelt, Democrat, President of the United States, into a corner yesterday in their controversy over the 1940 census questionnaire.

The Chief Executive, without naming names, through his Mr. Early, accused the New Hampshire solon of having urged the public to break the law by not answering certain queries in the questionnaire.

Whereupon Mr. TOBEY pointed out that Congress has passed no law enabling the Census Bureau to ask the said questions, but that the Bureau is making its own law.

Thus, once again it looks as though the occupant of the White House—as he has done on a number of other occasions—has pushed his chin smack into the Bill of Rights.

Experience never seems to teach the gentleman anything.

[From the Easton (Pa.) Express of March 19, 1940]

CONSTITUTION AND CENSUS

The Tobey-Roosevelt debate on the subject of prying into private incomes has had a change of personnel, Harry Hopkins substituting for the President, but the argument continues in virtually its original direction.

Going back a little for a fresh start, let it be remembered that Senator TOBEY recently took the position that the income questions of the census are unnecessary and need not be answered. Thereupon the President took the Senator severely to task for what he called inciting the citizens to break the law. The Senator's retort was "What law?"

The President didn't answer that one, but to Harry Hopkins with failing hands the torch is flung, and Harry carries on, as nobly as could be expected under the circumstances, by proudly declaiming that in the Constitution citizens are ordered by the "founding fathers" to answer census questions. Let's stop right here and see what the Constitution says on this matter.

Subsection 3 of section 2 of article 1 says, in part:

"The actual enumeration shall be made within 3 years after the first meeting of the Congress of the United States, and within every subsequent term of 10 years. * * *"

So. Harry is right so far. The founding fathers did command the citizens to answer the census questions. But let's finish the sentence—

"* * * in such manner as they (Congress) shall by law direct."

Hence, as Senator TOBEY suggests, the census provided for by the Constitution is a matter of counting the citizens, not of conducting a clinical investigation of their bodies and souls. As he has pointed out, the proposed census plan is not a law but "an unauthorized ruling of a departmental bureau."

As we likewise have taken occasion to point out, the Census Bureau's action in this case is an example of the usurpation of legislative power by the Executive and a part of the evil against which the Logan-Walter bill is directed.

In answer to the latest Tobey statement, Secretary Hopkins says that the Senator's discussion of law is too complex for him. All things considered, that may be a good answer, but we doubt that the cited discussion is too complex for the electorate of the United States. It involves merely a distinction between a law and the lack of one.

[From the St. Louis Globe-Democrat of March 16, 1940]

CRACK IN CENSUS LAW

Secretary of Commerce Hopkins now rules that individuals unwilling to give census enumerators verbal answers to intimate questions about income and how it is spent, may mail the information to Washington without signing their names. They may use franked envelopes which will be supplied by the enumerators. This is a surrender in the face of public protest but is an evasion of the law rather than a permanent remedy. What Congress should do is to amend the law to rid it of offensive features which are a plain invasion of the rights of an American citizen.

Senator TOBEY has received considerable abuse from new dealers, including the President, for his leadership in the Nation-wide protest. The cry of "cheap politics" has been raised by the administration, but this does not explain why Democrats as well as Republicans share resentment and have given their voice to the demand that the census law be altered. The unvarnished facts are that the administration proposes to conduct a snoop census which would seek information of an intimate and frequently embarrassing character. This information could easily become public property if the enumerators gossipped, as well they might. This information might easily be available to any prying politician who wanted a financial index of his community.

And despite the plea of Secretary Hopkins that the statistics are necessary to ascertain the extent of mass buying power and unemployment, there is the substantial suspicion they will contribute little or nothing of value to the solution of economic problems. An unemployment census can be made without obtaining the life history of every man and woman who happens to have a job.

Senator TOBEY has performed a useful public service in leading the fight against the present census law. The President, himself, plays doubtful politics when he attempts to impugn the New Hampshire Senator's motives, and brand him as an inciter of law violation. Since when is it criminal to say that a nefarious law should be amended?

[From the Salem (Oreg.) Journal of March 16, 1940]

ROOSEVELT AGAINST TOBEY

President Roosevelt is one of those dictatorial and meddlesome executives who want to run the whole show and resent, to the extent of using their high office, to punish those who honestly disagree. He tried to purge the party of Senators and others who opposed his court-packing plan, he publicly labels with opprobrious epithets those who protest his policies, uses political patronage to punish dissenters, and the vast bureaucracy he has created for coercive purposes.

The latest attempt to browbeat a nonconformist is his attack on Senator TOBEY of New Hampshire, for the latter's opposition to census questions about personal income, devised without constitutional authority by census officials. TOBEY had said citizens were within their rights in refusing to answer such questions and advised them to go to jail rather than answer them. Presidential Secretary Early told newsmen:

The President would have told you that for the first time in his knowledge a United States Senator openly advised the American people to violate the law and had held himself out as the one person who will not answer the two income questions when he knows full well that, in his case, the answer will be unnecessary, since the enumerator would know the Senator earns more than $5,000.

Senator TOBEY replied in a telegram to the President that the Senate Committee on Commerce had determined that the income questions were illegal and in conflict with the Bill of Rights, and added:

"If it is your position that an unauthorized ruling of a departmental bureau constitutes a law of the United States, then it is important that the people recall that such were the tactics used by Hitler in gaining powers never sanctioned by the people. It is time to call a halt to attempts of departments to arrogate to themselves the function of a legislative body, especially in matters which threaten the people of this free country with imprisonment for not bowing to the will of the bureau."

Senator TOBEY has all the best of the argument but is probably on the Presidential blacklist.

[From the Concord (N. H.) Monitor of March 18, 1940]

REBELLION

The magnitude of the tornado that has come out of what looked to be a tempest in a teapot—public indignation over prying census enumerator questions—is evidently getting under the skin of the President.

When the protest was first aired by Senator TOBEY, official Washington was quick to laugh it off, with the President leading. Oddly it would not laugh off. Then sneers were tried, with the implication that the New Hampshire Senator is "only playing politics." But sneers failed to appease public indignation.

Now the President accuses Senator TOBEY of inciting the public to violation of the law and official Washington after having tried ridicule and sneers is becoming angry and petulant.

Can it be that the nonofficeholding, taxpaying, private citizen in America has grown sick and tired of everlasting contact with superior-feeling officeholders, grown sleek and fat on official salaries? And has the private citizen, who after all is a free-born American, lately gathered the impression that the superior-feeling officeholders regard the private citizen as a poor worm, exposed to any inquiry his superior puts to him and privileged only to pay taxes?

It may be.

[From the Oregon Journal of March 15, 1940]

THOSE DEBATED CENSUS QUESTIONS

The census questions that intrude upon the privacy of American citizens are far from the original purposes of the Founding Fathers of this republic.

As set forth in section 2 of article 1 of the Constitution, it was to be an "actual enumeration." The purpose was to base upon population counts the number of representatives any State might have in the lower House of Congress, and also the apportionment of direct taxes.

The first census was directed to be taken within 3 years after the first meeting of the Congress and thereafter within each 10-year period.

The provision was defensive. It was intended to prevent the larger States from dominating the smaller and to insure to the latter *full* representation.

Also it was in the nature of reaction against the former British custom of sending swarms of officers to pry about in the colonists' homes, to humiliate and embarrass them and in every way to dispute that a man's home is his castle.

When James Otis protested such invasion, John Adams said, "The child of independence was born on that occasion."

To make more certain the protection of privacy, the fourth amendment to the Constitution read, in part:

"The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated. * * *"

A law passed in 1929 provides for the questions of the 1940 Census—34 for the population census with 50 for every fourteenth person; 232 for the farm census, and 31 for the housing census.

All of which is complex and alien in the light of original intent.

The census was intended to count noses, not secrets.

[From the Kennebec Journal of March 20, 1940]

BUREAUCRACY

Mrs. Eleanor Roosevelt has characterized the controversy over the census questionnaires as a tempest in a teapot and this probably represents the New Deal view. From one angle she is right, but from another this shows a very incomplete conception of the whole situation. The real issue is not whether women shall be compelled to tell their age or how many times they have been divorced, but bureaucracy, the worst form of government. This census fight emphasizes strikingly how very far the New Deal has gone toward bureaucratic control of the Government, and here is a very good place to call a halt and reverse the dangerous trend. The census is as good a peg as any upon which to hang a thorough debate to determine once for all the status of bureaucracy in this country.

Back in 1932 the only mandate given the New Deal by the people was to do something about the depression and business recovery. The first thing it did was to junk the platform upon which it had been elected, and set sail on a wild program of economic experimenting. It took the do something as carte blanche to do anything it wished and has so acted ever since. Nothing is more obvious politically than that the New Deal has gone vastly further than its supporters expected and is now way beyond the limits of old-fashioned American, constitutional government. This has been accomplished by permitting each bureau to interpret general authority as it pleased and to legislate as much as execute law. We are governed right now almost as much by bureau-made as by regularly enacted law and not even a Philadelphia lawyer can guarantee clients they are within or outside the law in any important action they may wish to take.

The census questionnaire is a very good sample of this bureaucratic rule. Apologists say that the reason for making such intimate requirements regarding incomes is to determine what type of public relief, like housing, is needed, and other welfare questions. This, however, ignores the fact that a majority of the taxpayers may not favor these elaborate and extravagant housing projects that have come so far short of serving their purpose. The experts admit most of these projects have failed, by and large, and consequently they must have more information to straighten them out.

Then there is the question of broadening the tax base so as to make the people more tax conscious. Before this is attempted the average of the smaller incomes must be known to determine the rate. But who wants the tax base broadened and who needs to be made tax conscious anyhow? Only the bureaucratic experts engaged in remaking America. Certainly nothing like this was anticipated when the New Deal received the mandate to do something for business recovery. Their conception of that has been as broad as the country itself and broader than the Constitution, even as most liberally interpreted.

Had all this theory and experimenting worked out successfully the abuse of power might have been overlooked. It has, however, been marked by more failures than success, but new dealers condone every failure with the assurance they can do better with other methods—and more money. The New Deal, in fact, has not one important, outstanding success to justify its methods and a debt of $48,000,000,000, $3,000,000,000 beyond the congressional limit and $8,000,000,000 beyond what was originally fixed by economists as safe for the country. This weakens our whole economic condition tremendously with practically no adequate compensation.

Taking this census controversy as representative, as it surely is, of the strong trend of the New Deal into the worst form of government, bureaucracy, it is far more than a tempest in a teapot, as Mrs. Roosevelt claims. Neither can those who understand be silenced by any autocratic commands from the bureaucrats and their theorists in Washington. This census questionnaire, in fact, may be the turning point for bureaucracy and the beginning of the rebellion of the people against the New Deal autocracy and misrule generally. Smaller things have marked epochs in our history.

[From the New York Sun of March 21, 1940]

NOW "SOAK THE POOR"—WHERE THE SNOOPERS' QUESTIONS IN THE CENSUS WILL LEAD

To the EDITOR OF THE SUN.

SIR: I have read President Roosevelt's criticism of Senator TOBEY for pointing out certain "snooping" questions inserted in the census questionnaire obviously not authorized by the census law itself, and advising that citizens are not legally obligated to answer them. I have also read Secretary Hopkins' unconvincing effort to justify inserting these snooping questions by attempting to maintain that authority given in the census law to ascertain how many people are unemployed authorizes him to force both employed and unemployed citizens in the small-income brackets, who have been specifically exempted by law from filing any income-tax return whatever, to disclose what their incomes are.

Having already forced citizens in the medium- and high-income brackets to disclose their incomes, and then indulged in a "soak the rich" fiesta to the saturation point of soakability, with resulting 7 years' stoppage of recovery, halting of revival of private enterprise, and paralysis of reemployment in order to find a new golden goose to kill, to continue their squandering, the New Deal spenders are now put to the less politically popular necessity of "soaking the poor." Hence the deep interest in low-bracket incomes.

It would, of course, be bad medicine politically to come out in the open and ask authority directly to obtain this low-bracket income information, especially in an election year, for this would let the cat out of the bag by forewarning citizens with low-bracket incomes that they are next on the list for a tax soaking. But if the information could be obtained under the convenient cloak of an apparently innocent census enumeration questionnaire, how clever this would be.

It is not, however, Secretary Hopkins' painful efforts to justify his unauthorized snooping by torturing the word "unemployed," in the census law beyond its widest connotation, but the sudden abhorrence of President Roosevelt at the constitutional obliquity of a United States Senator informing citizens they need not answer manifestly unauthorized Peeping Tom questions inserted in a census form by an administrative department of the Government.

Can this be the same President Roosevelt who not so long ago urged Congress to pass a "must" law whether it was constitutional or not? And the same President Roosevelt who when a member of his own Cabinet declared in a public press interview that the decision of the United States Supreme Court (unanimous, I believe), holding the processing tax of the A. A. A. unconstitutional, "legalized stealing," remained silent, and refrained from lifting the user of such words by the slack of his pants out of his Cabinet and public life, as such a gross violation of his oath of office obviously richly deserved?

SCRICTATOR.

NEW YORK, *March 19.*

[From the Colorado Springs Gazette of March 2, 1940]

GUINEA PIGS

Senator TOBEY, of New Hampshire, epitomized the whole controversy over the form of the census when he asked the Census Director, William L. Austin: "If a citizen stands on his constitutional rights this year and refuses to answer (questions of the census enumerator), will you send him to jail?"

The census that was an enumeration for the purpose of representation has obviously became an unwarranted search into the personal affairs of the citizen.

Ever since the New Deal came into being the American people have been merely so many guinea pigs for its experiments. They are put more completely in the role now because the census offers the first opportunity the New Deal government has had to deal with citizens individually. Nor do new dealers make any pretense about it. Says Dr. Willard L. Thorp, economic adviser to the census. "The information now sought is necessary to future economic planning," which is to say, to New Deal regimentation.

The citizen's view is that the information sought is his own affair and not Government's, and that prying into matters of private concern is an invasion of his rights as a citizen.

What is his income and how he gets it he thinks is no concern of Government except as it may have a tax claim, and certainly not information to be demanded by a census taker.

What his house cost; whether it is mortgaged; and if so, who owns the mortgage; what is its rental value; what is its state of repair; what equipment he has put in it; whether it has a bath or a shower; and if so, whether he uses it—these things the citizen properly thinks are personal matters concerning which Government has no right to question him.

But the citizen is wrong. Under the new dispensation, he belongs to Government, and beginning April 1 he will be lined up on his own doorstep to tell Government everything it wants to know about himself on penalty of a stiff fine and jail sentence. His only satisfaction is that next November he can throw Government out on its ear.

[From the Bayonne (N. J.) Times of March 18, 1940]

AN OBVIOUSLY POLITICAL MOVE

We are getting just about as tired as you must be of the charge that this or that is done "for political reasons," made whenever one political figure lashes back at another for any statement that is in opposition to that uttered by another.

Some of the pronouncements made by figures in public life are apparently prepared in the firm conviction that the great mass of the American people are blithering idiots.

If we could only get that thought across to those who have been elected to various political offices, things might be much simpler. We all thoroughly understand that practically every move, every statement is made by those on both sides for very definite political reasons, be it to enhance the one or to embarrass the other.

That being so, we can assume that everything up to that point is equal. From that point on we are pretty well able to distinguish the true from the false and make our own decisions.

Take the current controversy over the personal questions that have been inserted into the 1940 census, which has aroused a sufficiently great storm of interest to lead Secretary Hopkins to revise the method whereby the offending questions can be answered anonymously and personal affairs not be disclosed to the enumerator who may be one's neighbor and perhaps not a friendly one at that.

Senator TOBEY of New Hampshire is the focal point in the battle.

New Hampshire, it must be remembered, cannot be classed as an enthusiastic New Deal State. It voted against President Roosevelt in 1932 and gave him but a thin margin in 1936. What's more, Mr. CHARLES W. TOBEY is an unconverted Republican.

So Mr. TOBEY, having accomplished at least a compromise on the income question, is the recipient of Mr. Roosevelt's excoriation and is virtually branded a traitor for having encouraged the people to violate "the law."

Oh, shades of the great purge.

Mr. Roosevelt hasn't been feeling well, which may explain things, but in this matter he patiently should have "stood in bed."

That there was objection to telling anyone just how much money you owe and what your income is didn't need Mr. TOBEY's voice. We Americans don't like the bureaucracy that has ruined Europe, and this further extension of the census had all the earmarks of the infiltration of more busybody tactics.

But for Mr. Roosevelt to call this "a violation of the law" is just a little too silly to swallow.

Rather than building up a complicated census with a surfeit of economic questions that will take many, many political appointees to gather and file and summarize, we think the Government might well realize by this time that without any questions we have too many employed and too low an average income for those in the lower wage and salary brackets.

It would seem that the first job to be done is to get the unemployed to work.

If they go to work in productive private employment, that fact alone should work mightily to create a demand for consumer goods that will boost all incomes.

But that won't come until government realizes that business supports the people and people support business, and that you cannot forever hamstring business and expect the end of unemployment.

Eight years of W. P. A. have left many the man, who must depend upon it for the support of himself and his family, sick of the economic imprisonment it has imposed on him. He looked to W. P. A. and like governmental made-work projects as a stopgap until "business got better."

But it didn't get better, and prying and probing into private lives won't do it, despite the fact that Secretary Early, speaking for the President, says: "The President would have told you that these questions * * * will develop the same basis statistics about the low-income groups that are now available for the higher-income brackets through the Treasury. (Incidentally, the information the Treasury supplies is not personalized.)

Need we mention that the information could be had through a host of Government bureaus such as the Social Security Administration and the Wage and Hour Division?

Government knows that, but a Republican taking a slam at Mr. Roosevelt's favorite, Mr. Harry Hopkins, cannot be tolerated even if the President himself has to make foolish charges because an American, speaking for Americans, dares to voice his claim to his rights.

[From the Ashland (Ky.) Independent of March 19, 1940]

THE KING CAN DO NO WRONG!

Magnitude of the Nation-wide protest against the snooping features of the national census to begin April 1 was dramatized by President Roosevelt when he assailed—through his secretary—Senator TOBEY from his sickbed. Mr. Roosevelt apparently thought the matter so pressing that it had to be taken up before he recovered from his indisposition.

The President's explanation that the questions on personal income were inserted in the census questionnaire at the request of business does not sound convincing, and if business or anyone else had made the request it should not have been granted. Does the President, who has constantly assailed business and businessmen and held them up to ridicule, want the Nation to believe that if business had requested the income information, Harry Hopkins, of all people, would have jumped? It was Harry who inserted the obnoxious features in the 1940 census. Senator TOBEY says he exceeded his authority under the law when he did so.

When Mr. Roosevelt says Senator TOBEY advocates violation of Federal law by citizens of the United States when he opposes Federal snooping which was not authorized by Congress, but which is to be engaged in by order of a Presidential appointee, he confirms what those opposed to the census in its projected form have been charging. He admits that his philosophy is, "the king can do no wrong!"

This is not an American philosophy. It is, as Senator TOBEY says, the philosophy of Hitler. Congress will be remiss in its duty to the sovereign voters of this country if it does not rebuke the administration for attempting to make a totalitarian quiz out of the American census.

Narrow partisans who are attempting to delude the ignorant maintain that the 1940 questions are quite the same as those asked in other decade counts. But a four-page digest prepared by the Census Bureau itself fails to disclose a single query as to the citizen's income, though the digest goes back to the First Census, in 1790.

It is also claimed that the objectionable questions on personal income and property have been approved by the "experts." But who are these "experts"? Washington bureaucrats with a flair for statistics.

To say that it is illegal for a census taker to reveal the answers given by a citizen is merely to hide behind statutory theory. With more than a hundred thousand politically appointed persons engaged in the work, is it reasonable to believe that high standards of law observance and ethical conduct will be prevalent?

It is beside the point, also, to contend that inclusion of the controverted questions was urged by business. The census is a national undertaking, and its tenor should not be determined by special interests in any field—economic, educational, or social.

The average American has a duty to object to giving highly personal information to a questioner who may be a neighbor, an acquaintance, a political ward heeler, or the friend or relative of a party boss. Not to object under such conditions would be to reflect curious indifference to the American principle of individual liberty.

It is this inalienable right to reasonable privacy that has generated opposition to census snooping. New Deal zealots cannot deny this fact, even though their leader resort to his customary pretensions as to a monopoly on intellectual competency and moral insight.

Issues of the November Election

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD an able and profound speech delivered by the senior Senator from Michigan [Mr. VANDENBERG], broadcast on Monday, March 25, in which the Senator from Michigan discussed the determining issues in the November elections.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, I am asked tonight to answer this question: "From a Republican viewpoint, what will be the determining issues in the November elections?"

The American people have a habit of choosing their own "determining factors." Sometimes an unanticipated incident or a single,

pungent phrase may unexpectedly dominate the popular emotions. "He kept us out of war" lasted long enough—with only 5 months to spare—to elect Woodrow Wilson in 1916.

No seer can penetrate the 1940 prospectus in this regard. Indeed, this year's campaign is peculiarly uncertain because of two unknown quantities. One is the undisclosed intention of the President respecting a third term. This issue might crowd out all others if it arises. The people might well conclude that perpetuated White House tenancy, contrary to 150 years of unwritten law, would menace the life of American democracy—remembering that Thomas Jefferson warned against such tenure, saying that under such circumstances the office "will in fact become for life, and history shows how easily that degenerates into an inheritance." The other unknown quantity is the war—an issue which could dominate all others if the people should conclude that our national policy heads us into foreign entanglements and into other peoples' wars.

By next November either or both of these contingencies might be the paramount concern. I can well imagine a third-term issue rising to this magnitude, particularly at a restless moment when dictatorship has democracy by the throat all round the globe. In such event the deadly, dominating phrase might be, "If a third term, why not a fourth or fifth?" Similarly, if the war were to drift toward our involvement—say, for the sake of argument, in the pattern of the President's famous Chicago speech in favor of quarantines—the voters might forget all else. Then, despite our deep abhorrence of these alien ideologies, the monopolizing challenge might become, "Millions for defense, but not one man or dollar for war on foreign soil," or "Let's swap horses and stay on this side of the stream."

Of course, the war issue might work in reverse if the people were to conclude, despite the facts, that the President is our best peace insurance. But this only serves to show how speculative is this 1940 theme. I freely concede myself the supreme importance of this life-and-death issue, as I think my own pro-peace record proves. Our entry into another World War would swiftly plunge us into such rigid Government controls—the secret mobilization plans are ready right now—that our liberties would vanish overnight; and our exit from the conflict, even though victorious, would find us in the chains of home-made tyranny and bankruptcy. We are quite near enough to both without a war; which is to say, upon the one hand, we are already in the grip of "government by Executive decree" to an alarming extent, and, upon the other hand, the public credit is already crowding the red-ink danger line of disintegration.

Yes; in the shadow of our drift toward entry into another war, every other issue would sink to insignificance—even the third-term issue, unfortunately, as some of our best political calculators fully understand. Therefore, there is no certain answer to tonight's question until destiny unfolds. But I hope we may be spared any such decision; first, because of the horrible implications of the decision itself; second, because we cannot wait much longer to set our own house in order. The place where we must "save democracy" is right here at home, before it is too late. We must not allow ourselves to be needlessly diverted. It is upon this theory that we shall be able to fix our minds upon our own unanswered internal necessities that I proceed briefly to respond to the question of the evening: "From a Republican viewpoint, what will be the determining factors in the November elections?"

The controlling factor is a state of mind. It believes that in 7 years the New Deal has created more problems than it has solved; that many of its pell-mell programs and devices are proven wrong, yet never will be corrected or withdrawn by the authors of these errors; that even its useful social-minded progress needs new management to make it work. This state of mind believes that the New Deal is at war with private enterprise and wants every multiplying, dictatorial control over life and livelihood in the United States; that this is not the route to economic health and to the normal reemployment which is our prime necessity; that, on the contrary, legitimate private business must be emancipated to the task of creating new wealth and new jobs in the only way it can be done, American style.

This state of mind believes that sanity and solvency in government—and constancy of direction—must precede sustained recovery. It believes, too, that this administration is impatient of constitutional restraints and essential American traditions—all a part of today's deterring uncertainties—as evidenced by impatient attacks upon the courts; by the delegation of vast and unprecedented powers to the single authority of the Executive; by the persistent subordination of States' rights and home rule to Federal despotism in essential matters; by irritated attempts to purge even its own partisans when they fall out of goose step with the Chief; by dangerous concentrations of power in Washington and, too often, a willingness to use public resources for the purpose of keeping in power (sometimes impolitely called "playing politics with human misery"); and, last, but far from least, by the willingness of third termites to lengthen the tenure of this supreme authority beyond all dictates of prudence, precedent, and propriety.

This state of mind is often Democratic as well as Republican. Right or wrong, there it is. A state of mind is the hardest possible thing to defeat. The burned child fears the fire. This is exhibit A in 1940 calculations. The country is ready for a change. But it wants to know that the change will be for the better. It is in no mood for blind reaction. It wants to recapture the solid things of yesterday. But it distinctly wants to move forward to better things tomorrow. It wants prosperity, but it equally wants to pass prosperity around. This state of mind will be controlling in November in the degree that the Republican Party proves that it is constructively prepared to forward march to better things for our whole people.

One of the most important factors in this psychology of change is the growing national consciousness that we cannot spend ourselves into prosperity; that pump priming is a ghastly failure in defeating a depression that has lingered longer in the United States than in any other major country on the globe; that these mounting deficits and debts, which now crowd the very ceiling of economic safety as well as the limits of the law, have got, one day, to be paid out of the sweat of our whole people (to quote the President himself in an earlier day).

Listen! When the New Deal shall have finished its 8 fiscal years, it will have collected $40,000,000,000 in taxes—which is 44 percent as much as all of its predecessors in 144 years from George Washington to Herbert Hoover. Even the 8 Wilson years, including the World War, collected only 24 billions. But despite this colossal drain out of the pocketbooks of all our people, it was far from enough to pay the bills of these liberals—liberals being those who are liberal with other people's money. During its 8 fiscal years, the New Deal will have spent $65,000,000,000, which is 58 percent as much as all of its predecessors in 144 years. Even Wilson's 8 years, including the World War, cost only 47 billions. So the New Deal will have run a total deficit of $26,000,000,000 in 8 years which is 5 billions more than the deficits of all other administrations in 144 years from Washington to Hoover. The net result is that the New Deal in 8 years has run a debt equal to the entire net debt for the preceding 144 years, to say nothing of nearly 6 billions more in the guaranteed obligations of various Federal corporations.

No wonder anxiety is in the air. No wonder revolt is in the offing. Manifestly this trend cannot go on much longer—no matter how rich we think we are. This expenditure, often unavoidable because it took the place of regular business activity which the New Deal anesthetized, may have bought temporary relief in some quarters. But unemployment is just as big a challenge as it ever was; and, meanwhile, we have piled up an appalling hazard to the stability of every value in the land. Four more such years would precipitate the very calamity which President Roosevelt himself did not hesitate to foretell in 1932 when our red ink was only pale pink. We are charging our bills to the next three generations. It will be A. D. 2,000 before the last of them are paid. Talk about better days ahead for youth! Youth is the chief victim of this debacle. Youth will pay the fiddler—tomorrow.

What to do? Cut back expenditures as rapidly as possible, freely admitting that Government must continue to supply relief until the capitalistic system can supply real jobs. Deny all new Federal services and bounties—no matter how persuasive—until we have found a way to pay for the existing services and subsidies which we retain. Stop pump-priming suicide. Give as much consideration to the man from whom you take a dollar as to the man to whom you give it. Above all, restore the national economic confidence which will permit American private business—stunned and stunted for 8 sterile years—to produce the new wealth which will give us an annual income of eighty, yes, one hundred billions. I agree with the President that when we are an $80,000,000,000 country, many of our other problems will disappear. But I do not agree that you can make an $80,000,000,000 country out of a $60,000,000,000 country by spending the difference. And the national state of mind confirms this conclusion. Hence its importance in this November prospectus.

Anxiety regarding debts and deficits is paralleled by equal anxiety about needless governmental meddling with business, and Government competition with private enterprise, and disrupting Government controls over commerce, and punitive attacks upon the profit system. If you want to know what has happened to us, just note how there has been relatively only a dribble of new investment for 7 stagnant years, although banks are bulging with idle money aching for a dividend. Issues of new corporate capital in all 7 years from 1933 to 1940 have been only half what they were in the 1 year of 1929 alone. Eight billions in 1929. Only three hundred and seventy-one millions in 1939. Venture money is in a coma. Yet we have a frustrated, postponed need for more billions of replacements and expansions in private business than ever before in our history. Given a fair chance and a decent incentive, private enterprise will create the new wealth which will make us an $80,000,000,000 country in 6 months. Our problem that soon might be is how to control a boom.

We are not talking about a return to piracy in the market place. We are simply talking about giving legitimate business its chastened chance. We are talking about the natural effect of an administration which believes in private enterprise and which does not believe in political overlords and Federal straitjackets and sometimes even in socialism itself. We are talking about less government in business and more business in government. This is not an attack, for example, on the purposes of the Security Exchange Commission law. It is a demand for rational simplification of its process. This is not an attack upon the purposes of the National Labor Relations Act, with its collective bargaining which is here to stay. It is a demand for mutually fair amendments which—in the best interests of labor itself—will discourage needless interruptions to the continuity of profitable industrial production which must precede the continuity of profitable employment. It is simply a plea for the elimination of needless obstacles which impair recovery and reemployment.

Make no mistake; next November's state of mind will be thinking deeply upon this score.

The accumulation of vast, floating powers in the Executive—a concentration of power heretofore unheard of in the American system—not only multiplies these uncertainties that hobble business but also actually jeopardize the American constitutional theory of government. For example, the President—himself alone—can change the value of our money overnight. He can flood us with paper money any time he pleases. What could be more unsettling? Again, he can change our tariffs as he pleases (bounded only by a 50-percent restraint), a constant threat to every protected industry and every protected job, and every protected farm product in the land. All these floating powers must be recalled. Congress must resume its constitutional function. Yes; and speaking of monetary threats, we must quit buying all the loose gold and silver in the world at swollen prices—for no better purpose than to bury it in the ground at Fort Knox and West Point. This policy is as fantastic as it is dangerous. Incidentally, it directly aids the treacherous and ugly Soviets at Moscow. Russia mines her gold at $11 an ounce, unloads it on us at $35 an ounce, and puts the profit in a treasury which threatens every decent ideal of western civilization. The popular state of mind is going to be exceedingly critical of all these things when next November rolls around.

Of course, the plight of agriculture is going to be a major issue. Despite all the public money poured into it, and despite the restless succession of one wishful device after another, agriculture continues in the doldrums. It is tired of patent medicines that never cure. It is tired of enforced scarcity under orders from Washington, enforced by swarms of policing agents. It is tired of competitive imports that hurt. It wants parity with industry and its fair share of the national income, and until it gets it there can be no sustained prosperity for anybody else. It wants parity for all farm crops—not just a favored five. It is ridiculous, for example, to omit livestock, milk, and eggs when they are larger in volume than any of the favored five. The dairy industry accounts for a fifth of our farm economy, yet it counts for nothing under existing parity. Yes; agriculture wants parity—not by direct subsidies out of a bankrupt treasury, but by a farm program which itself produces parity prices, as is entirely possible and highly proper. It wants the domestic American market for its own domestic production, free of competitive alien competition. It wants a continuation of soil-conservation payments on a sound basis; but it wants all crops covered and not just the favored five. It wants easy credit, including reasonable crop loans in emergency. But instead of devices for more debt, it chiefly wants to get out of debt and into a natural income which yields cost of production and a fair profit. My own view is that it needs the two-price system to achieve this goal—an American standard of price for that portion of its crop domestically consumed, and the world price for its exportable surplus—and this will come when the well-known McNary-Haugen formula is modeled down to date.

Yes; the farmer is definitely part of this November state of mind. And no one has a greater stake than he in the restoration of industrial prosperity—because when his consumer customers generally can afford to buy his products on the scale essential to decent living for all our people, the farm problem will be immeasurably simplified. It is the same old vicious circle. "United we stand; divided we fall"—in our economics quite as much as in our national unity. The November question, of course, is just how united the divers and sundry victims of the New Deal will be, and just where they will stand.

Within the limits of this discussion, I have been unable to touch all the factors, from a Republican viewpoint, which will be influential in November. Indeed, no factor will be more conclusive than the Republican Party's ability to write a platform which is clear and explicit in its formula, and to find seasoned leadership which leaves no room to doubt the dependability of the program. But I have indicated the general trend. To sum it up, it is my view that the fundamental stake is free enterprise, free institutions, and free men. It involves economic recovery, American style. It involves the restoration of maximum individual liberty of action, maximum State and local self-government, and a renewal of the constitutional limitations which have made us the world's greatest representative democracy.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE DES MOINES REGISTER

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by W. W. Waymack, published in the Des Moines Register, an independent Republican newspaper. The editorial refers to the pending joint resolution for the extension of the Reciprocal-Trade Agreements Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Des Moines Register]

DO WE REPUDIATE DOLLIVER?

Saturday we printed a timely article on Senator Dolliver's fight against the Payne-Aldrich tariff.

We pointed out editorially that this was a great revolt, led by Iowa's great Republican Senator, against the old tariff dogmas and tariff-making practices.

We further pointed out that Dolliver was steam-rollered and the tariff bill was passed—but that it recoiled with terrific effect, as Dolliver said it would.

And we pointed out also that, from that day on, the real tradition of Iowa Republicanism has been skepticism and challenge toward the old logrolling tariffs.

Today the Senate is to start on the Hull trade-agreements program, and the real fight is going to be on whether to emasculate that program by requiring every agreement to be ratified by the Senate.

As every student of the thing knows, this means that every trade agreement affecting tariffs would be slaughtered in the Senate, and that we would be put back to the stage where the only possible way of tariff revising is the logrolling method.

So the lessons of the Dolliver struggle are of vital importance now.

Dolliver was no radical, though he was called that, of course, by the interests he was disturbing.

He was steam-rollered in the Senate. Political patronage was taken from him. President Taft, whom Dolliver characterized as a genial gentleman, surrounded by men who knew precisely what they wanted, was deluded into attacking him.

But Dolliver was right. In the Senate debate he proved he was right. In the political elections that followed he was proved not only right but "smart."

And the essence of it all was in these four things:

1. Dolliver proved that even the smaller house, the Senate, could not possibly pass intelligently on any complicated tariff revision, because it is a human impossibility for a majority to know what is actually in a tariff overhaul—what the new rates will do. Only by concentration on that thing alone, ignoring other legislative problems for months and months, could even so keen a mind as Dolliver's find out the facts. He repeatedly drove from the Senate floor the very men who led in pushing the steam-roller bill, by showing that they themselves were miserably ill-informed. He showed absolutely that, not through the fault of individual Senators, but through the unworkability of the system, a "scientific" tariff revision is impossible by the process of having Congress itself frame a tariff bill, item by item.

2. Dolliver proved that the only possible tariff revision, by this ancient method, was and is a logrolling revision, in which the broad national interest is completely submerged and the law actually is written by the groups that get the subsidies. The whole episode proved that a party pledge not to boost tariffs is incapable of fulfillment, for the moment it is undertaken under the logrolling method the best of intentions collapse. The Republican Party had been thus pledged before the Payne-Aldrich boosts were made.

(Incidentally, as further proof, the whole thing was repeated 20 years later with the Smoot-Hawley Act.)

3. Dolliver forced the party to declare categorically for reform of tariff making. The plan proposed by Republicans then was to shift responsibility to the Tariff Commission, which was to decide what fair rates were under broad principles laid down by Congress. The rest of the assumption was that thereafter Congress would merely vote those changes the Commission proposed. Dolliver endorsed this idea—but he warned, with great acuteness, that nothing whatever would come of it unless the new method were allowed to "work." It never was allowed to work. The tariff crowd took care of that, as he warned they probably would.

4. Dolliver made as clear as day that logrolling tariffs were the chief bulwarks of monopoly within the United States; the chief underminers of competition as the basis of free enterprise; the chief penalizers of consumers to benefit industrial "relief clients."

He said in the course of a magnificent speech:

"I am tired of the present methods of revising the tariffs."

He said of the logrollers:

"They took everybody into the arrangement except the American public."

He said as to the power of monopolies to control tariff making and to put burdens on the public:

"So far as I am concerned, I am through with it. I intend to fight it, and I intend to fight it as a Republican and as an American citizen."

To the threat of party punishment if he failed to follow "the party line" laid down by the tariff racketeers, he declared he would accept the more courageous alternative, since he had—

"Either to throw away my own opinions and accept the opinions of other people, or to retire from an arena in which the solidarity of a party is regarded as of more importance than its integrity."

That, ladies and gentlemen, is the alternative of other intelligent leaders within the Republican Party today.

It is dressed up a little differently now, but the alternative is the same.

Destruction of the trade-agreements program by a camouflaged vote means destruction of the only device that in even the slightest degree has ever shown promise of shaking us loose from the logrolling system.

Though there is much dissent within the Republican Party, again it is a question whether a few vociferous leaders can establish a vicious "party line," and then successfully bludgeon honest dissenters into silence by considerations of party "solidarity" throughout the preconvention period this year.

The 1936 Vice Presidential nominee, Colonel Knox, has refused to be silenced.

Are there no other leaders with the courage, or the insight, of Jonathan P. Dolliver?

Is his example so lost on Iowa that this State's Republican leadership will tamely submit to be led by the Grundys and the Pews, modern replicas of the tariff highbinders of Dolliver's own day?

Senator Guffey of Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES H. HUGHES

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE PHILADELPHIA RECORD OF MARCH 28, 1940

Mr. HUGHES. Mr. President, the distinguished Senator from Pennsylvania [Mr. GUFFEY] will shortly go before the people of his State for renomination. I might give many reasons why the Senator from Pennsylvania should be renominated, some of which are set forth in an editorial from the Philadelphia Record of March 28, 1940, under the heading "Why Guffey should be renominated." I ask unanimous consent that the editorial may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of March 28, 1940]

WHY GUFFEY SHOULD BE RENOMINATED

Before the real issues of the Democratic primary campaign become submerged in oratory, it might be a good idea to make a dispassionate, factual analysis of Senator JOSEPH F. GUFFEY'S record and of the opposition to him.

First let's think of the Democratic voters who must make the choice. At least four-fifths of all Pennsylvania Democrats are new dealers. They didn't enroll in the party until the New Deal. They are not attracted by antique party slogans such as tariff for revenue only. They don't emit rebel yells at campaign rallies.

They're in the Democratic Party because they support the progressive policies of Franklin D. Roosevelt.

Has Senator GUFFEY failed those Pennsylvania Democrats?

It will bear repeating that there is not a single member of the United States Senate with so consistent a record of voting for New Deal measures as Senator GUFFEY.

If you lost money in the bank panic, you can remember that Senator GUFFEY supported the bill creating Federal Deposit Insurance Corporation that now prevents such losses and that he voted, since, to liberalize it.

If you are a farmer saved by stabilized agricultural markets, you can remember that Senator GUFFEY supported and voted for the New Deal's farm legislation.

If your community has benefited from the construction of a new P. W. A. financed school, public building, or housing project, you can remember that Senator GUFFEY led in the fight for Federal Works appropriations.

If you have been unemployed, you can remember that Senator GUFFEY has supported every W. P. A. appropriation and has consistently fought against so-called "economy cuts" in W. P. A.

If you look upon the social-security system as one of the greatest advances of our time, you can remember that Senator GUFFEY supported it, fought for it, voted for it.

And in no case has he voted against the New Deal.

We can understand how New Deal Democrats have rough sledding in party primaries in some Southern States where the Democrats have been traditionally conservative. But we cannot understand why Senator GUFFEY is challenged in a primary contest to be decided by Pennsylvania Democrats, who are new dealers almost to a man.

Senator GUFFEY'S critics say they are not opposing him because of his record in Washington, but "because he split the Democratic Party" in Pennsylvania in that cat-and-dog fight primary of 1938.

Looking back, no one would approve all of GUFFEY'S actions in the 1938 fight. But to suggest that GUFFEY alone split the party is nonsense. Almost every Democratic leader in the State was guilty of excessive factionalism on one side or the other.

If those who are allowed to cast stones at GUFFEY are restricted to leaders blameless of factionalism in 1938, then we will have a very quiet campaign indeed.

Did GUFFEY carry the 1938 fight on after the voters had decided the issue?

No. Instead, he went further than any other Democratic leader in binding up the wounds of the 1938 family row.

Charles Alvin Jones opposed GUFFEY'S candidate for Governor in the primary and beat him. But GUFFEY nominated Jones for the Federal Circuit Court of Appeals, the position he now holds. State Chairman David Lawrence was GUFFEY'S principal foe in 1938, yet when Lawrence faced trial in Harrisburg, GUFFEY was there to testify in Lawrence's behalf; Lawrence was acquitted. Senator GUFFEY nominated Judge Guy Bard for the Federal district bench, though Bard supported the anti-Guffey ticket in 1938. Former Governor Earle opposed the Guffey faction in 1938. Yet GUFFEY sponsored Earle for his present post as Minister to Bulgaria.

GUFFEY cannot be repudiated by the Democrats on his record as a factionist any more than he can be repudiated on his record as a Senator.

As primary day approaches, the Democratic voters will realize in larger and larger numbers that it is impossible to be against a loyal New Deal Senator without being against the specific reforms and policies of the New Deal.

Extension of Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

LETTER AND TELEGRAM ENDORSING EXTENSION OF TRADE AGREEMENTS ACT

Mr. MEAD. Mr. President, I ask unanimous consent of the Senate to have printed in the Appendix of the RECORD a letter from the executive vice president of the Buffalo (N. Y.) Chamber of Commerce, endorsing the provisions of the pending measure.

I wish to say, Mr. President, that the Chamber of Commerce of Buffalo is located in an ideal section to appreciate the value of the Trade Agreements Act and the desirability of its renewal, for that community has suffered considerably from the operation of the Smoot-Hawley tariff law and the subsequent restrictive provisions of the British Trading With the Empire Act.

I should like to have published, together with the letter to which I have referred, a telegram from Mrs. Joseph Palmer, president of the East Aurora (N. Y.) League of Women Voters, stating that that organization strongly supports the extension of the Trade Agreements Act and conveying the information that it was approved at their last session by a vote of 4 to 1. That is the sentiment generally in my community.

There being no objection, the letter and telegram were ordered to be printed in the RECORD, as follows:

BUFFALO CHAMBER OF COMMERCE,
Buffalo, N. Y., March 22, 1940.

Hon. JAMES M. MEAD,
United States Senate, Washington, D. C.

DEAR SENATOR MEAD: On the recommendation of our Foreign Trade Committee, the board of directors of the Buffalo Chamber of Commerce yesterday authorized me to communicate to you the chamber's position with respect to the renewal of the Trade Agreements Act.

Feeling that the basic economic advantages of this policy outweigh all other considerations, we recommend the extension of the authority to enter into trade agreements with foreign countries for another 3 years. While we would urge you to support the renewal when the legislation reaches the Senate, we also suggest

you caution the State Department to exercise the greatest care in future trade agreements and renewals with particular respect to the flexibility of the termination clauses. Because present wars in Europe and Asia may very seriously affect the economic structure of this country in post-war years, adequate protection should be given United States industries by the inclusion of a clause providing for a very short termination notice.

We feel that this country should be in a position to void very promptly existing agreements in the event of acceleration of production and low labor costs abroad in the post-war era; the possibility of severe variations in foreign exchange; an unrestricted fight for world commerce; further acts of Congress or other groups, which may raise costs in this country and other eventualities which may tend to injure United States industries and business.

This reservation is attached to our endorsement of the objectives of the trade-agreement policy notwithstanding the escape clauses which are contained in agreements already entered into.

Very truly yours,

SAMUEL B. BOTSFORD,
Executive Vice President.

EAST AURORA, N. Y., *March 25, 1940.*

HON. JAMES MEAD,
Senate Office Building, Washington, D. C.:

The East Aurora League of Women Voters, upon a 4-to-1 vote, urges strongly that you support the extension of trade agreements and vote against amendment requiring Senate ratification. Extension is vital contribution in international situation should be decided by general good resulting not by pressure of certain interests.

MRS. JOSEPH PALMER, *President.*

Judicial Review of Administrative Decisions

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

OPINION OF SUPREME COURT

Mr. COCHRAN. Mr. Speaker, the Rules Committee having granted a special rule for the consideration of the bill commonly referred to as the Logan-Walter bill, undoubtedly it will be reached within the near future.

A year ago, acting upon the suggestion of former Attorney General Cummings, the President suggested to the then Attorney General, Justice Murphy, the appointment of a committee to investigate the "need for procedural reform in administrative law." The President further wrote: "A thorough and comprehensive study should be made of existing practices and procedures with a view to detecting any existing deficiencies and pointing the way to improvements."

An outstanding committee was appointed, the personnel of which follows: Dean Acheson, chairman; Ralph F. Fuchs, Lloyd K. Garrison, D. Lawrence Groner, Henry M. Hart, Jr., Carl McFarland, James W. Morris, Harry Shulman, E. Blythe Stason, Arthur T. Vanderbilt.

It is my opinion that the Congress would do well to delay consideration of such an important matter until the final report of this committee is available.

On January 29, 1940, the United States Supreme Court in an opinion handed down in Federal Communications Commission against the Pottsville Broadcasting Co. directly referred to judicial review of administrative decision.

Mr. Justice Frankfurter delivered the opinion of the Court. There was no dissent, Mr. Justice McReynolds concurring in the result.

This opinion relates to the subject and therefore, Mr. Speaker, as part of my remarks I ask permission to place it in the RECORD. The opinion follows:

[Supreme Court of the United States. No. 265. October term, 1939. *Federal Communications Commission, petitioner,* v. *The Pottsville Broadcasting Co.* On writ of certiorari to the United States Court of Appeals for the District of Columbia. January 29, 1940.]

Mr. Justice Frankfurter delivered the opinion of the Court.

The court below issued a writ of mandamus against the Federal Communications Commission, and, because important issues of administrative law are involved, we brought the case here (308 U. S. —). We are called upon to ascertain and enforce the spheres of authority which Congress has given to the Commission and the courts, respectively, through its scheme for the regulation of radio broadcasting in the Communications Act of 1934 (ch. 652, 48 Stat. 1064, as amended by the act of May 20, 1937, ch. 229, 50 Stat. 189; 47 U. S. C. 151).

Adequate appreciation of the facts presently to be summarized requires that they be set in their legislative framework. In its essentials the Communications Act of 1934 derives from the Federal Radio Act of 1927 (ch. 169, 44 Stat. 1162, as amended, 46 Stat. 844). By this act Congress, in order to protect the national interest involved in the new and far-reaching science of broadcasting, formulated a unified and comprehensive regulatory system for the industry.[1] The common factors in the administration of the various statutes by which Congress had supervised the different modes of communication led to the creation, in the act of 1934, of the Communications Commission. But the objectives of the legislation have remained substantially unaltered since 1927.

Congress moved under the spur of a widespread fear that in the absence of governmental control the public interest might be subordinated to monopolistic domination in the broadcasting field. To avoid this Congress provided for a system of permits and licenses. Licenses were not to be granted for longer than 3 years. (Communications Act of 1934, title iii, sec. 307 (d).) No license was to be "construed to create any right, beyond the terms, conditions, and periods of the license." (Ibid., sec. 301.) In granting or withholding permits for the construction of stations, and in granting, denying, modifying, or revoking licenses for the operation of stations, "public convenience, interest, or necessity" was the touchstone for the exercise of the Commission's authority. While this criterion is as concrete as the complicated factors for judgment in such a field of delegated authority permit, it serves as a supple instrument for the exercise of discretion by the expert body which Congress has charged to carry out its legislative policy. Necessarily, therefore, the subordinate questions of procedure in ascertaining the public interest, when the Commission's licensing authority is invoked—the scope of the inquiry, whether applications should be heard contemporaneously or successively, whether parties should be allowed to intervene in one another's proceedings, and similar questions—were explicitly and by implication left to the Commission's own devising so long, of course, as it observes the basic requirements designed for the protection of private as well as public interest. (Ibid, title I, sec. 4 (j).) Underlying the whole law is recognition of the rapidly fluctuating factors characteristic of the evolution of broadcasting and of the corresponding requirement that the administrative process possess sufficient flexibility to adjust itself to these factors. Thus it is highly significant that although investment in broadcasting stations may be large a license may not be issued for more than 3 years; and in deciding whether to renew the license, just as in deciding whether to issue it in the first place, the Commission must judge by the standard of "public convenience, interest, or necessity." The Communications Act is not designed primarily as a new code for the adjustment of conflicting private rights through adjudication. Rather, it expresses a desire on the part of Congress to maintain, through appropriate administrative control, a grip on the dynamic aspects of radio transmission.[2]

Against this background the facts of the present case fall into proper perspective. In May 1936, the Pottsville Broadcasting Co., respondent here, sought from the Commission a permit, under section 319 ibid, title iii, for the construction of a broadcasting station at Pottsville, Pa. The Commission denied this application on two grounds: (1) That the respondent was financially disqualified, and (2) that the applicant did not sufficiently represent local interests in the community which the proposed station was to serve. From this denial of its application respondent appealed to the court below. That tribunal withheld judgment on the second ground of the Commission's decision, for it did not deem this to have controlled the Commission's judgment. But, finding the Commission's conclusion regarding the respondent's lack of financial qualification to have been based on an erroneous understanding of Pennsylvania law, the Court of Appeals reversed the decision and ordered the

---

[1] For the legislative history of the act of 1927, see H. Rept. No. 464, S. Rept. No. 772, 69th Cong., 1st sess.; 67 CONGRESSIONAL RECORD, 5473–5504, 5555–5586, 5645–5647, 12335–12359, 12480, 12497–12508, 12614–12618; 68 CONGRESSIONAL RECORD, 2556–2580, 2750–2751, 2869–2882, 3025–3039, 3117–3134, 3257–3262, 3329–3336, 3569–3571, 4109–4155. A summary of the operation of previous regulatory laws may be found in Herring and Gross, Telecommunications, pp. 239–245.

[2] Since the beginning of regulation under the act of 1927 comparative considerations have governed the application of standards of "public convenience, interest, or necessity" laid down by the law. "* * * the Commission desires to point out that the test, 'public interest, convenience, or necessity,' becomes a matter of a comparative and not an absolute standard when applied to broadcasting stations. Since the number of channels is limited and the number of persons desiring to broadcast is far greater than can be accommodated, the Commission must determine from among the applicants before it which of them will, if licensed, best serve the public. In a measure, perhaps, all of them give more or less service. Those who give the least, however, must be sacrificed for those who give the most. The emphasis must be first and foremost on the interest, the convenience, and the necessity of the listening public and not on the interest, convenience, or necessity of the individual broadcaster or the advertiser." (Second Annual Report, Federal Radio Commission, 1928, pp. 169–170.)

"cause * * * remanded to the * * * Communications Commission for reconsideration in accordance with the views expressed." *Pottsville Broadcasting Co.* v. *Federal Communications Commission* (98 F. (2d) 288).

Following this remand, respondent petitioned the Commission to grant its original application. Instead of doing so, the Commission set for argument respondent's application along with two rival applications for the same facilities. The latter applications had been filed subsequently to that of respondent and hearings had been held on them by the Commission in a consolidated proceeding, but they were still undisposed of when the respondent's case returned to the Commission. With three applications for the same facilities thus before it, and the facts regarding each having theretofore been explored by appropriate procedure, the Commission directed that all three be set down for argument before it to determine which, on a comparative basis, in the judgment of the Commission will best serve public interest. At this stage of the proceedings respondents sought and obtained from the Court of Appeals the writ of mandamus now under review. That writ commanded the Commission to set aside its order designating respondent's application for hearing on a comparative basis with the other two, and to hear and reconsider the application of the Pottsville Broadcasting Co. on the basis of the record as originally made and in accordance with the opinions of the Court of Appeals in the original review (98 F. (2d) 288), and in the mandamus proceedings. *Pottsville Broadcasting Co.* v. *Federal Communications Commission* (105 F. (2d) 36.)

The Court of Appeals invoked against the Commission the familiar doctrine that a lower court is bound to respect the mandate of an appellate tribunal and cannot reconsider questions which the mandate has laid at rest. See *In re Sanford Fork & Tool Co.*, petitioner (160 U. S. 247, 255–56). That proposition is indisputable, but it does not tell us which issues are laid at rest. Cf. *Sprague* v. *Ticonic Bank* (307 U. S. 161). Nor is a court's interpretation of the scope of its own mandate necessarily conclusive. To be sure, the court that issues a mandate is normally the best judge of its content, on the general theory that the author of a document is ordinarily the authoritative interpreter of its purposes. But it is not even true that a lower court's interpretation of its mandate is controlling here. Cf. *United States* v. *Morgan* (307 U. S. 183). Therefore, we would not be foreclosed by the interpretation which the Court of Appeals gave to its mandate, even if it had been directed to a lower court.

A much deeper issue, however, is here involved. This was not a mandate from court to court, but from a court to an administrative agency. What is in issue is not the relationship of Federal courts inter se—a relationship defined largely by the courts themselves—but the due observance by courts of the distribution of authority made by Congress as between its power to regulate commerce and the reviewing power which it has conferred upon the courts under article III of the Constitution. A review by a Federal court of the action of a lower court is only one phase of a single unified process. But to the extent that a Federal court is authorized to review an administrative act, there is superimposed upon the enforcement of legislative policy through administrative control a different process from that out of which the administrative action under review ensued. The technical rules derived from the interrelationship of judicial tribunals forming a hierarchal system are taken out of their environment when mechanically applied to determine the extent to which congressional power, exercised through a delegated agency, can be controlled within the limited scope of judicial power conferred by Congress under the Constitution.

Courts, like other organisms, represent an interplay of form and function. The history of Anglo-American courts and the more or less narrowly defined range of their staple business have determined the basic characteristics of trial procedure, the rules of evidence, and the general principles of appellate review. Modern administrative tribunals are the outgrowth of conditions far different from those.[3] To a large degree they have been a response to the felt need of governmental supervision over economic enterprise—a supervision which could effectively be exercized neither directly through self-executing legislation nor by the judicial process. That this movement was natural and its extension inevitable was a quarter century ago the opinion of eminent spokesmen of the law.[4] Perhaps the most striking characteristic of this movement has been the investiture of administrative agencies with power far exceeding and different from the conventional judicial modes for adjusting conflicting claims—modes whereby interested litigants define the scope of the inquiry and determine the data on which the judicial judgment is ultimately based. Administrative agencies have power themselves to initiate inquiry, or, when their authority is invoked, to control the range of investigation in ascertaining what is to satisfy the requirements of the public interest in relation to the needs of vast regions and sometimes the whole nation in the enjoyment of facilities for transportation, communication, and other essential public services.[5] These differences in origin and function preclude wholesale transplantation of the rules of procedure, trial, and review, which have evolved from the history and experience of courts. Thus, this Court has recognized that bodies like the Interstate Commerce Commission, into whose mold Congress has cast more recent administrative agencies, "should not be too narrowly constrained by technical rules as to the admissibility of proof," *Interstate Commerce Commission* v. *Baird* (194 U. S. 25, 44), should be free to fashion their own rules of procedure and to pursue methods of inquiry capable of permitting them to discharge their multitudinous duties.[6] Compare *New England Divisions case* (261 U. S. 184). To be sure, the laws under which these agencies operate prescribe the fundamentals of fair play. They require that interested parties be afforded an opportunity for hearing and that judgment must express a reasoned conclusion. But to assimilate the relation of these administrative bodies and the courts to the relationship between lower and upper courts is to disregard the origin and purposes of the movement for administrative regulation and at the same time to disregard the traditional scope, however far reaching, of the judicial process. Unless these vital differentiations between the functions of judicial and administrative tribunals are observed, courts will stray outside their province and read the laws of Congress through the distorting lenses of inapplicable legal doctrine.

Under the Radio Act of 1927 as originally passed, the Court of Appeals was authorized in reviewing action of the Radio Commission to "alter or revise the decision appealed from and enter such judgment as to it may seem just." Section 16 of the Radio Act of 1927, 44 Stat. 1169. Thereby the Court of Appeals was constituted "a superior and revising agency in the same field" as that in which the Radio Commission acted. *Radio Commission* v. *General Electric Co.* (281 U. S. 464, 467). Since the power thus given was administrative rather than judicial, the appellate jurisdiction of this court could not be invoked. *Radio Commission* v. *General Electric Co.*, supra. To lay the basis for review here, Congress amended section 16 so as to terminate the administrative oversight of the Court of Appeals. (c. 788, 46 Stat. 844). In "sharp contrast with the previous grant of authority" the court was restricted to a purely judicial review. "Whether the Commission applies the legislative standards validly set up, whether it acts within the authority conferred or goes beyond it, whether its proceedings satisfy the pertinent demands of due process, whether, in short, there is compliance with the legal requirements which fix the province of the Commission and govern its action, are appropriate questions for judicial decision." *Radio Commission* v. *Nelson Bros. Co.* (289 U. S. 266, 276).

On review the court may thus correct errors of law and on remand the Commission is bound to act upon the correction. *Federal Power Commission* v. *Pacific Co.* (307 U. S. 156). But an administrative determination in which is imbedded a legal question open to judicial review does not impliedly foreclose the administrative agency, after its error has been corrected, from enforcing the legislative policy committed to its charge. Cf. *Ford Motor Co.* v. *Labor Board* (305 U. S. 364).

The Commission's responsibility at all times is to measure applications by the standard of "public convenience, interest, or necessity." The Commission originally found respondent's application inconsistent with the public interest because of an erroneous view regarding the law of Pennsylvania. The court of appeals laid bare that error and, in compelling obedience to its correction, exhausted the only power which Congress gave it. At this point the Commission was again charged with the duty of judging the application in the light of "public convenience, interest, or necessity." The fact that in its first disposition the Commission had committed a legal error did not create rights of priority in the respondent, as against the later applicants, which it would not have otherwise possessed. Only Congress could confer such a priority. It has not done so. The court of appeals cannot write the principle of priority into the statute as an indirect result of its power to scrutinize legal errors in the first of an allowable series of administrative actions. Such an implication from the curtailed review

---

[3] See Maitland, The Constitutional History of England, pp. 415–18; Landis, The Administrative Process, passim.

[4] See, for instance, the address of Elihu Root as president of the American Bar Association:

"There is one special field of law development which has manifestly become inevitable. We are entering upon the creation of a body of administrative law quite different in its machinery, its remedies, and its necessary safeguards from the old methods of regulation by specific statutes enforced by the courts. * * * There will be no withdrawal from these experiments. * * * We shall go on; we shall expand them, whether we approve theoretically or not, because such agencies furnish protection to rights and obstacles to wrongdoing which under our new social and industrial conditions cannot be practically accomplished by the old and simple procedure of legislatures and courts as in the last generation." 41 A. B. A. Rep. 355, 368–369.

[5] See *United States* v. *Lowden*, ante, p. —, decided December 4, 1939; Herring, Public Administration and the Public Interest, passim.

[6] The Communications Commission's Rules of Practice, Rule 106.4, provided that "the Commission will, so far as practicable, endeavor to fix the same date * * * for hearing on all applications which * * * present conflicting claims * * * excepting, however, applications filed after any such application has been designated for hearing." Respondent contends, and the court below seemed to believe that this rule bound the Commission to give respondent a noncomparative consideration because its application had been set down for hearing before the later and rival applications were filed. The Commission interprets this rule simply as governing the order in which applications shall be heard, and not touching upon the order in which they shall be acted upon or the manner in which they shall be considered. That interpretation is binding upon the courts. *A. T. & T. Co.* v. *United States*, 299 U. S. 232.

allowed by the Communications Act is at war with the basic policy underlying the statute. It would mean that for practical purposes the contingencies of judicial review and of litigation, rather than the public interest, would be decisive factors in determining which of several pending applications was to be granted.

It is, however, urged upon us that if all matters of administrative discretion remain open for determination on remand after reversal, a succession of single determinations upon single legal issues is possible, with resulting delay and hardship to the applicant. It is always easy to conjure up extreme and even oppressive possibilities in the exertion of authority. But courts are not charged with general guardianship against all potential mischief in the complicated tasks of government. The present case makes timely the reminder that "legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts." *Missouri, Kansas & Texas Ry. Co.* v. *May* (194 U. S. 267, 270). Congress, which creates and sustains these agencies, must be trusted to correct whatever defects experience may reveal. Interference by the courts is not conducive to the development of habits of responsibility in administrative agencies. Anglo-American courts as we now know them are themselves in no small measure the product of a historic process.

The judgment is reversed, with directions to dissolve the writ of mandamus and to dismiss respondent's petition.

Reversed.

Mr. Justice McReynolds concurs in the result.

Filipinos Demand Special Privileges

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. KRAMER. Mr. Speaker, I ask unanimous consent to extend my remarks on a bill pending before the Committee on Immigration and Naturalization, in which the Philippines are demanding special privileges, and to include therein an article by Paul Sharrenberg.

The SPEAKER. Is there objection?

There was no objection.

Mr. KRAMER. Mr. Speaker, the California Joint Immigration Committee, composed of representatives of the California State Federation of Labor, the California Department of the American Legion, the Native Sons of the Golden West, the Immigration Study Commission, and certain other Californians of national standing, was instrumental in having enacted into the Federal Immigration Restriction Act of 1924 the provision excluding as permanent settlers all aliens ineligible to American citizenship. Since that time the committee has been maintained to defend that measure from attack and repeal.

Nearly 150 years ago the founding fathers of this Republic laid down the basis for a white America in the naturalization law of 1790, which provided that citizenship should be restricted to "free white persons." The law was amended after the Civil War to include "persons of African nativity and persons of African descent."

The exclusion measure has been, and continues to be, America's legal fortification against the hordes of Asia, who would overwhelm us if we permitted them to do so. California's living standards have been in constant danger since the early days from repeated migrations of these Asiatics—Chinese, Hindus, Japanese, and Filipinos. Each separate infiltration, as it progressed, became a menace and has been fought with determination by the people. The Chinese were excluded in 1882, the Hindus in 1917, the Japanese in 1924, and the Filipinos in 1936 by the Philippines Independence Act, which limits their coming to 50 per year until 1946, when the act becomes effective. After that time they will be entirely barred under the exclusion measure.

If citizenship were to be granted to Filipinos, it necessarily must be granted also to all other Asiatics as well. There can be no discrimination. Thus the exclusion measure would be nullified immediately, since everyone would then become eligible to citizenship. The gates would be opened to all Asiatics, and their total immigration under quota would amount to well over 1,000 annually. The California alien land law would also be nullified.

Another point which should have earnest consideration is the fact that alien wives for both American-born and naturalized orientals, were citizenship privileges granted them, would then be admissible outside the quota. Also, every oriental born in a country of the Western Hemisphere and a citizen thereof would be admissible, since there is no quota restriction on citizens of those countries except that of emergency regulation.

It is a proven fact that orientals are absolutely unassimilable with the basic white population, forming as they do, distinct racial blocs. That even their children are also not assimilable is proved by the experience of the second-generation Japanese, who constitute the largest American-born oriental group in California. They are in every way splendid people, but in spite of their evident desire to become an integral part of the American population, they cannot find suitable employment despite education and fitness; they are restricted socially to their own racial group; they may not intermarry with Caucasians; they cannot find desirable living accommodations and are barred from many places of recreation and amusement. This condition is the result of the deep-seated and fundamental determination of the American people to keep their blood and their country white.

Although it is not generally known, it is another fact that Filipinos, besides underbidding and crowding out white labor in certain rural areas of California, have displaced many white workers in the cities, mostly women and men over 40 years of age working in restaurants, hotels, and institutions.

We must respect the civil rights of orientals living here, both American-born and alien. But to grant to alien Asiatics the privilege of citizenship, a privilege bringing with it the right of entry under immigration quota, would tend to lower American living standards and would be contrary to the welfare of the citizens of California and to the Nation as a whole.

For the reasons stated in this brief introductory, I take pleasure in presenting herewith an article from a recent issue of the American Federationist, written by Mr. Paul Scharrenberg, legislative representative of the American Federation of Labor, and for many years a member of the California Joint Immigration Committee. This article, which appears under the caption, "Filipinos Demand Special Privileges," not only sets forth the attitude of the American Federation of Labor toward the proposed naturalization of Filipinos, but also quotes the commitments made by Resident Commissioner Osias of the Philippines 10 years ago, when the House was debating the then-pending grant of independence to the Philippine Islands.

The article by Mr. Scharrenberg follows:

[From the American Federationist of December 1939]

FILIPINOS DEMAND SPECIAL PRIVILEGES

(By Paul Scharrenberg)

During this session of Congress several bills have been introduced to grant naturalization privileges to Filipinos now residents of the United States. The authors of these bills maintain that the United States can well afford to be generous to the Filipinos. They do not seem to realize, however, that their proposals are entirely contrary to the very precept of the Independence Act as endorsed by the Philippine Legislature and ratified by a plebiscite of Filipino people.

The fact is that the American people, through various congressional enactments, have been more than generous to the Filipinos. The record of the American Federation of Labor, also, is clear and above reproach in the lengthy controversy to grant the Filipinos their freedom and independence in the manner desired by themselves.

The American Federation of Labor convention which met at El Paso in 1924, by unanimous vote, adopted the following resolution:

"*Resolved*, That we respectfully petition and urge the Congress of the United States to forthwith grant the earnest prayer and petitions of the Filipinos—the right to exercise, in full, liberty, freedom, and self-government."

Thereafter, at every session of Congress the American Federation of Labor exerted its full and unqualified influence for Philippine independence. Those who opposed Philippine independence charged that labor's support for this cause was actuated by selfish motives. It was even hinted that labor had entered into an unholy alliance with the big sugar interests and with the dairy farmers who were apprehensive about the importation of coconut products used in the manufacture of oleomargarine.

Disregarding these unsupported charges, it is a fact that several of the national and international unions affiliated with the American Federation of Labor were greatly concerned about the constantly increasing imports of manufactured products from the islands. It was known that these products were manufactured at the lowest possible labor costs and it could not be denied that such imports constituted a menace and a threat to the immensely superior conditions of American workers.

In addition to the political pressure of the directly affected groups, there was wholesome public support for Philippine independence, especially from Pacific Coast States, where public opinion had been solidified for such legislation, first, because it was felt that our hold on the Philippines would sooner or later draw us into war with Japan, and, second, because of the general desire to close our gates to all Asiatic immigration, Filipinos included.

So Congress in 1932 passed the first Philippine independence bill. This measure did not seem to be satisfactory to the Filipinos. At any rate, the Philippine Legislature refused to approve the bill.

On March 24, 1934, the Tydings-McDuffie independence bill, drawn more in accordance with Filipino desires, was approved by President Roosevelt, and on May 1, 1934, it was ratified by the Philippine Legislature.

The act provides that in 1945 the United States shall withdraw entirely from the islands and on July 4, 1946, the Commonwealth shall become the Republic of the Philippines. When the Tydings-McDuffie bill was pending in Congress the American Federation of Labor paid special attention to the sections pertaining to immigration. As finally passed the bill provided:

1. That all Filipino immigration to continental United States shall cease upon ratification of the act by the Philippine Legislature, except for a quota of 50 persons per annum.

2. That Filipinos in the Territory of Hawaii shall not be admitted to the continental United States.

3. That upon withdrawal of American sovereignty over the Philippines "the immigration laws of the United States (including all the provisions thereof relating to persons ineligible to citizenship) shall apply to persons who were born in the Philippine Islands to the same extent as in the case of other foreign countries."

There can be no doubt that all the implications of the language in the immigration section of the Independence Act were fully understood and accepted by the official spokesmen for the people of the Philippines. On January 29, 1930, there was an interesting discussion upon this subject in the House of Representatives. Representatives Barbour of California, Johnson of Washington, and Resident Commissioner Osias of the Philippines participated in the discussion. To quote from the CONGRESSIONAL RECORD:

"Mr. BARBOUR. What I want to get at is this: After the Philippine Islands have independence will they be willing to be treated by the United States in every respect as other foreign governments?

"Mr. OSIAS. Yes, sir. If independent, we will be willing to be treated as other foreign governments, not only from the standpoint of immigration and labor but from the standpoint of the tariff—and I wish the people and Congress of the United States never to have any doubt about that. The Filipino people have carefully weighed the consequences of freedom, and they are prepared to shoulder the obligations and responsibilities that go with independence.

"Mr. JOHNSON of Washington. Will the gentleman yield?

"Mr. OSIAS. I yield gladly.

"Mr. JOHNSON of Washington. I do not want to embarrass the gentleman, but the only class of people in the Philippine Islands who can be naturalized are those who have served a certain length of time in the Navy. Would the gentleman like to see that amendment, which was passed in war times repealed?

"Mr. OSIAS. I am willing to take the consequences that go with freedom, and there are 13,000,000 Filipinos behind me when I make that statement. [Applause.]"

It will be noted that Commissioner Osias did not mince words. Speaking officially for his people he declared in so many words that they were willing and ready to take the bitter along with the sweet. They asked for freedom and were prepared to take all the consequences and to shoulder the obligations and responsibilities that go along with freedom.

These pledges were made only a few years ago but at the first session of the Seventy-sixth Congress we find the present Resident Commissioner of the Philippines, Mr. JOAQUIN N. ELIZALDE, in the House Committee on Immigration pleading for the passage of a bill (H. R. 3657) to grant the privilege of naturalization to certain Filipino seamen so as to qualify them for jobs on American merchant vessels.

At the very time Commissioner ELIZALDE appeared before the House Immigration Committee another hearing was held by the House Committee on Merchant Marine and Fisheries and testimony was presented to the latter committee that there were then approximately 18,000 unemployed American seamen in Atlantic and Gulf ports.

When speaking about the hardships imposed upon his countrymen by the adoption of legislation requiring the manning of American ships by American citizens Commissioner ELIZALDE conveniently overlooked another pertinent law affecting Filipinos in the United States. For the past 4 years Congress has provided free transportation to Filipinos who voluntarily desire to return to their native land and this session of Congress generously extended the provisions of that law to cover applications filed prior to December 31, 1940. This privilege of free rides home is not given to any other nationals. It is given exclusively to Filipinos, excepting, of course, persons who have been ordered deported for cause.

Still another bill, now pending in Congress (H. R. 7239) proposes to naturalize all Filipinos who are permanent residents of the United States. The author of this bill very generously seeks to provide special naturalization privileges for Filipinos. Neither a certificate of arrival nor a declaration of intention is required under the terms of this bill. It should be noted that according to the census of 1930 there were 63,052 Filipinos in the Territory of Hawaii.

It is more or less of a mystery why Filipinos cannot find happiness at home. In other Asiatic countries, with their dense population and decidedly limited natural resources, the struggle for mere existence is necessarily a lifelong problem. The Philippines, however, are not overpopulated. To the contrary the islands could comfortably support double and even treble the present population of approximately 13,000,000. The total area of the Philippines is 114,400 square miles, or only about 7,000 square miles less than Great Britain.

So far as natural resources are concerned the islands are rich beyond compare. In agriculture, forestry, and especially in the vast mineral resources there are boundless opportunities for development.

All of this must be known to those who sponsor legislation granting special naturalization privileges to the Filipinos. Yet, they refuse to leave well enough alone. The crux of the matter seems to be that the Filipinos have acquired a habit of getting what they wanted. Numerous tangible benefits such as gifts, loans, special tariff concessions, and finally the grant of independence have been accepted as though they were coupons on a Liberty bond. However, when asking for special naturalization privileges the Filipinos are attacking the entire structure of Asiatic exclusion laws which now prevent the migration of any Asiatics for permanent residence in the United States.

Congress, in 1924, inserted a clause in our general immigration laws providing that aliens ineligible to citizenship shall be barred as immigrants. This legislation was supported by the American Federation of Labor because it provided a logical, practical, and effective solution of the Asiatic immigration problem. It followed the Federal law which since 1790 has made all the yellow and brown races ineligible to citizenship because of unassimilability and the menace they would offer if established here. Certainly if immigration is to be restricted, we would commence with that element which is barred from citizenship.

Those Members of Congress who sponsor Filipino naturalization laws should realize that if such privileges were granted to natives of the Philippines, the natives of Japan, China, and other Asiatic countries would have justifiable cause for complaints of discrimination. Then, if the privilege of naturalization were granted to all Asiatics the props would be knocked from under our present effective immigration barriers.

Business Recovery

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 28 (legislative day of Monday, March 4), 1940

EDITORIAL BY PAUL BLOCK

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Mr. Paul Block which appeared in the Pittsburgh Post-Gazette of March 25, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUSINESS RECOVERY CAN COME NOW OR AFTER THE ELECTION—IT IS UP TO MR. ROOSEVELT

A rather strange situation exists among our voters if we are to believe the many surveys and polls which have been taken.

These prove that businessmen (from large and small business), as well as people who have good-paying jobs, are almost unanimously against Mr. Roosevelt and most of the New Deal measures, whereas the great majority of the men and women earning low wages and those on part-time work, as well as people on W. P. A. and relief, are in favor of Mr. Roosevelt.

One could imagine that men at the head of large industries, as well as the businessman who is still doing pretty well, would be among the first to say, "Why change, we are doing all right?" And the same might be expected from those whose jobs have not been disturbed, in fact, whose salaries have risen.

However, there is an answer, and one not very difficult to find.

Those in business have seen more and more of their kind being throttled by overburdening taxes and rules by the various bureaucratic commissions, which today are actually dictating the terms under which business may carry on.

These businessmen, small as well as large, see the handwriting on the wall; they see profits being reduced or wiped out, and they figure that 4 more years of the New Deal and there will be few, if any, profits left, and that free business enterprise, the method which made this country great, will be virtually, if not entirely, wiped out.

And those who are still earning good wages also recognize this. They know that if business is not allowed to make a profit, because of so-called further reforms, people with money, through fear of the future, will not invest in new enterprises or for the expansion of industry. And so pretty soon their jobs may be less secure, and because of continuously increasing taxes, their incomes will be lower, even though their salaries may not have been reduced.

And that brings us to the lower-salaried workers, and those on W. P. A. and relief.

One would imagine they would be among the very first to demand a change which might benefit them. For over 7 years Mr. Roosevelt and his crackpot aides have been running the Government and have not been able to be of any real help to these low-wage workers.

These men and women ought to demand a change in Washington, for nothing could be much worse than what they are suffering with now.

Do they fear a change because the new dealers have preached that the end of capitalism is at hand; that the expansion in business and the development of new industries through inventions and research is over?

Have some of our people, especially those whose hardship has been greatest, accepted the defeatist attitude which the new dealers have acclaimed?

Well, we don't pretend to be prophets, but our advice is, "Don't lose courage." Watch and see how business will start rising almost the day after Mr. Roosevelt declares that he will not, under any circumstances, accept a third term. We still feel confident he will not accept, but most every one differs with us.

So if we are wrong, the country will have to wait until after election before real business improvement comes. We feel confident a new President will be elected, with an administration which will fight for the return of free enterprise and the American form of government.

PAUL BLOCK, *Publisher.*

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1940

SUMMARY OF WORK IN CONNECTICUT

Mr. SHANLEY. Mr. Speaker, the National Youth Administration under its Director Richard Barrett has done a splendid job in Connecticut. In my own district, the home of Yale University, Albertus Magnus College, Arnold College, the Connecticut College of Pharmacy, Junior College of Commerce, and State Teachers College, all have been beneficiaries from the entire N. Y. A. program. It has the highest endorsement of educational leaders and I take this opportunity of complimenting the national organization as well as its Connecticut subdivision for a job well done. I am including a short summary of their program.

THE PROGRAM OF THE NATIONAL YOUTH ADMINISTRATION IN THE THIRD CONGRESSIONAL DISTRICT OF CONNECTICUT

The school work program

Student quota	707
Number of participating schools	25
Funds allotted for fiscal year	$38,194

A high-school student who could not otherwise attend school may work for and be paid from $3 to $6 per month; the average payment is $5.42.

The college and graduate work program

Student quota	531
Number of participating schools	8
Funds allotted for fiscal year	$39,960

These figures do not include students attending colleges or universities located outside the Third Congressional District. A college student who could not otherwise attend school may work for and be paid from $10 to $20 per month; the average payment is $11.21.

In the combined student work program, including the school work program and the college and graduate work programs, there are 1,238 youth employed in 33 schools and colleges with a total earning of $78,154.

The out-of-school work program as of Jan. 5, 1940

Number of youth employed on the N. Y. A. out-of-school program	1,234
Average monthly earnings of youth employed on the out-of-school program	$20.48
Number of unemployed youth certified and awaiting assignment	246
Estimated number of needy unemployed youth not certified	9,212
Total unassigned needy youth	9,458

A total of 2,472 youth are employed by the N. Y. A. in this congressional district.

Colleges participating in the N. Y. A. college and graduate work program in the Third Congressional District of Connecticut

College	Student quota	Yearly fund quota
Total	531	$39,960
Albertus Magnus College	18	2,430
Arnold College	10	1,350
Berkeley Divinity School	1	135
Connecticut College of Pharmacy	16	2,160
Junior College of Commerce	12	1,620
Junior College of Physical Therapy	4	540
State Teachers College, New Haven	35	4,725
Yale University	435	27,000

Government Help Must Be Sympathetic and Intelligent

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Senator ROBERT A. TAFT, of Ohio, in Chicago, Ill., the first week of March 1940:

I wish to discuss this evening what we might call the humanitarian activities of government. Since the depression of 1929 and the tremendous unemployment resulting from it we have seen a great extension of Government aid to those with little or no income. There are literally scores of Government bureaus handing out aid in all directions. It is no new principle of government. Local governments, cities, and counties have always furnished aid and relief to the poor, supplemented by a large measure of private charity administered through Protestant, Catholic, Jewish, and nonsectarian agencies. But the depression of 1929 multiplied our problem manyfold and led to the diversified relief, social security, and housing programs with which the Federal Government is now concerned.

That feature of the New Deal which seems to me most permanent is the acceptance of the principle that the Federal Government shall concern itself with these matters. There can be no doubt of the seriousness of the problem and the real danger of starvation which threatens so many millions. I think it is greatly aggravated by the economic planning, price fixing, and regulatory and spending policies of the Federal Government. Nevertheless, it is a situation which we face and which any government with the slightest humanity earnestly desires to meet. Before the depression of 1929 we hoped that it was a minor problem easily handled by local government. We hoped that under our American system every man who wished to work could earn an adequate living and provide for his own old age or educate his children so that they might do so. The depression of 1929 showed that we had not solved our economic problems so completely.

Furthermore, even if we succeed in putting back to work the greater part of the unemployed, we are still likely to find that many people have to work at jobs which do not return a living wage. The product of their labor is not sufficiently valuable to the rest of the people. We have accepted the principle that in some way these people must be helped so that their families, and particularly their children, may have the support which other children have to secure an education and a start in life.

There are still a good many people who close their eyes to the actual conditions which exist, and insist that poverty is always the result of a man's own faults. On the other hand, the new dealers have adopted the term "underprivileged," which implies that the fault lies entirely on the American system; that those who are earning their own living by their own industry are in some way getting special privileges from the Government. The truth lies between. Some of those who need aid will never succeed in earning their own living under any system, perhaps because of their own character. But there are millions of others who are merely unfortunate. Anyone who goes up and down the streets of our great municipalities will find family after family whose members would be eager and industrious workers if jobs could be found for them. Every social worker knows that most of his cases are of that character. Men on W. P. A. have been made the butts of all kinds of jokes, which are unfair to most of them, and have led many people to the belief that relief itself is unwise and unnecessary. The system is unwise, but it is no fault of the men on W. P. A. Those who have acquired that belief simply do not understand the condition that faces our industrial centers. It is unfortunate that the methods pursued have created a prejudice against all relief.

The problem is still of such magnitude that Federal assistance is not only proper but essential. The problem of transient unemployed is an interstate problem, with which the Federal Government has a direct concern. It is one which the present administration has neglected.

Apart from transients, relief is in the first instance a local problem. It was so declared to be in the Democratic platform of 1932, as well as in that of the Republicans. But the Federal Government had to help because of the tremendous financial burden which the local governments were unable to meet. Our State and local governments are greatly handicapped in raising taxes. They cannot tax the wealthy without driving them from the State. They cannot tax industry without discouraging its growth in the State. The most lucrative methods of taxation are not available to the States and localities, as they are to the Federal Government. Most of our States had steadily expanded their activities until all of their resources were required for the current operation of schools, cities, villages, and roads, and the normal functions of State and county government.

The New Deal was not the first to adopt Federal aid, for extensive loans were made by the Federal Government to localities under President Hoover. During the early years of the New Deal, relief was administered locally, largely by the old community-chest staffs, with aid from the Federal Government. But Harry Hopkins finally insisted, as a condition of Federal aid, that the Federal Government administer relief. There was never any good reason that I know of for Federal administration. The W. P. A. system is both expensive and inadequate. It provides a Federal work program, which encourages men to stay on relief. A Federal work program, as it actually works out, is neither relief nor public works. From political necessity, it is operated in some counties where no relief is needed, and in others it is entirely inadequate. It is never adjusted fast enough to real needs, but it always reaches a peak just before the November election, as it did in 1936 and 1938; and falls off when there is most distress, as in the depression the last part of 1937.

At the same time it takes real public works away from the private contractors who pay union wages and could give work to their more efficient workmen, and yet do the work at much less cost to the public.

W. P. A. only reaches a small proportion of those needing help. The Federal Government entirely washes its hands of the millions who cannot get on W. P. A., and imposes a burden on local communities for direct relief which in cases of exceptional unemployment or community poverty they cannot meet. The Federal Government has never kept its promise that it would take care of all the employables, because the expense of a Federal work program is so great that even a spendthrift administration won't add so greatly to Government expenses. There is an unfair discrimination between men in the same condition of hardship, and politics and favoritism often prevail. Congress is now considering the strengthening of the Hatch bill, passed because the Democrats themselves admitted that W. P. A. had become a football of politics.

The Federal Government should make the plans for dealing comprehensively with the entire relief problem, but the administration, except for transiency, should be local. The Federal Government should assist the States and localities with financial aid so long as that is necessary; but as a condition of that aid should require that State relief plans be established by law, comprehensive, and administered without political favor. The whole problem ought to be administered as a unit, and administered locally. Each locality should determine how much work relief and how much direct relief is necessary and advisable. It should determine what projects are worth while and what are not worth while. It should coordinate the whole employment and relief problem.

When a man loses his job the Federal-State employment agencies should attempt to find a new one. For a certain length of time he receives unemployment insurance. If a job is not found before that runs out, he should be carried for awhile on direct relief. Ultimately he would be put on some form of work relief. During the whole process he should have every incentive to find himself a new job in cooperation with the official employment agency.

This whole process can only be worked out locally by people in close touch with the local situation and the individual case. Undoubtedly the locality should put up a certain percentage of the total cost, one-third except in exceptional cases, so that it does not abuse the aid which the Federal Government is giving. The plan I suggest has been urged on the administration by the Community Chest organizations of the United States for several years, and has the support of many of those familiar with the tremendously difficult problem. But the Federal Government has never been willing to give up the political power and Federal prestige resulting from a Federal work program.

There are fields other than relief in which the Federal Government should rightly give some aid. Private industry, left to itself, has never furnished a satisfactory solution for the housing needs of the lower-income groups. Government assistance is required to see that everyone has a decent place to live and bring up a family. Up to this time the Federal activities in United States Housing Authority, Federal Housing Administration, home-loan banks, and various resettlement projects, have been expensive but purely experimental, and have only reached a small fraction of those in need. It is high time that we develop a unified program, adequate to solve the real problem, without the tremendous cost to the Government involved in the present subsidies provided by the United States Housing Authority. Here again the problem is largely a local problem and the plan approved should impose more and more responsibility on local communities with incidental Federal assistance. It should look toward cheaper housing, which all but the very poorest can acquire as their property. America should be a nation of home owners, not renters.

The field of medical aid to the lower-income groups, who are wholly unable to meet extraordinary sickness, has been considerably developed by local governments. There is no reason in the world why the Federal Government should take over the whole problem, with a strong slant toward socialized medicine, as the Wagner bill would provide. But there is good reason why the Federal Government should survey the field and give some additional financial assistance, over that which it is already giving, to help States and localities give this aid. There is no hardship to any family as great as serious sickness. Medical care is expensive. The doctors have provided a tremendous amount of free service, and are prepared to go on; but Federal aid for medical care, wisely administered, can provide a great help to a lot of families in the time of their direst need without any socialization of medicine.

We have further adopted the principle of Federal assistance to old-age pension systems. The subject is too broad to discuss fully in the time allotted to me, except to note that we have today two completely overlapping systems, one the State aid with he Federal Government paying one-half the cost, and the other the great reserve system with its burdensome pay-roll tax and elaborate machinery. A complete revision and unification of the system is still necessary.

The system of State aid we have established for relief, old-age pensions, housing, and medical care is probably the greatest and most expensive experiment in social subsidy any country has ever undertaken. If it succeeds it should do as much as any nation can do to prevent acute misfortune. But there are a lot of dangers still to be overcome. Government administration always tends to become bureaucratic and completely lose sympathy with the real purposes of the work. If it is going to be sympathetic it must be administered by people in close touch with those who need the help. It can't be run from marble palaces in Washington.

Furthermore, it must be on a sound financial basis. Up to date we have paid for it largely with borrowed money, but in the long run we must have a system which will pay the cost. Otherwise the whole system will come to an end. It must be economically administered, because the Government is not a magician who can draw dollars out of a hat. The assistance given to the poorer people can only be provided by the other four-fifths, or two-thirds, of the population. There is no great reserve of food and clothing in any country. The only people who can support others who do not work or do not earn their own way are those who are working at or about the same time. It is right that they should do so, but if the burden becomes too heavy we are likely to find that a revolt against the whole system will throw us back to the position we were in before we started. Furthermore, if the burden is too heavy, it so discourages the others from working, it so discourages the development of new business and the growth of old business that there are still fewer jobs and less income. It is not so difficult to "kill the goose that lays the golden egg."

There is an idea that relief money comes from the skies or from the wealthy. If you confiscated all the incomes over $10,000 a year in the United States—and you could surely not go lower than that because there are at least 200 leading new dealers drawing $10,000 from the Government today—you would only raise enough money to run the Government at its present cost for less than 6 months. Any further Government expense today comes out of everybody, rich and poor alike, through pay-roll taxes and sales taxes, and every other kind of tax on the consumer and the producer. There isn't any other way to get that amount of money. So administration has to be economical, and yet it has to reach all those in need without personal or political favor.

We can give the New Deal credit for a great advance along humanitarian lines, but the administration of all these experiments is so loose and inadequate and unplanned that the whole system is in serious danger of breaking down, and dragging the country down with it. The changes I have suggested in relief must be made. The medical and social security program must be thoroughly studied and redesigned to be equal and efficient and economical.

Finally we must remember that the whole problem can be made much easier; that two-thirds of it can be solved if we can get the

country back to the condition of prosperity which existed in the twenties. Relief at best is a mere palliative. There will always be need for some of it, but what the unemployed need most is jobs and not relief. The only way they can get jobs is in private industry. The new dealers have done their best with Government employment. They have increased the Federal pay rolls from 563,000 to 932,000, almost doubling it in 7 years, at an increased cost of $1,200,000,000 a year. But that is just a drop in the bucket. The only way to build up private industry is to reduce Government regulation of business, and Government interference with the farmer and the retailer and the manufacturer, so that we may resume the progress we made up to 1929. We have 10,000,000 more people now than we had then. We ought to have a total income 20 percent bigger than it is today to meet the needs of that additional population. We have always come out of past depressions by a steady increase in the number of private industries and the growth of little industry into big industry. There are hundreds of industries ready to go if they have the slightest confidence that the Government will let them alone to make their own success. The Government can help. It can prevent monopoly and keep the channels of trade open. But it has to stop trying to run every man's business and every man's farm. If it does, private industry can expand to give jobs to most of the unemployed; aid and relief to the more unfortunate can be more adequate and well financed.

Adequate Appropriations Necessary for Proper Enforcement of Labor Laws

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. WOLVERTON of New Jersey. Mr. Speaker, today this House is face to face with a subtle but determined effort to undermine and destroy the usefulness of laws recently adopted by Congress to improve working conditions.

The effort is more difficult to combat and, therefore, more dangerous to the cause of labor because it is not a direct attack on the laws by the usual method of amendment or repeal, but an indirect attack by cutting the appropriation of funds necessary for enforcement and proper administration of the laws. The result, if successful, will be just as effectual and harmful as if the attack had been made in a more open and direct manner.

No one will openly charge that the Congress did wrong when it passed the law to prohibit child labor, nor when it sought to fix wage and hour standards that would eliminate sweatshop conditions and make more certain and secure continuity of employment. Already the benefits resulting from these laws have been apparent. The future, with the additional benefits yet to accrue, will undoubtedly provide further justification for the enactment of such laws unless curtailment of adequate appropriations to enforce and administer the laws destroys their usefulness.

Failure to provide these funds will be, in effect, to sabotage the laws by making them less effectual. Therefore it is our clear duty to provide adequate funds to make effectual enforcement possible of attainment. To do otherwise is to destroy the worth-while purpose that prompted their enactment and make possible the return of sweatshop wages and hours of employment. I am unwilling to be a party to any movement that would produce any such unworthy result. I deem it to be our duty to advance and not to retreat.

Who would benefit if we cut the appropriation for the enforcement of these labor laws below the Budget figure? Certainly the men, women, and children in whose behalf they were enacted will not benefit. No; for them it would mean a return to the condition from which they were so recently relieved. Would it benefit the employer who has been willing to pay living wages to his workers? No; for him it means that he must again compete with unscrupulous employers who pay only sweatshop wages and demand long hours of service in return. The fact is that no one will gain by cutting these appropriations other than those who have practiced the methods of employment that were outlawed by the laws, the proper enforcement of which is now sought to be destroyed.

We must not overlook the fact that these laws were enacted to meet a situation that was working toward a breaking down of the American standard of living, Low wages resulting from keen competition for work by the millions of unemployed workers had to be checked. The desire to keep body and soul together made it necessary for the unemployed to take any kind of a job, and at any wage, no matter how low, in order to help support themselves and their families. Furthermore, we saw an ever-increasing number of established industries in the Northern States finding it necessary to move into Southern States to meet the competition that had arisen from that section because of its strikingly low wage scale. To stop this trend toward a wage that would not permit a continuance of our boasted American standard of living and to retain industries in the localities where they had long been established required drastic and positive action. Such legislation was not only necessary from the standpoint of the worker, but it was also necessary to protect the reputable employer from the unfair competition of the chiseler in industry.

In view of the necessity for legislation of the character enacted and the worth-while purpose it seeks to serve, it is impossible for me to understand the viewpoint of those who seek to cut the appropriations below the Budget recommendations. The need for economy in our national expenditures is real, but not to the extent of wrecking or seriously interfering with the proper enforcement and administration of laws that protect the worker and reputable employer from the chiseler and sweatshop operator. The benefits that have accrued justify the granting of adequate appropriations for the enforcement of these laws, and, in accordance with these views, I shall vote against the cuts that are sought to be made in these appropriations.

Retirement

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. RAMSPECK. Mr. Speaker, in the regular session of Congress last year, the House adopted amendments to the Civil Service Retirement Act which I thought would tend to safeguard that act, including an amendment raising the contribution of employees to 5 percent.

When the bill went to conference the amendment increasing the contribution was deleted from the bill, largely because of the opposition of certain groups of employees.

For some time I have been apprehensive that an effort would be made to place the Federal employees under the Social Security Act. It was with that apprehension in mind that I urged an increase in the employee contributions.

It is my belief that some of the employees subject to the civil-service retirement law receive too much for the amount they contribute. Their benefits, in proportion to what they pay, are out of line with the benefits payable under social security, to employees in private business.

The cost to the United States, of the retirement law, as it affects some of the employees, is too great. I believe that to correct this situation would be a friendly act toward the employees, and would prove a safeguard for the Civil Service Retirement Act.

If this situation is not corrected I am afraid the result will be a serious effort to place Federal employees under social security.

Because I believe my colleagues and the employees should have all possible information regarding this matter, I have had prepared a discussion and comparison of the two systems for inclusion with this statement.

Practically all Federal employees who have given the subject a careful study are opposed to the transfer of the civil service retirement system or any of the functions of such

system to the social security retirement system. The reasons for such opposition are, in part, as follows:

First. The civil service retirement system was established exclusively for the civilian employees of the Federal Government and its agencies, and is in fact an inherent part of the Government's personnel policy. The employees, therefore, hold that the administrative control of the retirement system should be vested in the Government's central personnel agency and that all legislation relating thereto should be under the jurisdiction of the Civil Service Committees of the House and the Senate, as these committees consider and formulate the other legislation governing personnel matters.

The social security retirement system was established exclusively for workers in private industry, the law is administered by an agency not charged with the duty of formulating general personnel policies for the Government, and is under the jurisdiction of congressional committees which do not, as a rule, draft legislation relating to personnel matters.

Second. On August 1, 1940, the civil service retirement system will be 20 years old and may be regarded as a "going concern." During these years many amendments have been made toward perfecting the system.

The social security retirement system is new and is still in its experimental stage. That this is true is evidenced by the fact that between the date of the enactment of the original law and the date it became effective for retirement purposes the basic law itself was radically changed. Doubtless, other changes will be made in the future, as the operation of any law shows its defects.

Third. The social-security system includes millions of workers in private industry, with the tenure of employment of many of them of intermittent or of uncertain duration, and with a wage rate so low that only small sums can be contributed for retirement purposes, and as a result the rate of deductions from the pay cannot well be large, nor can the rate of annuity be much above a relief basis.

In the Federal service the tenure of employment is much more stable; the average rate of pay is greater; and the rate of deduction and the rate of annuity can, therefore, be higher. Certain additional benefits are also possible under the Federal system, owing to the greater deductions from the salaries.

Fourth. The civil service retirement system has been wholly free from political pressure from the beginning, both legislatively and administratively. As the employers contribute one-half the cost of the social-security system, and as these employers are distributed throughout the whole country, this system will be subject to more or less political pressure all through the years to come.

Fifth. The establishment of the civil service retirement system was largely due to the activity of Federal employee organizations, after a campaign extending over a long period of years, during which these organizations contributed their time, money, and energy quite freely. The amendments to the law were likewise largely due to this same agency.

Human experience clearly shows that when a small group is absorbed by a very large group, the welfare of the very large group is given the principal consideration, and the welfare of the small group is generally neglected or even ignored. Federal employees, therefore, believe that a consolidation of the social security and the civil service retirement systems would tend to wreck the latter system. Federal employees also believe that the inclusion of any Federal employees or the inclusion of any of the functions of the civil-service-retirement system under the social security retirement system would result in a complete consolidation of these two systems ultimately.

Sixth. Moreover, there is no necessity for the inclusion of any Federal employees under the social-security-retirement system, nor is there any necessity for the transfer of any of the functions of the civil service retirement system to the social-security system; for all the justifiable benefits granted by one system can, by appropriate legislation, be extended to the other system. Plainly, the Government should not compel the employers and workers in private industry to provide benefits for these workers which the Government is unwilling to provide for its own employees. Perfecting the retirement law is only one of the steps in making Government service a career for Federal employees. The civil service retirement system should, therefore, be continued as a separate system, administered by the Civil Service Commission, and with the legislation relating thereto to be under the jurisdiction of the Civil Service Committees of the House and Senate.

A STUDY OF THE SOCIAL SECURITY RETIREMENT SYSTEM

Ever since the social-security law was enacted—April 14, 1935—there has been some agitation for a consolidation, or at least a coordination of the civil service retirement system with the social security retirement system.

The proponents of this combination argue that Federal employees would be greatly benefited by a coordination of the two systems. They maintain that the many thousand employees excluded from benefits under the civil service retirement system and the thousands of other employees now included under the system, but who forfeit their annuitable status when they resign or otherwise leave the service, could be given benefits under the social-security system. They also call attention to the fact that under the social-security system the wives, widows, dependent minors, and dependent parents are entitled to retirement allowances.

If all the provisions of these two retirement systems were comparable there might be a basis for at least coordination; but unfortunately the fundamental provisions of the two systems are so radically different that they cannot possibly be harmonized, and there is little doubt that any coordination of the civil service retirement system with the social security retirement system would ultimately destroy the civil service retirement system, as it would be completely absorbed by the social-security system, which nearly all Federal employees agree would be the supreme disaster to our retirement system.

The statement that the social-security system grants benefits not given by the civil service retirement system, when fully analyzed, is found to be an illusion. It is true there is provision for additional annuity for the wives, widows, minor children, and dependent parents; but the employees themselves pay for these benefits through reduced annuities and forfeited deductions. Single employees suffer the greatest loss. Married employees with comparatively short services and low salaries are most benefited, part of which benefit is paid by the higher salaried employees with long services.

Owing to the differences in the methods of computing the annuities and the other provisions of the two systems it is almost impossible to compare them clearly and accurately. Perhaps the easiest way to show the difference is to take three employees under the purview of the civil service retirement system and retire them under the social-security system; this will at least show the benefits under the latter system.

All retirements under social security are with forfeiture of principal. The dollar-a-month deduction does not apply either, so it is excluded from consideration.

Let us assume that three male employees who have contributed to the fund for 30 years on fixed salaries of $2,100, $2,400, and $3,000 are retired on an annuity with forfeiture of principal. The accumulated deductions of these employees at the end of the 30 years, with the forfeiture annuity purchaseable therewith at age 65, and the total annuity payable such employees under the provisions of the civil service retirement system would be as follows:

Salary	Total deductions	Annuity purchasable	Total annuity
$2,100	$4,204.44	$437.97	$1,337.97
$2,400	4,850.78	505.29	1,405.29
$3,000	6,006.35	625.66	1,525.66

Under the social security system the rates are different for a single man and a married man. The table must,

therefore, show the rate for both. The wife of the annuitant when she reaches age 65 receives a supplemental annuity equal to one-half the annuity of her husband. The annuity of these three employees if retired under the social-security system would be as follows:

Salary	Annuity if single	Annuity if married
$2,100	$507	$760.50
$2,400	546	819.00
$3,000	624	936.00

The higher rate does not begin until the wife reaches age 65.

The annuity paid the employees, if unmarried, the amount paid for by the employees themselves, and the amount paid for by the contribution of the employer are as follows:

Salary	Annuity	Paid by employee	Paid by employer
$2,100	$507	$437.97	$69.03
$2,400	546	505.29	40.71
$3,000	624	625.66	None

It will be noted that the deductions of the $3,000 employee more than pay for his entire annuity. This table clearly shows the source of part of the fund used to pay the benefits of the widows and dependents, the employer's contribution is used to pay the annuities of the wives, widows, and dependent relatives.

The survey made by the Civil Service Commission for the board of actuaries, as of June 30, 1930, showed that 54 percent of the employees included under the civil service retirement system had salaries of $2,000 or over, and 51 percent had salaries from $2,000 to $3,000. It is thus apparent that if our retirement system were consolidated with the social-security system, approximately 54 percent of the employees would pay into the fund a sum which would pay the whole cost, nearly the whole cost, or more than the whole cost of their annuities, if they were unmarried and had no dependents.

Nor is this all; under the civil service retirement system, if these three employees should die a few days before they attained age 65, the total amount of the deductions would be paid to their beneficiaries or estate. This would not be the case if these employees were under social security; for, if they had dependents entitled to annuity, the money would remain in the fund as a basis of the annuity for these dependents. If they had no wife or children under 18 years of age, and if their parents were dead, all that would be paid as a death benefit would be six times the monthly rate of annuity. The death benefit would be as follows:

For $2,100 employee	$253.50
For $2,400 employee	273.00
For $3,000 employee	312.00

The rest of the accumulated deductions would forfeit to the social security retirement fund. Obviously, over a period of years a vast sum would thus forfeit to the fund.

Let it be clearly understood that the social-security system is not criticized, condemned, nor held as inadequate for the purpose for which it was created. This system includes millions of workers who are paid low wages and are irregularly employed. The annuity rates established under this system for such workers are really generous. They contribute only small sums to the fund at irregular intervals. What is held to be true is that a retirement system such as the social security would be inadequate and unsatisfactory for a group of workers such as the Federal employees.

Federal employees should assume a realistic attitude toward social security, for its impact on the civil service retirement system is very great; and unless the civil-service system is amended to include the benefits granted under social security, some Federal employees and some of the functions of the civil service retirement system will be brought within the purview of the social security. This will be the entering wedge; the final result will be the complete consolidation of the two systems. Such consolidation will probably occur when the next "economy wave" hits us; and there will be no doubt as to the economy, for the annuity rate of the average employee under the civil service retirement system is markedly greater than the benefit under social security.

The first amendment needed is one which will bring practically all the civilian employees of the Federal Government within the purview of the civil service retirement system, except those who are included under some other retirement systems established by the Government for Federal employees. The enactment of bill H. R. 960 will do this, for all employees brought under the civil service will automatically acquire a retirement status.

The second amendment needed is one which will preserve the annuitable status of the employees who become separated from service before they become eligible for retirement benefits. The social-security law contains such a provision. An amendment establishing a nonforfeitable status after a service of 5 years would accomplish this. Such separated employees would be entitled to a deferred annuity when they reached the prescribed age of retirement, if they left their money in the fund.

The third amendment relates to employees who have received a refund of their accumulated deductions and later get back into service. Such employees can reestablish their annuitable status only by redepositing the refund with interest, which many of them are now unable to do. An amendment permitting these employees to waive the period of service covered by the refund would reestablish their annuitable status.

The fourth amendment needed relates to disability annuitants who recover and are unable to secure a restoration to service. An amendment making such employees eligible for retirement under section 7 of the act would preserve their annuitable status.

Plainly these four amendments to the law would bring all excluded employees within the purview of the civil service retirement system, and also preserve the retirement status of those who become separated from service before reaching retirement age.

The amendment of August 14, 1939, providing for joint and survivorship annuity, provides a larger benefit for the wives and widows of annuitants than the similar benefit under social security.

The social security provides benefits for the widows of deceased workers who die before becoming eligible for retirement benefits, provided they have children under 16 years of age—under 18, if the children are still in school. Such benefit for the widow ceases when the child or children reach age 16 or 18, whichever age applies, but again becomes effective when the widow, if not remarried, reaches age 65.

Here we have quite a problem, as the deductions from the salaries are insufficient to justify an amendment granting this benefit. Even a larger deduction might not cover this expense. It should be clearly understood that whatever widows' benefits are provided they must be paid for by the employees.

However, two amendments appear to be necessary to further protect the widows of deceased employees and deceased annuitants as follows:

First. When the wife is much younger than the husband the joint and survivorship annuity cannot well be used. An amendment which will permit the employee to set aside his accumulated deductions as a death benefit for his wife of beneficiary, and merely use the interest, will give the widows additional protection. For example: Take an employee with an individual credit of $4,000, this sum could be set aside as a death benefit for the wife and be used to purchase her an annuity on the death of the employee.

Second. Under the present law both the Government and the employee contribute to the fund, but if the employee dies in service the Government cancels its contribution and merely returns the employee's contribution with the interest.

Under some retirement systems the widow receives not only the contributions of the employee but also the contributions of the employer, either the whole or a part of it. Under Social Security the employer's contribution is never withdrawn, and is largely used to pay the cost of the retirement benefits of the widow and dependents. It is believed that the present law should be amended to provide that the widow of a deceased employee should be paid, in addition to the employee's accumulated deductions with the interest, a death benefit equal to at least one-half the amount of the employee's accumulated deductions. A reasonable limitation on the amount of such death benefit could be fixed, and the benefit could be paid in monthly installments.

Obviously, the amendments suggested will increase the cost of the retirement system; but all are essential in preventing the transfer of some Federal employees under the social-security system. This added cost and the further additional cost of the other amendments to the law, especially those relating to a lower optional age of retirement, which are so greatly desired by the employees, will materially increase the cost of the retirement system. Plainly, if the employees desire this protection and the additional benefits of the other proposed amendments, they must pay their full and just share of the increased cost; to do otherwise is to assume a predatory attitude.

The danger is not imaginary; it is real. At the last session of the Congress a bill was introduced which, if enacted, would have placed all Federal employees covered by the civil service retirement law partially under the social-security system and a large number of Federal employees wholly within the purview of that system. Studies are being conducted at the present time with some such end in view. Influential groups believe that a consolidation of the two systems is not only feasible but also desirable. If the Federal employees themselves do not act, the groups favoring the consolidation will win out. The issue will probably be decided within a few years. The principal argument now used by the proponents of consolidation is that the Federal employees would greatly benefit thereby. Seemingly, safety lies in securing the suggested amendments, so that no employee would be benefited by a transfer to the social-security system.

The outstanding danger at the present time is the refusal of certain employees to accept an increase in the deductions from the salaries commensurate with the benefits desired. Figuratively speaking, these employees may, unconsciously, be playing with dynamite, for during an economy drive the fact that the employees persistently refused to pay their just and fair share of the cost may be the determining cause for the transfer of the whole system to Social Security.

A COMPARISON OF THE SOCIAL SECURITY AND THE CIVIL SERVICE RETIREMENT SYSTEMS

Question. When were the Civil Service Retirement Act and the Social Security Act approved?

Answer. The Civil Service Retirement Act was approved on May 22, 1920, and the Social Security Act on August 14, 1935.

Question. When did the deductions from the salaries under each act begin?

Answer. The deductions from the salaries for the civil service retirement system began on August 1, 1920, and the deductions for the social-security system on January 1, 1937.

Question. What was the effective date for the commencement of the annuity benefits under each act?

Answer. The annuity benefits under the Civil Service Retirement Act began on August 20, 1920, and under the Social Security Act on January 1, 1940. The original date of commencement under the latter act was Jauary 1, 1942, but the law was amended on August 10, 1939, making the beginning date January 1, 1940.

Question. What is the rate of deduction from the salary of the employee under each act?

Answer. The rate of deduction under the civil service retirement law was 2½ percent of the salary up to July 1, 1926, and 3½ percent of the salary thereafter; the rate of deduction under the Social Security Act is 1 percent of the salary from January 1, 1937, to January 1, 1943. The rate fixed in the original Social Security Act was as follows:

	Percent
1937, 1938, and 1939	1
1940, 1941, and 1942	1½
1943, 1944, and 1945	2
1946, 1947, and 1948	2½
1949 and thereafter	3

Question. What groups of employees, or workers, are included under each retirement system?

Answer. The civil-service retirement covers only the employees of the Federal Government and its agencies, including the employees of the District of Columbia; the social-security system covers only workers in private industry.

Question. Are all the civilian employees of the Federal Government included under the civil service retirement law, and are workers in private industry included under the social-security law?

Answer. No; many thousand civilian employees of the Federal Government are excluded from benefits under all the Government's retirement systems; and millions of workers in private industry are excluded from benefits under the social-security system.

Question. Efforts have been made to bring these excluded Federal employees within the purview of the social security retirement system. Is such inclusion necessary to give these employees annuity benefits?

Answer. No; the enactment of bill H. R. 960 would make possible the bringing of practically all these excluded Federal employees under the purview of the civil service retirement system.

Question. Employees now covered by the civil service retirement system forfeit their annuitable status if they become separated from service before they become eligible for retirement benefits. It has been advocated that the social-security law be extended to cover these employees. Is such extension of the social-security law necessary to give these employees annuity benefits?

Answer. No; all standard life-insurance companies issued paid-up policies to all persons who have carried their policies for a certain number of years and are then unable to continue the payments. In other words, the payment of a certain number of premiums establishes a nonforfeitable status. The social-security law recognizes this life-insurance principle and contains a provision establishing a nonforfeitable status after a definite period of service. By incorporating this nonforfeitable provision in the civil service retirement law, the annuitable status of these "separated employees" would be maintained and when they reached the prescribed retirement age they would become eligible for retirement benefits.

Question. Disability annuitants who recover and are unable to secure a restoration to service also lose their annuitable status. Could the retirement law be amended to preserve their annuitable status?

Answer. Yes; by making these annuitants eligible for retirement benefits under section 7 of the act their annuitable status would be preserved.

Question. Workers in private industry frequently enter the Federal service and Federal employees often leave the Federal service and enter private industry. If such employees establish a nonforfeitable status under both the social security and civil service retirement systems, would they not be entitled to two annuities?

Answer. Yes; and rightly so. Retirement is a form of insurance, and the employees cited would be in the same position as a person carrying two insurance policies, one in one company and the other policy in a different company.

Question. Has this principle of two benefits already been established by the Federal Government?

Answer. Yes; a number of employees are in service who are receiving a pension, a compensation, or a military retirement allowance, and such employees are also entitled to annuity benefits.

Question. Would it be practicable to coordinate these two retirement systems and provide that when an employee from private industry enters the Federal service the amount he has to his credit in the social-security system be withdrawn and placed to his credit in the civil service retirement system, and that such similar transfer be made for the Federal employee leaving Government service and entering private industry?

Answer. No; the rate of annuity under the two systems is not only markedly different, the basis of computing the annuity is also radically different. There is as much difference in these annuity policies as there is in an ordinary life policy and an endowment policy of a life-insurance company. In justice each employee is entitled to the full benefit granted by the system at the time his contributions to the fund were made.

Question. What is the basis of computing the annuity under the social-security system?

Answer. The basis of computation is the average monthly wage during the period that the worker was covered by the system.

Question. At what age does the worker become eligible for retirement benefits under social security?

Answer. The eligible age of retirement under this system is 65 years, but retirement at that age is not mandatory.

Question. Is there a limitation on the average monthly salary used in computing the annuity?

Answer. Yes; the monthly salary, or wage, is limited to $250 a month—$3,000 salary for the year. (No deduction is made on the salary in excess of $3,000 a year.)

Question. What is the formula used in computing the annuity under the social-security system.

Answer. The formula for computing the "primary insurance benefit" is as follows: 40 percent of the first $50 of the salary, plus 10 percent of the balance of the salary (not exceeding $200), plus 1 percent of the amount thus obtained multiplied by the number of years of service.

Question. Does the social security retirement system provide supplemental benefits for the wives, widows, dependent children, and dependent parents of the worker?

Answer. Yes; under certain conditions all these relatives are provided for. The worker's share of the annuity is called the primary annuity and if there be no widow or dependent children or dependent parents, this primary annuity is all that is paid.

Question. What would be the primary annuity after a service of 30 years on fixed salaries of $2,100, $2,400, and $3,000, with the retirement age 65?

Answer. Such primary annuity would be as follows:

Salary	Yearly annuity	Monthly annuity
$2,100	$507	$42.25
$2,400	546	45.50
$3,000	624	52.00

Question. How much supplemental annuity is added for the wife, and when does it begin?

Answer. The supplemental annuity for the wife does not begin until she reaches the age of 65, the amount is one-half the primary annuity; that is one-half the amount paid the worker.

Question. What would be the total benefits, primary and supplemental, based on these salaries, $2,100, $2,400, and $3,000, with 30 years of service, after the wife attained the age of 65 years?

Answer. Such total benefits would be as follows:

Salary	Yearly benefit	Monthly benefit
$2,100	$760.50	$63.38
$2,400	819.00	68.25
$3,000	936.00	78.00

Question. In case the annuitant died after the wife reached the age of 65 years what would her annuity be, based on the three salaries cited?

Answer. The widow's annuity would be three-fourths of the worker's primary annuity, or as follows:

Salary	Yearly benefit	Monthly benefit
$2,100	$380.25	$31.69
$2,400	409.50	34.13
$3,000	468.00	39.00

Question. Were the retirement benefits as given under the provisions of the original social-security law, the act of August 14, 1935, the same as those under the present social-security law?

Answer. No; the "primary insurance benefits" under the original social-security law were materially greater than under the present law.

Question. What were the old monthly rates and what are the present monthly rates, and what would be the monthly loss in annuity for employees with fixed salaries of $2,100, $2,400, and $3,000 after a service of 30 years?

Answer. The old monthly rate, the new monthly rate, and the monthly loss in annuity based on these salaries are shown in the following table:

Salary	Old rate	New rate	Loss
$2,100	$58.75	$42.25	$16.50
$2,400	62.50	45.50	17.00
$3,000	70.00	52.00	18.00

The annual reduction in annuity is $198 for the $2,100 salary, $204 for the $2,400 salary, and $216 for the $3,000 salary.

Question. What was the purpose of this reduction in the rate of annuity?

Answer. Seemingly, the reduction was made to provide a fund for the widows and dependent relatives.

Question. What was the refund paid to the estate of the worker in case he died before becoming eligible for retirement benefits under the provisions of the original social-security law?

Answer. The refund was a sum equal to 3½ percent of the total salary of the worker received by him during the period he was covered by the law.

Question. What amount is refunded to the estate of a deceased employee, or worker, who dies before he becomes eligible for retirement benefits, under the present social-security law?

Answer. If the employee leaves a widow or dependent relative entitled to annuity there is no refund of deductions, as the money is used to pay the supplemental annuity. If the employee left no widow, minor child under 18 years of age, or dependent parent, the refund is a sum equal to six times a primary insurance benefit. This is paid in a lump sum.

Question. What is the amount of this "primary insurance benefit"?

Answer. A sum equal to the monthly rate of annuity paid the worker.

Question. What will be the accumulated deductions on a $3,000 salary at the end of 30 years with the deduction rate at 3½ percent of the salary?

Answer. Approximately $6,006.35.

Question. If this $3,000 employee died at age 64, leaving neither a widow nor minor child under 18 years of age, and both parents were dead, what would become of his $6,006.35?

Answer. In such case the primary insurance benefit under the present social-security law would be the monthly benefit of $52, and the employees' other children or heirs entitled to his estate would receive six times this amount, or $312.

Question. What would become of the balance of the money?

Answer. The balance would forfeit to the social security retirement fund and would largely be used to pay the benefits for the widows and dependent relatives of other workers.

Question. Is it then true that the annuity benefits for the widows and dependent relatives of the worker, paid under the social-security law, are based upon a reduction of the annuity rate paid the worker and a reduction in the rate of refund paid the heirs of a deceased worker?

Answer. Yes; the benefits for the widows and dependents are made possible by a reduction in the benefits paid the workers.

Question. What will the accumulated deductions amount to at the end of 30 years on fixed salaries of $2,100, $2,400, and $3,000, with the deduction rate at 3½ percent and interest at 4 percent compounded annually; and how much annuity with forfeiture of principal will such accumulated deductions purchase a male at age 65, under our system?

Answer. The amount of such deductions and the forfeiture annuity purchasable therewith are as follows:

Salary	Total deductions	Annuity purchasable
$2,100	$4,204.44	$437.97
$2,400	4,850.78	505.29
$3,000	6,006.35	625.66

Poll of Future Voters of America

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

LETTER FROM ORA M. YODER

Mr. GILLIE. Mr. Speaker, one of the significant developments of our modern age has been the surprising rise of public-opinion polls to a place of prominence in our national life. We have the Gallup poll, the Fortune poll, and many other similar polls which purport to reveal the exact sentiments of the American people on such vital issues at neutrality, third terms, the farm program, and so forth.

Although recognizing the fact that the field is fairly well covered, I wish at this time to present the results of a unique and significant poll of my own. It is a limited survey of what the future voters of America think about major questions facing the present Congress.

This poll was conducted for me by Mr. Ora M. Yoder, an enterprising instructor in the Shipshewana School, Lagrange County, Ind., among students in his class in American Government.

This school, in the heart of the Midwest farm belt, is typical of the hundreds of fine schools in rural America which each year are graduating thousands of young citizens of tomorrow.

Mr. Speaker, I herewith present, for the guidance of my colleagues, the results of this poll as described by Instructor Yoder in a letter to me:

SHIPSHEWANA SCHOOL,
Shipshewana, Ind., March 22, 1940.

Mr. GEORGE W. GILLIE,
Room 434, House Office Building, Washington, D. C.

DEAR MR. GILLIE: I have taken up some of the questions you listed on your letter of March 15 with my United States Government class. Some lively discussions followed, and considerable interest was developed about these issues. We spent approximately an hour on each question.

On the question of appropriations for relief, the class agreed by a vote of 9 to 6 (some not voting) that appropriations for relief should be cut, with the following comments: "Many get it who could find other work, especially in rural districts." "It makes people lazy." "Many on relief live better than those who are not on relief." There was one vote for an increase which should come for old-age pensions.

The question on national defense became quite heated but resulted in 15 for same amount, 5 for more, and none for reduction, with the outstanding arguments as follows: "Our defense is adequate." "There is no need for large defense." "Airplanes and equipment soon become obsolete." "Why spend for defense when our large neighbor Canada is friendly?" "If we are neutral, fair, and square in our dealing, other nations will not deliberately sink our ships."

The consensus of opinion on farm legislation was that appropriations should be reduced and farmers be left alone.

Interesting arguments were presented in regard to a new tax bill. They came to the conclusion that if the Government wants to spend more than their receipts, they should pay as they go. Raise the tax because the people will receive the benefit now, and if the expenditures are for worthy causes and the benefits are worth the cost, the people will and should bear the burden now. It is not fair to humanity or to future generations to spend money now and make our children pay for it. The class asks that Government expenses be cut until they equal the income or raise the income, but not to go into debt any deeper.

By a vote of 15 to 4 the class passed a bill that all presidents be allowed to serve only two terms. They said occasionally a good man might run for a third term, but the risk of drifting toward a dictatorship is too great to warrant taking any chance.

We will appreciate any material on current issues and do appreciate letters as of March 15. Hoping you may find this information of some value in making your choices on some of the legislation.

Yours for a better government,

ORA M. YODER,
Teacher of Civics.

Deft Hands and Level Heads

EXTENSION OF REMARKS
OF
HON. CHARLES HAWKS, JR.
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

ADDRESS BY HON. LOUIS JOHNSON

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Louis Johnson, the Assistant Secretary of War, before the State-wide American Legion meeting at Milwaukee, Wis., March 18, 1940:

Fellow Legionnaires, I return to you today after a lapse of almost 7 years to continue my plea for unity in our ranks, for loyalty to our ideals, and for perseverance in our efforts toward a strong and happy America.

In 1932–33, when I came to you as your national commander, it was a most critical and distressing moment in the history of our organization. Confusion and despair had seeped into the ranks of World War veterans. Seeds of discontent—discontent with our form of government and with our economic system, had been planted in our midst. Thanks to your hearty cooperation, we uprooted those evil influences, cast them aside, carved out a victorious path through the morass of depression and despair, and started along the road toward recovery and happiness.

At that time I learned for myself, as has every national commander in the history of our organization, that Wisconsin Legionnaires are loyal, dependable, energetic, and courageous. You gave me every support in 1932–33. You are standing behind me today in my fight for adequate national defense. I admire you, "iron jaws" of the Thirty-second Division who, in 1917–18, "shot through every line the enemy put before you." You have the capacity, the will, and the power to break down any wall that enemies of America and the American way of life may try to build around you.

As far back as the War between the States, sons of Wisconsin were hailed as "men of iron." Soldiers of the Badger State always go into battle inspired and may they never return vanquished. In the World War, you, my comrades, won the admiration of your friends and elicited the praise of our Allies. The French awarded you the Croix de Guerre with Palm and upon you appropriately conferred the title of "Les Terribles"—the terror-striking men. You, the "iron jaws" of 1917–18, were indeed the worthy successors of the Iron Brigade of 1861–65.

Many of your comrades of the Thirty-second Division paid with their precious lives during the World War ordeal. More than 3,000 of them were killed in action or died from wounds received in battle. No National Guard Division has matched these sacrifices. Today the present members carry on the old traditions; and to signify that they are the descendants of the "Brigade of Iron" the gunners of the One Hundred and Twentieth Field Artillery bear on their shield the reminder, "Catervae Serreae."

In emphasizing the Thirty-second Division, I am not overlooking the other organizations in which men of Wisconsin conducted themselves so gallantly—the Custer Division, or the Eighty-fifth, which upheld the Stars and Stripes in northern Russia and the Rainbow, or the Forty-second Division, which fought in so many sectors on the western front. Then there were the 7,000 replacements, captains and privates of the One Hundred and Twenty-eighth Infantry, who were transferred in March 1918 to the First Division, to share with pre-World War Regulars the brunt of many important battles.

You, in Milwaukee, are familiar with the military accomplishments of your citizens during the World War and we who have occasion to review them, note them with pride and satisfaction. Twenty-one of our Milwaukee comrades were awarded the Distinguished Service Cross. I doubt whether such a record can be equaled in any city of your size. Their heroism was confined neither to rank, race, nor religion. The roll of honor carries not only such names as Douglas MacArthur, the brilliant brigadier general, who later rose to Chief of Staff, and William Mitchell, who led our air forces in France, but also that of Pvt. Elroy Bub and Corp. John Kochanik and Sgt. Albert B. Brown. Most of these D. S. C. men were born in Wisconsin but Kimon Karelis, who came from Greece, and Steve Kubacki from Germany and Vinton Pawel from Russia; they, too, proved of equal worth in combat. Though I have not the time to recall all of their citations, I feel that Vinton Pawel's is worthy of special emphasis. Here was a supply sergeant who properly belonged near the kitchens, behind the lines, who, when the crisis came, went forward into battle and when the officers were killed, personally led the attack. His citation speaks for itself:

"As supply sergeant of his company, he voluntarily and fearlessly led a platoon of his company in an attack on St. Amand Farm at the Soissons-Paris Road, spurring his men on to their objectives under intense machine-gun fire. His company officers having been killed, wounded, or called to higher units, he assumed command of his company, frequently exposing himself to heavy enemy fire during its reorganization and preparation for a renewal of the advance. On July 20–21 he again led his company in the assault, inspiring his men by his utter disregard of personal safety, maintaining constant liaison with his flanks and with his battalion commander, refusing repeatedly to be evacuated, although severely and painfully wounded by shrapnel, until relieved on July 22 by a commissioned officer."

Proud as we are of the exploits of Sergeant Pawel, and the other heroes with and without decoration, you and I sincerely hope that we never again will be called upon to cite men for valor on the field of battle. We do not want war; but who in the world of today would be so bold as to say we may never fight again?

If the call should ever come in our lifetime, I am confident that the present generation will meet its patriotic duty with the same fervor, the same energy, and the same devotion that you, my comrades, displayed in 1917–18. I have full confidence in our youth and in their loyalty to American ideals. And why not? Most of them come from American homes, yes; homes of Legionnaires, if you will, where the ideals of our country are inculcated in the cradle, nurtured through childhood and sustained through adolescence. The young men and young women of America have their feet firmly on the ground. They have level heads to guide them in a crisis. They can be trusted to carry on our cherished traditions. There are, to be sure, some who have drifted away from our concepts and have been won over to alien doctrines, but they represent an infinitesimal fraction of the cross section of American youth; and, many of them, too, will return to the fold when their adolescence ripens to full maturity. We had some of their prototype in our own generation before 1917–18. You remember them, I am sure, but when the test came most of them stood with us, shoulder to shoulder. I therefore have no misgivings as to the loyalty of the great body of youth of our country.

But I do have some doubts about their ability to meet the requirements of modern combat. The modern soldier must be not only a disciplined fighter but a skilled mechanic. He must have a firm grasp of the powers and the capabilities of his weapons, as well as the strength and the courage to use them efficiently and intelligently. Guns, tanks, planes, and the other numerous battle accessories today call for craftsmen skilled in handling machines, as well as fighters bred in discipline. Any ordinary chauffeur can drive a car, but the pilot of a heavy tank who must traverse varied terrain, climb over steep hills, drive through thick forests, wade across deep gullies, and speed across wide open fields while planes from above and artillery from the flank shower him with a deadly spray, must indeed be a mechanic in arms.

This is only one side of the demand for skill. Behind our planes, our tanks, our trucks, and all of our modern, delicate engines of war is the manual dexterity of our industrial mechanic. For

the production of our war equipment and our munitions in our civilian factories we must look to deft hands. Where and how are we going to obtain this skill?

In an article in our own American Legion magazine of November 1939 entitled "Geared to Go," I pointed out the need for vocational training in our high schools as an excellent means of meeting threatened deficiencies in skilled labor. As always, American Legion comrades responded.

Here, in the city of Milwaukee, you have done an admirable job in developing skilled labor. You were one of the first communities in this country to appreciate the need for and the value of public vocational education.

This civic enterprise has brought your community many industrial advantages; and the Milwaukee Vocational School has grown with its added responsibilities. I have no hesitation whatever in saying to you that we, who are interested in vocational training of our youth, regard the Milwaukee Vocational School as one of the best in the world. It affords educational opportunities for those who wish to improve themselves while working, for those who much re-educate themselves vocationally because of the disappearance of their craft, for those who enter into apprenticeship, and for the boys who wish to prepare themselves for a job prior to entering industry. All courses of instruction in this institution are arranged with the consent and advice of the faculty and based upon their intimate knowledge of the industry of the city in which the students live and where they must be employed.

I cannot dismiss the subject of vocational training without paying my respects to Dr. R. L. Cooley, director of the Milwaukee Vocational School, who recently resigned his office because of ill health. Dr. Cooley has a national reputation as one of the leaders of vocational education throughout the United States. You, in Milwaukee, have appreciated his value in time of peace. We, in the War Department, called upon him during the World War as the adviser on educational work in the Motor Transport Corps. The spirit that he injected into the Milwaukee Vocational School is expressed in motto after motto that leaders of educational training throughout the country have adopted. Here are a few of his well-known sayings, familiar perhaps to 400,000 of you who had the privilege of attending his school:

"The teacher has not taught until the student has learned.

"I would rather improve a fellow's attitude than his arithmetic.

"Ignorance is not a cure for anything.

"If you begin to build badly at the bottom, you've got to take what you are going to get at the top.

"Human junk is so expensive we must quit making it."

Important as is the public vocational program as a means of developing the deftness of the hands of our young men, there are other important ways of increasing the reservoir of skilled labor in America. Let me mention a few.

Manufacturing establishments can give formal apprenticeship courses in accordance with the minimum standards adopted by the Federal Committee of Apprentice Training.

Industry can provide on-the-job training supplemented by training extension courses in related subjects in public vocational schools for employed semiskilled labor to increase its usefulness.

We can train skilled craftsmen to become supervisors and leaders. State vocational educational systems can be of help in providing trained foremen, conference leaders, and instructors for teacher-training courses. Technical men and young college graduates can be developed to design and produce the machinery that the modern age demands.

Most important of all, we must bring back to our youth the spirit of the dignity of labor. In the days of our pioneers, men boasted of their dexterity. They took a keen delight in their handiwork and found happiness and diversion in their manual skill. They shod their own horses and wrought their own wagons. They wove their own cloth and built their own homes. They took pride in their artisans. They respected their craftsmen. Every member of society, even among those who entered the professions learned to use his hands. There was a dignity to labor which gave it a worthy rank in the life of the American pioneer.

Later generations maintained this attitude. They developed for America a seemingly inexhaustible supply of skilled workers, who made possible our industrial supremacy and created our unparalleled prosperity.

Today, however, the specter of an actual shortage of skilled labor in certain crafts and occupations has appeared. That situation we must correct. I have outlined for you a number of projects which, properly developed, can return labor to its old dignity. The deft hands and level heads of the youth of America must be mobilized to retain for us and for our children the high pinnacle of success and happiness that we now enjoy.

The future of America, in peace and in war, rests largely upon the courage, the character, the discipline, the poise, and the balance of the young men and young women of America. Their lives, their jobs, their careers, and their attitude toward our institutions depend on the training we give them today. We must win in them a desire to adhere to the ideals of courage, of perseverance, of tolerance, of liberty, and to the dignity of labor.

Skilled in hand, brave in heart, and strong in mind, let us all move forward to a happy and united America, with you, Wisconsin Legionnaires, in the vanguard of our progress.

And finally, my comrades of the American Legion—you who since the days of 1917–18 have preached the gospel of a sound national preparedness—may I urge you to continue your efforts for a sound policy of adequate national defense. It is the most certain road toward peace. And when I speak of preparedness, I refer, not only to the sinews of battle—money, men, and munitions—but to the thoughts, the attitudes, and the aspirations of our people. Peace is a spiritual desire. It comes, not from the ability to use force for aggression but to fall back upon it for protection.

We must have a combination of the power of self-defense and a policy of peaceful arrangement of our affairs.

We want peace in America so that our children may enjoy the privelege of play and recreation, our young men the opportunity for self-expression, and our mature men and women the assurance of contentment and security. Toward these objectives we should eternally strive. Let us keep our country free from the scourges of war which are destroying the Old World. Let us make of America an abiding place for the civilization of the world—a land of peace and prosperity.

Federal Revenue Collections and Expenditures in Missouri

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, in these days when many of the States of this Union look to the Federal Government for aid and assistance in matters that should always remain the exclusive concern of the States themselves, it is well to look about us to see if there remain any of the States which recognize the obligations of their sovereignty. I have the great honor to represent one such State—Missouri.

Although the Federal Government has spent $639,969,502 in the State of Missouri for various activities from March 1933 to June 1939 and $32,000,000 for recovery and relief in the 7 months to February 1, 1940, Missouri can still claim the distinction of being the only State west of the Mississippi, with the single exception of California, that pays into the Federal Treasury more than it takes out.

Internal revenue collections from the State of Missouri from March 1933 to December 1939 amounted to more than $669,000,000. In addition to this sum there were other amounts paid by Missouri firms and individuals in the form of customs duties which are difficult to segregate, since Missouri is not separately listed as a customs-collecting district.

Although Federal revenue collections from Misscuri exceeded Federal expenditures in Missouri by millions of dollars, the situation in the neighboring State of Kansas was quite the opposite. During this same 7-year period the Federal Government was spending $444,106,786 in Kansas and collecting in revenue only $136,625,326.

In Illinois the Federal Government collected $2,394,890,811 in revenue and spent only $1,308,374,980.

Following is an illustration of how the money was spent in Missouri and what it was spent for. During the period from March 4, 1933, to June 30, 1939, the Federal Government's expenditures in Missouri can be listed as follows:

Agricultural Adjustment Administration	$96,626,968
Farm Security Administration	7,052,518
Civil Works Administration	19,266,118
Civilian Conservation Corps	48,541,500
Bureau of Public Roads	44,001,366
Public Works Administration	58,828,509
Work Projects Administration	196,246,925
Social Security Act	22,866,022
Public buildings (Treasury)	9,891,990
Soil conservation	458,474
Land-utilization program	3,959
Agriculture experimental stations	157,347
Agriculture extension work	579,040
Agricultural and mechanical arts	114,385
Forest funds	16,094
Forest Service roads	81,816
Rivers, harbors, flood control	9,836,203
Vocational education	578,238

United States Employment Service	$667,884
State Home for Sailors and Soldiers	6,387
Federal Surplus Commodities Corporation	3,460,857
National Guard	1,200,272
Veterans' Administration	16,170,367
Various miscellaneous projects	20,416,848
Total expenditures on cash basis	629,969,502

The item on the Surplus Commodities Corporation is on a cash-value basis. The item in regard to the Veterans' Administration is for the fiscal year 1939 only.

FEDERAL LOANS CLOSED IN MISSOURI

In addition to the cash expenditures of the Federal Government in Missouri just mentioned, Federal loans in the amount of $267,651,891 were closed during the same 7-year period, as follows:

Reconstruction Finance Corporation	$63,644,759
Farm Credit Administration	79,830,470
Commodity Credit Corporation	19,555,799
Farm Security Administration	13,133,229
Farm Tenant Purchase Act (1939 only)	807,183
Rural Electrification Administration	2,947,629
Public Works Administration loans	8,736,005
Home Owners Loan Corporation and Treasury, 1939	41,000
Home Owners Loan Corporation	75,521,175
Disaster Loan Corporation	66,983
Federal Reserve Board	3,417,659
Total Missouri loans to June 30, 1939	267,651,891

During this same period the Federal Government insured loans in Missouri in the amount of $18,170,590 under the Federal housing program, title I, and $49,507,197 under the Federal Housing Act, title II, the total amount thus insured being $67,677,787.

With the expenditures for veterans not included for the fiscal year of 1939, the grand total under the headings of "Grants," "Loans closed," and "Loans insured," for Missouri in the period from March 4, 1933, to June 30, 1939, amounts to $965,299,180.

Thus, we can examine the record and see that Missouri has been the recipient of vast sums of money under the Federal program. And yet our State has put into the Federal Treasury a greater amount, giving Missouri the distinction of being the only State west of the Mississippi with the single exception of California that pays into the Federal Treasury an amount which is greater than the amount spent by the Federal Government in the State.

Employee Earnings Under Old-Age and Survivors' Insurance Program

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. SHEPPARD. Mr. Speaker, for information of the Members I wish to discuss the status of records of employee earnings under the old-age and survivors' insurance program which is under consideration in this bill.

Benefits under the old-age and survivors' insurance program are based upon the worker's previous earnings in covered employment. The worker, when employed, pays his pay-roll tax contributions upon these earnings; simultaneously, his employer pays a similar tax on his total pay roll. Both in the collection of the pay-roll tax contributions, and subsequently when the worker dies or retires, in calculating the benefits due to him or to his survivors, a record of his earnings is essential. This record of each insured worker's earnings is built up from the employer's tax returns. Each quarter—four times a year—each employer covered by the Federal Insurance Contributions Act is required to submit a return giving the name, identifying account number, and wages earned by each of his employees (see Exhibit A, Form SS-1a). These returns are forwarded, along with the taxes due, to the local collector of internal revenue. The collector separates the tax payments from the return and then forwards the information relative to the earnings of each individual employee to the Bureau of Old-Age and Survivors Insurance of the Social Security Board. This Bureau, upon receiving these employer's returns, with the aid of the most modern mechanical accounting equipment, transfers this data relative to each employee's earnings to his or her individual insurance account.

It was to be expected that employers would, at the start, experience some difficulty in accurately reporting employees' wages. This situation has now been corrected to such an extent that employers' reports are, for the most part, wholly adequate for properly maintaining the employee wage records. For example, employers reported about 10 percent of all employee wage items in 1937 without the essential identifying account numbers. In 1938, the proportion of items incompletely reported (i. e., without account numbers) was reduced to 3.53 percent; and in 1939, to 2.47 percent. Simultaneously, the number of items reported by employers with misspelled names, or transposed digits in the account number, has been reduced. This improvement in employer reporting now permits the identification of all but a relatively small number of items currently as they are received.

The so-called John Doe cards are employee wage items that are recorded on alphabetically filed cards (exhibit B) and posted to employer ledgers (exhibit C), rather than to individual employee ledgers. They have not been posted to the employee-ledger accounts because employers have made incomplete or inaccurate reports of the employee's name or identifying account number. These items have been reported either without correct account numbers, or names, or with such omissions, misspellings, or transpositions as to prevent their immediate posting to the employee accounts.

When there is an inaccuracy in recording a worker's social security account number on the employer's report, or when the number is lacking entirely, the matter is immediately taken up with the employer who reported the employee's earnings. Such a situation may arise because a worker fails to give his number to his employer, because of the illegibility of the name reported, because the employee without the knowledge of the Board works under a name different from that shown on his account number card, or because there has been a mistake in the reporting of the account number or of the name.

The suspension of any item, pending complete identification, does not permanently jeopardize the employee's chance of getting the full amount of his benefits. These suspended items are posted to alphabetically filed cards and to employer ledgers and, hence, are always available for reference when any employee's claim is filed, or when he inquires as to the status of his insurance account. Many of these items are being posted to the individual employee accounts daily as the result of their reference to the Board's files, and the reference of these items to the reporting employers for correction or completion.

The Social Security Board has repeatedly invited employees to inquire as to the status of their respective old-age insurance accounts. To date, more than 300,000 such inquiries have been received and promptly answered. The answers to these thousands of employee inquiries demonstrate to those employees who have inquired the substantial accuracy and completeness of these records. The Board is continuing, through the press, through posters, through placards in streetcars, and through radio statements, to invite employees to inquire as to the status of their accounts in order to insure that the doubts engendered by inaccurate publicity are allayed. Furthermore, on the basis of these wage records, the Board has already paid more than $27,000,000 in claims, without challenge. No individual has yet indicated that he has been deprived of benefits or received smaller benefits than he was entitled to because of inaccurate records of employee earnings.

During the calendar years 1937 and 1938, employers reported earnings for their employees of $55,089,827,754. As of March 1, 1940, $390,563,200 in wages were still in suspense.

In short, only 0.71 percent, or less than three-quarters of 1 cent of each dollar of wages reported by all employers, remain in suspense. Moreover, since the identification of these items is a continuing process, this small proportion is being steadily reduced.

The employee wage items reported by employers for 1939 have not as yet been completely processed. The fourth-quarter tax returns were not due until February 1. However, sufficient work has been accomplished so that substantial samples are available. These show that of the wage items reported for 1939, the proportion of incompletely and incorrectly reported wage items is running substantially below that for previous years, with corresponding improvement in our records.

With respect to costs, the efficiency of the wage-record system maintained by the Bureau of Old-Age and Survivors Insurance is demonstrated by the fact that the cost at no time has exceeded 20 cents per annum per employee account. Moreover, this cost is being steadily reduced. During the fiscal year 1940, it is estimated, the cost of maintaining these employee earnings accounts will approximate 18 cents per annum per account. The over-all efficiency of the Bureau of Old-Age and Survivors Insurance is demonstrated by the fact that, while the experts who assisted in the development of the old-age insurance system estimated the annual cost of administration would exceed 8 percent of the annual pay-roll tax collections, the actual cost to the Federal Government for the operation of the Bureau of Old-Age and Survivors Insurance and all other expenses of any agency of the Federal Government participating in the administration of this program has been less than 5 percent.

"Equal Justice Under Law"

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. HOFFMAN. Mr. Speaker, "Equal Justice Under Law" is the legend inscribed in marble over the portal of the home of the Supreme Court of the United States, which for more than a hundred years has been the faithful guardian of the poor and the oppressed, as well as the protector of the rights of the prosperous, the wealthy.

Unfortunately, apparently yielding to the implied threat carried in the tricky scheme to destroy its integrity by adding subservient Justices, recent decisions of the Court have indicated that it is disposed to shirk its responsibility as the protector of the rights guaranteed in the Bill of Rights and our Constitution, and to uphold the enactments of Congress, no matter how unjust or contrary to the provisions of our Constitution those laws may be.

This change in the attitude of our Supreme Court renders it all the more necessary that the people send to Congress only those Representatives who possess the desire, the intelligence, and the courage to withstand the demands of special groups; to resist the attempts to change our form of government; and to preserve for those who come after Lincoln's government of the people, by the people, and for the people; a government not of men but of law, and under which all may receive equal justice under law.

That in recent years a determined and all too successful effort has been made to destroy our form of government cannot be denied by those who have knowledge of the facts.

If the words and the acts of the present administration be traced and the results be weighed against the background of our history and our constitutional liberties, it will be found that, instead of a skillful weaving into the protective mantle of our Constitution of new, brightly colored and strengthening strands of improved procedure to preserve the whole, it has been attempting to supplant the homespun cloak which has protected us for, lo, these many years, with another, an outworn and shoddy robe worn by the dictators and which gives no protection to the common people from either the chilling blasts of nazi-ism or the consuming fires of communism; from the acts of a Hitler or the firing squads of a Stalin.

The charge is here deliberately made that this administration has followed a course:

(a) Which will bring national bankruptcy.

(b) Which has contributed to the causes of unemployment.

(c) Which has (1) worked injustice to employers; (2) deprived them of free speech and a free press.

(d) Which has (1) interfered with the right of employees to work; (2) prevented them from bargaining collectively through representatives of their own choosing.

(e) Which has deprived both employee and employer of (1) the constitutional right to due process of law, including the right to be confronted by the witnesses who give evidence against him; (2) the right of cross-examination; (3) a fair and impartial trial.

(f) And which tends to overthrow our form of government and create a dictatorship.

A DRIVE INTO NATIONAL BANKRUPTCY

The President, knowing the result of his actions, is intentionally following a course which he said would lead our Nation into national bankruptcy.

The purpose of the President's advisers, to whom he has apparently yielded, was clearly stated in 1934 by that distinguished student and accurate observer of national affairs, Bainbridge Colby, Wilson's Secretary of State, when he made the statement:

> It is openly charged, and indeed admitted, that a substantial number of the President's immediate advisers are not desirous of business revival, feeling that to prolong the depression will produce a better psychological background for the prosecution of their revolutionary designs. The overturn of our institutions, including the Constitution, is their avowed goal.

The President knew the nature of our national illness. He knew the danger of excessive spending, of deficit borrowing. He was aware of the remedy. He asked the privilege of administering it.

Let me quote his words:

On September 9, 1931, at Syracuse, N. Y.:

> We don't know what the future holds for us. This depression is today's problem. * * * I think most of us are agreed, too, that we cannot and must not borrow against the future to meet it.

On July 30, 1932, at Albany, N. Y.:

> Let us have the courage to stop borrowing to meet continuing deficits.
>
> * * * * * * *
>
> Revenues must cover expenditures by one means or another. Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuation of that habit means the poorhouse.

Speaking of the Nation, in October of 1932, at Pittsburgh, Candidate Roosevelt said:

> If, in some crisis, it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms.
>
> But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing to the limit of the people's power to pay and continues to pile up deficits, it is on the road to bankruptcy.

Again, on March 10, 1933, in his message to Congress, he said:

> Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger.

On September 29, 1932, at Sioux City, Iowa, Candidate Roosevelt had said:

> I accuse the present administration of being the greatest spending administration in peacetimes in all our history—one which has piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs or reduced earning power of the people. Bureaus and bureaucrats have been retained at the expense of the taxpayer.
>
> On my part, I ask you to assign to me the task of reducing the annual operating expenses of the National Government.

In his message to Congress on March 10, 1933, he said:

> With the utmost seriousness, I point out to the Congress the profound effect of this fact [that there had been deficits in the

Hoover administration] upon our national economy. It has contributed to the recent collapse of our banking structure. It has accentuated the stagnation of the economic life of our people. It has added to the ranks of the unemployed. Our Government's house is not in order and for many reasons no effective action has been taken to restore it to order.

We must move with a direct and resolute purpose now. The Members of the Congress and I are pledged to immediate economy.

I am therefore assuming that you and I are in complete agreement as to the urgent necessity, and my constitutional duty is to advise you as to the methods for obtaining drastic retrenchment at this time.

I am not speaking to you in general terms. I am pointing out a definite road.

Prior to that time, on the 19th day of October 1932, at Pittsburgh, he said:

I regard reduction in Federal spending as one of the most important issues of this campaign. In my opinion, it is the most direct and effective contribution that Government can make to business.

In 1932 he also said:

It is my pledge and promise that this dangerous kind of financing shall be stopped and that rigid governmental economy shall be forced by a stern and unremitting administration policy of living within our income.

Aware of the nature of our illness, knowing the remedy, having promised to apply it, Franklin Delano Roosevelt broke faith with the people of this country, repudiated his party platform, deliberately entered upon, and has consistently followed, a program of wasteful spending of borrowed money, and has recklessly followed the course of borrowing against the future to meet present-day needs, after having told us that such a course would send us as a Nation to the poorhouse and into national bankruptcy.

"Wherefore by their fruits ye shall know them." By his acts must the President be judged.

Having told us in 1932 that continuing deficits would bankrupt us, that our only remedy was to live within our income, that the only way by which we could safely accomplish that was to reduce Government employees, Government bureaus, Federal expenditures, he will have deliberately and with his eyes open, at the end of his second term, by more than $5,000,000,000, doubled our national debt.

National bankruptcy, which his policy is bound to bring about, will inevitably be followed by the bankruptcy of millions of individuals, of thousands of corporations. Individual and national bankruptcy means suffering and privation—an ideal background for the overthrow of an existing government; the establishment of a dictatorship.

THE ADMINISTRATION HAS CONTRIBUTED TO THE CAUSES OF UNEMPLOYMENT

The President advised us that the spending by the Federal Government of borrowed money was "a brake on any return to normal business activity;" that it "added to the ranks of the unemployed," and his own deficit spending during the past 7 years has demonstrated the truthfulness of his contention, for unemployment has not been solved.

On the contrary, in spite of the millions who have been given jobs through the expenditure of Federal funds, we are now told that the unemployed number somewhere between nine and thirteen million.

THE ADMINISTRATION'S COURSE HAS WORKED INJUSTICE TO EMPLOYERS—DEPRIVED THEM OF FREE SPEECH AND A FREE PRESS

The National Labor Relations Act

The purpose of the National Labor Relations Act was to lessen the causes of industrial disputes affecting interstate and foreign commerce. Every law, to justify its existence, must apply equally to all those who come under its operation.

The national labor relations law prescribes many acts which, if done by employers, are declared to be unfair labor practices. It in no way prohibits or punishes as unfair labor practices acts of employees which injure or destroy the business of the employer. It does not compel the employees to bargain collectively at the request of the employer, but it punishes the employer if he refuses to bargain collectively with the representatives of the employees.

Under the act as construed employees or representatives of employees may destroy the business of the employer by mass picketing. They may break up his machinery. They may wreck his buildings. They may assault and beat up loyal employees, members of the office force, the employer himself. Yet the act, designed to promote industrial peace, provides no punishment for the employees or their representatives who do these things; it gives no remedy to the employer who has been injured.

Under the act, as construed by the National Labor Relations Board, the employee or the union organizer may make, publish, and circulate untrue, degrading, and vicious statements as to the employer's motives or acts. The employer may be falsely charged with the most reprehensible and disgraceful conduct; with being greedy, avaricious, cruel, unpatriotic. Yet, under this act, brought into existence to promote industrial peace, he is without remedy.

On the other hand, the employer is guilty of an unfair labor practice if he truthfully informs his employees who have no desire to join a union that those who are attempting to organize them are Communists, convicted criminals.

The employer is guilty of an unfair labor practice if, while a union is attempting to organize his employees, he voluntarily increases their wages.

He is guilty of an unfair labor practice if he advises his men that they need not pay, either to obtain or to hold a job with him. Such was the basis of the decision of the Board holding Henry Ford guilty of a violation of the act.

Although the relationship of employee and employer has existed for years and the relationship has always been pleasant, the employer may not either talk or write to his employees about working conditions, even though the bargaining agency misrepresents, untruthfully states his position. Nor may he post notices on his bulletin board stating that he is willing to make certain concessions after the bargaining agent of the employees has refused to agree to his proposal.

The bargaining agent may make a demand. That demand may be unreasonable. It may be excessive. The employer may be willing to make certain concessions. Yet, under the law as interpreted and administered by the Board, if the employer attempts, either verbally, by letter, or through the posting of bulletins, to make known his position to his own employees, to advise them of the concessions which he is willing to make, he is guilty of an unfair labor practice.

Although the employer may bargain with the utmost good faith, if the negotiations have reached the point where he can make no more concessions, and the bargaining agency makes a demand, under the ruling of the Board the employer is guilty of an unfair labor practice if he does not make a counter-proposal.

This ruling means, not that the employer must bargain collectively. It goes further than that. It means that he must make concessions, whatever be the demand of the bargaining representative.

The National Labor Relations Board has held that it is an unfair labor practice for an employer to discharge leaders in a strike who had brought about mass picketing, barred the entrance to the employer's premises, stopped all trucks even though they were on emergency business, and required all orders to be put through a telephone office on the picket line.

After the Court in the Fansteel case held that employees and strike leaders who had destroyed property need not be reinstated with back pay, the Board held, and a court upheld that decision, that other employees who had destroyed property of a lesser value than $300, or who had only beaten up fellow workers or company officials just a little, were to be taken back and reimbursed for lost time.

Keep in mind that I do not state that the foregoing Board decisions are decisions which will ultimately be upheld by our courts. My charge is that they are decisions of the National Labor Relations Board, which has maladministered an unfair act.

Where an employer refused, because of their union activities, to take on two applicants for jobs, neither of whom had ever been employed by him, the Board ordered him to give them jobs and to reimburse them for the time lost from the

day they made application until the time they were given work.

There is another law which has enabled labor racketeers to take advantage not only of employers, but of employees as well. I refer to the Norris-LaGuardia Act, which prohibits the issuing of injunctions restraining strikers, except in certain cases.

This act provides, among other things, that an injunction shall not be issued where there is a labor dispute, unless the employer can establish, among other things, the fact that the local authorities either will not or cannot give protection. Under this act, the courts have defined a labor dispute to include a controversy between an employer and those who never were employees.

As an illustration: In Washington, the New Negro Alliance picketed the place of a grocery company, demanding that the grocery company employ more Negroes as clerks. The employer refused and when he sought the protection of the courts, he was met with the decision of the court to the effect that, although none of those demanding employment, although no member of the New Negro Alliance, had ever been employed in his place of business, nevertheless, because he refused to hire them, a labor dispute existed and therefore he was without remedy, unless he could show that the civil authorities had refused to give him protection or could not give him protection.

There are other cases which hold that, although none of the employees belong to a union which is seeking membership in that plant or store, nevertheless, if a union demands that the employees join its ranks, pay initiation fees, dues, and special assessments and become members, a labor dispute is created, and picketing cannot be prohibited.

The result is well illustrated by at least two cases in the Nation's Capital. On E Street, one establishment employed for an interior decorating job a member of one union. Another union picketed the store, although the wages paid were union wages. In retaliation, pickets from the union of the painter who was doing the decorating picketed another job farther down the street where the construction work was being done by members of the second union. A few days later, another incident of the same kind occurred.

Could anything be more absurd, more ridiculous, more unfair? In both of these instances, the employer was in no way at fault. He hired union workmen; he paid union wages. Yet he had his place of business picketed by members of a rival union.

On such a theory, no employer would be free from having his customers annoyed, his business destroyed, by a union where a rival was awarded the job.

The construction given to a labor dispute by the Norris-LaGuardia Act has been adopted by the Board and by the courts when construing the same term contained in the National Labor Relations Act.

To the same effect is the case of Fur Workers Union against H. Zirkin & Sons, Inc., where the Circuit Court of Appeals of the District of Columbia held (and the decision was affirmed by the United States Supreme Court) that two C. I. O. employees—the total employees numbering 11—were justified, as a matter of law, in calling to their assistance outside sympathizers who had never worked in the Zirkin place of business, in order to effectively throw a picket line around the place of employment and so prevent a majority of the employees from going to their work.

THE POLICY OF THE ADMINISTRATION HAS INTERFERED WITH THE RIGHT OF EMPLOYEES TO WORK AND PREVENTED THEM FROM BARGAINING COLLECTIVELY THROUGH REPRESENTATIVES OF THEIR OWN CHOOSING

The President, by supporting John L. Lewis, whose organization contributed $470,000 to the New Deal campaign fund, in his organizing campaigns, in his sit-down strikes and through the activities of the National Labor Relations Board, which the President appointed and for which he is responsible, has deprived employees of the right to work until they have signed on the dotted line, paid the initiation fees and dues demanded by John L. Lewis.

This situation is so well known that it is unnecessary to cite more than one specific case—the sit-down strikes in Michigan, which began in Flint, Mich., on the last day of December 1936, and continued for 44 days; the Chrysler strikes at Detroit, Mich., which ran for 54 days, and the purpose of which was to force a closed shop and the check-off upon General Motors and Chrysler.

When comes the day in America that the head of the family cannot go to his daily task without paying tribute to a union organizer, or, for that matter, to any person, for the privilege of exercising his right to work, to earn a livelihood for himself and his family, then has arrived the day when men are no longer free, when America is no longer the land of opportunity.

"Equal justice under law?"

The President, John L. Lewis, and the Communists in his wake have made a mockery of that legend. There was a time in the history of our country when the black man worked when and where and at the task provided by the white man. Thank God, that time has gone. To bring about the end of that practice, millions of dollars were spent and hundreds of thousands of lives were lost and a whole section of our country was laid waste.

Today, in another form, Lewis seeks to force every man who labors to come to him or his representatives for the privilege of working and to pay for that privilege a fee fixed by the International Council of the C. I. O.

To prove that the right given employees by section 7 of the N. L. R. A., that is, the right to bargain collectively through representatives of their own choosing, is denied them, we need but call attention to the rulings of the Board in the Longshoremen's case on the west coast and to the cases affecting the bituminous-coal miners.

In the Longshoremen's case, decided by the Circuit Court of Appeals of the District of Columbia and affirmed by the United States Supreme Court, it was held that, under the act, in those cities on the west coast where the majority of the employees in any plant or city belonged to the A. F. of L., they must give up their membership in that organization and either join the C. I. O. or lose their jobs. This because, in the whole territory, the C. I. O. was in the majority.

The same result was reached in the bituminous-coal industry, where the miners were told that, if they wanted to mine coal, they should join the United Mine Workers.

A similar result followed in the plants of the Pittsburgh Glass Co., where, in Crystal City and Festus, Mo., some 1,700 workers, who had their own independent union, were ordered by the Board to bargain through C. I. O. representatives.

BY SPONSORING AND SUPPORTING THE BOARD IN ITS INTERPRETATION AND ADMINISTRATION OF THE N. L. R. A., THE ADMINISTRATION HAS DEPRIVED BOTH EMPLOYEE AND EMPLOYER OF THE CONSTITUTIONAL RIGHT TO DUE PROCESS OF LAW, INCLUDING THE RIGHT TO BE CONFRONTED BY THE WITNESSES WHO GIVE EVIDENCE AGAINST THEM

The due process of law which is guaranteed to every citizen by our Constitution has been interpreted to mean the right of the accused to be confronted by the witnesses who appear against him, the right to cross-examine those witnesses, and the right to a fair and impartial trial by unbiased, unprejudiced jurors or judges.

The hearings before the Smith investigating committee disclose, among other things, the following violations of this constitutional right.

From the files of the Board, it appears that investigating and reviewing attorneys, wholly without industrial or judicial experience; biased and prejudiced against employers, against capital, against the profit system, have made investigations and sat in cases where employers were charged with unfair labor practices.

These investigating and reviewing attorneys have, on occasion, made investigations of their own, of which the accused was wholly unaware, and they have used that information, so surreptitiously obtained, against the employer.

Reviewing attorneys have not only in some cases considered thousands of pages of typewritten testimony which was in the record, but have had information submitted to them which was outside the record, and these reviewing attorneys have then gone before the Board and orally expressed their conclusions as to what the evidence showed.

Upon those oral conclusions so expressed, the Board has indicated what the decision should be and, at times, the reviewing attorney has prepared that decision, submitted it to the Board and, upon approval, it became the decision of the Board.

Under the law, when the accused employer appealed from that decision to the circuit court of appeals, he was confronted by that provision of the N. L. R. A. which provided that the decision of the Board, if sustained by evidence, should be conclusive. And, upon appeal to the United States Supreme Court, the same provision held.

So that, in the end, we have a decision of the United States Supreme Court based upon a decision of the circuit court of appeals, which is based upon a decision of the Board, which, in effect, is the decision of the reviewing attorney, without judicial or industrial experience and all too often entertaining a prejudiced opinion of the employer.

In at least two cases circuit courts of appeal have held that, while decisions of the Board could not be based wholly upon hearsay evidence or rumor, hearsay was admissible, for, under the law, the Board is not bound by the strict rules of evidence.

Although the National Labor Relations Act expressly states—section 4 (a)—

> Nothing in this act shall be construed to authorize the Board to appoint individuals for the purpose of conciliation or mediation (or for statistical work), where such service may be obtained from the Department of Labor—

The Board has established what it is pleased to call an Economic Division. At the head of this Division it has been pleased to put one David Saposs, born in Russia, a man thoroughly saturated with communistic ideas; a man, who, according to the testimony taken before the Smith committee—see page 70 of the hearings of February 14, 1940—was a member of the Conference for Progressive Labor Action.

The preamble to the constitution of that organization, referring to the American profit system, stated that:

> Planless, profiteering, war-provoking, imperialistic capitalism must be abolished. It cannot be reformed. * * * We must have a workers' republic and a planned economic order under which the masses will labor to create plenty, security, leisure, and freedom for themselves, not profits, privilege, and arbitrary power for a few.
>
> The job of abolishing capitalism and building a new social order must be done by the workers. * * * We, the workers, must provide the revolutionary will, the courage, and the intelligence for the task.

In another article, entitled "The Role of the Middle Class in Social Development," Saposs again attacks the American form of government; the conditions which have brought about freedom and prosperity for the American worker.

He is, in short, an enemy of all those things which in this country have given the man who toils with his hands a higher standard of living, more comfort, more luxuries, greater opportunity than any other worker in any part of the world.

While here in America it has always been considered that a person accused of an offense is entitled to a trial in open court, where he may hear all of the testimony which enters into the record; where he may see the witnesses who testify against him and where he may, through attorney, cross-examine those witnesses, it is the function of Dr. Saposs, when an employer has been accused of an unfair labor practice, to make an independent investigation, outside and beyond the record, interviewing such witnesses as he may choose to examine, ascertaining and considering such facts or statements as may please his fancy, and then to put upon the statements of the witnesses he has seen, upon the statements he has read or heard, his own interpretation and report back to the reviewing attorney or to the Board his conclusions, based on the investigation which he has made.

Put in a different way: This man Saposs, whose writings show that his views are not in accord with those principles which have given to the workingman of America the position which he now enjoys, is the unseen, the secret, the biased, and the prejudiced adviser to the court, that is, to the reviewing attorney or to the Board, which passes upon the guilt or the innocence of the employer, who has no opportunity to test the value of Saposs' conclusions by a cross-examination of the witnesses from whom Saposs derived his information.

Saposs, speaking figuratively, is the thirteenth member of the jury; the unseen member, who, in secret, whispers to the reviewing attorney, to the Board, his biased and prejudiced views; his views, which, in the opinion of many, tend to deprive our citizens of their constitutional rights.

To illustrate the fact that the Board has no regard for the constitutional mandate that every person shall have a fair and an impartial trial, but one more case will be cited.

From the files of the Board comes a memorandum in the handwriting of the Board's secretary, Nathan Witt. The facts are these:

There was trouble brewing at Pittsburgh between the Inland Steel Co. and its employees. Someone from the C. I. O. called someone connected with the National Labor Relations Board. In answer to that call, on the 2d day of June 1937, Nathan Witt went to Pittsburgh, where he met Lee Pressman, general counsel of the C. I. O., and Phil Murray, vice president of the C. I. O.

It was decided by the three that the union should make a demand upon Inland that a written contract be signed by the company. The question at issue did not relate either to wages, hours, or working conditions. All three of these conspirators knew that Inland would not sign a written contract. All three knew, or at least they should have known, that in April of that same year the Supreme Court had held in a unanimous decision that an employer need not even enter into a contract.

The purpose of the demand was to cause a strike, to give an excuse for the filing of a complaint of an unfair labor practice against the company.

The demand was made. The company refused to sign and, on the 12th day of June, the Board filed its complaint against Inland. It took 2 years and 8 months of expensive litigation on the part of the company to obtain a decision from the circuit court of appeals holding that the company was not guilty of an unfair labor practice because of its refusal to sign.

Here we have a Board which, under the law, acts as investigator, prosecutor, judge, and, as one circuit court of appeals said, as executioner, through its secretary, entering into a conspiracy with the general counsel and the vice president of the C. I. O.; instigating and fostering a strike, so that an unfair labor practice charge could be lodged against the company—a queer, queer way to promote industrial peace.

Rightly or wrongly, the National Labor Relations Board has lost the confidence of the American people. It has been charged as being biased and unfair, not only by employers, but by representatives of the C. I. O. and of the A. F. of L.

If this Nation is to have industrial peace, the present National Labor Relations Board must be abolished and a new Board and a new staff, made up of fair, conscientious, experienced men, appointed to interpret and administer the act. In no other way will industrial peace come to us as a Nation.

If the financial integrity of our Nation is to be preserved, there must be an end to deficit spending, for the Nation, no more than the individual, can spend itself into prosperity.

If we are to continue to be a Nation of free people, governed by a Constitution, by laws rather than by men, those in charge of our national affairs must be ousted from the places of authority in which they have so glaringly betrayed the trust we reposed in them.

An end to the remaking of America can be brought about in the November elections. God grant that we shall have the wisdom and energy to, with his help, accomplish that purpose.

Tribute to Hon. James Wolfenden, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. DITTER. Mr. Speaker, under leave to extend my remarks, I include the following address by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts at a testimonial dinner given in honor of Hon. JAMES WOLFENDEN by the Wolfenden Republican Club at Haverford, Pa., on March 26, 1940:

I recall with great pleasure a visit to this live Republican organization more than a year ago. It was following the 1938 elections, and at that time we were filled with new hope and new courage. I am glad of an opportunity to return, and I am delighted to report our optimism is still running strong; and justification for it has been demonstrated in the local elections of 1939 and in a number of special congressional elections.

I am happy tonight that I may pay tribute to your own great Congressman, my warm personal friend, and your beloved leader—JIM WOLFENDEN. No man in Congress has a more powerful personal influence than Jim; a legislator with a keen mind and excellent judgment, he has won the confidence and respect of the entire House. Delaware County and Pennsylvania are indeed fortunate that he is in Congress to watch and protect the many interests of a great industrial community.

I wish also to express my respect and admiration for your brilliant neighboring Congressman, BILL DITTER, who has just delivered a most stirring address. He is an outstanding Member of Congress, and as chairman of the committee whose purpose it is to elect a Republican House, he will be much in the news in the next few months. Upon his efforts will, in a large measure, depend the future course of our country. And I am sure he will prove equal to all we expect of him.

THE REPUBLICAN TIDE

I come here tonight to plead especially for the election of a Republican House. While I do not minimize the importance of a Republican in the White House, I say it is fully as important that we have a Republican House of Representatives. Elect a Republican House, and the Nation will at once move forward with new confidence. We will see once more the smiling, happy faces of millions of our workers as they go back to work in private enterprise at decent American wages.

In the 1938 elections Pennsylvania increased her Republican delegation in the House to 19, adding 12 new districts to the Republican territory. Today there are only 11 out of 67 counties in your great State which are not in some Republican congressional district.

And let me add that in my duties as Republican leader of the House I have found this Pennsylvania delegation a sturdy band of real Republicans. Reelect them all this year, with another dozen like 'em, and we'll show you what real Americanism in Washington can do for recovery and prosperity.

I need not remind you that in the 1938 congressional elections the Republican Party once more became the majority party in the 38 States outside of the deep South. In that great sweep we carried 1,123 counties in this vast two-party area as against only 885 counties carried by the Democrats.

Today, therefore, Republican workers are in actual majority control of 3 out of every 5 counties in the 38 States which maintain the 2-party system—and in Pennsylvania your position is even stronger.

But here is another fact of even greater significance about the 1938 elections: Republican candidates lost in 37 districts by a margin of less than 3 percent of the total vote, and in 20 other districts by a margin of 5 percent or less. This means that if we increase the total Republican vote this year by 5 percent we can gain 57 additional congressional districts. Does anybody in touch with the thought and pulse of America today question that we will carry all these districts next November?

Look at the recent special elections in Ohio. In both the Seventeenth and Twenty-second Ohio Districts early this month we increased the Republican position by better than 7 percent as compared with 1938. If this percentage of gain can be achieved evenly throughout the country in November, we will gain 70 Republican seats in the House, whereas only 50 additional districts are needed to give us control. Later, in Iowa, these results were confirmed. There, in the heart of the Farm Belt, we carried the home district of the New Deal Secretary of Agriculture.

A mighty tide of Republicanism is sweeping through the land. The New Deal came with the wind, floundered for 7 years in its own "dust bowl," and is now headed back to its own wonderland of insolvency and broken promises.

Because America wants to get back to work, the people are determined to place their Government once more in the hands of practical and constructive leadership.

Our workers, farmers, and businessmen took new hope, and all business registered a strong surge of confidence when the full sweep of the Republican landslide was realized in November 1938.

That election, which doubled our Republican membership, ended the New Deal's irresponsible scheme of rubber-stamp legislation. A vigorous and united opposition in Congress since has insisted that every piece of legislation be examined carefully.

Since that time there has been no "must" legislation from the White House.

A new spirit of prudence also was manifest almost immediately in the enactment of spending bills. We Republicans were not strong enough to eliminate all political extravagance, but we were strong enough to head off many new follies. And after the 1940 returns are in we will be strong enough to command a dollar's worth of honest public service for every dollar of Federal expenditure.

And we will be able to root out waste, favoritism, and disgraceful political racketeering in Federal spending.

We will be in a position to stop experimental squandering.

We will restore sanity, honesty, and fairness to our Government.

CENSUS SNOOPING

The country has been stirred deeply during the last 2 months by revelations touching the 1940 census questions.

Never before in our history has there been such an attempt by government to pry into the most intimate concerns of the people.

Never before has there been such an attempt to catalog every citizen as he may fit into the master chart of our national planners.

Members of the House and Senate were quick to expose this invasion of privacy and security when the census forms were printed. Inquiry disclosed that some of these intolerable questions had been placed in the census, not by Congress, not by the Bureau of the Census, but by powerful officials in the highest ranks of the New Deal.

Why does a routine American census thus take on the form of a national registration, such as would delight any dictator?

New Deal officials in Washington have attempted to dismiss this Nation-wide expression of indignation. But the tempest will not subside until real satisfaction is offered to the American demand for reasonable privacy and security in the personal affairs of the citizen.

The incident is significant in that it again illustrates the core of the whole New Deal philosophy—the idea that every aspect of life must be organized, controlled, directed, and supervised by an elaborate scheme of prying bureaus and commissions in Washington. That doctrine is the great challenge to America in the 1940 elections.

Is government the creature and the servant of the American people? Or are our people mere puppets of the bureaucrats, mere cogs in the wheels of managed economy?

Shall we continue to have a government of the people, by the people, and for the people, or shall we have a government controlled and dominated by a few bureaucrats in Washington? You will answer this question with your votes next November.

NATIONAL DEFENSE

One of the major problems before Congress today is national defense. For more than a year a special committee of House Republicans has been studying this subject. It has made two reports to the Republican conference, the most recent on March 11 of this year. And in that report appeared this challenge and warning—that national defense, in the final analysis, is more than men and ships and fleets of planes. Behind all these, in any scheme of national defense, must be a sound and vibrant economic organization. The committee then pointed out the dangers which we find today in the loose and reckless fiscal policies of the Government.

At the end of the present fiscal year, next June 30, the national debt will be approximately $45,000,000,000, the limit fixed by law. Taxes are the highest since the World War years, and have already reached the point where increased rates fail to produce increased revenues. On top of this the New Deal has been piling up deficit after deficit for 7 years, at the average rate of more than $3,000,000,000 every year. During the same years expenditures for national defense have increased from $600,000,000 a year to almost $2,000,000,000 available for the fiscal year 1941.

What do these figures mean? They mean only this, that involvement in war under the circumstances of the moment would burden the American financial structure to a degree which might easily bring on serious dislocation to every field of commerce and industry.

The people of America have not forgotten that during our 18 months' participation in the World War we spent in excess of $35,000,000,000. We went into the war with a debt of approximately $1,000,000,000 and came out with a debt of $26,000,000,000.

This brings us to the heart of the recent Republican report on national defense. It reads:

"Let us remember, therefore, that should we be drawn into a war of first magnitude we should have to start with a debt of at least $44,000,000,000, probably more, and then finance the effort on top of that debt. It is a prospect which must concern every thoughtful person in the land."

Our position is that sound domestic policies which build up private enterprise, expand production, and develop a wholesome and healthy financial situation must be regarded as essential parts of any honest program of national defense. Vast fleets and many regiments can be no stronger than the productive organization which supplies and sustains them. And no productive organization can be stronger than the financial situation which provides the money and credits for plant and equipment.

The country applauds the Republican position that considerable savings can be realized by the elimination of waste and extravagance, by the elimination of overlapping and duplicating Federal agencies, and by the sharp curtailment of bureaucratic propaganda, questionnaires, and snooping.

Savings along these lines easily could supply our immediate needs in national defense expansion. Until such savings are honestly attempted, the people should not be called upon for increased taxes to maintain the New Deal load of reckless extravagance and futile pump priming.

The first step in national defense is a sound and honest Federal Budget. And we don't need two budgets to do the job. One budget is enough if it be an honest one.

DOMESTIC PROBLEMS PRESSING

During the last few months the powerful propaganda machine of the New Deal has endeavored to focus public attention more and more upon international problems. A smoke screen of mystery and secret international arrangements has been spread over the whole face of official news from Washington.

This propaganda campaign can have but one objective—to distract the attention of the American people from the follies and failures of the New Deal.

Today the entire third-term movement floats on a cloud of internationalism.

The American people have no way of knowing for a certainty whether this secret international activity is headed toward American involvement abroad. There are many public professions of peaceful policy. But the American people have every right to ask again and again whether the conduct of our foreign relations day by day conforms, in fact, to the policy of peace, to which the American people are overwhelmingly committed. We had one bitter experience in 1916. Then a President was elected on the slogan, "He kept us out of war." But in 5 months after the election we were in the war!

Our people will not be deceived again.

They deny that our first line of defense is on the Rhine or anywhere else in Europe.

I have said before, and I say again tonight, with all the conviction and sincerity I may convey, that our first line of defense is at the farm gate and at the factory door. America wants to go back to work. America wants to keep out of war.

NEW DEAL FAILURES

The people of the United States have given the new dealers more than a fair chance to test their theories and policies. But where are we today? Confronted again by a declining curve of business and a rising tide of unemployment.

The President was entrusted with vast new powers over money, tariffs, agriculture, housing, banking, and transportation. Yet we find today, after 7 years of extravagant experiments, 10,000,000 unemployed and a national debt increased by $25,000,000,000.

We have 4,000,000 young people between the ages of 18 and 24 who never have had a regular job.

Farm prices never have attained the pre-war parity, which was so eloquently proclaimed to be the New Deal goal. And today farm prices again are drifting downward to distressing levels. Is this a fair return for the $6,000,000,000 appropriated by Congress for New Deal agricultural rehabilitation?

Every citizen has a right to ask why the United States has shown less recovery than most of the other important industrial nations of the world? That is the fact revealed by the 1939 report of the economic section of the League of Nations. In that report the United States ranks eighteenth among all nations of the world in point of recovery toward the level of 1929. Such small nations as Holland, Belgium, and Switzerland, each of which is hardly as big as one of our average States, have done better in the march toward recovery since 1930.

Why is it that a nation with the natural resources and manpower of the United States should be at the tail end of the world recovery procession?

Recovery cannot begin until our people may once more face the future with full confidence, and a feeling of personal security under the law.

Nothing can be more fatal than excessive meddling or interference on the part of government.

We do not believe this great country has reached the end of the road.

On the contrary, we Republicans envision a day when our national income may reach $100,000,000,000 a year.

We look forward to the day when the eyes of youth will glow once more with the light of hope, adventure, and enterprise.

We look forward to the time when American business may do more than work for the tax collector.

We look forward to the day when the job maker and the job giver rightfully will be regarded as keymen in a revived scheme of economic abundance.

America has the resources, the skill, the technical equipment, and the manpower to push this Nation to heights of prosperity undreamed in the past.

Our first task is to restore the vigorous forward-looking and hopeful spirit of our people.

We are a nation in the chains of uncertainty and confusion.

Worst of all, no one now has any confidence that our situation will improve so long as prevailing policies are retained in Washington.

These are the New Deal accomplishments of 7 years. No party with such a record can go before the American people and expect to get a mandate to continue. The people are aroused. They will not be fooled again.

That is why we can confidently expect this year the election of a Republican President and a Republican House in Washington; and I am sure Pennsylvania will contribute magnificently toward these results in November.

Nebraskans Resent James R. Cromwell's Agitation For America's Entry Into the War

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. CURTIS. Mr. Speaker, recent statements made by our Minister to Canada have disturbed many thoughtful Americans. An editorial in the Grand Island Daily Independent, of Grand Island, Nebr., said in part:

THE TALKATIVE MR. CROMWELL

James H. R. Cromwell, newly appointed Minister to Canada, has fallen into the error of so many amateur diplomats—that of letting his interest in the country to which he is accredited interfere with his interest in the country of which he is an envoy.

Mr. Cromwell is very indignant at the isolationists in the United States. He believes the British and French allies are fighting for the perpetuation of individual liberty and freedom. While he doesn't say so, the presumption is strong that he wants this country to do what it did in 1917, and make the world safe for democracy.

Mr. Cromwell is not the first American diplomat to become so enamored of another nation that he became indiscreet in his public utterances, and let his sympathies go to his head. Ambassador Page, in London at the start of the World War, and Ambassador Herrick, in Paris, were so violently pro-Ally that they kept our State Department in constant hot water.

This is the result of the old American custom of appointing as ambassadors and ministers men who have contributed heavily to the campaign fund of the party in power, and frequently without regard to any fitness whatever for the task. A few such diplomats have been surprisingly efficient; most are, at best, mediocre. The career men in the Department, whose appointments have followed years of training, are far more likely to succeed than the rich boys with a yen for distinction.

At the same time the following editorial appeared in the Omaha World Herald of Omaha, Nebr.:

JIMMY'S $50,000

According to all reports Jimmy Cromwell, America's champion son-in-law, contributed $50,000 to Mr. Roosevelt's 1936 campaign against the money changers.

That liberal amount certainly entitled him to his appointment as Minister to Canada. Jimmy apparently felt that it also entitled him to express his candid opinion of Adolf Hitler and American participation in the European war. But in that he was wrong. His outburst brought an unprecedented and well-deserved telegram of rebuke from his boss, Secretary Hull.

The affair indicates that maybe there is some merit in the Senate's amendment to the Hatch Act, to limit campaign contributions to $5,000.

After all, if Jimmy had contributed only $5,000 to the 1936 campaign his qualifications for the job in Canada would have been decreased by exactly nine-tenths. As a job-seeker, then, he would have been one of many. He would have had to compete with a lot of other $5,000 men and the chances are he would not have gotten the job.

The more we think about it the better we like the Hatch bill, the way it now reads.

Congressional Secretaries' Club Given Facts Relative to History and Growth of the Library of Congress

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

ADDRESS OF DAVID C. MEARNS, SUPERINTENDENT OF READING ROOMS OF THE LIBRARY OF CONGRESS, BEFORE THE CONGRESSIONAL SECRETARIES' CLUB, THURSDAY EVENING, MARCH 21, 1940

Mr. CRAWFORD. Mr. Speaker, through the efforts of the Congressional Secretaries' Club I feel that there has been a decided improvement on Capitol Hill in the efficiency of many of our offices. Much of this is due to the fact that this fine group of secretaries have been devoting their own time one and two nights a week after working hours to better acquaint themselves with the functions of the various agencies of government.

To do this they have heard informative addresses followed by questions and answers during their regular weekly meetings and in addition they have made tours through such places as the Government Printing Office, the Federal Bureau of Investigation, the Library of Congress, the Navy Yard, the National Archives, and others.

I have heard considerable comment on a highly informative address given the secretaries a few nights ago by David C. Mearns, superintendent of the reading rooms of the Library of Congress, and because this address contains such good information and the answers to questions frequently asked us by our constituents relative to the Library, I am presenting it to the House as of possible value to each of our offices.

Mr. Mearns' address follows:

THE LIBRARY OF CONGRESS

Like Joan of Arc, your servants in the Library hear voices, but, unlike the Maid of Orleans, the voices that we hear belong to you and are transmitted to us through the facilities of the Chesapeake & Potomac Telephone Co. We are, therefore, particularly gratified by your personal appearance tonight and anxious to exhibit our wares in the most becoming manner we can contrive.

The Library of Congress is 140 years old. When the Continental Congress sat in Philadelphia the directors of the Library Co.—that notable institution founded by Dr. Franklin—extended to the Revolutionary legislators "the use of such books as they may have occasion for during their sitting," and later, after the ratification of the Constitution, when the First Congress of the United States convened in New York City, its membership was accorded similar courtesies by the New York Society Library. In 1791 the Government returned to Philadelphia, and the Library Co. promptly renewed the facilities enjoyed by the "old Congress." It was not, therefore, until April 24, 1800, when preparations were being made for the removal of the Government to Concocheague (as the site of the District of Columbia had been called by the Indians) that legislation was approved providing that for the purchase of such books as may be necessary for the use of Congress at the said city of Washington, and for fitting up a suitable apartment for containing them and for placing them therein, the sum of $5,000 shall be, and hereby is, appropriated."

That there would be need for a library at the permanent seat of government was obvious. Washington was a boom town, and aside from a few public buildings and some boarding houses and congressional "messes," or eating places, spread between Capitol Hill and the President's House, it was a city only on paper—Major L'Enfant's paper.

This is the way a young bride described it to her doting family: "At last we drew near this, our future abode; we left the woods among which a boundary stone marked the beginning of the city; we entered a long, unshed road which rises a hill and crosses a vast common covered with stout oaks and blackberries in abundance. I look in vain for the city; I see no houses, although among the bushes I see the different stones, which here and there mark the different avenues. Footpaths and roads dissect the extensive plain, which is exactly like the common, the other side of the Raritan, only more extensive and more productive of blackberry and sweetbriars. At last I perceive the Capitol, a large, square, ungraceful building; approching nearer, I see three large brick houses and a few hovels scattered over the plain. One of the brick houses is where we lodge. We drive to it; it is surrounded with mud, shavings, bricks, planks, and all the rubbish of building. Here, then, I am. I alight, am introduced to Mr. Stelle, and led into a large, handsome parlor. I seat myself at the widow and, while Mr. Smith is busied with the baggage, survey the scene before me. Immediately before the door is the place from whence the clay for bricks has been dug and which is now a pond of dirty water. All the materials for building—bricks, planks, stone, etc.—are scattered over the space which lies between this and the Capitol, and which is thickly overgrown with briars. * * * Some brickkilns and small wooden houses and sheds diversify the scene. * * * The Capitol stands on a hill which slopes down toward the Potomac; from the bottom of this hill to the river extends a thick and noble wood; beyond this you see the river; the scene is then closed by a range of hills, which extends north and south as far as the eye can reach."

Thus was Washington in 1800, but of especial interest to us is the fact that the tavern from which that letter was written stood on the site of the present Library of Congress. Nearly a century was to elapse, however, between Margaret Bayard Smith's dutiful subscription and the opening of these doors.

ARRIVAL OF THE FIRST BOOKS

In the spring of 1801 the first books, numbering 740 volumes, arrived from England, packed in 11 hair trunks and a map case, and an economy Congress directed that the trunks be sold forthwith and that the proceeds be covered into the miscellaneous receipts of the Treasury. As for the books, they were stored temporarily in the office of the clerk of the Senate, a room south of the Senate Chamber in the old north wing of the Capitol.

JEFFERSON TO THE RESCUE

When the War of 1812 broke out, the collections had increased to 3,004 volumes, but on the evening of the 24th of August 1814 an invading army kindled the flames which destroyed the Capitol with the books from the Library of Congress. To repair the loss, ex-President Jefferson offered to sell to the Government his private library, and on January 30, 1815, James Madison approved an act providing for its purchase for $23,950. It was more than a replacement, for it not only doubled the contents of the Library wiped out by the enemy's tinder boxes, but it also diverted to the public use the most carefully selected collection which had been brought together on this continent, and one which represented every discipline. For 3 years thereafter (while the Capitol was being restored) the Library of Congress was administered from the attic story of Blodgett's Hotel, on E between Seventh and Eighth Streets. This building the Government had purchased a few years before for the joint accommodation of the General Post Office and the Patent Office.

In 1815 the staff of the Library consisted of the Librarian, whose salary was fixed at $1,000 a year, a nameless Negro man, whose compensation was $1 a day, and a Negro boy, who was allowed the munificent sum of $4 a month. For a short time a Mr. Martin Larner assisted the Librarian in labeling and bookplating the collection, and was given $35 for his pains. In that year, too, was published the Catalog of the Library of the United States, the first to be arranged according to Mr. Jefferson's classification, which divided the universe of knowledge into 44 subjects. Despite its recent trial by fire, the Library was heated by an open grate, as bills for cordwood and brass fenders, among the surviving accounts, would seem to prove. The office supplies appear to have been modest. There were, for example, a broom to keep the place tidy, a pair of shears, a jug of japan ink, three quires of foolscap paper, three boxes of paste, some sealing wax, two lead pencils, and a memorandum book, which recorded the uses made of the Library by such distinguished statesmen as Daniel Webster, John C. Calhoun, and Henry Clay. In the evenings or on cloudy days the apartment was lit with candles.

In 1818 the Library returned to the Capitol and was placed temporarily in a room on the top level of the Senate wing. There it remained until 1824, when it was removed to the gallery especially designed for its accommodation on the west side of the principal or main floor. In its alcoves, it is said, the belles of the city used to hold their receptions and receive the homage of their suitors. In 1851 the progress of the Library was halted briefly when another disastrous fire destroyed more than half the books, including two-thirds of the Jefferson collection; but Congress acted promptly to acquire replacements, and the work of extending its resources moved forward again. In 1866 the 40,000 volumes of the transactions of learned societies and academies in the Smithsonian Institution were, by law, transferred to the Library of Congress. A year later the present system of international exchanges was established and the Peter Force collection of Americana was purchased, by a special appropriation, for $100,000. In 1870 the entire copyright business was brought under the direction of the Librarian, and new effect was given to the law requiring the deposit of copies as a condition precedent to registration.

INTO ITS OWN BUILDING

Almost immediately it became apparent that the Library deserved and required a separate building, but it was not until 1886 that appropriations were forthcoming, and another decade was to pass before the collections, numbering about 800,000 volumes, were transferred to this place that we know so well. The new building did a great deal more than provide adequate accommodation for the collections; it also made possible, through the development of apparatus and the establishment of departments, an enlarging service to Congress and the scholarly public.

By 1924 the following achievements could be enumerated:

1. All spaces in the building were duly differentiated and equipped for specialized, as well as general, uses.

2. The specialized material had been installed in appropriate cases.

3. A scheme of classification, systematic and elastic, described as the "best for a large library," had been devised and put into practice.

4. There had been adopted processes of cataloging, including forms of entry, which are now standard for American libraries.

By an act of Congress approved March 3, 1925, the Library of Congress Trust Fund Board was created. It not only granted authority to accept endowments but also to receive gifts of money for immediate disbursement. As a result of this legislation the collections have been enhanced "by a huge importation of source material of concern to the investigator," and consultants in various fields of learning have been recruited, "who, with the equipment of teachers or investigators, are here not to teach or pursue research but to aid in the serious use of the collections by assisting in the interpretation of them."

In 1939 the annex, erected on the square immediately east of the main building, was opened to the public.

Today the collections comprise almost 6,000,000 volumes and pamphlets, 1,500,000 maps and views, 1,222,000 pieces and volumes of music, 550,000 prints, 100,000 bound volumes of newspapers, and so many manuscripts that a numerical estimate is not feasible.

LARGEST COLLECTIONS IN THE WORLD

The Library possesses the largest collection of books on aeronautics in the world, the largest collection of Chinese books outside of China and Japan, and perhaps the largest collection of Russian books outside of Russia. In the Division of Manuscripts are the private papers of nearly all the Presidents and of many of our greatest statesmen. Through a Rockefeller grant reproductions of European archives relating to the history of the United States have been secured. In the rare-book collection are approximately 85,000 volumes; among them many first editions, rare bindings, about 25,000 early American pamphlets, more than 1,500 bound volumes of eighteenth century American newspapers. Of the more than 4,600 fifteenth century books, 3,000—including the St. Blasius-St. Paul copy of the Gutenberg Bible—were purchased by a special act of Congress in 1930. In the northwest courtyard is the auditorium for public concerts of chamber music, presented to the Government by Mrs. Elizabeth Sprague Coolidge in 1925; adjoining it is the pavilion given by Mrs. Matthew John Whittall in 1938, where the quintet of Stradivari stringed instruments and the Tourte bows—her previous gift to the Division of Music—are kept on exhibit when not in actual use. At the expense of an anonymous doner a gallery on the second floor has been remodeled as a center for hispanic studies. Endowment funds exceed $2,000,000 and gifts of money received for immediate disbursement have amounted to about $1,415,000. The main building and the annex contain nearly 36 acres of floor space, and about 414 miles of steel shelving.

Mr. MacLeish, the Librarian, has asked me to assure you of his disappointment because a previous engagement makes it impossible for him to welcome you tonight. Were he here he would, I believe, want to tell you something like this:

When Mr. Jefferson offered his library to Congress he said of it: "I do not know that it contains any branch of science which Congress would wish to exclude from their collection; there is, in fact, no subject to which a Member of Congress may not have occasion to refer."

It is that last opinion of the dignity and responsibility of the duties and function of the Congress which determined the subsequent development of the Library of Congress. Its great collections with their inclusiveness of all disciplines, its scholarly services, its magnificent catalogs, its divisions of music and fine arts, its priceless manuscripts, its ancient books, are all in the Library of Congress, because "there is, in fact, no subject to which a Member of Congress may not have occasion to refer." That it is also a national institution—indeed, the National Library—is a byproduct of that fact.

Refund of Processing Tax on Hogs

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. JOHNSON of Illinois. Mr. Speaker, on August 5, 1939, there was introduced a bill, Senate Joint Resolution 66, making provisions for the refund of the processing tax on hogs marketed for slaughter by the raisers and producers who, in fact, bore all or part of the burdens of such tax.

Farmers have inquired of me if it be necessary to employ an agent or attorney or pay fees to collect their processing-tax refund. My answer is "No." The bill contains the following language:

No fees shall be charged for filing such claim. It shall not be necessary that the claimant be represented by an attorney.

There were certain farmer organizations set up to promote this bill and they served a most useful purpose. This bill has passed the Senate and now rests in the House committee with discharge petition No. 25 on the Speaker's desk and which I have signed.

Information comes to me that certain agents are now collecting fees in advance from farmers for collecting these refund taxes. It is my warning to farmers they beware of fee-collecting agents. At this time no attorney or agent is necessary.

Gannett—Candidate To Be Watched

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

ARTICLE FROM THE PATHFINDER

Mr. O'BRIEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include an article published by Emil Hurja concerning the distinguished newspaper publisher, Frank E. Gannett. The title of this article is "Gannett—Candidate To Be Watched," and is as follows:

Almost overnight—in fact, within 2 months—a new face has come into the national political struggle which seems destined to loom larger as the Republican convention approaches.

Frank Gannett, of Rochester, is just beginning his third month of intensive preconvention campaign. Already he has visited 34 States in his whirlwind drive to educate the voters on the issues that must be decided in 1940. In his own plane he has recently covered more than 20,000 miles, addressed scores of audiences and met political leaders throughout the country. Returning from a coast-to-coast trip, Mr. Gannett says that his chances for the nomination are as good as anyone's. On the side, he expresses confidence that he will be the nominee, and publicly he says, "If I am nominated I'll be elected."

Mr. Gannett bases his opinion on his talks with party leaders. He points out that all States west of the Mississippi will send unpledged delegates, and that party leaders are turning to him because of the desire for a businessman for President. There is a demand, he says, for a President, as head of the largest business on earth, who understands the principles of private enterprise and can make it function so as to give high production and employment.

Pathfinder polls of public opinion show that Mr. Gannett has picked up so much support in 2 short months that he has emerged to take a place with Dewey, Taft, Vandenberg, Hoover, and Landon. As a result of this rapid gain in recognition, it is apparent that Gannett has become a candidate to be watched.

Gannett might well make a powerful vote-pulling Republican nominee. The American people generally are attracted to any man who has from humble beginnings reached the heights of business success by thrift and hard work. Gannett's father was a poor farmer who built his own home of forest-hewn lumber in the Finger Lakes region of central New York. There Frank Ernest Gannett was born on September 15, 1876.

At 9 he began working to help out the family. He delivered newspapers, peddled books, and labored on the farm. At 18 he won a Cornell scholarship, worked his way by waiting table, operating a laundry agency, and reporting for a newspaper (which he now owns). He was graduated with high scholastic honors and savings of $1,000.

After a year as secretary to the chairman of the first Philippine Commission he returned to Ithaca as city editor of the News at $15 a week. Six years later he bought a half interest in the Elmira Gazette for $20,000, putting down $3,000 of his own savings and borrowing the rest.

That was just the beginning. Today Gannett owns 19 newspapers in New York, Connecticut, New Jersey, and Illinois. They form the third largest newspaper chain in the Nation (the Hearst and Scripps-Howard chains are larger).

In addition to his business success Mr. Gannett's backers point to two other factors they consider would make him a good Republican Presidential nominee. One, that he has been the mainspring of drives which resulted in four major New Deal defeats.

As organizer and chairman of the National Committee to Uphold Constitutional Government, he fought tooth and nail the President's Supreme Court enlargement bill, his first reorganization bill, his attempted "purge" of antinew dealers in Congress, and his 1939 lending-spending program.

With 90 percent of the American people concerned about our becoming involved in the European war, Mr. Gannett's supporters point out that he has better knowledge of international affairs than any other candidate, with the possible exception of Mr. Hoover.

"How we vote in November," says Mr. Gannett, "will determine the future of America and the kind of government under which we and our children must live.

"Dictatorships are born in the suffering that comes from economic disorders and wrong government policies. I have personally gone through the dictator countries, and have seen in all its horror what it means to be deprived of the precious liberties guaranteed us by our Constitution. Constitutional government and our system of private enterprise—which alone can give satisfactory jobs—will not be safe until we correct conditions and make sure it cannot happen here.

"We must clean out the theorists who, with unlimited powers and billions of the taxpayers' money, have bungled our affairs. We must return to sound business principles and put in charge men who know how to make the private-enterprise system work. We must keep Government the servant, not the master, of the people.

"I know how, by putting experience and understanding in charge, we can bring reemployment and prosperity. Our people need only sound leadership to march forward to good times and new heights. We must put an end to Government interference with honest business and give free enterprise an opportunity to function. I have visited the South American countries and have seen how their farmers have been given restored income and good prices without restriction and regimentation. We can do the same for our farmers here.

"We can restore opportunity for youth and, while continuing necessary relief, bring renewed hope to the poor and unfortunate. I would concern myself, not with unemployment but with reemployment and jobs for all. We can stimulate new developments, revive the spirit of initiative, and have once more a dynamic, surging America.

"I can promise that we will follow Washington's precept and keep out of entangling alliances and foreign war. Our job is to put our own house in order and thus make America great and prosperous. Our task is to stop overspending and end stifling taxation, and to restore and preserve constitutional balance in government."

Mr. Gannett is particularly interested in the farm problem and expects wide support from the agricultural States. For several years he has been chairman of the board of the American Agriculturist, the oldest farm paper in the Northeast. He has also been, since 1926, a trustee of Cornell University and in touch with the Cornell Agricultural College, the fountainhead of information and advice for farmers.

He contends that farm income must be restored to normal and that the farmers' loss of $35,000,000,000 of income since 1929 accounts for much of our depression. He believes we should study the methods followed successfully by other countries—Argentina, Brazil, Australia, New Zealand—where farmers were doubling their crops and receiving high prices while we were plowing under cotton and killing little pigs.

He believes that the best way to restore prosperity is to make the farmers prosperous so that they may be able to buy the things they need, thus putting the factories up to capacity and giving employment to idle millions.

"My call to farmers," he says, "is use your political power to put through the program on which the great national farm organizations, including the Farm Bureau, the Grange, the National Cooperative Council, have united. Go to the precinct men and the county chairman of your party, and tell them that in 1940 you will vote only for candidates and a party that pledges action for reform that will give to American agriculture its just income. Use your political power. Save agriculture to save America."

Washington State College's Fiftieth Birthday

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. HILL. Mr. Speaker, today the State College of Washington, one of the leading land-grant colleges of this country, is celebrating the fiftieth anniversary of its founding—its golden jubilee. Tonight, at the Hamilton Hotel, in Washington, D. C., and elsewhere throughout the country, 35,000 alumni and former students will be grouped to celebrate this event, and to hear a national broadcasting system carry a program dedicated to the State college, and originating on its campus, to all parts of the United States.

It is my privilege to represent the congressional district in which the State College of Washington is located, and therefore, it becomes a personal pleasure for me to express the appreciation of the people of Washington to the president and faculty for their devoted service to the institution, and to the principles of public education.

On this fiftieth birthday of Washington State College it is also appropriate to pay our particular respects to President E. O. Holland, and President Emeritus Enoch A. Bryan, whose able administrations are responsible for its splendid growth and development. Doctor Bryan served as president from 1893 to January 1, 1916, when he resigned to become commissioner of education for the State of Idaho, returning in 1923 to become research professor of economics, and economic history. Doctor Holland left a brilliant career in education in Indiana and Kentucky to join the State college in 1916, and has continued as its president since that date.

It is also fitting on this occasion to honor the following of the faculty, who have served the State College of Washington with more than 25 years of long and distinguished service: Herbert Kimbrough, vice president; H. V. Carpenter, dean, college of mechanic arts and engineering; A. A. Cleveland, dean, school of education; C. C. Todd, dean, college of sciences and arts; E. E. Wegner, dean, college of veterinary medicine; J. F. Bohler, director of athletics; W. W. Foote, librarian; F. T. Barnard, registrar; and W. C. Kreugel, bursar. Nor could I properly fail to mention the harmonious association with the Federal Government of E. C. Johnson, dean of the college of agriculture and director of the experiment station; F. E. Balmer, director of the extension service; and A. E. Drucker, dean of the school of mines and geology, whose able cooperation has contributed much to the success of the joint Federal-State programs of agricultural and mineral development.

The Federal Government participates in the conduct of this institution as a land-grant college. It is fitting, therefore, that recognition be here given to this memorial day. As seems proper, the following brief summary is devoted to a statement of the part which the Federal Government has played in the development of this great institution of higher learning:

The State College of Washington has its origins in an act passed by the Thirty-seventh Congress of the United States and signed by President Lincoln on July 2, 1862. The purposes of this act at the time it was passed were revolutionary in educational circles, for it was based on the philosophy that in a democracy the children of all the people should have the opportunity of developing their talents to the utmost. Up to the time of the passage of this act by the Congress, higher education in America, as throughout the world, had been limited almost exclusively to young people training for entry into the professions of that day, such as the ministry, the law, and medicine.

History has proved the wisdom of this revolutionary educational doctrine. The principles which underlie the Morrill Act of 1862 have today spread throughout the Nation. Not only has every State at least one such land-grant institution whose work is founded specifically upon the Federal enactments, but the scores of private denominational and other institutions throughout the country have perforce followed suit. The State College of Washington, in celebrating its fiftieth anniversary today, is celebrating also the birthday of a movement in higher education which has changed completely the function, purposes, and to a large extent the procedures of the colleges and universities of the country.

At the beginning of this movement the area now known as the State of Washington was part of the Washington Territory. The State of Washington began its existence in the year 1889. One of the first acts of the first legislative assembly of the new State was to enter into joint agreements with the Federal Government for the founding and establishment of a land-grant institution. The act which became the charter of the State College of Washington was signed by the Governor of this State on March 28, 1890. A few months later, in January 1892, the doors of the college first opened for instruction. The building was a one-story brick structure 36 by 60 feet, costing approximately $1,500.

From this single building on a lonely hill in 1892 has grown an institution housed in 33 major buildings, for the most part class A fireproof, with 1,000 acres of land and other equipment and improvements sufficient to bring the total valuation to $13,500,000. The few thousand dollars expended during the school year 1892–93 has grown to an annual budget of $2,250,000, with a permanent

endowment of lands of $7,000,000. The 84 students of the early day have increased to an enrollment of approximately forty-two hundred attending the regular sessions, with considerable additional numbers attending summer sessions, short courses, etc. The first faculty of 5 has increased to 343. The tiny campus surrounding the single building of 1892 has expanded to include, through the research and extension activities of the institution, the entire State. There is today no county in Washington that does not have at least one, some as many as five, full-time resident members of the State college staff serving the needs of the citizens living in that locality.

PARTICIPATION OF FEDERAL GOVERNMENT IN THE DEVELOPMENT OF THE STATE COLLEGE

What specifically has been the part of the National Government in the development of this great college? As previously stated, the Federal act of 1862, known as the Morrill Act, provided the educational and social philosophy on which the college was founded and has since been developed. The same act provided also an endowment of some 90,000 acres of public lands lying within the borders of the State of Washington.

Another Federal act signed on March 2, 1882, provided for the establishment in certain Northwestern States, of which Washington was one, of a school of science. To such States as accepted its provisions, this act carried a gift of 100,000 acres of public lands lying within the borders of the State. The first Legislature of the State of Washington accepted the provisions of this act and combined the functions of the school of science so created with those specified by the terms of the Morrill Act. By this wise centralization of the similar educational functions, the new institution was given a permanent endowment of 190,000 acres of land—this before it opened its doors for instruction; indeed, before its location within the State was finally determined upon.

The history of the control of similar Federal endowments for public education reveals instances where the lands involved have been soon sold for a dollar or two an acre and the small resulting funds used in their entirety to meet pressing emergencies; to the contrary in the State of Washington. To date but 40,000 acres of its lands have been sold, leaving a permanent endowment today of 150,000 acres of land and $7,000,000 in invested funds. The land is appreciating rapidly in value and will continue so to do as the State develops. The ultimate total of this gift of the Federal Government to the State College, if policies of the past are continued in the future, will be very large.

The establishment of the fundamental policies on which the State College was founded and has since been developed, and the gift of 190,000 acres of public land for a permanent endowment did not constitute the sole participation of the Nation in the beginnings of the institution. On August 31, 1890, an act of Congress was signed which provided for annual incomes to be devoted to furthering the purposes of the Morrill Act of 1862. The college first received from this source $15,000 per year, which sum was increased by annual increments of $1,000 until it reached $25,000 annually.

Additional current revenue was given to the new institution by a Federal act signed on March 2, 1887, later known as the Hatch Act. This act provided for the establishment of agricultural experimentation in connection with the land-grant college in the various States. The financial support given the State College of Washington at the beginning of its existence by the terms of this act amounted to $15,000 per year.

Thus, we see that the Nation, before the State College of Washington existed except in legal enactments, contributed a magnificent permanent endowment and annual cash income beginning at $30,000 and increasing within 10 years to $40,000.

INSTRUCTION ON THE CAMPUS

This initial policy has been continued throughout the years in each of the three divisions of the work of the institution, namely, instruction on the campus, research in the laboratories and in the fields, and extension throughout the State. Federal contributions in each of these fields in the years since the founding of the college will be examined briefly. First, the instructional work on the campus. On March 4, 1907, what has come to be known as the Second Morrill Act became a law. By the provisions of this act the $25,000 being received annually under the terms of the act of 1890 was increased by $3,000 per year until an annual total of $50,000 was being contributed by the Federal Government. This sum was further increased by the enactment on June 29, 1935, of a Federal law which increased the amount then being received. At the present time the State College is receiving from the Federal Government approximately $89,000 per year for aid in the instructional work on its campus.

This work is given in 11 colleges and schools and two departments, as follows: College of Agriculture, College of Mechanic Arts and Engineering, College of Sciences and Arts, College of Veterinary Medicine, College of Home Economics, School of Mines and Geology, School of Education, School of Pharmacy, School of Music and Fine Arts, Graduate School of Social Work, Graduate School, Department of Physical Education and Athletics, Department of Military Science and Tactics.

AGRICULTURAL EXPERIMENTATION

The initial provision for agricultural experimentation made by the act of Congress signed on March 2, 1887, was augmented by an act signed on March 16, 1906. By the terms of this act the $15,000 already being received was added to each year until a total of $30,000 was being received annually. The next increment to the Federal support of this work was made by the provisions of the Purnell Act signed on February 24, 1925. Under the terms of this act the State College receives an annual sum amounting to $60,000 which, added to the $30,000 previously mentioned, made a total Federal support of agricultural experimentation of $90,000 per year.

On June 29, 1935, further participation in this type of activity was provided by an act of Congress known as the Bankhead-Jones Act. Under the terms of this law as it applies to agricultural experimentation, the college received during the year 1938–39 a total of approximately $25,000. Adding this $25,000 to the previous sums of $60,000 and $30,000, it is apparent that the Nation is now contributing to agricultural experimentation in the State of Washington through the experiment station at the State College a total annual sum of $115,000.

This work is carried on through the activities of 87 staff members working at the main experiment station on the campus of the college, at four branch experiment stations so located in various sections of the State as to serve best its major agricultural interests, and at scores of experimental plots scattered strategically throughout the State. The researches of the staff in such industries as wheat, fruit, small fruits, cranberries, dairy, poultry, livestock, irrigated farming, dry-land farming, etc., have been of incalculable value. Various attempts have been made to place a monetary figure on these services. The most conservative of these show that the increased income of the State today in one year, by reason of the work of the State College in agricultural experimentation, more than pays all of the costs to the State of the State College since its foundation.

AGRICULTURAL EXTENSION SERVICE

The third division of the work of the college, in common with all land-grant institutions, is that of extension service. By far the major portion of the task of carrying the facilities of the institution to the people of the State off the campus is performed by the agricultural extension service. This service is unique in that it is the only one of the three divisions of the work of the college that did not receive specific financial support by the Federal Government at the time the institution was founded. The function itself was recognized, as the records show that farmers' institutes were held in nearby communities during the first years of the history of the college. The work was expanded as the financial resources of the institution permitted as the years went by. But it was not until 1914 that the Federal Government took official cognizance of this work and provided inducements for its development.

On March 18, 1914, the Smith-Lever Act became law. This act had for its function the encouragement of land-grant institutions throughout the country in making available the resources of the institutions to the people of the States in their homes and on their farms. By its provisions the college received during the first year $10,000, which increased annually, until at the present time the Nation is contributing approximately $62,000 under the terms of this act in conjunction with the supplementary Smith-Lever Act of July 24, 1919, and the additional cooperative Smith-Lever Act of July 3, 1930.

The next recognition by Congress of the importance of this activity was made by the enactment of the Capper-Ketcham Act signed on May 22, 1928. By its terms the college is now receiving a little more than $26,000 annually for agricultural extension. On June 29, 1935, the Bankhead-Jones Act, previously referred to, was signed and became law. This act provided encouragement and additional financial support for instruction on the campus and agricultural experiment station work, previously cited, and for the agricultural extension service. Additional financial support for agricultural extension service so provided amounts now to approximately $131,000 annually.

Summing up these various provisions of the Federal Government for the encouragement of the agricultural extension service of the State College of Washington, it appears that the institution is now receiving an annual sum of approximately $219,000 from the Nation to aid in making available to all the people of the State information that would be helpful to them in their various activities. Two measures of the response of the people to this type of work may be cited here briefly. The first of these is found in the number of requests for information made to this service.

During the past year an average of 1,000 responses to such requests in the form of printed bulletins or personal letters have been made each day by the State College of Washington. The second measure of appreciation is the fact that each county in the State is supplying a large portion of the funds necessary to make available to the citizens of the county the services of a full-time resident member of the staff of the college; indeed, some of the larger counties with more diversified farm interests are supplying sufficient funds to make available the services of five such resident experts.

TOTAL CONTRIBUTION

When all these annual contributions of funds are considered, it appears that the Federal Government today is contributing annually approximately one-half million dollars to the support of the instruction on the campus, research work, and agricultural extension service of the State College of Washington. While this total may in itself seem considerable, it, after all, is but a small portion of the total amount of money necessary to conduct an institution of the size and scope of the State College of Washington for 1 year. As mentioned in the first few paragraphs, the total annual budget approximates $2,250,000. It is apparent that the funds supplied by the Federal Government are but a small fraction of this total. The college itself, through its various operations and income from its endowment fund, supplies the major portion of these funds—well

over $1,150,000 annually. The State of Washington, like the Federal Government, makes an annual contribution of approximately $600,000.

As we look back over the years and see the vital part which the Federal Government has played in the founding and development of this great institution of higher learning in the Pacific Northwest, we may well be proud, for the State College of Washington, as it stands today on the fiftieth anniversary of its founding, illustrates a high degree of the development of the educational philosophy on which our predecessors in these halls in 1862 based the then revolutionary doctrine incorporated in the Land Grant Act of that year. It does more than this; it shows the theories which underlie this movement made into reality. It is a specific and concrete illustration of how the benefits of higher education, previously reserved to the professional classes of that day, law, medicine, and theology, have been applied, to use the words of the original Land Grant Act of 1862, "to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

We, the Members of the Seventy-sixth Congress, may say without exaggeration that through the inspiration and aid provided by our predecessors the State of Washington has been enabled to succeed, through its land-grant college, in giving to the 95 percent of its people engaged in the several pursuits and professions of life the educational and cultural privileges previously reserved for the exclusive benefit of its traditional professional classes.

The Attitude of Youth

EXTENSION OF REMARKS
OF
HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1940

LETTER FROM CARL KRAUSE

Mr. LEWIS of Ohio. Mr. Speaker, as the campaign of this year draws near, men of both political parties are trying to learn the attitude of the voters with respect to the issues involved. Recent Republican victories in special congressional elections, in the Twenty-second and the Seventeenth Ohio Districts, the Thirty-first and the Thirty-fourth New York Districts, and the Sixth District of Iowa, seem to indicate a strong Republican trend in these pivotal States.

Perhaps the thinking of the average voter under present conditions is aptly portrayed, and the results of these congressional elections and the general election in the fall, whose result they portend, is aptly revealed by the following letter received by me from a Democratic constituent living in my district in eastern Ohio.

The letter is unusually revealing and is as follows:

MALVERN, OHIO, *March 4, 1940.*

Hon. EARL R. LEWIS,
House of Representatives, Washington, D. C.

MY DEAR MR. LEWIS: I am writing to you because I feel that I may confide my trust in you. You have proven that you are not partisan, and that is one essential element of true Americanism.

In view of the serious unemployment of both young and old people, I want to express my views as a future young citizen.

We cannot boast of our true democracy while millions of young men are denied honest jobs to support themselves and their parents. This situation makes us lose faith in democracy. But, thank God, we can try to change these dire conditions through democratic processes.

Without fear of contradiction I can safely state that I have supported the Roosevelt administration more than anybody in this country. But after 7 years of Government programs, the young people are worse off than at any other time in history. As long as we are denied jobs, no Government agency can solve this serious problem. In following the record of Congress during this session I fail to find any attempt to cope with the unemployment situation. Nevertheless this is some relief, because every new law seems to make things worse instead of better.

We, the young people of America, do not want Government subsidies, like the American Youth Congress make us believe. I further want to state that the American Youth Congress does not represent the majority of us.

The only thing we want is a chance to prove our worth. The Democratic Party has failed to clear the obstacles from the path in order to give us that chance even after the spending of billions of dollars.

The Government forced two loans on my mother. They fail to make it possible to pay these back. Our debts, both as public taxpayers and private citizens, are increasing rapidly, and at the same time the chances of earning are decreasing.

This situation should stop. Therefore you may have my support in doing this. I look to you likewise in giving your support to our case—a chance for an honest-earned living.

My difference of opinion is due to the fact that I love my country more than I love the Democratic Party.

Yours truly,

CARL KRAUSE.

N. L. R. B. Intrenched As Labor's Maginot Line

EXTENSION OF REMARKS
OF
HON. THOMAS F. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

ARTICLE BY JAMES POPE

Mr. THOMAS F. FORD. Mr. Speaker, in view of the back-door attack on the National Labor Relations Board, through the device of cutting its appropriation in such a manner as to cripple its operations, I am attaching hereto an article that appeared in the March 10 issue of the Courier-Journal of Louisville, Ky., which, in my judgment, is a splendid analysis of the philosophy and forces that motivate the opposition of this worth-while act.

[From the Louisville Courier-Journal of March 10, 1940]

NATIONAL LABOR RELATIONS BOARD ENTRENCHED AS LABOR'S MAGINOT LINE—OVERCOMES GUNSHYNESS, SURVIVES WILLIAM GREEN'S CONDEMNATION, AND IS PROBABLY SAFE FROM MAJOR CHANGES IN THIS ELECTION YEAR WHEN CONGRESS IS UNLIKELY TO PASS DRASTIC LABOR LEGISLATION

(By James Pope)

Martial analogies have become a little threadbare, but it does seem apt to say that the National Labor Relations Board has suffered from the report of the Smith committee a far from disastrous bombing; that the Board remains entrenched, with communications intact, upon its well-fortified isthmus; and that unless Congress rushes reinforcements not now in sight, the attack will develop no serious damage.

The National Labor Relations Board is no longer gunshy. It has been bombed with epithets like "kangaroo court" and "drumhead court martial," and it has survived William Green's condemnation that "* * * the administration of the Board is a travesty on justice."

The Board's three members—Chairman Warren Madden, William M. Leiserson, and Edwin S. Smith—have been threatened with a blitzkrieg for many months. The Smith report was hardly that.

And being men with normal sensitivity to politics, the members are probably extracting comfort from the thought that friendly committees will reconstruct the proposed amendments in House and Senate, and that Congress, in this election year of 1940, is unlikely to pass any drastic labor legislation anyway.

To be skeptical of the practical effect of the Smith report is not, however, to ignore it. Some of its recommendations have the support of the A. F. of L. Some seem to impartial critics to be fairly well justified.

DITCH COLLECTIVE BARGAINING?

And one of the proposed amendments would strike so potently at the whole labor movement that it stands out in bold relief as a threat (if no more than a threat) against the No. 1 principle for which labor has battled these 40 years.

That principle is the right of labor to organize and bargain collectively. Not primarily the right to higher wages or the right to shorter hours or the right to decent working conditions. These are boons which collective bargaining enables labor to obtain in varying degree. Fundamental is the right to bargain, and the active approval of this right by the United States Government.

The Smith committee proposes that the language of the Wagner Act, characterizing the denial of collective bargaining as leading to strikes, and setting forth that it is the policy of the Government to encourage collective bargaining, shall be stricken from the act.

If it is, church is out so far as labor is concerned. The other 20 proposed amendments would be dwarfed in any possible effect they might have, once the collective-bargaining principle is ditched.

ORGANIZATION SLOW

To understand this, a glance at the background of the labor movement is pertinent. Against this background the proposed amendments to the Wagner Act may attain a clearer relief.

The Wagner Act is 5 years old. The effort it epitomizes is far past the century mark in this country.

In 1806 some Philadelphia shoemakers got fined for the monstrous crime of banding together to seek higher wages.

Thirty-six years later a Massachusetts court held that the people had as much right to organize for higher wages as for the promotion of temperance. The germ became discernible to the naked eye. But it grew slowly.

A bloody, disastrous fight marked the progress of labor's seeking after recognition. The century was waning before President Cleveland appointed a commission to investigate the causes of the Pullman strikes and to recommend a guide for relations between laborer and employer. The Commission urged employers:

"* * * to recognize labor organizations; that such organizations be dealt with through representatives * * * it (the Commission) is also satisfied that if employers will consider employees as thoroughly essential to industrial success as capital, and thus take labor into consultation at proper times, much of the severity of strikes can be tempered and the number greatly reduced. * * *"

A commission appointed by Theodore Roosevelt in 1902 produced similar findings, but employers altogether lacked enthusiasm for the reiterated principle.

"STRUGGLE FOR LIBERTY"

In 1916 another commission reported on the Ludlow massacre and on the whole field of industrial relations, after hearing 740 witnesses. Here is what the Commission said:

"It has been pointed out with great force and logic that the struggle of labor for organization is not merely an attempt to secure an increased measure of material comforts of life, but is part of the age-long struggle for liberty; that this struggle is sharpened by the pinch of hunger and the exhaustion of body and mind by long hours of improper working conditions; but that even if the men were well fed they would fight to be free."

Chief Justice Taft observed from the bench in 1923 that "A single employee was helpless in dealing with the employer."

Thus the philosophy was built up over 40 years. Many labor leaders went to jail; no employer suffered that fate. But sentiment grew and legislation followed. The Norris-LaGuardia Act of 1932 embodied the principle that labor could organize and bargain, though every man must have a free choice on the question of joining a union. This declaration made before the New Deal administration came in, was incorporated into the Wagner Act.

Obviously, then, if that act is amended to destroy the principle of collective bargaining, the other amendments will be largely academic.

STRIKES DECREASE

For 2 years after the passage of this act the National Labor Relations Board was helpless, paralyzed by injunctions. It became effective only after the Supreme Court upheld validity of the act, so its 5-year record really covers only 3 years of genuine activity.

Up to February 1, 1940, the Board handled 25,968 cases involving 5,805 workers. Of these, 22,402 were closed. Fifty percent were closed by agreement, 16 percent dismissed by the board of regional directors, 22 percent were withdrawn, 7 percent were closed by Board decisions.

The statement has been made, apparently unchallenged, that 42 percent were decided in favor of the employer.

In the same period, the Board intervened in some 2,614 strike cases and settled 1,973, or 75 percent. It averted 806 strikes, and held 2,630 elections affecting over a million workers.

The trend of strikes is definitely downward. The decrease last year was one-third.

Man-days of idleness, caused by strikes, decreased from 28,424,808 in 1937 to 9,148,273 in 1938, or about 68 percent.

So reads, in brief, the credit side of the ledger.

What are the chief complaints against the Board?

From John L. Lewis that the Board favors the A. F. of L.; from William Green that it favors the C. I. O. (Of the cases closed last year, employers recognized the A. F. of L. in 434, the C. I. O. in 436—a photo-finish if there ever was one.)

STIRS LABOR STRIFE?

In a review of the Board and its work by Walter Gellhorn and Seymour L. Linfield, of the Columbia University School of Law, the complaints against the Board are cited thusly:

"It stirs up labor strife by bringing unwarranted charges against employers."

"It doesn't give respondents fair notice of the charges against them, so that they cannot properly prepare their defense.

"Its hearings are conducted in a disorderly and arbitrary fashion."

"It doesn't observe the rules of evidence."

"There is too much confusion in the roles of judge and prosecutor in the Board's work."

Messrs. Gellhorn and Linfield add that after examining these criticisms in detail they "are convinced that no one of them is fairly supported by the record of events."

It may be that criticism has confused its target. Poor administration was conspicuous and wide open to attack during the early years of the Board's operation, but most critics assailed the law, not the administration. Defenders of the law contend that since Leiserson has gone on the Board (about 10 months ago) the administration has improved immensely.

Their argument is that most of the objections have been met by the Board's own reform, and that the act itself needs little altering.

The Smith committee delivered a broadside against the Wagner Act itself, but the shells were of unequal power.

SMITH is an antinew dealer from Virginia. Two Republicans, HALLECK (Indiana) and ROUTZOHN (Ohio) signed his report. The two New Deal Members, HEALEY (Massachusetts) and MURDOCK (Utah) dissented.

PROPOSED AMENDMENTS

This line-up should be borne in mind during a quick survey of the proposed amendments and their probable effect.

1. The Board shall be reconstituted (the same three members could be appointed) with judicial functions merely, while an administrator is charged with the duty of receiving and investigating complaints, and presenting them to the Board.

Labor is against this device for dividing authority, but the harm it may cause is not apparent. Certainly it would not cripple the working of the act. The A. F. of L. wants a five-man board. A compulsory geographical distribution of members is favored by many.

2. The Board shall have authority to subpena records and witnesses on application of the administrator or any party to proceedings.

Not so good. Would cause endless delay in hearings and clutter proceedings with books and records that might obscure essential issues.

3. No bargaining unit larger than the largest unit asked by parties to proceedings shall be certified.

The Board has on occasion certified units on a large scale seemingly unjustified. The amendment would put a check on this tendency, and is entirely defensible.

4. Certification shall be effective for 1 year, during which employee representation could not be made a subject of controversy.

Apparently innocent, but might give hostile employers a chance to break unions during this year of grace.

5. Board shall be barred from acting on representation cases involving C. I. O.-A. F. of L. disputes unless two factions have agreed in writing on settlement of dispute.

Why shouldn't the Board act on cases involving disputes? Looks like a political device of the namby-pamby type.

6. Employer refusal to bargain with either of two disputing factions shall not be construed as unfair labor practice.

Fair enough. Employers should not have to bargain when two factions clamor for representation. The Board should settle the dispute.

7. Employers shall be protected in freedom of speech, provided no intimidation is involved.

Your guess is as good as anybody's about this. If Congress can define freedom of speech within limits that prevent intimidation, a Congressional Medal will be in order.

8. All hearings shall be conducted in accordance with rules of evidence in United States circuit courts.

Would add difficulties to Board's efforts to get at facts. Present freedom in considering evidence is subject to abuse, but seems necessary to sound administration.

9. Board shall make findings on preponderance of evidence, and courts can review this evidence.

A cardinal fighting point. If the work of the Board is subjected to judicial review, delays costly to labor will ensue. Also, court dockets will become glutted, and new courts probably become necessary to handle the mass of appeals.

10. Board to be stripped of power to order reinstatement of employees found guilty of violence.

MOST OPPOSED BY LABOR

Ambiguous. Minority of committee thinks the effect would be "sentence of economic death" to many workers.

Some of the amendments cited above have been telescoped with others of common purpose. It will be noted that most of them are opposed by labor, that some of them would have no important effect on the operation of the Wagner Act, and that some are genuine threats to the Board's freedom of action.

Why did the committee fail to please the United States Chamber of Commerce by omitting an amendment to make labor accountable for unfair labor practices as well as employers? It seems a good opportunity missed.

But does it matter?

COMMITTEE APPROVAL UNLIKELY

Representative MARY NORTON, of New Jersey, is chairman of the House Labor Committee, and she has already announced her belief that the House will defeat the amendments. Her committee is unlikely to approve them.

If they get to the Senate, the Labor Committee there is expected to sit on any amendments that seem hostile to labor organizing and bargaining rights.

So the political fortunes of the Smith committee report do not appear at the moment to be happily starred.

The report is useful in that it crystallizes the voice of opposition to the Wagner Act, shows defenders of the citadel of labor what they have to resist.

In a recent address, Mark Ethridge, general manager of the Courier-Journal and Times (whose notes form the basis of this discussion), observed that the Wagner Act is "the Maginot line of labor's fight for freedom to organize, just as employers organize into corporations."

Mr. Ethridge views the Smith report as useful in that "It brings into focus the whole field of labor relations, and projects clearly the fundamental issue: Shall labor retain its hard-won privilege of collective bargaining or shall this privilege be withdrawn at a time when heartening progress is being made in the reduction of strikes and the increase of productivity?"

Seven Years of the New Deal

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1940

Mr. BENDER. Mr. Speaker, 7 years ago this month, President Franklin Delano Roosevelt swore the oath of allegiance to our Federal Constitution and assumed the highest political office within the gift of the world's greatest republic. The anniversary is one of the most significant in American history, for it brings to mind the circumstances of that difficult period in 1933 when the Nation's economic life appeared to be bordering upon complete collapse. For a brief moment in that tragic era, we seemed to be caught up in an overwhelming, all-engulfing flood, which threatened to destroy everything which our people had so laboriously created in almost 150 years of independence.

To rout the forces of economic hopelessness which were assailing us, our representatives delegated to the President powers totally unprecedented in the history of our country. He was virtually dictator of the Nation's economic destiny. His will was law. For 100 days, from March to June, the legislative mills of our Congress ground out an endless stream of legislation in response to every wish of the White House. Proclamation followed proclamation in the spirit of militant warfare. In very fact, the President himself declared that he was waging war—a war upon the forces of depression. In ringing tones, he told us that the only enemy we had to fear was fear itself. Seemingly, he had a plan.

Today it is March 1940. Yet the same difficulties which surrounded us in 1939 are still present. To be sure, the Nation is no longer in the desperate external plight we found 7 years ago; but there is more than a strong suspicion that whatever has been gained since 1933 has been achieved in spite of rather than because of the ministrations of the New Deal. We have reached an income level higher than we saw in 1933. But we have raised our taxes tremendously in the process. We have in no manner met the vast and far-reaching problem of mass unemployment. We have created social-security legislation, but we have by no means created social security. Elaborate codes have been set up to assure our unemployed working men and women of some insurance benefit, but they have gained neither security nor comfort from these pittances. Old-age pensions are pointed to as glorious creations, but they serve only to illumine the desperate position in which our aged find themselves.

The picture is tragic. After 7 years of an administration which was to meet our problems fearlessly, to melt difficulties away as the hottest sun melts even the hardest ice, we are in no better position fundamentally than we were before. Every gain registered is offset by some major loss. The rise in national income is reflected by a still sharper rise in the national debt. To achieve momentary respite from our current troubles we have mortgaged the future and stored up new problems for the days to come.

We have planted vineyards, but their fruit may prove to be the grapes of wrath. Labor is divided within itself, but united in bitterness against capital. Business peers anxiously and timidly into the future, fearful of what it may see directly ahead. Farmers shake their heads wonderingly, amazed at an administration which embarks upon a program of scarcity in the midst of hunger.

These are facts worth pondering upon the seventh anniversary of the most turbulent national peacetime administration the American people have ever seen. They give us sound grounds for misgiving. In many unprejudiced minds they must lead to the conclusion that the gulf between theory and practice under the New Deal is too wide to be spanned. Its fallacies are basic. Its errors have been more than errors of method. They have been errors of policy. Deficit spending, pump priming, crop curtailment, unfair competition with industry, a program of expanding class conflict—none of these can be justified in the light of events.

American citizens of every political faith must, nevertheless, be grateful for the lessons we have learned in these trying years. Like the thousands of unsuccessful experiments conducted by scientists the world over, the New Deal has marked out a direction and charted it upon the Nation's map—"No road." Down this path there waits nothing but disappointment.

The first steps are before us.

In the elections of 1940 we have the opportunity to write "Finis" to the unsound experiment we have undertaken. We have the second chance which is the comfort and solace of every experimenter. Seven years of wandering down blind alleys without a beam to guide us should be more than enough. It is time for us to turn on the lights.

The Silver Question

EXTENSION OF REMARKS
OF
HON. GEORGE S. WILLIAMS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

ARTICLE BY DR. LEWIS HANEY

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short article by Dr. Lewis Haney, published in the New York Journal-American of March 22:

[From the New York Journal American of March 22, 1940]

DR. LEWIS HANEY, PROFESSOR OF ECONOMICS, NEW YORK UNIVERSITY, CALLS SILVER ACTION A FAVORABLE SYMPTOM

The vote of the Senate committee to end the President's power to buy foreign silver is of real interest and importance.

First of all, I would chalk it up as one of the favorable symptoms, suggesting that common sense and business recovery are beginning to prevail against the New Deal delusions.

The active and courageous fight of Senator TOWNSEND is to be praised. That his sense of timing is also good is shown by his success. The bill is actually apt to pass, since the committee vote was 14 to 4 in its favor.

This sign comes along with the general recognition of the badness of the Wagner Labor Act, and the fair and open attack by the Investment Bankers Association on the arbitrary acts of the S. E. C. Truly, the people are beginning to see the light.

Such developments mean that well-intentioned wish thinkers, who have been led into hasty reforms, are being disillusioned. The bitter and biased radicals are on the defensive. It is beginning to seep in that the reasonable critics of the New Deal economics have been definitely right. Such men as Senators SMATHERS, PEPPER, BARKLEY, and WAGNER are going to have to do a lot of explaining to their aroused constituents.

Incidentally, the repeal of foreign silver subsidies will leave the domestic silver subsidy naked. Probably it won't be long before we quit that foolishness, too. The only real defense for it is that it doesn't cost as much as most of the other New Deal spending sprees.

The change in silver buying also means the weakening of a good many economic errors that have prevailed during recent years. These are somewhat as follows:

1. The repeal of silver buying marks the beginning of the end of the notion that the Nation needs more money.

One of the main arguments for unsound money schemes is always the claim that there isn't enough money in circulation, and that therefore more currency should be printed or coined.

When Roosevelt defended this wild silver-buying spree, he talked about increasing our metallic reserves as if we needed more money.

2. It reminds us that more money does not necessarily circulate. Today we have huge masses of gold and silver, and enormous bank-deposit credits; but circulation is almost dormant.

When the Government spends the stuff, it flows back and freezes. It does not circulate. Why? Because business is frozen

by abnormal uncertainty and fear. Commercial lending and investing are dead.

The only way to get money to circulate is to get goods to circulate. The only way to get goods to circulate is to encourage production and trade.

3. The idea of "helping the weak" by doing unsound and wasteful things is shaken. Originally, the new dealers claimed that by purchasing silver they would help China. They hastened her financial ruin. Now they are "helping" Mexico by giving her dollars for her large silver output. (Reports from Mexico state that if the bill is passed, Roosevelt is expected to veto it.)

The way to give relief is the direct and open way. Mixing relief with unsound and devious policies is bad.

4. The repeal of silver buying will mark a change in the attitude of some toward wasteful Government spending, or "pump-priming."

For every silver dollar which the Government prints or coins, it writes up a "profit," which is called "seigniorage." It takes about 27 cents worth of silver, and pays about 35 cents for it. Then it enters it on the books as a dollar. The difference between 27 cents worth of silver, written up to 35 cents, and a dollar, is the Government's "seigniorage" charge. This is about 65 cents on the dollar.

This fake "seigniorage" profit amounts to well over a billion dollars. The spenders and wasters are eagerly waiting to start inflation by putting it into circulation. They tell the world that the more money we waste on buying overvalued silver the more money we have.

Our Producers and Consumers Can Be Served Best by Their Local Retailers

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

STATEMENT BY HON. JOHN M. HOUSTON, OF KANSAS, BEFORE THE SUBCOMMITTEE OF THE COMMITTEE ON WAYS AND MEANS AT THE HEARING ON H. R. 1

Mr. HOUSTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made before the subcommittee of the Committee on Ways and Means considering legislation on the bill providing for an excise tax on retail stores:

STATEMENT OF HON. JOHN M. HOUSTON, OF KANSAS, IN SUPPORT OF H. R. 1

Mr. Chairman, your committee has on file petitions urging the enactment of H. R. 1, a bill providing for an excise tax on retail stores, signed by 1,106 residents of the Fifth Congressional District of Kansas, which I have the honor to represent. These petitions have been filed with your committee by me since the beginning of this session of Congress, and they were signed by wholesalers, retailers, and others, many of whom I know personally. The petitions came to me with letters beseeching Congress to break the monopolistic control of the great interstate chain stores in order that the independent retailers may survive.

In addition, I have received during the past few weeks numerous letters from other parts of Kansas. A Topeka manufacturer of steam boilers, oil refinery equipment and other supplies, wrote as follows:

"The chain-store situation is growing worse every day, and I am serious when I state that unless something is done, and done quick, it will eliminate all stores operated and owned by local merchants."

An Emporia wholesale grocer declared:

"There can be no question but that the greatest menace with which our country is confronted is the extinction of individualism of our people and concentration of wealth in the hands of a few. It is fundamental and elementary that if you pull the profits, for example, out of Wichita, or Sedgwick County, and shoot them off to Wall Street investors, that city and county will suffer in that ratio. * * * It is just a case of the home builders splitting up their business among the foreign chains, whose owners do not give a tinker's damn for the welfare of these local citizens."

A Junction City wholesale grocer begged support of H. R. 1 for the good of the country as a whole. He said:

"There is just one thing sure and certain; that if we intend to keep the United States independent and conserve the business of the United States for our children, something must be done to curb the unfair activities of the chain stores."

An Arkansas City wholesale grocer, in business for over 45 years, wrote:

"I remember clearly when the chains invaded our territory, and have been studying this matter ever since. I have come firmly to the conclusion that H. R. 1 should be passed.

"The chains invaded our localities after our cities were built, our churches and schools built, our streets paved and the communities had become prosperous without any contribution on their part; they do not contribute to local relief, churches, charities, except in a miserable sum entirely out of proportion to their business; they break down local rent schedules by destroying independent merchants; they compel our boys and girls to work for absentee owners of business for long hours at starvation wages; they are draining capital from our local towns; they destroy the independence and self-reliance that built the towns which they did not create.

"They never fail to beat down the prices on farm products. They are the first to leave the town if it is overtaken by drought, cyclone, epidemic, or other unforeseen disaster. They charge different prices in different cities in the same State, and even in the same city, according to competition from an independent merchant across the street who is marked as the next victim. They do not at any time render assistance in the form of credit to any citizen; they never pay their just and fair share of taxes in proportion to the volume of business they do and in proportion to the stocks they carry.

"I firmly and honestly believe that unless this situation is corrected they will drive our independent merchants entirely out of business. I am in hopes that prosperity will return to the people in our communities, and I know of no way to get better and quicker results than by the curbing of monopolistic chain-store competition."

Those are the statements of real Kansans who actually helped in the building of Kansas towns and cities and in the making of the State of Kansas what it is today.

The Honorable Frank Murphy, now Associate Justice of the Supreme Court of the United States, is reported to have once said:

"Trusts and monopolies in America have been fostered and promoted in the past by the Federal Government to such an extent that they virtually have wiped out the small independent businessman. We must restore this independent businessman or we will be a Nation of corporative peons in another decade.

"The day is already here when a boy graduating from college can seek a career only in some monopolistic enterprise if he has any hope whatever of achieving comparative success.

"We have come to the point of making jokes about the disappearance of the corner grocer."

I cannot view with complacency, or as a joke, the displacement of the individual resident retail merchant or the resident retail organizations in the towns and cities of my district, my State, and the Nation, whether in numbers or in trade volume, by the nonresident owned and directed interstate chain-store corporations.

I will not undertake to present a national statistical picture of the conditions of which I complain. That will be done in detail by others who will appear before you. But I do know that in my own district the well-being of the resident-owned retail stores is being sapped by the inroads of the interstate chain-store corporations.

When I visit the towns and cities and look up and down the streets, I observe easily the prevalence of retail stores of all kinds whose owners and responsible directing heads are nonresidents of my district and the net profits from the operations of which in my district go out of my district for reinvestment or other use elsewhere.

I have observed also that the stores of these nonresident concerns occupy sites or are situated in localities that formerly housed or supported with their trade stores of the individual merchants resident of my district. I do not like this situation; in fact I am saddened by it. I am convinced that this change has brought no net social gain but, on the contrary, distinct social harm and loss.

Nor will I undertake here to enter a discussion of whether these chain-store systems sell to the consumer cheaper than the independents; or if it is true whether they sell cheaper because they are enabled to do so by using their mass buying power to coerce from farmers, growers, and processors buying prices below the prevailing market levels for others and thus to the harm and deprivation of such farmers, growers, and processors; or whether there is really any true standard by which such differences of selling prices may be measured in view of the many varying factors that go to make up whatever differences may exist. You will have adequate factual testimony from others on all of those points.

But if it be determined that certain chain systems are enabled to sell to their patrons cheaper than the independents, I beg that you, the members of this committee, inquire sharply and penetratingly into the reasons why.

For anyone to sell cheaper than another he must buy cheaper. If the chain-store systems or the leaders among them buy cheaper through the use of oppressive tactics on growers and producers, as is attested by the Federal Trade Commission's report following its fresh fruit and vegetable inquiry, so that their patrons may reap an advantage in consumer prices, there is nothing admirable or truly economic or socially beneficial in that. It is merely the use of organization size and organized economic power to serve a selfish end. Such procedure harms many growers and producers, benefits some consumers, but benefits more than all the owners of the leading interstate chain-store systems whose return on investment ranges around 17 to 18 percent.

I am interested, not in the prosperity of these nonresident interstate chain-store systems, but in the well-being of all the people of my district, including the farmers, the laboring men, the manufacturers, the processors, the retailers, the wholesalers, the bank-

ers, the printers, the insurance men, the traveling men, the hotels, and all consumers.

If the consumers are to be benefited, I want all the consumers in my district to be benefited and not merely those who patronize the chain stores. If cost of distribution is to be reduced, I want the cost of all distribution reduced and not merely chain-store distribution. I do not want the interstate chain-store systems to grow so large and so powerful, whatever may be their artificial or mechanical efficiency, that they will displace or dominate to the equivalent of displacement, all other forms of distribution so that no other form will be left operative. The cost of distribution should be reduced, but not to the point where it brings detrimental social repercussions.

For some consumers or some groups of consumers to get exceptionally low prices is one thing; it is quite another thing if such exceptional prices are socially unjustifiable. If such prices are made possible by the oppression of growers and processors or the displacement of labor or the shirking of community burdens, then such prices are socially evil, however attractive they may appear to their recipients. Hence they are to be enjoyed only to the harm and peril of the whole social structure.

I state to you from my own knowledge and study that the interstate chain-store systems work more harm by their oppressive buying practices and their growing domination of retailing made possible thereby than can be cured by any mechanical efficiency however great.

I want to see the retailing in my district done by individual shop owners who are residents of their communities and who are responsible for the fate of their communities whether it be for weal or woe. I believe that the welfare of these local communities is better entrusted, so far as retailing is concerned, to many individual resident owners and proprietors and resident-owned concerns whose fate is necessarily bound up with the present and future of their communities than to the agents of a few nonresident corporations whose interest in the community is essentially the net profits that they can take out of it.

I want the stabilizing economic and political force of the resident shop owner to prevail in my district. I want the economic grass roots embedded in the soil of my district to grow and multiply and yield abundantly. I do not want to see them perish or become dry and sterile by some blight arriving from the outside.

I believe that local retailing should be done by the local interests of my district and State and not preempted or dominated in buying and selling prices by the power of the interstate chain-store systems. For these reasons I favor H. R. 1 and would urge the members of this committee to report it favorably.

Tax Damper on School Endowments

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

EDITORIAL FROM THE ST. LOUIS GLOBE-DEMOCRAT

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of March 19:

[From the St. Louis Globe-Democrat of March 19, 1940]

TAX DAMPER ON SCHOOL ENDOWMENTS

The plight of privately endowed colleges and universities, as a result first of depression losses and then of high income-tax rates, is a matter that should command the close attention of Congress. It seems apparent, now that the economy bloc is taking a licking, Congress will soon be called on to find ways of increasing Federal revenue. One proposal already advanced contemplates a 10-percent boost in existing income taxes. Such an act would increase the financial incubus that already clings to the back of educational and other institutions which depend wholly or partially on gifts from private sources.

This threatening danger was cogently presented in a letter written by Chancelor George R. Throop, of Washington University, and sent to Missouri Congressmen on behalf of the 12 colleges and universities composing the Missouri College Union. These schools only a few years ago obtained an income from invested funds averaging 5 or 6 percent. Now that income has been cut to 3½ percent or less, and endowments are far less frequent and of necessity less generous.

This condition applies not alone to universities and colleges. Drastic income levies threaten endowment possibilities and revenues of churches, libraries, hospitals, and various other philanthropic agencies.

One of the most healthy and distinctive implements of American progress in the past has been philanthropy. Billions of dollars have gone into private endowments that wrought a spread of culture, learning, religion, beyond the power of estimation. They have created a network of institutions dedicated to advance of our civilization, and which can find no parallel anywhere else in the world. Now this well shows a tendency to dry up. Taxes have dug so deep into income and hampered pioneering business initiative so critically, people are either unable to indulge in philanthropy or fear insecurity too much.

An increase in taxes upon income will further curtail endowments. Dr. Throop's letter observes "the capacity of large incomes to bear such (increased) tax is not in question; but its probable effect upon the services of our educational and charitable institutions is a matter which demands careful thought. * * * These services are today in jeopardy."

Rocketing income levies still higher would seem inevitably destined to strike a crushing blow to thousands of universities, to hospitals and libraries, indirectly to churches and other institutions that have had a cultural and moral value to the Nation beyond material computation.

Arbitrary Ruling by the Federal Communications Commission Ties up Development of Television

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR OF MARCH 26, 1940

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Christian Science Monitor of March 26, 1940, and which merits careful consideration by every Member of the House and Senate.

The decision of the Federal Communications Commission to suspend its recently granted permission for limited commercial application of television seems unreasonable and arbitrary in view of past experience. The analogy drawn in the editorial is a splendid one and I think we all realize that neither the automobile, the telephone, or the radio, could possibly have reached their present-day stage of perfection had their public use been delayed and retarded until a hundred percent degree of satisfactory service was an attained reality.

[From the Christian Science Monitor of March 26, 1940]

TELEVISION TIED UP

How far should a Federal commission go in specifying how an industry should develop a new art? That seems to be the crux of the question presented by the order of the Federal Communications Commission to suspend its recently granted permission for limited commercial application of television.

The concern of the F. C. C. to protect the public against purchasing sets which must be considered experimental in the present status of television is understandable. But the Commission goes pretty far in its alarm lest the public buy what it thinks is a set for all time when the receiver becomes out of date in a year or two.

The F. C. C. warns that pushing the sale of receivers at this time may not only intensify the danger of leaving these instruments on the hands of the public but may react to crystallize transmission standards at present levels.

If experience is any guide, this is hardly a justification for tying up the television industry for another long period. Privately owned industries cannot attract capital with which to perfect their products except by asking the public to share in the developmental costs through buying the goods or services.

Telephone service in the early days was an uncertain affair. Early automobiles seldom arrived on time at their destinations. Early motion pictures were a mass of jerky actions and grotesque performances. The public did not feel themselves defrauded by buying these products in their early days.

Up to now, private judgment has determined how long the public participation in a new and experimental industry should be deferred. Are we at a point where a Government agency will determine this? The F. C. C. says the sales promotional activities of the Radio Corporation of America may be retarding television. But in taking this suspensive action the F. C. C. may equally be charged with retarding television.

It is to be hoped that the F. C. C. and the R. C. A. will get together and work out quickly a useful plan of action. Otherwise credence will be given to the persistent rumor that this action represents anti-big-business feeling on the part of certain commissioners rather than a reasonable supervisory action in a new and important industry, television.

The Migrant Problem in California

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

LETTER FROM CAREY McWILLIAMS

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a letter from Carey McWilliams, of the Division of Immigration and Housing, of the State of California. In this letter Mr. McWilliams answers certain charges made by J. S. Watson, of the Associated Farmers.

The letter follows:

DIVISION OF IMMIGRATION AND HOUSING.
Los Angeles, March 26, 1940.

Congressman LEE GEYER,
House Office Building, Washington, D. C.

MY DEAR MR. GEYER: It was most kind and thoughtful of you to go to the trouble of sending me a copy of the blast of the Associated Farmers of California against me based upon an interview which I gave to the press in Washington.

I should like, for your information, to reply to these charges. The substance of my remarks was solely directed to impressing official Washington with the gravity of the migrant problem. No one in California will question the seriousness of the problem itself. As you know, the State Chamber of Commerce has recently taken official cognizance of the problem and has earnestly petitioned Congress to investigate all aspects of the matter. Apparently my critics feel that anyone who discusses this matter, not in abstract terms but in terms of human misery and suffering, is inciting to riot and encouraging all sorts of dire and awful developments. I emphatically disavow any such intentions. But I have had occasion, particularly during the last year, to talk with many of the migrants themselves, and I think I know a little about the conditions that they are up against and what they themselves are thinking. I was not a prophet in saying that the unemployed citizens of California would strenuously protest against the relief measure recently enacted by the legislature at the special session. Before I left for Washington 4,000 people marched to Sacramento to register their protest against the bill, and other demonstrations and protests were in preparation at the time. With all of these protests and demonstrations, needless to say, I have had nothing to do. I have neither advised, consulted, nor otherwise encouraged such demonstrations.

Mr. Watson accuses me of inconsistency. He states, for example, that I have said that the large-scale farm operators want a surplus of farm workers; and, on the other hand, that I have said these same operators are now anxious to get some of the migrants out of the State. Having stated the matter in this manner, he asks how both these statements can be true. There is really nothing inconsistent in these statements. It is quite easy to demonstrate that the type of agricultural economy that has become entrenched in California is dependent upon a large supply, or pool, of unemployed labor to tap at the peak seasonal periods. Over a period of a great many years, these same growers have recruited this supply of labor in a variety of ways—from Mexico, from the Hawaiian Islands, from the Dust Bowl. They want (and say they need) a relative surplus of workers. There has been, in fact, a surplus of workers in agriculture in California since about 1921, with the exception of a few brief periods intervening. But this time, in connection with the Dust Bowl migration, the supply has reached such proportions that even these same interests are a little worried at the possible consequences. Besides, it is not so much the number of Dust Bowl migrants that concerns them as it is the tendency which this type of labor has shown to settle down in the community and to become permanent residents. They do not like to think of the possibility of their employees becoming voters in the districts in which they work. And, of course, unlike Filipino workers and most Mexican workers, the Dust Bowl migrants are American citizens and want to exercise the franchise. One other factor must be considered—the Associated Farmers is not, of course, a genuine farm organization at all, but a so-called "farmers' front" organization, behind which are organized the most powerful employer groups in California. These groups want to see all relief standards lower in this State; not merely for migrants or agricultural workers who have resided in the community for only a short time, but for California citizens who have lived here all their lives. Consequently, as a means of lowering all relief standards these groups point to the migrant influx and, by this means, persuade the legislature that a 3-year residence law in California is necessary. The effect of such action is, of course, that all unemployed persons are made to suffer in California under the erroneous assumption that the relief problem is synonymous with the migrant problem. Realizing, also, that the Dust Bowl migration threatens to continue, these same interests have attempted to start a back to the Dust Bowl movement and have launched certain prosecutions of migrants for bringing indigent persons into the State. The inconsistency, therefore, is only apparent and not real.

The best answer to Mr. Watson's diatribe is to be found, not in any statement from me which rightly or wrongly might be regarded as self-serving but in the transcript of the La Follette committee hearings in California. In the thousands of pages of testimony received during these hearings having to do with the Associated Farmers, the nature of the organization, the practices it has indulged in, and the character of the interests that now dominate every phase of California agriculture are clearly and irrefutably demonstrated and set forth. No one familiar with this transcript could possibly be misled or deceived by the Associated Farmers.

In closing may I take this opportunity to urge upon you the desirability of supporting the suggestion for the appointment of a congressional committee on agricultural labor and interstate migration, so that the national aspects and importance of this problem may be clearly established. Anything that you can do in support of this suggestion, as well as in furtherance of Mr. VOORHIS' legislation on the same subject, would be all to the good.

Thanking you again for your thoughtfulness in sending me a copy of Mr. Watson's statement, I am,

Yours very truly,

CAREY MCWILLIAMS.

P. S.—Incidentally, on the matter of "irresponsible statements" and "inciting to riot," may I call your attention to the declarations made by representatives of the Associated Farmers before the La Follette committee? You will find in the transcript many instances of the contemptuous attitude shown by this organization and its officials to a committee of the United States Senate. They accuse me of "inciting to riot"; but they have engaged in riots—not one but a dozen or more—and on this score merely note in the La Follette committee transcript the testimony on the Madera riot of October 1939.

The key to the entire attitude of the Associated Farmers on the migrant and relief question has fortunately been provided by Dr. George B. Clements, of the Los Angeles Chamber of Commerce, when he says: "The white transients are not tractable labor. Being American citizens, they are going to demand the so-called American standard of living" (Weekly People, March 16, 1940). This single statement sheds more light on the position of the Associated Farmers than any comment that I might make.

The Pity of It

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

LETTER FROM S. HERNES

Mr. COFFEE of Washington. Mr. Speaker, I herewith read into the RECORD for the benefit of the Members of the House a letter written by a resident of my district, Mr. S. Hernes, of 7428 South G Street, Tacoma, Wash., which is a tragic and touching and moving statement as to conditions prevailing at home. It reveals all too poignantly the suffering of the plain people and offers a potent argument as to why charity should begin at home.

The letter is as follows:

EDITOR OF THE TIMES:

Recently here in America a 12-year-old boy hung himself because he was tired of eating nothing but mush. His widowed mother and her 6 children were refused relief because one of them earns $4 a week. The boy had complained many times about his diet of mush and on the eve of his departure he scribbled a note that read: "I'm tired of eating mush." Thus he was found in his room by his schoolmate, who was to have studied arithmetic with him that evening. Time and again we have heard that the ill-housed, ill-clad, and the ill-fed shall be given assistance. Can it be that relief agencies have orders to refuse aid because their superiors feel that an income of $4 a week is sufficient to sustain a family of six? No mention of this boy appeared in the press. It seems that such news is considered by the press of less importance for its headlines than the marriage of a movie star or one headed for Reno, or the removal of an eye from a dog. Millions of dollars will soon be loaned to Finland and other European countries for the sake of democracy, and that word falls far short as to what it should mean to millions here in America, including the mother who must house, clothe, and feed her family on a diet of mush on top of her sorrow.

S. HERNES.

Congressman Tinkham Calls Thomas E. Dewey an Internationalist and Political Interventionist and States That He Is Unfit To Be the Republican Candidate for President

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. TINKHAM. Mr. Speaker, the greatest issue before the American people today is the maintenance of our traditional foreign policies against the efforts of the internationalists and political interventionists who would involve the United States in war in Europe and Asia.

This issue will be decided by the American people themselves in the approaching primaries and on election day next November.

The Republican voters in Wisconsin, Nebraska, and Illinois will have an opportunity within the next 2 weeks to play a part in keeping the United States out of foreign entanglements and foreign wars by selecting delegates to the Republican National Convention who will support candidates for the Presidential nomination who are known to be opposed to the internationalism and political interventionism of President Roosevelt and Secretary of State Hull.

Some of the Republican candidates for the Presidential nomination have remained suspiciously silent on the great international issues involving the security and peace of our country and the continuance of our present form of government.

One of them, Mr. Thomas E. Dewey, has publicly endorsed the internationalist policies of President Roosevelt.

In a speech which he delivered before the Women's National Republican Club of New York on January 20, 1940, Mr. Dewey deliberately declared that "we find the administration—referring to the Roosevelt administration—broadly following the policies both in Europe and in the Far East laid down during the 12 years of Republican administration." He then went on to praise Henry L. Stimson, former Republican Secretary of State, who, when he retired as Secretary of State, left the United States on the verge of war with Japan. Mr. Stimson is a pronounced internationalist and political interventionist; he was one of the most active proponents of the repeal of the arms embargo, a measure which was opposed by 90 percent of the Republicans in Congress, and is one of the strongest supporters of the internationalism and political interventionism of President Roosevelt.

Mr. Dewey practically stated that there is no difference between the foreign policies of the Republican Party and the internationalist policies of the Roosevelt administration. Such a statement is a repudiation of the efforts of the Republicans in Congress, who, since President Roosevelt's "quarantine" speech at Chicago in 1937, have been endeavoring to combat the various attempts of the Roosevelt administration to undermine American neutrality. The Republicans in Congress opposed the repeal of the arms embargo, the granting of power to the President to impose economic sanctions, and the political intervention of the President in the affairs of other nations, all of which they realized were bound inevitably to involve the United States in the ceaseless conflicts and wars of Europe and Asia.

This public statement by Mr. Dewey evidenced his utter lack of sympathy with traditional American foreign policies. It showed that he is not in accord with the Republican leadership in the House and Senate and is unfitted to be the Republican candidate for President.

The issue in Congress between the Republicans who have been insisting upon the continuance of the traditional American policies of strict neutrality, of nonintervention in the political affairs of other nations, of no entangling alliances, and of peace for the United States, and the supporters of the internationalism and political interventionism of the Roosevelt administration has been clear-cut.

Mr. Dewey chose to align himself with such Republican internationalists and political interventionists as Henry L. Stimson and Nicholas Murray Butler, together with President Roosevelt, Secretary of State Hull, and the United States Minister to Canada, James H. R. Cromwell.

The people must judge the candidates on their record and their public statements. Where they find a Republican candidate who supports the internationalism and political interventionism of the Roosevelt administration, they should recognize him as one opposed to American neutrality and willing to take the road to war.

Our Youth Problem

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1940

RADIO ADDRESS BY HON. LEE E. GEYER, OF CALIFORNIA

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I including the following address which I delivered over the radio on March 25:

A Congressman receives a great deal of mail. Some of the letters are neatly typed on expensive stationery. A Congressman knows that such letters were dictated one morning along with a few dozen others.

But we get another type of letter, too—letters written in longhand on any sort of paper, letters that we know come from the heart of America.

Let me read one of these:

"Dear Congressman," it begins, "I am writing to you for help. I need a job. For 2 years—since I left high school—I've knocked on every door in town—the mills, the stores, every place. Once in a while there are a few days' work, delivering packages or filling in for a sick office boy. But they say there are no permanent jobs for me. I'm 20 years old. My family needs my help and I don't want to be a burden to them forever. Besides this, a certain young lady and I would like to start a home of our own. This we are fearful of doing due to the uncertainty of an income in the future. Are we to be denied the same privileges that have always been taken for granted in this great democracy of ours? Where can I turn? Honestly, I'll do anything that is honest and honorable."

How shall I answer this letter? What can I tell this young man? How can we answer this same plea coming from more than 4,000,000 boys and girls who are in the same boat?

I can no longer say "Go West, young man, go West," for the physical frontiers are no more. I can no longer say "Start a little business of your own," when I know that these boys and girls haven't the capital for even a little business, when I know that small businesses are dying like flies. I will not say to them in these times "Join the Army or enlist in the Navy."

This boy and more than 4,000,000 others have been turned down by private industry. They are out of school and anxious to work but private industry is able to get along without them. Producing more than we did in 1929, there are fewer men and women employed in our factories and fields, our mines and mills.

There are people who say, "Yes, but this is not a special problem of youth." I agree with them that unemployment for adults is tragic, too, that we must find ways to give jobs to all who are willing and able.

But for these 4,000,000 young people, between the ages of 16 and 25, there is a special problem. They are at an age best suited for the development of their skills and talents. They are at an age when frustration hurts much more, when continued idleness leads to demoralization and sometimes to crime.

And for the Nation as a whole, they constitute a special concern. It is in this age group that there is the greatest percentage of unemployment. And yet, the Nation will depend in the future on the ability and skill of these same young people to work our fields and factories, run our mills and mines. The very future of American democracy is in their hands.

Congress has recognized this problem and for 5 years has appropriated funds for the Civilian Conservation Corps and the National Youth Administration. Seeing more than 4,000,000 youth performing no useful services, receiving no training, these governmental programs were devised to help a few, but only a few. Altogether, less than a million out-of-school young people have

been given aid through the C. C. C., N. Y. A., and W. P. A., at the peak of these programs.

W. P. A has been so limited lately that there is no longer room for these young people. The C. C. C. program has already been curtailed and will be further limited if Congress accepts the President's proposal to cut its present Budget by $60,000,000.

The National Youth Administration Budget proposed by the President will limit that program still further so that only 250,000 part-time jobs will be available at less than $20 a month average and only about 340,000 needy high-school and college students will be helped so that they may stay in school with an average of $7 a month.

Everyone will agree that the National Youth Administration, as a sign of recognition for the plight of youth, is a great step forward. But it is no answer for the young man who wrote to me. In his country thousands of young people are on the N. Y. A. waiting list. Throughout the country there are still 4,000,000 youth untouched by these governmental programs. Yes; government is turning them down just as private industry has turned them down.

It is because of the inadequacy of this Federal program for youth that I have introduced a bill into Congress known as the American Youth Act. It is a bill "to provide vocational guidance, vocational training, and employment opportunities for youth between the ages of 16 and 25; to provide for increased educational opportunities for high-school, college, and postgraduate students."

Let me quote from the declaration of policy of the American Youth Act: "The traditional American ideal of opportunity for young people must be preserved. In the past, new fields were opened by the Federal Government to provide an outlet for the initiative of generations of American youth, through such legislation as the Homestead Act of 1862. It is hereby declared to be the policy of Congress, in order to promote the general welfare, to make it possible for the youth of the United States to obtain these opportunities once more."

The American Youth Act will establish a permanent National Youth Administration instead of the temporary one which exists today and which can become the victim of politics. It will authorize the appropriation of $500,000,000—less than the price of 10 battleships—to provide job and educational opportunity, vocational training, and guidance.

To the young person who needs a job, the American Youth Act will mean useful work and training at the prevailing rate of wages, with at least 4 hours of appropriate education each week. To the community it will mean more parks, playgrounds, recreation centers, schools, and hospitals. The community will also profit by having a ycung generation at useful work instead of hanging around poolrooms, taverns, and street corners.

Students who must have part-time jobs or scholarships in order to continue in school or college will be provided for. Adult workers will have less competition from young people who can't afford to stay in school and therefore compete for their jobs at lower wages.

Unlike the present National Youth Administration, directed by one man whose policies are subject to no check, the American Youth Act provides for a board of directors made up of representatives from educational, civic, labor, youth, and social-service organizations which shall be responsible for the general policies.

But let me warn you—this bill will have no easy road through Congress. The same forces are in action that have already sabotaged such forward-looking social legislation and are working night and day to wipe off the statute books all of the gains of the New Deal.

I have been watching closely the source and the leadership of this opposition. I have discovered that, in the main, it comes from the Representatives from a certain group of States where minority government prevails; States where a poll tax must be paid for the privilege of voting; where the right to vote is not recognized, but where voting is a privilege enjoyed by less than a fourth of the people.

Senator PEPPER evidently made the same discovery over in the Senate—and in a brilliant speech last August he condemned the unholy alliance that exists between the opposition groups in the two major parties.

On the day Senator PEPPER made that speech, I introduced a bill in the House (the Geyer anti-poll-tax bill)—it should be a companion measure to this American Youth Act. That bill will restore democracy to the people of that section of the country. It will increase the influence of youth. It will give a stronger voice to the allies of youth; to the workingman and the farmers, to the small business man, the senior citizen, and the unemployed. It will make certain southern Representatives more responsive to letters such as the one I read to you—letters that come in to us written in longhand with pencil or pen—sometimes on tablet paper.

The anti-poll-tax measure will dilute the influence of the opposition and make it easier to pass a bill such as the American Youth Act.

I feel sure that all of you will agree that this program of youth aid is desirable and urgently needed. But a few of you will be murmuring, "But where will the $500,000,000 come from? Can the Government afford this program?"

Do you know that juvenile delinquency and the petty crimes of young people cost this country $3,000,000,000 each year, six times the cost of the Youth Act program? Do you know that the great bulk of this crime and delinquency is the direct result of youth unemployment? The American Youth Act will save the taxpayer money by helping to reduce the crime bill.

And there is another answer to those who question the ability of the Federal Government to raise the funds necessary for the American Youth Act. When the Government wants to build battleships, increase our Army and Navy, we always find the needed funds. Is it more important to equip ourselves with weapons of destruction or to save the young people of our Nation from idleness, hopelessness, demoralization?

The President, submitting the proposed Budget to Congress, cut the social-welfare items, cut the amounts to be appropriated for the C. C. C., the N. Y. A., the Office of Education, and the Public Health Service. But these cuts did not reduce the total amount to be spent, because at the same time he proposed that we almost double our expenditures for the Army and Navy, for so-called national defense. Our peace-loving people do not wish to be involved in war. They do not wish to spend funds for war preparations at a time when they are so badly needed for social services.

A forthcoming survey in Fortune Magazine shows that the great majority of the American people believe that, from the standpoint of national defense, it is more important to end unemployment than to increase armaments. The American people know that battleships are no substitute for that best of all defense—a free, happy, prosperous people. They also know that armaments are of no social use and that the kind of limited employment which may be provided in armament plants is no substitute for useful employment producing the things the people need and can use.

Our young people are especially concerned that we shall not be involved in Europe's war. They are anxious to work—to build much-needed hospitals, schools, housing projects—not battleships. Appropriations for these useful and badly needed public services can be an answer to the boys and girls who are writing their Congressmen asking where to find jobs. Appropriations for the American Youth Act is an immediate answer to those who need training, who wish to continue their education.

Every businessman knows that the first rule of good business administration is to preserve his capital assets. Before other expenditures, he knows that he must set aside funds for depreciation and depletion. For if he does not take out this insurance on his capital, the future of his income will always be in jeopardy.

The youth of this Nation are our capital assets. Five hundred million dollars a year is surely not too much to set aside to prevent the depreciation of their skill. If we do not want to throw away the income-producing power of our country for years to come, we must set aside at least this sum for the program of the American Youth Act.

And it cannot be an afterthought. We cannot say, "Let's build battleships first, and then if there is anything left over, we can take care of our young people." That is not a policy of national defense. It is rather a policy of national ruin.

Abraham Lincoln once said: "What constitutes the bulk of our liberty and independence? It is not our frowning battlements, our bristling seacoast, the guns of our war steamers, or the strength of our gallant Army. These are not our reliance against the resumption of tyranny on our land. All of them may be turned against our liberty without making us stronger or weaker. Our reliance is in the love of liberty which God placed in our bosoms. Our defense is in the preservation of the spirit and you have planted the seeds of despotism around your own doors."

Let us heed these words of Lincoln and spare no effort or expense to see that the love of liberty remains in the hearts of the young people of our country. Government must give them the opportunities which private industry fails to give to them. And it must be done now. If we fail to provide these opportunities through legislation such as the American Youth Act, then the faith of young people in democracy will vanish. The passage of this youth act becomes a responsibility which the whole Nation must share.

I truly believe that if American democracy means anything it means that if business, industry, and finance cannot or will not provide, all who want to work, with a job guaranteeing a decent standard of living that it is the duty of government to do so.

I believe the pasage of this act combined with a Nation-wide adequate old-age pension will do more to safeguard a continuance of this present form of Government than hundreds of new battleships built to fight we know not whom.

The Financial Situation

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

LETTER OF BEN DIEFENDORF

Mr. WHITE of Idaho. Mr. Speaker, in considering the cause of the existing depressed business conditions and finan-

cial trends now under way in this country, I desire to present for the attention of the Members of the House an analysis of the present condition and the suggested remedy presented by an experienced financial expert, the former Idaho State finance commissioner, Mr. Ben Diefendorf, who has given thoughtful and serious consideration to the subject. Mr. Diefendorf is presented herewith:

JEROME, IDAHO, *February 13, 1940.*

FROZEN CREDITS—SLOW DOLLARS

Hon. COMPTON WHITE,
United States Congressman.
Washington, D. C.

DEAR CONGRESSMAN: 1. Forty-three billion United States bonds and debts are frozen credit in addition to the billions in life insurance.

2. We are in a cycle of speed transportation and production, due to machinery using gasoline and electricity.

3. The "dollar credit" must be thawed out and speed used on the dollar in a rapid turn-over to keep up with production, transportation, and increase consumption.

4. This means the earnings of the dollar must be nil unless used in production, transportation, labor, commerce, and pleasure.

5. The United States should stop bond issues and issue money to stop frozen credit and interest.

6. The "dollar credit" under the present set-up does not move in keeping with human necessities and has no speed in turn-over when frozen in bonds and life insurance.

7. Even though interest has been reduced, it has had no effect on the dollar, but has frozen more credit because of the reduction of interest.

8. When we come to the end of the road we are on, it will shake the equity "imagined," and the borrower will lose his "imagined" equity; the lender will have to take it over, and he will be busy for some years.

9. The 10 percent of the people who have the ability and control the dollar must come forward with a plan.

Yours respectfully,

BEN DIEFENDORF.

W. P. A. Construction

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

LETTER FROM A CONSTITUENT

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following card received by me from a carpenter living in my district:

DEAR JUDGE JENNINGS: I make my living as a carpenter. I want the construction work to be done through the relief bill to be done by contract after competitive bids.

I want this done because W. P. A. construction puts me on relief where I get lower wages, no social-security or workmen's compensation benefits. I wish you would tell this to the Appropriations Committee.

I want a real job, not a relief job.

J. H. JONES,
340 E. Oklahoma Ave.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 29 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY JOHN A. MATTHEWS, LL. D.

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. John A. Matthews, LL. D., on Sunday, February 18, 1940, which was broadcast over station WHBI.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, next Thursday we will celebrate the birthday anniversary of George Washington. He lived in the "horse and buggy" age. But his horse sense as first President of the United States, is something to be conjured with in these days of streamlined statesmanship.

Today I want to discuss with you the advice given by our first President in those "horse and buggy" days, on the principles which he believed should actuate our foreign relations, in order that you may see how the untoward happenings of recent months have resulted from our failure to heed Washington's salutary advice.

Indeed I fondly wish that the spirit of the late lamented Senator Borah, whose statesmanship was not streamlined at the expense of common horse sense, would arise in the Senate on the eve of Washington's birthday and read and comment on the passages from Washington's Farewell Address which deal with our foreign relations.

I am impelled to this thought and wish by the following remarks of Senator REYNOLDS, of North Carolina, during a Senate debate on the matter of our taking action against England's unwarranted and illegal rifling of United States mail at the Bermuda stop of our airships en route to Europe. Said Senator REYNOLDS:

"Mr. President, we are facing a dangerous situation. Of course, it is dangerous for any man in public life to open his mouth or to utter one word in behalf of his country if of necessity in that argument he must mention Great Britain, because it is said that those who openly oppose our entrance into this war are pro-Nazi. So far as I am concerned, I do not care what they say or write about me, so long as I have the right in this body or in any other public forum to speak out in the interest of the American people, and I say it is high time that the American people became pro-American. It is high time that we begin looking after our interests, the interests of the United States, instead of pussyfooting around and being afraid to say anything that might be construed to be against Great Britain."

My fellow Americans, may I ask you to keep those words of Senator REYNOLDS in mind?

It is eminently fitting on this the eve of Washington's birthday anniversary that we should ponder these words of warning advice on the matter of foreign relations contained in Washington's Farewell Address:

"A passionate attachment of one nation for another produces a variety of evils. Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest in cases where no real common interest exists, and infusing into one the enmities of the other, betrays the former into a participation in the quarrels and wars of the latter, without adequate inducements or justifications. It leads also to concessions, to the favorite nation, of privileges denied to others, which is apt doubly to injure the nation making the concessions, by unnecessarily parting with what ought to have been retained, and by exciting jealousy, ill will, and a disposition to retaliate in the parties from whom equal privileges are withheld; and it gives to ambitious, corrupted or deluded citizens who devote themselves to the favorite nation, facility to betray or sacrifice the interests of their own country, without odium, sometimes even with popularity."

Has not our sympathy for the Allies, and particularly for England, in her controversy with Germany both before and since the inception of this European war, facilitated the illusion of an imaginary common interest between England and America in this power politics war in Europe?

What common interest has America in that wicked and unjust war? What common interest has the United States in the controversy about the Polish Corridor and Danzig, a controversy which Lloyd George said 21 years ago, "Must in my opinion sooner or later lead to a new war in Europe;" a controversy which the Nation and Athenaeum, an outstanding English publication, characterized in these words in 1927: "The corridor separating east and west Prussia is impossible. * * * This corridor is poisoning the political atmosphere of Europe, and we (English) are implicated in it;" a controversy which Lord Rothermere referred to in the Daily Mail for November 9, 1932, in these words: "The dividing of Germany into unequal halves in order to give Poland access to the sea was the worst robbery the peace conference committed. The existence of the corridor is a provocation to Germany and a danger to the Polish."

The answer of the war mongers and the internationalists, that we have a common interest in this European power-politics war to prevent the spread of totalitarianism, brown or red, lest it span 3,000 miles of ocean to our shores, is as false as it is hypocritical.

Red communism, which is different only in color and in insignia from brown nazi-ism, exists in our land today. Its avowed adherents and fellow travelers have bored into our schools and colleges, hold positions under our National, State, and municipal governments, and until very recently when Stalin spurned the hand of Chamberlain for that of Hitler, red communism and its official governmental representative in the United States were not only personae gratae to our Government, but on occasion, and as recently as last summer, Russia was referred to by the mayor of New York City as a nation whose governmental origins were akin to our own.

Yea more, Mr. President, that same red communism, not so long ago, reached its lethal hand into our erstwhile good neighbor,

Mexico, drenched the altars of that land with the blood of massacred priests, nuns, and Christian people, and no governmental word of warning, no congressional or senatorial resolution of prevention was enacted by us, to prevent that red totalitarianism from crossing, not 3,000 miles of ocean, but the silver strip of river called the Rio Grande.

No, my friends, there is no common interest between the Allies and us in this European war of power politics. But our propagandized sympathy for the Allies has, as Washington said, "facilitated the illusion of an imaginary common interest where no real common interest exists," and that imaginary common interest propagandized by foreign and American war mongers and internationalists has, as Washington said, given "to ambitious, corrupted, or deluded citizens (who devote themselves to the favorite nation) facility to betray and sacrifice the interests of their own country, without odium, sometimes even with popularity."

I challenge these warmongers to differentiate between the aggression of Hitler in Poland, and the aggression of Stalin in Poland and Finland, and I call upon them to answer why their favorite nation has not declared war against Russia if England's war aims, so often expressed, are to stop aggression against small nations. I challenge these common-interest war mongers to differentiate between the continuing aggression of their favorite nation, today, in India, in Ireland, and in South Africa, and the aggression of Hitler and Stalin in Poland and Finland, and I ask them to answer that challenge in the truthful facts of history and not in the camouflaged explanation of English propagandists. Finally, I challenge these war mongers to show the American people how these totalitarian nations, red or brown, or both, whether they win, lose, or draw in this European war, can even remotely threaten the physical integrity of the United States.

The physical integrity of our national domain is safe against attack by any and every kind of weapon and bomb except the bombs of propaganda, bombs which are manufactured and hurled by "ambitious, corrupted, or deluded citizens," as Washington called those who, as he put it, "betray or sacrifice the interests of their own country without odium, sometimes even with popularity."

And now, may I call your attention to other events which have happened in our country because of our failure to follow the advice of Washington as to our foreign policy.

Has not our propagandized passionate attachment for the allies, and particularly for England, led us, as Washington predicted, into "concessions of privileges which have caused us unnecessarily to part with what we ought to have retained"? Was not the repeal of the arms embargo—itself an unneutral act in time of war between nations—brought about only by parting with much of our rights upon the seas? And despite our parting with our rights upon the seas, have we not parted—and with merely perfunctory protest—with our rights of unhampered commerce in nonbelligerent zones with neutral nations? Have we not even parted with our dignity and self-respect as a great Nation, by submitting our cargoes destined for neutral nations, first to inspection, euphemistically called navicerting, in our own ports, by agents of the so-called favorite nation, and then to stoppage, inspection, and arbitrary confiscation for contraband?

And finally have we not been subjected to the illegal taking of our ships with cargoes for neutrals, into the ports of the so-called favorite nation, thereby bringing upon us the threat of the destruction of our ships by Germany, with the consequent loss of American life?

Have we not by our "concession of privileges" to England, parted with our export market for tobacco, cotton, and agricultural products in England, in Argentina, and Brazil, to mention only presently ascertainable loss of export markets? In a word have not our concessions to the so-called favored nation brought us to the stage where England looks upon us presently, merely as her arsenal, in the hope and expectation that she will force our sons ultimately to carry the weapons which she has propagandized us into manufacturing in mass production, and which her failure to pay for will be the final step into war to save the investments of the war mongers and munition manufacturers?

May I ask you, who do me the honor to listen now, to ponder these further words of warning advice as to our foreign relations, in Washington's Farewell Address:

"Against the insidious wiles of foreign influence, (I conjure you to believe me fellow citizens, the jealousy of a few people ought to be constantly awake; since history and experience prove, that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests."

Can anyone deny that excessive partiality to the Allies and particularly to England, and excessive dislike for Germany, have, as Washington said, actuated our people to see danger only on one side, and have served to veil and even second the arts of influence on the other?

Let us consider for a moment what danger Germany holds for America, and then let us take the veil from the arts of influence of England.

We can discard with little comment the war mongers' scare that Nazi ideology, totalitarianism with its un-Christian dogma of racism, will ever supplant democracy in America, unless and until, which God forbid, our Nation should discard Christianity.

But what of the oft-repeated propaganda of the war mongers and internationalists that Germany is or will be a threat to the integrity of our national domain? The answer of every disinterested student of military affairs is that a post-war Germany, vanquished or victorious, has no more chance, either alone or in concert with Russia, Japan, Italy, or whomever else, of successfully invading our shores than England has, and she tried it once when we were in swaddling clothes as a nation, and she tried it surreptitiously and vicariously a second time in our Civil War, and both times we licked her.

My friends, "our detached and distant situation," as Washington in that same Farewell Address, described our ocean barriers against foreign aggression, is as complete and effective a defense of our borders today as it was in Washington's day.

True, indeed, the horse and buggy of Washington's days has been succeeded by methods of transportation for peace and armaments for war that have annihilated time and space. Navigation of the stratosphere might enable bombing planes to cross the oceans. But the horse sense of even the "horse and buggy" days will convince anyone except the war mongers and the internationalists that these stratosphere bombers, even if they were to get here in appreciable numbers, would never get back, if indeed our American defenders, who will be at least as adept as our imaginary attackers, have not consigned them to Davy Jones' locker long before they even sight our coast lines.

And now, ladies and gentlemen, let us take the veil from the arts of influence of England. Let us see whether there is any danger lurking in her hitherto undisclosed aims in this war of power politics.

I have before me an editorial from the Saturday Evening Post of February 10, 1940, entitled "Propaganda," from which I would like to read:

"That there is an organized propaganda for getting this country into the war is a fact which we think no literate intelligence would dispute. * * * There are those for example, who suspect it was more than a curious coincidence that the British Ambassador's message (Lord Lothian's speech before the Chicago Council on Foreign Relations) was paralleled to an idea that had been actively developed here beforehand as an American theme, uniting the thought of all who are for taking this country into the war. The Ambassador suggested a federation of democracies. Sea power should no longer be in the hands of one nation; it should be in the hands of the democracies. The united sea power of the united democracies, would, of course, give them control of the world.

"Now that happens to be the central idea of a book entitled "Union Now," written by Clarence K. Streit, who is an American journalist. Moreover, this book has had a sudden career. There is an organized campaign behind it, with committees, bureaus, speakers, funds, and, in Europe, a distinguished British sponsorship. A militant cult seems to have formed about it in a spontaneous manner, treating it as the political Koran of the New World. * * * If there is here any foreign design or subsidy, we should be interested to know; and we should know what to do about it. * * *

"What this book, Union Now, proposes is a federation of 15 democracies, namely, the United States, Great Britain, Canada, Australia, New Zealand, Union of South Africa, Ireland, France, Belgium, Holland, Switzerland, Denmark, Norway, Sweden, and Finland, in the form of a supreme world government, with a constitution, an executive, a legislature, a judiciary, and a common citizenship, with the ultimate power to make war and peace, to make treaties, to issue money, and to regulate trade. The military strength of this federation would be such that it could be reduced one-half and still stand as 2 to 1 against all the rest of the world. Its economic strength would be even more formidable, since to begin with it would own half the earth, control two-thirds of all trade, and possess a practical monopoly of raw materials. Who could survive against it? Other nations would be permitted to join only provided the people in them overthrow their dictators and embraced democracy.

"We wish," continues this editorial, "that those who try to move us with the word 'democracy'—not excluding the British Ambassador (Lord Lothian), who did it so well—could be obliged to say what it is they are thinking. It is owing only to a defeat of British diplomacy that Russia is not a 'democracy,' fighting on the side of 'right.' In the verbal confusion now surrounding the word (democracy) it can be made to mean anything you want it to mean or to sanctify any end whatever, even conquest.

"Union Now makes nonsense except as a variation of the theme that once before involved us in Europe's warfare. Let us this time attend to the saving of our own democracy."

I have read this editorial at such length, in order that you may realize, on this the eve of Washington's Birthday, the prophetic truth of his advice on our foreign policy; in order that the Senate may see how this "excessive partiality" for England and "hatred" for Germany have, as Washington put it, "served to veil and even second the arts of influence" of England in our midst, yes, even to camouflage what appears to be a well-organized and financed attempt to supplant American democracy with an English-controlled world government.

George Washington, in his Farewell Address, said:

"Europe has a set of primary interests, which to us have none, or a very remote relation. Hence, she must be engaged in frequent controversies, the causes of which are essentially foreign to our

concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities. * * *

"Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

My fellow Americans, may I, your humble broadcaster, plead with you to keep faith with George Washington.

Unemployment

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, March 29 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on March 23, 1940, on the occasion of nation-wide meetings on the subject of unemployment.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I congratulate you who have come together today to consider the challenging problem of unemployment in America. I congratulate you upon the patriotism which brings you to consideration of this threat to American stability, for nothing saving the threat of war itself so endangers the safety and security of our country as the existence of conditions which keep a man or a woman from finding a job.

Speaking of the magnitude of this unemployed army and its dependents, Corrington Gill, Assistant Commissioner of the Work Projects Administration, in a book, Wasted Manpower, issued last year, said:

"When the unemployed number between ten and eleven million, one out of every five persons in our employable population lacks a job. If we include those who are dependent upon these jobless workers, a total of about 25,000,000 persons have a direct stake in the solution of the unemployment problem.

"The combined total of the unemployed and their dependents at this level is greater than the population of all the New England States, plus New York and New Jersey. Looked at another way, this total is greater than the number of persons residing in the 10 largest cities in the United States. Put another way, our present total of unemployed and their dependents is approximately the same as the total population of the United States in 1850."

There are two ideas about whether the people's government is interested in whether its people have a job or not. One idea was expressed in 1932 by Merle Thorpe, assistant director of President Hoover's organization on unemployed relief. Mr. Thorpe said:

"When old-age pensions were adopted, England took the first step to destroy the foundations of thrift. Labor exchanges and unemployment insurance were then introduced, on the idiotic idea that it was the duty of the Government to find its citizens work."

The American people in the election of 1932 repudiated that idea. The American people will continue to repudiate a Government which is indifferent to the suffering of its people.

In the Democratic platform of 1936, we hear the ringing voice of the people of America uttering a new Declaration of Independence.

"We hold this truth to be self-evident—that the tests of a representative government is its ability to promote the safety and happiness of its people.

"We hold this truth to be self-evident—that government in a modern civilization has certain inescapable obligations to its citizens, among which are:

"(1) Protection of the family and the home.

"(2) Establishment of a democracy of opportunity for all the people.

"(3) Aid to those overtaken by disaster."

These obligations, neglected through 12 years of the old leadership, have once more been recognized by the American Government.

You know that it has not been Franklin D. Roosevelt who has been inconsiderate of the jobless of America in the last 7 years. For 4 long years, from 1929 to 1933, the lines of the unemployed grew longer and longer. Fortune and family crashed in every corner of the land. To meet the problem of unemployment, all the Republican administration did was to create the Reconstruction Finance Corporation, with power to make loans to private and public agencies for relief purposes. Between the creation of the R. F. C. in July 1932 and the 1st of January 1933, $80,000,000 only was disbursed for relief purposes. That amount was approximately the same that the R. F. C., under that Republican administration, in the same period, loaned to the Honorable Charles Dawes' bank in the city of Chicago.

In contrast, the Roosevelt administration, in the last 7 years, to create jobs and to raise the purchasing power of the people of this country, has spent in cash over $26,000,000,000.

This same administration, in the same period of time, has spent another $6,000,000,000 for materials to be used essentially in a works program.

In the same time this Roosevelt administration has loaned another $17,000,000,000 to business—big, middle-sized, and little—and this, too, went to create jobs for the unemployed of America.

That makes $49,000,000,000 that this administration has actually put in cash into the channels of commerce and trade, primarily to give employment to those who sought a job in our country.

That money has borne fruit, for half of the loans have been paid back. The national income approaches the high of 1929. The output of our industrial machine exceeds the 1929 days. The difference in our income in 1939 and in 1932 is more than twice the total net increase in the national debt, to the middle of last year.

Six hundred thousand workers a year, we are told, grow into the employable-age group in excess of the number who grow out of that group. In 7 years, therefore, our labor supply has increased from that source at least 4,000,000. Another 500,000 each year, we are told, lose their jobs to machines of one sort or another. In the last 7 years, then, another three and a half million have been added to the labor supply from that source. That means that we have had to find jobs for at least seven and a half million more than those who were jobless in 1932. If the number of unemployed were 16,000,000 in the beginning of 1933, and seven and one-half million have been added to the unemployed since 1933, we have had an unemployment load of some twenty-three and one-half millions. If, by the agreement of all factual agencies, the number of unemployed is now ten to twelve millions, we have relatively reduced the number by half of what it was.

We have set up unemployment insurance, the principal reliance of most countries abroad for unemployment relief. That is going to help more and more.

But it is not enough to have made progress on this problem. It must be solved; for a nation can no more exist seriously unemployed than a nation can exist half free.

The program offered by David Lasser and his organization, which I have introduced in the Senate, affords a good minimum program. It has two divisions. It would require the W. P. A. to increase the number of its employees to 3,000,000, an addition of 700,000 to the number of the W. P. A. in February. It would, in addition to creating those new jobs, save their jobs for the 800,000 men and women who must under the present law, enacted over the President's vigorous opposition at the last session of the Congress, go off the W. P. A. by the 1st of July. It would fix a minimum of $70 a month for the W. P. A. worker.

In its second part the bill would create in the Federal Security Administration an unemployment assistance board to disburse Federal grants to the States which would submit satisfactory work-relief plans to the Federal Government. The Federal Government's share of the contribution in such cases would be 50 percent of the cost of the operation of the plan, except that the Federal cost could be increased to two-thirds of the total cost in States of lowest per capita income.

This bill is only a part of the answer. The problem ramifies into our whole national life, into the education of our children, the training of our citizens, the health of our people, into adequate credit and capital being available for business, and particularly little business. It is a war upon many fronts—a war which must be waged with unyielding relentlessness. It is in the spirit of democracy—such a spirit as is manifesting itself in the State of Florida today in the opening of the headquarters of the first State-wide Congress on Education and Democracy—it is in the spirit of America's pioneers and America's dreams that we say the working power of the earnest men and women of America must not be wasted. Unemployment in America must be destroyed.

Unemployment Our Greatest Problem

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Friday, March 29 (legislative day of Monday, March 4), 1940

ARTICLES FROM LABOR

Mr. O'MAHONEY. Mr. President, because of the tremendous importance to the people of America of a solution of the problem of unemployment, and because of the widespread interest which has been manifested in a measure designed to solve unemployment, which I introduced in this body a few weeks ago, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared on March

26, 1940, in Labor, the weekly journal of the railway brotherhoods.

In addition to this article, I should also like to have printed in the RECORD an editorial which appeared in the same journal on July 25, 1939, commenting upon a statement contained in the preliminary report of the so-called Monopoly Committee, in which special emphasis was laid upon the fact, so often apparently overlooked, that people come first in the economic system.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From Labor of March 26, 1940]

MEN-BEFORE-MACHINE BILL WINS WIDESPREAD INTEREST—PRAISE OF ELECTRICAL WORKERS' PLAN GREATLY EXCEEDS CENSURE IN FLOOD OF LETTERS RECEIVED BY O'MAHONEY

A flood of letters poured in upon Senator JOSEPH C. O'MAHONEY this week from all corners of the country—congratulating and criticizing him for his bill to "balance men and machines."

As reported in last week's Labor, O'MAHONEY introduced the bill at the request of the International Brotherhood of Electrical Workers, whose March Journal described the measure and its purpose.

It would have Uncle Sam collect "differential payments" from employers who make "more than average use of machines" and use the money to compensate employers who produce with fewer machines and more workers. Thus it aims to increase employment.

Despite the fact that newspaper editors and columnists heaped ridicule on the bill, a large majority of the letters received by O'MAHONEY warmly welcome this new kind of attack on the unemployment problem. Praise came from manufacturers, bankers, industrial engineers, and, of course, from workers who have lost their jobs because of machines.

"You will be a godsend to this country if your bill becomes law," wrote "a man who cannot find a job." "Take the Louisville & Nashville, for instance; about 2,000 people were put out of work on that railroad during the past 10 years. In the office alone 600 people lost their positions because of the International Business Machines Co. What is to become of the poor people who cannot find jobs?"

"Consider the plight of the celluloid workers," writes another man. "Since the use of the injection molding machine process, myself and thousands of others are now out of that line of work for good. The machine produces the work with less than 15 percent of the former labor."

PHONOGRAPH KILLS JOBS

Says a woman: "My husband is one of the thousands of musicians who have been deprived of the chance to make a living because of the use of phonograph records by the radio stations. I hope you can convince your fellow Senators of the importance of your bill."

Among many other letters from workers is this: "With all my heart, soul, and mind I congratulate you for taking upon yourself the task of entering the lion's den. The robots must be given less work than men or mankind perishes."

A banker denounces the New York Evening Sun for an editorial ridiculing the bill and saying that, "in the long run, machines create more jobs than they abolish." This banker says that "the unpleasant fact is that human laborers must live in the present, not in the future or the long run."

ANOTHER BANKER BOOSTS

Another banker writes that "machinery is creating a vast amount of unemployment, because of the larger operators crowding out the little fellows."

An industrial engineer says that his first-hand "experience making surveys of industrial plants" convinces him that O'MAHONEY is making the right "attack on the unemployment problem."

A "consulting engineer" declares that "I am in favor of machines as a means for securing 'a more abundant life,' but not in favor of machines where hand labor is more economical. And, Senator, you would be amazed and shocked to know the extent of that practice. I think your bill would correct this inconsistency in our economic system."

WILL SOLVE PROBLEM

One of the manufacturers wrote that "this is the most progressive piece of legislation advocated for many years and will solve the greatest problem facing our country—unemployment."

The head of a large insurance company wrote O'MAHONEY that "your solution of the unemployment problem has the backing of many people in my class—the middle class of America."

Among those against the bill are two newspaper publishers whose names speak for themselves. One is William Randolph Hearst; the other is "Moe" Annenberg, publisher of the Philadelphia Inquirer, a power in reactionary Republican politics and now being prosecuted by the Federal Government on charges of evading income taxes and conducting a Nation-wide gambling racket.

HEARST'S IGNORANCE

Enclosed in one letter was a "column" written by Hearst himself, as a brand-new feature in his newspapers. Hearst showed amazing ignorance by calling Senator O'MAHONEY "Congressman O'MAHONEY," and his column abused the bill. So did a long editorial in Annenberg's paper which was enclosed in another letter.

[From Labor of July 25, 1939]

"NATURE MOCKS INTELLIGENCE OF MEN"—SENATOR O'MAHONEY PRESENTS A STINGING INDICTMENT OF THE CRUEL ABSURDITIES OF AMERICA'S ECONOMIC "SET-UP"

Before he was a lawyer and a legislator, Senator JOSEPH C. O'MAHONEY was a newspaper man, and a good one. In those far-off days he wrote many editorials, but never did he present a great issue more clearly and impressively than in his statement of America's economic condition in the preliminary report of his monopoly committee, made public this week. The Senator wrote:

"People who are able and willing to work cannot find employment.

"People who are hungry cannot provide themselves with food.

"People who produce what the idle and the hungry need cannot sell it and, indeed, can find a market for only a small portion of what they are capable of producing.

"Owners of money and owners of machines cannot put their property to sure and certain use.

"The abundance of nature mocks the intelligence of men, who seem incapable of distributing it among their own kind, either equitably or profitably."

What answer can our statesmen make to that indictment? "The abundance of nature mocks the intelligence of men." There's a line which will not be soon forgotten. As a matter of fact, it tells the whole story. Nature and Nature's God have been more than generous to us, but, nevertheless, in the midst of this superabundance, we condemn to slow starvation millions of our fellow Americans, able and anxious to work.

Administrative Procedure Bill

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 29 (legislative day of Monday, March 4), 1940

REPORT OF BAR ASSOCIATION OF THE CITY OF NEW YORK

Mr. MINTON. Mr. President, the Association of the Bar of the City of New York have had under consideration and study Senate bill 916, commonly known as the Logan bill, and have made a report on their study. I ask unanimous consent that a copy of the report may be inserted in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

Joint report of the Committees on Administrative Law and on Federal Legislation of the Association of the Bar of the City of New York on S. 916, introduced by Mr. Logan in the Seventy-sixth Congress, first session, and its companion bill, H. R. 4235, introduced by Mr. CELLER, both entitled "A bill to establish a United States Court of Appeals for Administration to receive, decide, and expedite appeals from Federal commissions, administrative authorities, and tribunals in which the United States is a party or has an interest, and for other purposes"

The Committees on Administrative Law and on Federal Legislation of the Association of the Bar of the City of New York respectfully submit the following report disapproving S. 916 and H. R. 4235:

These bills, as indicated in their titles, create a United States Court of Appeals for Administration to hear appeals from specified administrative bodies. The court is to be composed of a chief justice and 10 associate justices, and is to be located in the District of Columbia. It may hold special sessions in any part of the United States.

The court is to have exclusive jurisdiction to review on appeal all final orders and decisions now subject to review by the Federal courts (court review being limited to questions of law, the findings of fact of the administrative tribunals to be conclusive if supported by substantial evidence) of the administrative authorities and tribunals following:

(1) The United States Board of Tax Appeals.
(2) The Processing Tax Board of Review in the Treasury Department.
(3) The Interstate Commerce Commission, except as to orders for the payment of money.
(4) The Federal Communications Commission, except as to orders for the payment of money.
(5) The Commodity Exchange Commission.
(6) The Federal Power Commission.
(7) The Federal Trade Commission.
(8) The National Bituminous Coal Commission.
(9) The National Labor Relations Board.
(10) The Securities and Exchange Commission.
(11) The United States Maritime Commission, except as to orders for the payment of money.

(12) The Secretary of Agriculture in respect to orders (except orders for the payment of money) issued under the Packers and Stockyards Act, under the Perishable Commodities Act, orders issued as Chairman of the Commodity Exchange Commission, and orders issued to prevent monopolization, restraint of trade, and unduly enhancing prices of associations of producers of agricultural products.

(13) The Federal Reserve Board in respect of orders under the antitrust laws.

(14) The Secretary of Commerce, in respect of orders to prevent monopoly or restraint of trade in the fishing industry.

(15) The Post Office Department, in respect of orders requiring publications to be sent by freight.

(16) The Federal Alcohol Administration in the Treasury Department.

(17) The Civil Aeronautics Authority.

(18) Administration of the Wage and Hour Division of the Department of Labor.

We do not believe it to be sound procedure to establish a single appellate court to hear appeals from the above administrative authorities in substitution for the jurisdiction now vested in the United States circuit courts of appeals, district courts, and courts of the District of Columbia. These bodies, it is obvious, deal with a great variety of matters which have little if any relationship to each other.

The widely divergent scope of the administrative agencies subject to review by the proposed court does not lend itself to the development of a reviewing tribunal to become expert in a given field, unless it be the development of a sort of technique in dealing with questions of administrative procedure. But this would be a very minor role of the new court and would not in itself warrant the establishment of a single court of review for all the agencies enumerated.

We think the country should not lose the advantages of having appeals from the orders of these important administrative bodies heard by courts having wide experience in all fields of the law. The law should not be pigeonholed according to the source of the order being reviewed; for the rulings on review of one type of order impinge upon and must be reconciled with rulings upon review in other types of cases if we are to have a unified and consistent body of law. In reviewing antitrust decisions of the Federal Trade Commission, why should the country be deprived of the valuable judicial experience of Federal judges who have heard and will continue to hear similar antitrust cases commenced by the Attorney General or by private litigants in the district courts?

In our opinion, there is danger in the exclusive concentration in a single court of so extensive a scope of review. It runs counter to the established general practice of decentralization of the lower branches of the Federal judiciary.

Accordingly, we record our disapproval of this bill.

Respectfully submitted.

Committee on Administrative Law Association of the Bar of the City of New York: John Foster Dulles (chairman), Edward S. Greenbaum, Alfred Jaretzki, Jr., Robert C. Page, Blackwell Smith, Hayden N. Smith, Alan M. Stroock.

Committee on Federal Legislation Association of the Bar of the City of New York: Cloyd Laporte (chairman), Eduardo Andrede, Herbert H. Bell, Porter Ralph Chandler, Arthur Hobson Dean, Noel Thomas Dowling, Milton Handler, Orrin G. Judd, John B. Marsh, Paul D. Miller, Robert G. Page, Simon H. Rifkind, Samuel Rudner, Charles H. Willard, John E. F. Wood; auxiliary members: Melbourne Bergerman, Henry J. Kennedy, Melvyn Gordon Lowenstein, Samuel J. Silverman, I. N. P. Stokes, 2d, Lauson H. Stone.

Proposed Amendments of the Labor-Security Appropriation Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. LUDLOW. Mr. Speaker, while I am a firm believer in economy, and while I regard at least 98 percent of the cuts we make in appropriations year in and year out as being amply justified, there are infrequent occasions when the Appropriations Committee cuts too deeply.

My considered judgment is that the bill making appropriations for the Department of Labor, Federal Security Agency, and related independent agencies for the fiscal year 1941, has made cuts in three items that can hardly be justified in the public interest. The three establishments which in my opinion have suffered from too zealous use of the pruning knife are the Wage and Hour Division of the Department of Labor.

The National Labor Relations Board.

The National Youth Administration.

During the consideration of this bill I have supported amendments to restore the full Budget estimates for the two first-mentioned activities and to raise the appropriation for the National Youth Administration to $100,000,000, the amount appropriated for the current year.

Let us try to analyze the situation in respect to the Wage and Hour Division and visualize, if we can, the calamitous effects that are certain to result if the Budget estimate for that Division is not restored.

The President, through his Budget Bureau, recommended $7,486,000 for that agency. The bill before us reduces that amount by $1,346,000—a 20-percent cut.

That would cripple the Division in many respects, but the main injury it would inflict would be to whittle down the inspection force by 350 men who are vitally needed in compliance work.

EPIDEMIC OF NONCOMPLIANCE FEARED

I fear the result would be that a veritable epidemic of noncompliance would sweep over the country. Honest businessmen, as usual, would obey the law and they would become the victims of chiseling competitors who could not be brought into line because there would not be enough inspectors to detect evasions and enforce compliance. This not only would be an insufferable hardship to the honest element in business—the very element that ought to be protected—but it would tend to break down the entire wage and hour structure. The wage and hour law is the result of a long and epochal struggle to improve the condition of our workingmen and working women. It deserves a better fate than to be broken down and destroyed by indirection. It merits a fair trial and I am voting to give it a fair trial by implementing it with the funds necessary to carry on its operations.

I am sure that our sound business interests want this law to have a chance to prove its worth. Many businessmen who were not for it at the beginning do not now want to see it wrecked and they would censure us if we were to starve it by withholding the essential funds to make it fully operative.

Similar reasoning, I think, should be applied to the cut in the appropriation for the National Labor Relations Board. If we take away $57,000 from that Board's trial examiners' section we reduce their number by one-fourth. Each examiner has been handling 30 cases a year. That means an average of 10 working days per case, which is a very limited time to sit in a case and write a formal report. The proposed cut would make it necessary for the Board to refuse to undertake 25 percent of its hearings. At least 250 cases a year, as the gentleman from Georgia [Mr. RAMSPECK] so aptly put it, "would have to be resolved by strikes instead of by law." Nor can I agree that the Board's Division of Economic Research should be wiped out entirely, as is proposed in this bill.

That office is an important part of the machinery set up in the act, and data prepared in that section has been the basis on which the Board has won many of its successful suits. There may be legitimate criticism of some of the policies and acts of the National Labor Relations Board, but those should be corrected by amendments to the law prepared by a legislative committee and passed in the usual way provided for the consideration of all legislation, and we should not seek to strike at the heart of the National Labor Relations Board by the indirect method of withholding appropriations. As in the case of the Wage and Hour Division, I favor restoring the full Budget estimate for the National Labor Relations Board.

NATIONAL YOUTH ADMINISTRATION

I also voted to increase the appropriation of the National Youth Administration so that it may carry on its useful operations next year on the same scale as this year. I do not think that an elaborate explanation of that vote is necessary. Without the National Youth Administration an education would be entirely beyond many a poor boy in America. If there had been a National Youth Administration in my early life

it would have been possible for me to have obtained the education which I so much longed for but which fate denied me. I want the children of the future to have better opportunities than we had in our day and generation.

Concerning the need of maintaining this appropriation at the 1940 level, a good friend of mine, Dr. Herman B. Wells, president of Indiana University, wired to me recently:

Proposed 30-percent cut in college N. Y. A. next year will force many young persons of ability who lack money to leave college. We are receiving slightly more applications this year than last and see no present prospect for reduced applications next year.

LETTER FROM ROBERT S. RICHEY

In conclusion, I present a letter from Robert S. Richey, the very able and alert administrator of the National Youth Administration for the State of Indiana, which describes the operation of that activity in Indiana. The letter follows:

Hon. LOUIS LUDLOW,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: It was very kind of you to see me the other day when I was in Washington. I wanted to talk to you some more about N. Y. A. activities, but I realize that you were very busy at that time and had other problems to think about. Therefore, I thought it best to give you a narrative report of some of the N. Y. A. activities in your district. Even though I left a copy of this in your office, I am sending you another for your files.

This year we expect to reach from fifteen to seventeen thousand different youths on our out-of-school work program. In addition, we are benefiting some 8,500 youths in Indiana high schools and some 4,100 different youths in Indiana colleges. Of the almost 900 high schools in this State, 750 are participating in the N. Y. A. high-school aid program, and all colleges in the State which are tax-exempt and non-profit-making in character, 40 in all, are on the N. Y. A. college aid program.

I recall you asked me how many youths we have in Indiana for whom we are not able to care. In this respect, although our economic condition is not as bad as that of many other States, we still have great need for such a youth-employment program. Our estimates and those of the Biggers' report show from fifty-five to sixty thousand out-of-school and unemployed youths in Indiana. These are centralized largely in the industrial areas, such as Indianapolis, Lake County, etc. Our chief rural problem lies in the heavy relief areas south and west of Indianapolis.

As I told you, our principal objective on the out-of-school work program is to get these youths into private employment as soon as possible. This goal is kept before them at all times, and through our guidance and counseling services, and by giving them various types of work experience, we have been able already this fiscal year to place an average of three to four hundred youths from our projects in private employment each month. During the year of 1938–39, some thirty-two hundred youths left our projects for jobs in private industry.

On your next visit to Indiana I want very much for you to see some of our workshops and recreational, clerical, and other training projects.

I know there are many problems facing you this session of Congress with respect to Federal appropriations and expenditures. However, I know also that you realize that an appropriation to take care of as many of our needy boys and girls as possible is justified, and will be appreciated by many people in our State. I am sure you will give every consideration to the worth-while activities of the National Youth Administration.

Sincerely yours,

ROBERT S. RICHEY,
State Administrator.

Wrath Against the Day of Wrath—The Foolishness of Being a Demagogue—There Is No Such Thing as Political Expediency

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

The House had under consideration the Labor-Security appropriation bill (H. R. 9007), 1941.

Mr. PLUMLEY. Mr. Speaker, I sadly appreciate and fully recognize my helplessness, as well as the futility of any attempt on my part to urge economy in expenditures from an already empty Treasury. Aided and abetted by well-intentioned but misinformed and misguided "pressure groups," the Congress has, as evidenced by votes already of record, again started the country once more down the slippery road that can lead only to inflation, repudiation, and bankruptcy.

Congress should know better and has only itself to blame for what may follow this ill-considered desire to be demagogues and temporarily popular.

Mr. Speaker, I served last year as a member of the subcommittee that is handling this bill on the floor. I feel competent, therefore, to suggest that it is obvious to one listening to the discussion that very few Members have read the bill and that even fewer have read the report. On the other hand, the subcommittee spent weeks in study of the facts and in the drafting of the bill. They are all of them, I know, just as interested to retain the National Youth Administration and to conserve the Civilian Conservation Corps as any of you. Such cuts in appropriations as they have made are based, in the first place, on their well-considered judgment that such cuts will not seriously restrict or cripple these organizations.

If you will read the report, you will have to admit that such is the fact. Not a cent of cut has been made that is not in their judgment made absolutely necessary by the depleted condition of the Treasury and the necessity for the strictest limitation of expenditures therefrom.

Therefore, let me urge you to read the bill and the report. You will be surprised to see how carefully the subcommittee has gone to work to conserve the activities and to protect the taxpayer.

The surprising thing about the discussion is the apparent lack of interest evidenced in the man who is going to pay the bills. It is easy to stand up and make a gesture of great interest in youth; but youth will not thank you for adding all these unnecessary millions to the burden of debt they must bear and pay. Read the bill. Read the report. Do both before you vote and then later discover how shallow are your pretenses and how demogogical are your words and actions in the premises.

You are just storing up wrath against a day of wrath when you add another unnecessary dollar to the load that youth must eventually bear.

I say this because I know that the bill amply provides for every justifiable need for expenditure in order to carry on the work—somewhat restrictedly, yes; but economically. If we are ever to get out of this swamp of destructive debt we must economize, and economy, like charity, begins at home.

With every wage earner in my State of Vermont whose pay check does not exceed $20 a week contributing almost 25 percent of that week's wages, or over $4 a week of it, to pay taxes hidden in food, clothing, and a hundred other places, when and while he is doing this and thereby depriving his family of so many things they need and should have, I am not going to vote to increase his taxes by voting to increase unnecessary expenditure of his money for the benefit of somebody else.

With the head of the average wage-earner's family in my State of Vermont paying out over $200 a year now in indirect and hidden taxes, I do not propose to vote to increase his burden unnecessarily.

The unskilled laborers in my district, married men with a wife and two children, who earn around $1,000 a year, are paying over $190 a year in taxes today, whether they know it or not.

The foreman, or so-called skilled mechanic, a married man with a wife and two children, living in my district, who earns approximately $2,000 a year, is paying out over $200 a year in taxes. Yes; taxes.

A great many people think that just because they pay no income tax and have no real-estate tax to pay that they are not paying any taxes.

You can talk about soaking the rich and letting them pay, but the truth is, if every cent of all the incomes of over $100,000 were to be taken by the tax collectors and paid into the Treasury, that would not furnish enough money to run the Federal, State, and local governments over 10 days at the outside; and if you took all the incomes of $5,000 and over and pooled them, you would collect only money enough to pay the cost of this Government for 3 months and a half at the outside.

I recognize the fact that you politicians know that there may be unpleasant consequences when the people realize that taxes hit every man and woman in this country; the poor as well as the rich, the wage earner as well as the big corporation, and that is why there was developed this indirect system of taxes, under which every man and woman pays without realizing that they are paying.

I am opposed to increasing these hidden taxes, or to enlarging the size of the burden, or increasing the public debt, the burden of which, in the last analysis, rests on every man and woman.

The average man does not appreciate the fact that since you are talking about the public debt you are talking about his share of it. The public debt for each individual in the United States has increased from $40 to $442—and that is what it means to you and to each individual in dollars and cents—whether you are a wage earner, a salaried worker, a professional man, or not.

You, the average man, and woman, earner, have been paying these taxes without knowing you were paying them, and you have had no way of telling exactly what your tax bill amounted to.

You, the average man, and woman, earner, have been paying, and are still paying, other peoples' taxes, those who have shifted their taxes to your pocketbook. You are the ultimate consumer; you cannot pass your taxes along; you pay.

Just because you are single and earn $18 a week and live in a furnished apartment you think that taxes cannot hurt you. Well, the truth is if you are earning $960 a year you are paying $116 in hidden taxes. I could reduce this to the items, but I am telling you if you could find some way of getting around the hidden taxes you are paying as a single man it would be the same thing as a 12-percent raise in your salary.

Now, you representatives of the people still have the nerve and the audacity to spend money like drunken sailors, and to increase the tax load which the people must bear, when by your own figures, those which you have produced, millions of dollars which you are appropriating today are absolutely unnecessary.

The farmer is the hardest hit of all. Every additional cent of debt increases the invisible mortgage on his farm. He may hold a warranty deed, but every billion-dollar debt increase means a 290-cent invisible mortgage on every acre of cropland he owns, if agriculture were to bear the burden of the load.

This gets right down into every man's pocketbook. There is a difference between spending when you have it, and borrowing to spend, or going into a morass of debt from which this country can never escape, just to let folks know you are a good fellow. You would not spend your own money that way. You cannot spend mine, or that of my constituents, that way without a protest from me.

The tax load on each one of us can be lightened only by reducing government costs. I am the last one to suggest that the tax load should be lightened at the expense of the necessary duties of government, provided such duties are efficiently performed, but I am determined so far as anything I may say and may do, that the waste and inefficient and reckless spending of the people's money must stop.

The sooner the people themselves come to realize that they—the rank and file—are the actual taxpayers the sooner there will be a stop of this program, and the better off all of us will be.

The taxpayer has some rights, as you will discover when you recover from your debauch of reckless spending in which you seem determined to indulge again. If you think that by voting to load down posterity with an unbearable burden of debt, in order to make it appear that you are broad-minded is going to get you any votes, you will wake up some day and be ashamed of the reckless way in which you have forced the taxpayer into the hands of the pickpockets of the Treasury, to make a Roman holiday with up-to-date oratorical skyrockets that will come down like a dud on your head.

It is short-sighted political expediency for you to vote these dollars away, for if you would read the bill you would discover just how much of a joke you are making of yourselves in your attempt to pose as philanthropists while you spend other peoples' money.

The C. C. C. and N. Y. A. have no better friend on this floor than I am. That is a matter of record and not a statement made for advertising purposes. Read the hearings before the committee. Examine the CONGRESSIONAL RECORD.

Because I am the friend of these organizations I deprecate all the hollow mockery which is attending the consideration of their needs. Read the bill. Read last year's hearings. Read this year's hearings. Read the bill, and then vote according to your honest judgment.

I am opposed to a renewal or revival of the policy of wanton, wasteful, extravagant, unnecessary spending of the taxpayer's money in order to perpetuate this paternalistic New Deal program, or to continue in office those who, in order to continue themselves in office have to stultify themselves, to vote for this uneconomical, unnecessary, and unjustifiable attempt to increase the amount above the President's recommendation, the Budget estimate, and the committee's report.

But read the bill. Read the report, and if you do you will say less, and think more.

Flood Control and Navigation in the Red River Valley

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1940

RADIO ADDRESS BY HON. OVERTON BROOKS, OF LOUISIANA

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

My friends, I have been asked to speak for a few moments on Flood Control in the Lower Mississippi Valley. As this is such an extensive subject, I have decided to confine my remarks to only one part of this subject, namely: The Red River Valley. While much has been said in reference to the development of the Lower Mississippi Valley, oftentimes the development of the Red River Valley in such discussions is overlooked.

The Red River, however, is one of the great tributaries of the Mississippi River and forms a confluence with the Mississippi River at Angola, La., which is about midway between Vicksburg, Miss., and Baton Rouge, La. The source of the Red River rises in Colorado and the river itself courses its way for some 1,500 miles through the great States of Texas, Oklahoma, Arkansas, and Louisiana. While its volume is not as large as some rivers, it is yet one of the truly great rivers of the world.

Development of flood control and navigation in the Red River Valley has scarcely commenced as the parent project of all development is the construction of the Denison Dam, which comes foremost. As you know, Congress has authorized the spending of $54,000,000 for the building of Denison Dam, about 12 miles west of Denison, Tex., on the boundary between Oklahoma and Texas. The purpose of this dam and reservoir is to provide:

(1) For flood control.
(2) For navigation.
(3) For power purposes.

The great dam, when constructed, will create a tremendous reservoir for the storing up of water descending from the upper reaches of the Red River and its tributaries. So tremendous will be this pool that it is difficult to calculate its real capacities.

Engineers who have spent almost a lifetime studying this project tell us that when the dam is constructed, with an orderly operation of this project, no flood from waters arising above the dam will ever be possible in the lower Red River Valley. Floods arising below the dam will be greatly diminished in intensity, size, and volume. The possibilities from flood control alone are difficult to contemplate in the great alluvial Red River Valley.

In reference to the further use of this stream for commerce (and I appreciate the fact that I am now addressing the Rivers and Harbors Congress) engineers tell us that the completion of the construction of this dam is a forerunner of the return of navigation on Red River. The orderly release of the impounded waters accumulated from above the dam into the channel below during times of drought will go far to maintain a steady volume and a minimum depth in the Red River channel. The retention

of the floodwaters in times of floods and heavy rains will do much to retard the velocity of the current of this river even almost to its very mouth where it empties into the Mississippi and Atchafalaya Rivers. By reducing this velocity the channel will become more permanent, and erosion of the banks from the swiftly moving waters will be reduced to a very minimum. This effect will be felt through the entire valley.

When the dam is completed and the exact effect upon the entire river can be measured accurately, the real work to make the river suitable for navigation will begin and in this connection the flood-control projects below Denison Dam, such as the Bodcau Dam and Reservoir located in north Louisiana; the Wallace Lake Dam and Reservoir located likewise in Louisiana; and other reservoirs being built likewise have the effect of improving the channel, insuring a steady volume of water and a gradual release, over a period of time, of the accumulated waters. The opening up of the channel of Bayou Pierre, which parallels the Red River from Shreveport to Natchitoches, La., a distance of some 80 miles, with the resulting improvement of drainage behind the Red River levees and the resulting aid to the proper release of waters into the Red River is certainly worthy of mention. All of these projects and many others are stories in themselves. Did time permit I could present each one individually, in detail, to you here today.

There are those who scoff at the building of the Denison Dam. There are those who attempt to point out disadvantages arising out of the construction of this project. They say that land will be necessary in the construction of the reservoir. They say that this land is available for farming and for the mining of oil. They point out these petty disadvantages as reasons why this great project must be stopped and must be forever abandoned. They say force may be used to stop the building of this Denison Dam.

If there is oil under the land which may be necessary for a reservoir, it can be mined even though the project is constructed and the land is inundated. The amount of land is small, comparatively speaking, which will be used as the bed of the pool in which water is stored when one considers the vast possibility of irrigation and of hydroelectrical energy. Millions of acres may be reclaimed by irrigation methods and millions of people may be put to work by the creation of low-priced electrical energy.

What are these local disadvantages in comparison with the development of a great empire in the southwestern part of the Nation? What are they in comparison with the development of the Red River Valley?

We who live in the heart of this valley, midway between its headwaters and its mouth, know the tremendous possibilities available from the proper use of one of God's greatest natural resources. We should have a large voice in the decision of a matter which means so much to millions of people who live in this area of the Nation. We want to see this work completed. We want to see further development in the way of flood control until all danger of floods in the Red River is forever eliminated. We want to see the work continue until commerce is restored to this river and until thriving towns feel the beneficent effect of low water freight rates giving a stimulus to the activities of those who build and maintain the great Southwest. We who are most vitally concerned ask, require, and demand that we have the use of the God-given waters of the Red River Valley for the purpose of flood control and navigation.

Mr. Dewey—Say "Thank You"

EXTENSION OF REMARKS
OF
HON. KENT E. KELLER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1940

Mr. KELLER. Mr. Speaker, I have read the speech of Hon. Thomas E. Dewey, delivered at Chicago last night. In this he criticizes the Democratic Party according to his best prosecuting-attorney style. He properly flays the abuses that have been permitted, and he did not leave out a single one. If he had stopped at that it would not have been so bad. But he ends his diatribe by making the usual foolish Republican charge that this administration is responsible for the unemployment which everybody knows we inherited from the Republican Party as the result of the most terrible panic and depression in the history of our country.

Of course it is expecting a lot from a prosecuting attorney to require of himself the statement of facts which he always requires of others. But even the buzzing of the tremendous Presidential bee should not destroy all the generosity which is supposed to reside in the hearts of men.

I refer to a statement in Mr. Dewey's speech in which he says:

> For the past 5 years I have had 25 W. P. A. employees doing special accounting investigation in my office.

And now I offer a photostatic copy of a letter from Hon. Thomas E. Dewey before the bee was buzzing so loudly as it is at present, addressed to Mr. Corrington Gill, Assistant Administrator, Works Progress Administration, Washington, D. C.

COUNTY OF NEW YORK, DISTRICT ATTORNEY'S OFFICE,
New York, April 7, 1938.

Mr. CORRINGTON GILL,
Assistant Administrator, Works Progress Administration, Washington, D. C.

MY DEAR MR. GILL: I am gravely concerned at the possibility of interruption of the W. P. A. project now attached to this office, the news of which you conveyed to me yesterday. The discontinuance of the project would be nothing short of a calamity in the administration of criminal justice.

For the past 2 years this project has been continuously assisting in racket investigations of great importance. These successful prosecutions would not have been possible, with one exception, without the tremendous volume of accounting labor expended in each. Unless intimately connected with the office, no one could have any conception of the work done by the 25 W. P. A. accountants and the 10 staff accountants regularly attached to my office. Literally thousands of full sets of books have been examined, the suspicious items isolated and their histories developed in form to compel the testimony of reluctant or intimidated victims of organized crime.

By way of illustration, my office has been working for more than 2 years upon an organized monopoly in the electrical industry maintained by fraud and violence. This contractor's monopoly has, in my judgment, cost the National, State, and municipal governments, for electrical work in the city of New York, many millions of dollars in the past decade.

This investigation involves the exhaustive examination of the corporate books and records of several scores of contractors whose total annual business aggregates many millions of dollars. Only in this way can the evidence be procured. With a small staff burdened with many other duties, I think I can fairly state that this investigation would break down completely without the assistance of the W. P. A. project. The savings to the Federal Government alone, after the monopoly has been broken, would, in my judgment, pay for the continuance of the W. P. A. project for 10 years.

One other illustration may be helpful. For more than 4 years a group of professional criminals directly connected with the notorious Lucky Luciano have, under the guise of a legitimate labor union, extorted money from workers and employers in the taxicab industry in New York City. Officers of four of the largest companies and many of their employees have been intimidated or beaten and their cabs seriously damaged or destroyed. By combining the extensive and skilled accounting work largely performed by men on the W. P. A. project with an investigation by my office, this racket has been broken and the defendants are either in custody or fugitives from justice. The economic loss to the community as a result of this racket has been tremendous and its destruction by arrests during this past week made an important contribution to the peace and security of industry and labor in New York.

In each of these two illustrations the work is going forward, with a vast amount still to be done. There are at least a dozen other situations of almost equal magnitude, in each of which it is imperative that the accounting work be continuously available.

This need for additional accountants, I hope, is not permanent but will continue for another year or more. It is a project of the highest social value to the community. While the expense of the project does not appear to me to be substantial, on a comparative basis, it might be possible to make some reduction in cost if that would be helpful.

Should any further information be useful to you in presenting this matter to the President, I will be happy to provide it. It is my sincere hope that authority for the continuance of the project can be procured.

With kindest personal regards,
Sincerely yours,

THOMAS E. DEWEY.

And after reading this letter, we get an entirely new appreciation of the W. P. A. and the extraordinary service rendered by them. Mr. Dewey's letter shows two things for which he ought to be going around saying "thank you" to the Democratic Party, instead of making faces at it. Because it appears that the credit for breaking up the gangster rings is due very largely to the fine work of these W. P. A. workers whom the Democratic Party has furnished to Mr. Dewey for 5 years.

The second service for which Mr. Dewey should be saying "thank you" is the resulting fact that these W. P. A. workers have, through their intelligence and labor in catching these gangsters, made possible to Mr. Dewey the possibility of being considered as a Presidential nominee. He ought to be thankful for that; because, if these W. P. A. workers had not done their work, it is entirely questionable whether Mr. Dewey would ever have thought to aspire to this high office.

Read the letter yourself. It is a photostatic copy of the original and tells the story of a great service by humble men, whose work Mr. Dewey has continued to use on W. P. A. wages without trying to raise their pay to something commensurate with their value.

Women and Cancer

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1940

RADIO ADDRESSES BY HON. EDITH NOURSE ROGERS, OF MASSACHUSETTS, AND DR. THOMAS PARRAN

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me today over the Columbia Broadcasting System, and also the radio address of Dr. Thomas Parran, Surgeon General of the Public Health Service:

Many of you who are unfamiliar with what has been going on in this field in recent years may wonder why I choose a title like "Women and Cancer." I'm not going to give a medical lecture and tell you how much cancer women have or what they ought to do if they fear they have it—that is something that physicians must do. No; I want to discuss briefly just what women are doing as a group and as individuals in the fight against cancer.

Today the control of this disease is insolubly bound up with the activities of women throughout the Nation. Let me give you a bit of history. In 1913 the American Society for the Control of Cancer was formed. Until 1936 its energies were devoted almost entirely to cooperating with National, State, and local medical organizations to raise the standards of diagnosis and treatment of cancer. Four years ago, however, the leaders of the society decided that they must make an intensive effort to enlist the cooperation of the general public.

The reason for this was simple: great progress had been made in research and in medicine, and physicians were able to cure cancer, but only in its early stages. Since cancer is usually painless in its early and curable period, too few people who had the disease went to their physicians in time. How were men and women to be taught the importance of going to their doctors early? That was the problem facing the American Society for the Control of Cancer.

To solve it, the society approached a small group of women, most of whom were associated with the General Federation of Women's Clubs, and asked them to undertake a great task, the education of the public in the essentials of cancer control. Women responded quickly.

Leaders were found in State after State to carry on with the cooperation and under the supervision of outstanding physicians. In 1937 the Women's Field Army of the American Society for the Control of Cancer conducted its first educational campaign in 39 States. The next year Congress enacted a measure, which I sponsored, setting aside April as cancer-control month, and requesting the President to issue annually a proclamation appealing for public help in this great work.

Today this peacetime army is under way in 46 States and the District of Columbia. The original handful of volunteers has grown to tens of thousands of volunteers. Last year there were information centers on cancer—that is, local units of the field army—in half the counties of the Nation. This year we expect to have these focal points of cancer education in nearly every county in the country.

The Field Army is a great achievement of which every woman should be proud. Less well known is the fact that many women have done, and are doing, fine pieces of work against cancer in medicine and in research. Last month leaders of the Women's Field Army, at the national assembly in Louisville, made public the names of 11 women who "should be honored as pathfinders, as craftsmen, and as fellow workers by all those concerned with saving lives from cancer." The achievements of these women are too long and too technical for me to list them here, but it may be said that they were cited for their study of cancer-producing chemicals, for experiments in the physiology and genetics of cancer in mice, for work on the origin of cancer of the lung, and for developing methods of regulating and gaging dosage in X-ray and radium treatments. These are significant contributions to cancer control.

Two of the women have done unique work the importance of which all of you will readily appreciate. An essential in the control of cancer, according to medical authorities, is a complete annual physical examination for those over 35, however well they may feel.

The importance of these examinations is being demonstrated graphically by Dr. Catherine Macfarlane, of Philadelphia, who, as an experiment, is giving a pelvic examination semiannually to 1,200 women for 5 years. The women are volunteers. In the first series of examinations, three early, unsuspected cancers of the cervix were discovered. There is every reason to believe that these cancers have been cured. Three early cancers in 1,200 women—how many cancers would be uncovered in examinations of 25,000,000 women? In New York City another woman physician, Dr. Elise Strang L'Esperance, has formed what she calls cancer-prevention clinics where anyone fearing they have cancer may go for a complete physical examination. Since the formation of these clinics, 27 early cases of cancer have been discovered. From the work of these two women physicians we have ample evidence of the value of comprehensive physical examinations, evidence that I hope all those who are listening will take to heart.

Now, there was one other women cited at Louisville whom I should like to mention. She is Dr. Anna C. Palmer, of Milton, Mass., president of the Cured Cancer Club. Dr. Palmer is 83 years old and serves as a splendid illustration of the fact that today cancer is curable and is being cured throughout the country. One of the strange and difficult things about this disease is the way the terror that had some justification 20 years ago still clings on in many minds. The women of the country, the Women's Field Army, the women physicians, the women research workers, are all united to fight this fear and to replace it with an intelligent alertness.

In closing, I should like to say a few words about a measure that I have introduced into the Seventy-sixth Congress. Its purpose is to expand the National Cancer Institute Act by providing funds through grants to States and private institutions on the basis of population, the death rate from cancer, existing facilities for diagnosis and treatments, and the financial needs of the respective States.

Federal funds are to be matched by equal amounts by the States. This measure would do for cancer what was done by the Venereal Disease Control Act in 1938. My bill conforms in principle and structure to the legislation embodied in title 6 of the Social Security Act.

If this measure is enacted, we shall be better equipped to face and conquer cancer. In my opinion this bill will implement and make more valuable the fine education women are doing everywhere. Throughout the country women are doing their bit in their daily lives in the war against cancer.

You see, there is a place and a duty for everybody during April—the cancer-control month. For your own good, follow the advice of the Women's Field Army: Have a complete physical examination, secure the free literature on cancer control and read it. For the good of others, enlist in the Field Army and help spread its message to the millions who need it.

ADDRESS BY DR. PARRAN, SURGEON GENERAL OF PUBLIC HEALTH SERVICE

With chaos and destruction of life elsewhere in the world it is increasingly important that we in this country redouble our efforts in disease prevention and life saving. One of our first lines of attack should be against cancer.

The people have accepted the idea that a disease which takes a sweeping toll of lives each year from the productive ages of our population; a disease which knows no State or county boundaries; a disease which is so costly in its diagnosis and treatment that but few of its victims can pay the costs unaided—is a public-health problem. Cancer is such a disease.

It is the realization among medical men of the possibility of cure for the cancer sufferer that motivates modern control efforts. Some 25 years ago professional groups and interested citizens joined to launch in the United States a movement which had as its objective the educating of physicians and the public to an effective understanding of the primary importance of early diagnosis and prompt expert treatment. As has so frequently been the case in the advancement of health in this country, the private voluntary agency led the way to national action. The movement, initiated by the American Society for the Control of Cancer, has widened in scope and its influence is reflected by a growing national interest in cancer, and by increased support of research and the provision of diagnostic and treatment facilities.

Under the command of the Women's Field Army units in 46 States and the District of Columbia, 23,000 volunteer workers have enlisted to fight cancer with knowledge. One hundred and thirty thousand others have enlisted to support them.

The growing interest in cancer has been further accelerated by the joint efforts of the American Medical Association, the American College of Surgeons, and the National Cancer Institute of the Public Health Service.

Experience during the past 25 years, however, has clearly indicated that, important as it is, education alone will not stem the mortality from cancer. We must know better how to prevent and cure the disease. Also, the advance in scientific knowledge and improvement of technical skills and tools have placed cancer in the category of high-cost diseases. Organized services, special equipment, and physicians highly trained in tumor pathology, radiology, and surgery are essential in modern diagnosis and treatment of cancer. Unless these services and facilities are readily available to an extent comparable with education, we may fail in our objective—early diagnosis and prompt, expert treatment.

In 1935 only 4 States had recognized the importance of cancer as a public-health problem and taken steps for more widespread application of scientific knowledge of cancer—Massachusetts, New Hampshire, New York, Connecticut. Now 9 States have cancer-control laws and 17 others have instituted some sort of cancer-control work. A few localities have competent diagnostic and treatment facilities within fairly easy reach of all; but it is distressing how little is being done in many areas to apply the knowledge we now have to cure cancer. In fact, there are in the United States only 307 cancer centers or clinics which meet the minimum standards set up by the American College of Surgeons. We need many more.

Every State should have a cancer-control program which would include at least the following:

1. Approved cancer clinics where expert diagnosis and treatment is available to all, regardless of ability to pay.
2. An educational program for the public.
3. Free laboratory services to physicians for the competent examination of tissue specimens.
4. Post-graduate training of doctors to keep them informed of the latest advances in diagnostic and treatment methods.

Established in 1937, the National Cancer Institute of the Public Health Service promotes coordination of cancer research; procures and lends radium to hospitals for treatment of cancer sufferers; provides fellowships for research; and cooperates with State health agencies in prevention, control, and eradication of cancer. Nineteen individuals and institutions have received grants-in-aid of research in the amount of $200,000. Thirty-six doctors have been given training for a period of 1 to 3 years in diagnosis and treatment of cancer. Through the knowledge they acquire 36 communities will have available the services of competent cancer specialists. Twenty-four scientists have been granted fellowships for research. Radium has been loaned to 48 hospitals and cancer clinics.

What the National Cancer Institute will eventually mean to the Nation in the saving of lives may only be conjectured at this time. Already we can see tangible and immediate benefits to present cancer patients through wider education and improved facilities for diagnosis and treatment. Also, it promises much for the future through the advancement of knowledge.

We have not yet put our finger on the true cause of cancer, nor have we discovered a specific means of prevention. Our present knowledge is not enough. Research must be continued. No investigator in the cancer field is pessimistic about the ultimate outcome of the search. We have complete faith in the effectiveness and power of the scientific method which already has resulted in the control of many diseases and the saving of countless lives. Give us a few more decades and we will conquer cancer also. In the meantime let us apply the knowledge we now have, find the disease early, and give prompt, expert treatment. Cancer can be cured.

Cost of Production Against Parity Payments

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. LEMKE. Mr. Speaker, the Senate has amended the agricultural appropriation bill by inserting $212,000,000 for parity payments. Of course, this $212,000,000 is an insult to our intelligence. To give the farmers parity payments on all of their products under our present agricultural program would require $7,500,000,000. Of course, the Treasury could not stand that. The whole program is insane—it is a flop. But as long as the Members of Congress have not sufficient independence and courage to remedy that insane situation I shall vote for parity payments, and shall vote to increase them.

May I ask my conservative colleagues on both sides of the aisle, and especially on the Republican side, why, in place of opposing this $212,000,000 appropriation, you do not do something constructive. Why do you not help us do away with these subsidies once and for all? Why do you not step up to the Speaker's desk and sign petition No. 5, which now has 118 signatures on it? We need just 100 more. This petition has for its object the bringing up for consideration and passage of H. R. 2371, the nonpartisan cost-of-production bill.

If you, my friends on both sides of the aisle, are sincere and wish to protect the Treasury, if you mean business and really want to balance the Budget, then help us get cost of production, 100 percent parity, for the farmers on that part of their products domestically consumed. The passage of this bill will balance the Budget within less than a year. It comes with poor grace to continue to oppose parity appropriations when you permit the condition to continue which makes those appropriations imperative. Remove the cause and then these appropriations will become unnecessary.

You will not be able to fool the farmer again with high-sounding phrases such as farm chemurgy, equality with industry, and 75 percent of parity. The farmer is through with that kind of slush. This time you will have to shoot square with him or he will shoot you with a blank ballot on election day. He is more interested in what you do for agriculture than in the particular political label you are branded with. He wants you to balance the Budget by giving him cost of production. He knows that laws are passed by Congress, not by the President. He asks that you accept that responsibility or forever hold your peace on parity appropriations.

Eighteen Members of the Senate and 16 of the House, realizing that the Secretary of Agriculture's farm program has been a flop, introduced a nonpartisan cost-of-production farm bill. These Members know that during the last 6 years of farm regimentation, of the crazy policy of destruction and curtailment of agricultural wealth, about 1 farmer out of every 5 lost his farm by mortgage foreclosure, tax, or judgment sale. The price of that erroneous policy comes too high.

This cost-of-production bill would increase the farmers' yearly income $7,500,000,000. Since every dollar of farm cash income increases the national income by $7.55, therefore the national income would be increased by $56,625,000,000. That would mean prosperity by plenty and not starvation by scarcity—by the curtailment and the destruction of agricultural wealth.

This bill provides that as a minimum price the farmer is to receive cost of production for that part of his products domestically consumed. There is no difference between a cost-of-production price and a real parity price. But, since the Secretary of Agriculture does not understand what cost of production means, the House Committee on Agriculture has amended H. R. 2371 so as to read "parity prices" in place of "cost of production prices." Now the few followers that the Secretary still has can sign petition No. 5 without hesitating.

This bill would not cost the Federal Government one penny. When it becomes a law there will be no further need for subsidies to the farmer. There will be no further need of the 27 varieties of Federal agencies now riding on the farmers' back. There will be no further need for an army of Federal employees to regulate the daily lives of the farmers. When this bill becomes a law the Government will no longer have to bail out the farmer—the farmer will bail out the Government.

To those of my colleagues who are so afraid of price fixing permit me to suggest that ever since 1876 we have fixed prices by acts of Congress.

There are 23 valid acts of Congress, dating from August 1876 to June 1938 which authorize and direct Federal agencies to regulate prices, rates, charges, wages, and services, directly protecting practically every economic group, except agriculture. Agriculture remains the unprotected base of this economic pyramid.

Act of August 15, 1876 (19 Stat. 200, p. 5; U. S. Code 25: 261): Commissioner of Indian Affairs authorized to prescribe prices at which goods are to be sold to Indians.

Act of October 15, 1914 (38 Stat. 730, c. 323, p. 2): Supplemented Antitrust Act of 1914, prohibiting difference in prices to purchasers to lessen competition, and so forth.

Act of June 3, 1916 (39 Stat. 213, p. 120; U. S. Code 50: 80): Secretary of War authorized to determine prices to be paid for military supplies in time of war.

Act of September 7, 1916 (39 Stat. 735, p. 18; U. S. Code 46: 817): Shipping Board (i. e., Maritime Commission at present) authorized to prescribe just and reasonable rates, fares, and charges of common carriers by water in interstate commerce.

Act of August 10, 1917 (40 Stat. 281, 284–286): Fixed guaranteed prices of wheat; authorized President to fix price of coal and coke during period of war.

Act of October 6, 1917 (40 Stat. 421 (c)): President authorized to fix prices of articles necessary for conduct of war, produced under license to use processes, and so forth, owned or controlled by an enemy or ally of an enemy.

Act of February 28, 1920 (41 Stat. 483–487; U. S. Code 49: 6, 15). Interstate Commerce Commission authorized to fix charges, etc., of common carriers in interstate commerce, etc. (Amended by act of Mar. 4, 1927, 44 Stat. 1447, p. 2.)

Act of June 10, 1920 (41 Stat. 1073, pp. 19, 20; U. S. Code 16: 812, 813): Federal Power Commission authorized to regulate charges of licensees under Federal Power Act, if no State commission has such regulatory power.

Act of August 15, 1921 (42 Stat. 166–167; U. S. Code 7: 211, 212): Secretary of Agriculture authorized to prescribe charges, etc., of stockyard owners or market agencies in certain cases.

Act of September 21, 1922 (42 Stat. 1000, p. 5 (c, d)): Authorized Secretary of Agriculture to designate as "contract markets," governing boards which prevent misleading reports or manipulation of prices of grain in interstate commerce.

Act of June 25, 1926 (44 Stat. 769, c. 674): Provided that owners of potash rights agree to market the potash produced at a reasonable price.

Act of May 18, 1933 (48 Stat. 65, p. 12; U. S. Code 16: 831k): Tennessee Valley Authority to fix schedule of resale prices in contracts for sale of surplus electric power.

Act of June 19, 1934 (48 Stat. 1072, p. 205; U. S. Code 47: 205): Federal Communications Commission authorized to prescribe charges for communication by wire or radio or transmission of energy.

Act of June 6, 1934 (48 Stat. 889, p. 9) (Securities Exchange Act of 1934): Prohibited manipulation of security prices.

Act of August 14, 1935 (49 Stat. 649, ch. 532; U. S. Code Supp. 7: 218c): Act of August 15, 1921, above, made applicable to live-poultry dealers and handlers.

Act of June 30, 1936 (49 Stat. 2036, ch. 881, 2039, p. 6; U. S. Code Supp. 41: 35, 40): Secretary of Labor to determine minimum wages to be paid by Government contractors.

Act of April 26, 1937 (50 Stat. 77–81; U. S. Code Supp. 15: 833): National Bituminous Coal Commission authorized to prescribe maximum and minimum coal prices for code members.

Act of June 3, 1937 (50 Stat. 247 (f); U. S. Code Supp. 7:608c): Secretary of Agriculture authorized to fix prices for milk.

Act of August 17, 1937 (50 Stat. 693 VIII): Amended antitrust laws relating to contracts in restraint of trade by providing that contracts prescribing minimum prices which are lawful in intrastate transactions are not to be rendered illegal in the resale of such commodity at the minimum price elsewhere.

Act of September 1, 1937 (50 Stat. 904, par. 201): (Sugar Act of 1937.) Provided for regulation of sugar prices to consumers.

Act of June 21, 1938 (52 Stat. 822–824; U. S. Code Supp. 15:717c, 717d): Federal Power Commission authorized to fix charges of natural gas companies.

Act of June 23, 1938 (52 Stat. 955, par. 5; U. S. Code Supp. 46:1131): Maritime Commission authorized to prescribe minimum-wage scales in contracts under Merchant Marine Act. Same (p. 964, par. 43; U. S. Code Supp. 46:845a). Maritime Commission authorized to prescribe rates, etc., of carriers subject to Intercoastal Shipping Act.

Act of June 25, 1938 (52 Stat. 1064, par. 8; U. S. Code Supp. 29:208): Administrator of Wage and Hour Division authorized to fix minimum wages.

In conclusion permit me to suggest that every manufacturer, every wholesaler, and every retailer fixes his price. The farmer is the only one who, when he buys something, asks "How much is it?" and when he sells something asks "What will you give me?"

Under these conditions, may I ask the Members of Congress to have the decency to sign petition No. 5 and help us get H. R. 2371 up for discussion and passage? Even if you are not naturally good-natured, good sportsmanship, I am sure, will empel you to sign petition No. 5 and give us a chance.

Ambassador Daniels

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. COOLEY. Mr. Speaker, in view of the unjustified attack made on yesterday by the distinguished gentleman from New York [Mr. FISH] upon the present administration and the Ambassador to Mexico, but without any desire to further dignify the gentleman's remarks, I would like to call to your attention a few pertinent facts with regard to this Government's attitude toward the situation complained of.

The gentleman's assertions with regard to the Mexican policy of the administration and the work of Ambassador Daniels relate specifically to the expropriation policies of the Mexican Government. It is said that American farm lands and oil properties have been virtually confiscated by the Mexican Government without vigorous protests from President Roosevelt or the State Department and that this alleged attitude encourages a continuation of "lawless and ruthless confiscation" in other countries.

It is not the case that there has been failure vigorously to protest the expropriations in question. On the contrary, the Department of State in notes dated July 21, 1938, and August 22, 1938, most vigorously protested against expropriations without payment of prompt, adequate, and effective compensation. I am informed that protests to the same effect have been orally delivered to the Mexican Government on numerous occasions by the Secretary of State and by Ambassador Daniels. In fact, I am informed that no suitable opportunity has been omitted for calling the attention of the Mexican Government to the views of the United States on the subject.

The reports of proposed nullification of certain titles in Campeche, from which American chicle companies derived titles, that gave rise to the present discussion were based on a decree now being contested in the Mexican courts. It is noted that the decree itself provides a period of 1 year within which the derivative companies may apply for confirmation of their right in part or all of their holdings. Moreover, according to information I have just received the applications for injunction by two of the companies have been accepted by the appropriate Mexican Federal court, which has suspended action until the case is decided by the supreme court, probably not before November. The third company decided not to seek an injunction at present. Ambassador Daniels has extended every proper assistance in this and numerous other cases involving the protection of American citizens or interests.

As to the expropriation of American-owned lands and the obtaining of compensation therefor from the Mexican Government, attention is invited to the note of the United States dated November 9, 1938, and to the reply of the Mexican Government to Ambassador Daniels dated November 12, 1938, which are available at the State Department, effecting an arrangement for the payment of compensation for American-owned lands taken by the Mexican Government in connection with this program. It is to be noted that the Mexican Government on May 31, 1939, in compliance with this arrangement, delivered a check to Ambassador Daniels for $1,000,000 on account of these claims. The American section of the Agrarian Claims Commission, established in pursuance of the agreement mentioned, has practically completed a detailed study of more than 250 claims submitted by American citizens whose lands were taken. I am advised that this work is being rapidly pushed toward conclusion.

The interest of Ambassador Daniels in his duties is further evidenced by the fact that in 1936 the American Chamber of Commerce in Mexico City passed a resolution thanking

him for his hearty cooperation with and interest in the chamber's affairs since his arrival in Mexico. The Ambassador has continued this interest to the present time. He has made a number of public addresses and in all of these he has emphasized the history, traditions, ideals, and greatness of our country. American tourists, businessmen, and organizations visiting Mexico have always found him desirous of assisting them in every possible manner with a view to making their visits as pleasant and profitable as possible.

While it is the case that no solution has yet been found for the problems arising out of the expropriation of American-owned oil properties in Mexico, it cannot accurately be said that there has been failure on the part of the United States to make known its consistent view that the United States is unable to recognize the legality of expropriations unless accompanied by the payment of prompt, adequate, and effective compensation. The Secretary of State, the Under Secretary of State, and Ambassador Daniels have on various occasions invited the attention of the Mexican Government to this policy and have called attention to the fact that the views expressed in the notes of July 21 and August 22, 1938, apply with equal force to the oil expropriations.

In this relation, public statements were issued by the Secretary of State on March 21 and March 30, 1938, and by the Under Secretary of State on August 14, 1939, on the subject, these being only some of a number of statements made publicly and to Mexican officials by responsible officers of the United States Government.

But for burdening this RECORD, I would include in my remarks the notes and communications I have referred to. As I have said, they are available at the State Department to anyone interested, and it is to be regretted that the distinguished gentleman from New York did not familiarize himself with the situation before waging his unwarranted attack upon the administration and the Ambassador to Mexico.

With further reference to the work of Ambassador Daniels, attention is invited to the fact that it may be said that during a trying period in which Mexico was seeking to perfect a program of social reform and criticism was rife of that program and efforts were made to take advantage of that situation to create ill will between the two countries, Ambassador Daniels has been a realist and very successful in maintaining an attitude of calm examination of such of the issues arising as were of concern to the United States. As has been seen, the land expropriation matter is in course of settlement. There can be no question of the views of this Government in the oil matter.

It is scarcely possible to exaggerate the value of the services of Ambassador Daniels in fostering proper social and cultural relations between the people of the United States and the people of neighboring Mexico. At a time when the passions of the peoples of the world were easily aroused, his sane and friendly attitude toward difficult and trying problems has served well in maintaining a proper perspective as to the relative merits of these questions. An emotional approach to them could easily have resulted in disastrous effects upon the relations between Mexico and the United States.

In my opinion Ambassador Daniels should be congratulated rather than condemned upon the manner in which he has discharged the duties of his office.

Appropriation for Wage and Hour Division

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. BRYSON. Mr. Speaker, if we can be persuaded to deny the Wage and Hour Division an appropriation sufficient to insure proper enforcement of the Fair Labor Standards Act, what then of the millions of American workers whose right to lead a finer, better, and happier life was affirmed when the wage-hour law was placed on the statute books? The harm that may be done by letting down these men and women at this time is something which I fear to contemplate for it will most certainly leave on the march those forces of reaction which are now moving against the legislative gains of recent years. Permit this fact to be fully understood by the Members of this House, who in the great majority, stand for principles and acts of social and economic betterment, and we shall defeat this effort to jeopardize the future of the wage-hour law.

In its report to the House what did the Appropriations Committee say about the Wage and Hour Division? Words to this effect, it must be admitted, and nothing else: "We have made a drastic reduction in the Budget estimate for the Wage and Hour Division because we believe that the Fair Labor Standards Act should be amended."

The reduction, according to the committee report, was made not because the Budget estimate was found in error or excessive, not because the committee could see no need for expansion in the Wage and Hour Division, but simply because it was felt that the Fair Labor Standards Act should be amended. Thus we find that those seeking to make a damaging slash in this appropriation bill have attempted neither to discount the estimates furnished by the Budget Bureau and Wage and Hour Division nor to justify the sweeping reduction which they recommend.

This furnishes us once more with the spectacle of an indirect attempt to destroy the purpose and effectiveness of the Fair Labor Standards Act. It is at least significant that every serious attempt on the life of the Fair Labor Standards Act has been of an indirect, nicely concealed nature. Note carefully the fact that few, if any, have cried out "abolish the act," but how we have heard the whisper "amend, amend," "reduce, reduce."

However we may view the matter the facts are:

First. That Congress has placed on the statute books a law which guarantees to American workers protection against sweat-shop labor practices.

Second. That enforcement of this law against sweat-shop labor practices has been declared the duty of the Wage and Hour Division of the Department of Labor.

Third. That if Congress fails to provide the Wage and Hour Division with the necessary funds to meet the enforcement requirements, the law cannot be properly enforced; if the law is not properly enforced it will soon be lost and protection against sweat-shop labor practices for millions of American men and women will be at an end.

I am unwilling, quite unwilling, to see the curtain dropped for thousands of workers throughout the Nation who look for continued protection under the wage-hour law. I know what this act has meant to the people of my State, South Carolina, where shortened working hours and increased pay has been extended to an estimated 25,700 employees.

Fear of further administrative difficulties was advanced in the Appropriations Committee report. Let us put aside these fears insofar as the Wage and Hour Division itself is concerned. These fears belong to the past, I feel sure. We should have every reason to believe that Colonel Fleming, who has already won the confidence of those who have observed his activities, will, to use the language of the committee report, "satisfactorily work out means and methods of administering this act that will be in conformity with elements of reasonableness and good judgment." But if the best work is to be done, Congress must stand behind the Wage and Hour Division and provide funds necessary to assure uniform enforcement of the act.

In fairness to those employers who have voluntarily complied with the law, we must see that the Wage and Hour Division is adequately staffed to check violations of the law. We shall commit an injustice against those who are abiding by the law if we do not provide the means to restrain those who are violating it.

As I make this plea for the protection of honest employers against the chiselers, I am thinking particularly of the splendid manner in which numerous textile-mill executives in my own congressional district have complied with the provisions of the act. I am proud to say that, although the textile employers of South Carolina expressed some alarm as to the effect of increasing wages in that industry without a differential, they have made no attempt to block application of the 32½-cent minimum set last October. No injunctions against the act have been filed in South Carolina.

It is my hope and belief that the industrial leaders of the southeast will face the future with the Wage and Hour Division in a cooperative frame of mind. Such will be the case, I predict, if we furnish the Wage and Hour Division with sufficient machinery to do a good job of enforcement.

The Farmer's Radio in Danger

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1940

ARTICLE FROM THE NATIONAL GRANGE MONTHLY

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I desire to call to the attention of the House to a new type of bureaucratic domination now being attempted in Washington, and therefore I am asking consent to have printed in the RECORD the following article which appeared in the April issue of the National Grange Monthly:

[From the National Grange Monthly]

THE FARMER'S RADIO IN DANGER—A SERIOUS SITUATION AT WASHINGTON—CALLS FOR UNITED ACTION BY THE RURAL PEOPLE

Radio broadcasting service to American farmers is in jeopardy, according to reliable information in Washington. With more than 70 percent of the farm homes of the Nation dependent upon service from "clear channel" radio stations, it is reported that there is a possibility that the Federal Communications Commission, the body that regulates radio, may curtail these stations in order to give more service to the big cities.

It has well been said that "eternal vigilance is the price of liberty." This truth applies to the threat confronting the farmers and other remote radio listeners. While our liberty is not involved in the customary sense, the right and opportunity of farmers to hear the Nation's best radio programs at night is at stake.

The danger to radio listeners living on many farms and in remote areas springs from the possibility that the Federal Communications Commission may abandon its heretofore consistent policy of having "clear channels"; that is, certain channels on which stations of high power render radio service over wide areas.

CLEAR CHANNELS SERVE AGRICULTURE

According to the Commission's own surveys of rural listening, more than 70 percent of American farmers have to rely on clear-channel stations for radio reception at night. If these channels are broken down and more than one station is permitted to operate on the same clear channel at night, the service of the present stations operating on these channels will be severely curtailed. Farmers living outside the service areas of local and regional stations, now getting good service from clear-channel stations, will then find their radio service damaged, if not destroyed.

When we realize that television, which offers such a great potential service in education and entertainment for the public, will be essentially a service for city people, and that most farmers will get practically no benefit from it, we should be eternally and doubly vigilant to protect the service that the farmers are now getting from broadcasting.

Television is developing on the higher wave lengths, which do not carry much beyond the horizon from the transmitter, and this will cause television stations to be located at the highest point in a city, usually a high building. The great majority of farmers live beyond the horizon of the highest buildings in their nearest cities. Since there is apparently very little that can be done now to get television to farmers, it is all the more important that farmers and those living in small towns, particularly in remote areas, should become articulate and make known the fact that they do not wish to lose the radio service they are now getting.

When the first Radio Commission was created back in 1927, agriculture had a representative on the Board who received his appointment after endorsement by the National Grange and other farm groups. The addition of a farm representative on the Board resulted satisfactorily for agriculture, because the system of clear channels was established and farmers for years have been getting satisfactory service as a result. Probably because the reception has been so satisfactory, farmers and remote listeners have become lulled into a sense of false security.

FARMERS NO LONGER REPRESENTED

But now, since everlasting change seems to be the guiding motive of various administrative agencies in Washington, and because there are new members on the Federal Communications Commission, without a representative of agriculture among them, there is justification, perhaps, in concluding that the members of the Commission as now constituted are not so intimately acquainted with the listening habits of the farmers. Under these conditions, it appears that the farm population must again assert itself in order to protect the radio service which today is at its disposal.

The reason for breaking down clear channels comes fundamentally from a demand for more stations in cities, most of which are oversupplied with radio service from their local, regional, and clear-channel stations. Consequently such a breaking down of the clear channels as it contemplated would make the city listener richer in radio service, and the farm listener poorer.

Radio has become an essential source of news to the farmer. He depends upon it for market information, entertainment and education, as well as for cultural and religious programs not otherwise available; it is therefore apparent that it would be unwise and unfair for any Federal agency sitting in Washington to arbitrarily decide that clear-channel radio service to farmers and remote listeners is no longer necessary. In fairness to the members of the present Communications Commission, it should be said that apparently they have simply not heard the farmer's side of the story.

One of the surveys made by the Commission itself shows that 80 percent of the area of the United States is served at night only by clear-channel stations. As has already been stated, 70 percent of the people living in rural areas are dependent upon the same channels.

This may be stated in another way, depending upon facts gathered by the Commission's own survey: There are 50,605,000 persons entirely dependent on clear-channel stations for nighttime broadcasting facilities, most of whom reside in rural areas. Perhaps these statistics have been buried in the Commission's own files and are not being given the consideration to which they are entitled.

Under all the circumstances, farmers and others who dwell in the big open spaces of the country should become vocal. It would be entirely proper for residents of the rural districts to write the Federal Communications Commission, Washington, D. C., requesting that nothing be done to impair the fine radio service we now have. The point should be emphasized that clear-channel radio service for people living in small towns and in the rural sections is just as necessary today as it ever was.

Business Recovery Can Come Now or After the Election—It Is up to Mr. Roosevelt

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1940

EDITORIAL FROM THE BLOCK NEWSPAPERS

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein an editorial which appeared in the Block newspapers on a recent date. This editorial follows:

[From the Block newspapers]

A rather strange situation exists among our voters if we are to believe the many surveys and polls which have been taken.

These prove that businessmen (from large and small business) as well as people who have good-paying jobs are almost unanimously against Mr. Roosevelt and most of the New Deal measures, whereas the great majority of the men and women earning low wages and those on part-time work, as well as people on W. P. A. and relief, are in favor of Mr. Roosevelt.

One could imagine that men at the head of large industries, as well as the businessman who is still doing pretty well, would be among the first to say, "Why change, we are doing all right." And

the same might be expected from those whose jobs have not been disturbed, in fact whose salaries have risen.

However, there is an answer, and one not very difficult to find.

Those in business have seen more and more of their kind being throttled by overburdening taxes and rules by the various bureaucratic commissions which today are actually dictating the terms under which business may carry on.

These businessmen, small as well as large, see the handwriting on the wall; they see profits being reduced or wiped out, and they figure that 4 more years of the New Deal and there will be few if any profits left, and that free business enterprise, the method which made this country great, will be virtually, if not entirely, wiped out.

And those who are still earning good wages also recognize this. They know that if business is not allowed to make a profit, because of so-called further reforms, people with money, through fear of the future, will not invest in new enterprises or for the expansion of industry. And so pretty soon their jobs may be less secure, and because of continuously increasing taxes, their incomes will be lower, even though their salaries may not have been reduced.

And that brings us to the lower-salaried workers, and those on W. P. A. and relief.

One would imagine they would be among the very first to demand a change which might benefit them. For over 7 years Mr. Roosevelt and his crackpot aides have been running the Government and have not been able to be of any real help to these low-wage workers.

These men and women ought to demand a change in Washington, for nothing could be much worse than what they are suffering with now.

Do they fear a change because the new dealers have preached that the end of capitalism is at hand; that the expansion in business and the development of new industries through inventions and research is over?

Have some of our people, especially those whose hardship has been greatest, accepted the defeatist attitude which the new dealers have acclaimed?

Well, we don't pretend to be prophets, but our advice is, "Don't lose courage." Watch and see how business will start rising almost the day after Mr. Roosevelt declares that he will not, under any circumstances, accept a third term. We still feel confident he will not accept, but most every one differs with us.

So if we are wrong, the country will have to wait until after election before real business improvement comes. We feel confident a new President will be elected, with an administration which will fight for the return of free enterprise and the American form of government.

Supreme Court Makes Important Decision on Puerto Rican Land Ownership

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1940

TEXT OF THE DECISION OF THE SUPREME COURT OF THE UNITED STATES

Mr. CRAWFORD. Mr. Speaker, in 1937 the Puerto Rican Reconstruction Administration released as a public document for sale through the Superintendent of Documents a Census of Puerto Rico, 1935, on Agriculture, Farms and Farm Property, Crops, and Livestock. The presentation was prepared under the supervision of Dr. Leon Truesdell, chief statistician for population in the United States Bureau of the Census under special assignment as general supervisor of the Census of Puerto Rico, with the assistance of Sol Luis Descartes and Ray Hurley. From the census report we learn there are some 52,790 farms in the island ranging in size from under 3 acres up to 500 acres or more. A cuerdas of land is equivalent to about 1.01 acres and the total cuerdas in the 52,790 farms amounts to 1,913,047. The farms under 3 cuerdas total 1,782; those ranging in size from 3 up to 20 cuerdas amount to 36,492 farms, containing 279,590 cuerdas; farms ranging in size of 20 up to 499 cuerdas contain 966,694 cuerdas; and the 335 farms consisting of 500 and over cuerdas carry some 663,458 cuerdas in area. The latter class of farms aggregates 34.7 percent of all land in farms. The farms with less than 500 cuerdas aggregate 65.3 percent of the total farm lands. Therefore, Mr. Speaker, we may assume that the following opinion of the Supreme Court touches upon and to a more or less degree, approximates 34.7 percent of the farm land of the island.

CULTIVATION OF SUGARCANE IMPORTANT ACTIVITY

When one considers the activities of the Federal agency known as the Puerto Rico Reconstruction Administration and the millions of dollars that have already been spent, and the influence which is now being exerted on the affairs of the island through the P. R. R. A. and the Department of the Interior, they can well afford to analyze the effect the Supreme Court decision may have on the future of the island. The ambitious program now being so aggressively promoted by the Department of the Interior, and which takes the form of H. R. 8239, upon which hearings have been in progress before the House Insular Affairs Committee during the past 2 weeks, is, in my opinion, very definitely related to the opinion of the Court. Going back for some 6 years, we find the report of the Puerto Rico Policy Commission (Chardon report). Its 146 pages present an enlightening story of the far-flung plans which have to a greater or lesser degree already been financed by our Federal Treasury. Tens of millions of dollars have already been transmitted to Puerto Rico. H. R. 8239 further expands on the ambitious program. That island and its people, it would appear, is now our great experimental laboratory. The decision of the Court may well contribute toward an acceleration of our activities, and especially may this be true if we facilitate, through the enactment of additional legislation and the appropriation of additional funds, the powers of the P. R. R. A. and other agencies of the Federal Government along with those of certain authorities present plans call for in the island. Those who are interested may well consider the dissimilarity of Puerto Rico Senate Bill No. 166 and the provisions of H. R. 8239.

If the sugar plantations of the island should be broken up into small areas and sold to individual farmers financed by funds supplied by the Federal Government, and the entire operations be turned over to some Federal authority, or agency of the Puerto Rican government, we may yet witness the first great transformation to occur under the American flag. The opinion of the Court follows:

[Supreme Court of the United States. No. 582.—October term, 1939. *The People of Puerto Rico, Petitioner,* v. *Rubert Hermanos, Inc.* On writ of certiorari to the Circuit Court of Appeals for the First Circuit. March 25, 1940]

Mr. Justice Frankfurter delivered the opinion of the Court.

The question here in controversy is a matter of great importance to Puerto Rico and involves the power of its legislature to enforce congressional policies affecting the island. We, therefore, brought the case here on a writ of certiorari (309 U. S. —), to review a decision of the Circuit Court of Appeals for the First Circuit. (106 F. (2d) 754.) That court had reversed the judgment of the Supreme Court of Puerto Rico (53 P. R. 779) (Spanish edition), sustaining a proceeding in quo warranto brought against respondent.

The proceeding was initiated in the Supreme Court of Puerto Rico under jurisdiction conferred upon it by the local legislature. The substance of two measures, enacted in 1935, and set out below, authorized the government of Puerto Rico to bring a quo warranto proceeding in its supreme court against any corporation violating Federal law.[1] Accordingly the attorney general of the island

---

[1] Act No. 33 of July 22, 1935, Laws of Puerto Rico, Special Session, 1935, p. 418, providing:

"SECTION 1. There is hereby conferred upon the Supreme Court of Puerto Rico exclusive original jurisdiction to take cognizance of all quo warranto proceedings that the Government of Puerto Rico may hereafter institute for violations of the provisions of section 752, title 48, United States Code, and for that purpose it is provided that the violation of said provisions shall constitute sufficient cause to institute a proceeding of the nature of quo warranto.

"SEC. 2. All laws or parts of laws in conflict herewith are hereby repealed.

"SEC. 3. This act, being of an urgent character, shall take effect immediately after its approval.

Act No. 47 of August 7, 1935, Laws of Puerto Rico, Special Session, 1935, pp. 530–532, providing:

"SECTION 1. Section 2 of an act entitled "An act establishing quo warranto proceedings," approved March 1, 1902, is hereby amended as follows:

"'SEC. 2. In case any person should usurp, or unlawfully hold or execute any public office or should unlawfully make use of any

brought the present suit against respondent, a corporation organized in 1927 under Puerto Rico's corporation law. The gravamen of the suit was alleged defiance by respondent of the congressional restriction imposed upon "every corporation authorized to engage in agriculture * * * to the ownership and control of not to exceed 500 acres of land." This restriction, according to the complaint, embodied "the public policy of the people of Puerto Rico" first declared by Congress in its joint resolution of May 1, 1900 (31 Stat. 715), supplementing the Foraker Act of April 12, 1900 (31 Stat. 77).[2] This limitation upon the corporate ownership of land was continued when Congress in 1917 revised the constitutional framework of Puerto Rico's government in what is the existing Organic Act, section 39 of the act of March 2, 1917 (39 Stat. 964 (48 U. S. C., sec. 752)).

The present controversy derives from the fact that Congress affixed no direct consequences to disobedience of its land policy for Puerto Rico. The main issue presented here is whether Puerto Rico's legislative assembly has power to graft such consequences upon the congressional prohibition. This was the issue as the Supreme Court of Puerto Rico conceived it, and we are not disposed to deal with it differently. It was suggested by the dissenting judge in the Court of Appeals that the Supreme Court's judgment may be supported by construing the 1935 legislation as a means of enforcing the local land policy—identic, to be sure, with that declared by Congress—embodied in the 1911 corporation law of Puerto Rico. To do so, however, would take us into niceties of pleading and of local law which were not canvassed by the insular court. Such a course would be peculiarly gratuitous when the issue which the local court in fact decided is easily resolved.

In the setting of the traditional relation between the broad outlines designed by Congress for the government of territories and the powers of local legislatures to move freely within those outlines, the difficulties conjured up against the view taken by the Puerto Rican court rapidly evaporate. The objections urged against it illustrate vividly the power of subtle argument to give an appearance of difficulty to what is relatively simple. The breadth of local autonomy reposed by Congress in the legislative assembly was elucidated too recently and too thoroughly in *Puerto Rico* v. *Shell Co.* (302 U. S. 253) to call for repetition here. Suffice it to say that the opinion in that case underlined the fullness of scope which Congress gave to Puerto Rico when it provided by section 37 of the Organic Act of 1917 that "the legislative authority shall extend to all matters of a legislative character not locally inapplicable * * *" (39 Stat. 964, 48 U. S. C., sec. 821). Drawing on the practice of Congress in its treatment of territories throughout our history, and assimilating that practice into the Puerto Rican situation, the Court concluded that "The grant of legislative power in respect of local matters contained in section 32 of the Foraker Act and continued in force by section 37 of the Organic Act of 1917 is as broad and comprehensive as language could make it" (302 U. S. 261).

Surely nothing more immediately touches the local concern of Puerto Rico than legislation giving effect to the congressional restriction on corporate land holdings. This policy was born of the special needs of a congested population largely dependent upon the land for its livelihood.[3] It was enunciated as soon as Congress became responsible for the welfare of the island's people, was retained against vigorous attempts to modify it,[4] and was reaffirmed when Congress enlarged Puerto Rico's powers of self-government. Surely Congress meant its action to have significance beyond mere empty words. To treat the absence of a specific remedy for violation of the restriction as an implied bar against local enforcement measures is to impute to Congress a dog-in-the-manger attitude bordering on disingenuousness. We refuse to believe that Congress was bent on the elaborate futility of a brutum fulmen. What was said in another context, *Texas & N. O. R. Co.* v. *Ry. Clerks* (281 U. S. 548, 569) is apposite here: "The definite prohibition which Congress inserted in the act cannot, therefore, be overridden in the view that Congress intended it to be ignored. As the prohibition was appropriate to the aim of Congress and is capable of enforcement, the conclusion must be that enforcement was contemplated." The suggestion that enforcement might come only through quo warranto proceedings by the Attorney General of the United States is equally feckless.

A much more rational explanation, consistent with the organic relation between Congress and the local government, is at hand. As the ultimate legislative guardian of the island's welfare, Congress confined the legislature's discretion within the limits of the 500-acre restriction. How this policy was to be realized was for Puerto Rico to say. "Local authorities may ascertain facts and decide questions upon which depends appropriate exertion of the power much more conveniently than may the Congress," *Commission* v. *Havemeyer* (296 U. S. 506, 515–516).

It is admitted, as, indeed, in view of the Shell case, it could not be denied, that the remedy here pursued would have been available to the legislative assembly if that body had adopted the congressional policy in a substantive statute of its own. But respondent contends that the same result cannot be achieved by investing the insular courts with jurisdiction directly to enforce the congressional policy. Such useless indirection is compelled neither by the organic act nor by any general consideration underlying the distribution of power between Congress and the insular legislature. So long as the legislative assembly acts within the framework which Congress has set up, it merely avails itself of the power conferred in section 37 of the organic act. It has done so here.

There remains for consideration an objection based on section 256 of the Judicial Code (28 U. S. C., sec. 371). That section vests in "the courts of the United States, * * * exclusive of the courts of the several States," jurisdiction of all suits "for penalties and forfeitures incurred under the laws of the United States." Whether a law passed by Congress is a "law of the United States" depends on the meaning given to that phrase by its context. A law for the District of Columbia, though enacted by Congress, was held to be not a "law of the United States" within the meaning of section 250 of the Judicial Code (*Am. Security Co.* v. *District of Columbia*, 224 U. S. 491). Likewise, we hold that section 37 of the organic act is not one of "the laws of the United States" within the meaning of section 256. Section 37 is peculiarly concerned with local policy calling for local enforcement from which local courts should not be excluded by a statutory provision plainly designed for the protection of policies having general application throughout the United States.

---

franchise, or likewise shall hold any office in any corporation created by and existing under the laws of Puerto Rico, or any public officer shall have done or suffered any act which, by the provisions of the law, involves a forfeiture of his office, or any association or number of persons shall act within Puerto Rico as a corporation, without being legally incorporated, or any corporation does or omits any act which amounts to a surrender or forfeiture of its rights and privileges as a corporation, or exercises rights not conferred by law, the Attorney General, or any prosecuting attorney of the respective district court, either on his own initiative or at the instance of another person, may file before any district court of Puerto Rico a petition for an information in the nature of quo warranto in the name of the people of Puerto Rico; or whenever any corporation, by itself or through any other subsidiary or affiliated entity or agent, exercises rights, performs acts, or makes contracts in violation of the express provisions of the Organic Act of Puerto Rico or of any of its statutes, the Attorney General or any district attorney, either on his own initiative or at the instance of another person, may file before the Supreme Court of Puerto Rico a petition for an information in the nature of quo warranto in the name of the people of Puerto Rico; and if from the allegations such court shall be satisfied that there is probable ground for the proceeding, the court may grant the petition and order the information accordingly. Where it appears to the court that the several rights of divers parties to the same office or franchise may properly be determined on the same proceeding, the court may give leave to join all such persons in the same petition, in order to try their respective rights to such office or franchise.

" 'When any corporation, by itself or through any other subsidiary or affiliated entity or agent, is unlawfully holding, under any title, real estate in Puerto Rico, the People of Puerto Rico may, at its option, through the same proceedings, institute [sic] in its behalf the confiscation of such property, or the alienation thereof at public auction, within a term of not more than 6 months, counting from the date on which final sentence is rendered.

" 'In every case alienation or confiscation shall be through the corresponding indemnity as established in the law of eminent domain.' "

[2] Section 3 of the joint resolution provides:

"No corporation shall be authorized to conduct the business of buying and selling real estate or be permitted to hold or own real estate except such as may be reasonably necessary to enable it to carry out the purposes for which it was created, and every corporation hereafter authorized to engage in agriculture shall by its charter be restricted to the ownership and control of not to exceed 500 acres of land; and this provision shall be held to prevent any member of a corporation engaged in agriculture from being in anywise interested in any other corporation engaged in agriculture. Corporations, however, may loan funds upon real-estate security, and purchase real estate when necessary for the collection of loans, but they shall dispose of real estate so obtained within 5 years after receiving the title. Corporations not organized in Puerto Rico, and doing business therein, shall be bound by the provisions of this section so far as they are applicable.

"Whether the restriction operates directly as a limitation upon the powers of the corporation or merely as a limitation upon the legislative assembly's power to confer corporate privileges, its effect is to render corporate land ownership in excess of the prescribed acreage unlawful." See the opinion of Attorney General Wickersham, 28 Op. A. G. 258, 260–261.

[3] See Gayer, Homan and James, The Sugar Economy of Puerto Rico, pp. 97–132; Diffie, Porto Rico: A Broken Pledge, pp. 45–88; Fleagle, Social Problems in Porto Rico, pp. 19–27; Hanson, Planning Problems and Activities in Puerto Rico (Report to National Resources Committee. 1936). Compare Clark, etc., Porto Rico and Its Problems, pp. 495–500, 628 et seq.

[4] See H. R. 23000, 61st Cong.; H. Rept. No. 750, 61st Cong., 2d sess.; S. Rept. No. 920, 61st Cong., 3d sess.; 45 CONGRESSIONAL RECORD, 6861 et seq., 7220 et seq., 7584 et seq., 7604 et seq., 8177 et seq.; 46 CONGRESSIONAL RECORD, 2644.

Other objections urged at the bar and in respondent's brief do not call for particular mention. On the only questions now before us, we think the Supreme Court of Puerto Rico acted within the scope of power validly conferred upon it by the legislative assembly.[5]

The judgment of the circuit court of appeals must therefore be reversed.

Mr. Justice McReynolds did not participate in the decision of this case.

Competitive Farm Products

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1940

Mr. JONES of Ohio. Mr. Speaker, I have received a table from the Department of Commerce showing the quantities and value of competitive farm products during the entire years of 1938 and 1939.

The Agriculture Department has paid the American farmer to raise less, while, at the same time, competitive farm products of cheap labor of foreign countries, as shown on the table below, have been brought into this country. The American farmer cannot compete with the foreign farmer because the American standard of living and cost of labor are higher.

Any farmer in my district, or any farmer in America, can look at the amount of grain that has been imported into this country and check for himself the number of acres of land that would be used in America to produce the quantity, stated below, that has been imported from foreign countries. The New Deal reciprocal-trade program is responsible.

The following is a list of farm products brought into this country from foreign lands which compete with the products of the American farmer:

Imports for consumption of specified farm products into the United States during the calendar years 1938 and 1939

	Unit of Quantity	1938		1939	
		Quantity	Dollars	Quantity	Dollars
Cattle:					
Edible	Number	424,000	9,111,000	754,000	20,207,000
Inedible (for breeding)	Number	10,000	899,000	10,000	941,000
Meat products	Pound	148,649,000	29,754,000	150,794,000	27,312,000
Canned beef	Pound	78,597,000	8,397,000	85,863,000	8,572,000
Cheese	Pound	4,083,000	903,000	59,070,000	12,844,000
Eggs (in shell)	Dozen	232,000	44,000	329,000	57,000
Hides and skins, raw, except furs (total)	Pound	181,993,000	29,833,000	323,446,000	47,056,000
Cattle hides	Pound	59,693,000	5,180,000	134,107,000	12,124,000
Sheep and lamb skins	Pound	32,649,000	5,304,000	63,776,000	9,909,000
Silver-fox skins	Number	16,000	463,000	133,000	2,468,000
Casein	Pound	417,000	28,000	15,832,000	886,000
Barley	Bushel	126,000	71,000	776,000	334,000
Oats	Bushel	7,000	5,000	4,393,000	1,506,000
Wheat (total)	Bushel	3,829,000	2,542,000	10,749,000	6,009,000
Wheat flour	Pound	14,289,000	224,000	17,279,000	195,000
Barley malt	Pound	100,576,000	2,825,000	101,130,000	2,141,000
Hay	Ton (2,000 pounds)	19,000	142,000	48,000	381,000
Chickpeas, dried	Pound	7,728,000	330,000	8,332,000	323,000
Potatoes, white or Irish	Pound	45,820,000	581,000	93,859,000	1,527,000
Sago	Pound	11,803,000	150,000	22,807,000	292,000
Tapioca	Pound	230,879,000	3,880,000	382,803,000	5,521,000
Arrowroot	Pound	5,653,000	305,000	8,346,000	463,000
Peas, canned	Pound	450,000	39,000	1,159,000	122,000
Tomatoes, canned	Pound	62,520,000	2,434,000	55,400,000	2,222,000
Pineapples, prepared or preserved	Pound	31,524,000	1,529,000	74,991,000	2,997,000
Apples	Bushel	26,000	44,000	46,000	72,000
Wool, unmanufactured	Pound	104,274,000	22,605,000	245,970,000	49,667,000
Cotton, unmanufactured	Pound	106,382,000	9,615,000	103,578,000	8,292,000
Tobacco, unmanufactured	Pound	71,406,000	36,028,000	82,447,000	36,918,000
Flaxseed	Bushel	15,364,000	19,872,000	16,028,000	18,424,000
Castor beans	Pound	114,073,000	2,046,000	161,611,000	2,882,000
Potato starch	Pound	6,746,000	155,000	10,984,000	246,000
Maple sugar and sirup	Pound	3,984,000	631,000	12,258,000	1,767,000
Wool noils	Pound	2,279,000	1,165,000	6,022,000	2,412,000
Wool wastes	Pound	730,000	296,000	3,904,000	1,270,000
Wool rags	Pound	794,000	262,000	8,418,000	3,322,000

Prepared by Division of Foreign Trade Statistics.

[5] The imposition of a fine by the Supreme Court of Puerto Rico, as a part of the power to grant relief ancillary to the main proceeding for forfeiture of the corporate privileges, was within the scope of authority validly conferred upon it by the 1935 legislation. Compare *State of Illinois* v. *Illinois Cent. R. Co.* (33 Fed. 721). See High, Extraordinary Legal Remedies, sections 745–762.

T. V. A.

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ARTICLE BY DON WHITEHEAD

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in the Washington Post of yesterday, entitled "T. V. A., Oldest New Deal Experiment, Closing Seventh Year." The article is written by Mr. Don Whitehead, an Associated Press staff writer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

T. V. A., OLDEST NEW DEAL EXPERIMENT, CLOSING SEVENTH YEAR—TYCOONS OF INDUSTRY SEE T. V. A. AS SYMBOL OF NEW EPOCH

(By Don Whitehead)

KNOXVILLE, TENN., March 30.—The New Deal's $500,000,000 baby, the Tennessee Valley Authority, will be 7 years old on May 18, and already it has outgrown its rompers.

Conceived as the Nation's first major experiment in planned economy 2 months after Franklin D. Roosevelt became President, the Authority has grown until today many Tennessee Valley inhabitants consider it a vital force in their lives.

There are few persons in the area from the Mississippi Delta to the highlands of east Tennessee not affected directly or indirectly by the growth of the giant corporation and its numerous projects involving power production, navigation, flood control, agriculture, and social adjustment.

Some, from the lowliest sharecropper to the industrial tycoon, think of T. V. A. as a symbol of a new era in which the historic Tennessee Valley is having its face lifted and its future carved anew.

PROJECT VISITED BY 40,000,000

So intriguing is the giant effort at regional planning that 40,000,000 persons from all parts of the world have come to see, to study, to ponder upon the undertaking.

What the future will hold, of course, is a highly controversial subject throughout the Nation, depending on the point of view and perhaps upon political alinements. Those who direct the course of the experiment foresee marginal thousands lifted into solid economic security, soil and forests conserved, an entire region rehabilitated commercially and socially. Some others, of course, are less optimistic.

The basic plan for accomplishing this ambitious program was the unified development of the Tennessee River, which rises in the hills of Virginia and North Carolina, winds lazily through eastern Tennessee to course across northern Alabama before swinging north through a tip of Mississippi and thus across western Tennessee into Kentucky and the Ohio River.

By a series of 10 big dams the Authority proposed to make the Tennessee navigable from Knoxville to the Ohio (almost 600 miles), control floods, and produce electric power. All other activities stemmed from these projects.

It was in 1933 that Congress passed the act which launched the "great experiment" and its history-making activities.

Immediately after its creation T. V. A. was plunged into a maelstrom of controversy, internal conflict, and a long series of legal battles involving the constitutionality of the entire program.

Hardly had the ink dried on the President's signature approving the T. V. A. Act when idealistic T. V. A. Chairman Arthur E. Morgan was at odds with his fellow directors, David E. Lilienthal and Harcourt A. Morgan.

This dissension was climaxed 4 years later with charges by Dr. Arthur Morgan of mismanagement and allegations that there was fraud in an unsuccessful attempt by George Berry, then Democratic Senator from Tennessee, to obtain damages from T. V. A. for marble lands flooded by the Authority's Norris Dam on the Clinch River near here.

Subsequently President Roosevelt removed Dr. Morgan from office for "contumacy," and a congressional investigation exonerated the directors of any wrongdoing. James P. Pope, former Senator from Idaho, was named as a director to succeed A. E. Morgan.

During this time T. V. A. was in open conflict with privately owned electric utilities in the valley, most of which were controlled by the Commonwealth & Southern Corporation.

The fight over the legality of the Authority's power program and effort to set up a yardstick for electric-power rates proceeded through State and Federal courts until finally the Supreme Court in 1938 affirmed a ruling by a special three-judge Federal court upholding the constitutionality of the T. V. A. program.

The internal friction, legal scraps, and congressional debate over the New Deal experiment to a large degree obscured the progress the Authority was making during those formative years. With the strife at an end, the court battles won, and with the aid of a Congress sufficiently friendly to provide appropriations, the Authority's program emerged from the clouds of controversy as well advanced.

PROJECTS UPHELD BY SUPREME COURT

So let's take a peek at the status of T. V. A. on the eve of its seventh birthday:

Power—

The Supreme Court decision holding the T. V. A. projects constitutional catapulted the Authority into the position of being one of the country's largest power producers, with virtually an exclusive market for the sale of its cheap electricity.

Within a period of less than a year T. V. A. rounded out its power empire by the purchase of some privately owned utilities controlled by Commonwealth & Southern. Its customers increased from a few thousand to almost 400,000. Revenues boomed to an estimated $15,000,000 annually.

The final break in the long stalemate between the T. V. A. and private utilities came about a year ago when T. V. A., in cooperation with valley municipalities and electric cooperatives, agreed to buy the Commonwealth & Southern properties in Tennessee for $78,600,000.

Last December the Authority purchased the north Mississippi electric properties of the Mississippi Power Co. for $2,000,000, and last month arranged to buy the Alabama Power Co. properties in north Alabama for $4,100,000.

Under the agreed plan the Authority purchased generating and transmitting properties, while the municipalities and cooperatives became owners of the electric-distribution plants.

With the huge market the T. V. A. has under contract about all the power it can produce until the giant Kentucky Dam near Paducah, Ky., is completed in 1945 or 1946.

Sales of electric appliances reached new heights. During 1939 residential consumers of T. V. A. power purchased $7,072,000 worth of appliances. Consumer use of electricity per residential customer increased from 104 kilowatt-hours at the beginning of the year to 113 kilowatt-hours at the close, at an average cost of 2.16 cents per kilowatt-hour.

SEVEN OF ITS DAMS ARE COMPLETED

Flood control—

Already the Authority has seven of its dams completed and in operation—Wilson, Chickamauga, Wheeler, Gunthersville, and Pickwick Landing Dams on the Tennessee River, Norris Dam on the Clinch River, and Hiwassee Dam on the Hiwassee River. This leaves only the Kentucky Dam at Gilbertsville, Ky., the Watts Bar Dam, and the Coulter Shoals Dam near Knoxville, all on the Tennessee, to be completed.

When the chain of dams, with their great storage basins, are finished, the Tennessee River will be harnessed, changed from a flowing stream to a series of still lakes.

At floodtime, the dams will take the crest of the high water that sweeps into the Ohio River, and release it gradually. The Authority estimates that the Tennessee, uncontrolled, contributes as much as 25 percent to the flood crests in the lower Ohio and that the dams will reduce flood crests at Cairo, Ill., and on the lower Mississippi from 2 to 3 feet—vital inches when the Father of Waters is on a rampage.

The flood program, however, is not confined to the river, but goes back to the land where the rains fall. To accomplish this, the T. V. A. has evolved a cooperative program with farmers and other Government agencies for reforestation, crop rotation, and erosion control to check the flow of water from the land.

Navigation—

With completion of the series of dams, a 9-foot navigable channel will be provided from Knoxville to the Ohio River.

There is some traffic already on the river by boats of shallow draft, but when the channel reaches its maximum depth, the Authority anticipates a heavy flow of freight by river, with Chattanooga as the major port.

Full development of navigation along the river is contingent to a large degree on port facilities, and establishment of joint water-rail and water-truck rates which cannot be authorized by the Interstate Commerce Commission until there is common-carrier service on the river. The Federal barge line is now prohibited by law from operating except on the Mississippi and Warrior Rivers.

AUTHORITY RESTS WITH CONGRESS

Regional recreation—

The development of the Tennessee Valley into a vast playground on a regional basis is a future aim of T. V. A., but Congress must give the agency the authority for this work, already recommended by President Roosevelt.

Under the plan, T. V. A. would develop the lakes for boating, fishing, swimming, and other forms of recreation, with cabins for vacationists and park facilities for tourists.

Norris Lake now is a recreation center for thousands in east Tennessee, southeast Kentucky, and southwest Virginia. There are 1,800 boats, valued at more than $300,000, and ranging from skiffs to 40-foot launches, on the lake where once there were not more than half a hundred "johnboats."

Agriculture—

The gullied and scarred countryside in the valley gradually is being rebuilt under the direction of T. V. A. and other Government agencies as part of the Authority's program of water control on the land.

There are 26,000,000 acres in the Tennessee Valley watershed, of which 18,000,000 is farm land. Of this tillable soil, 7,000,000 acres is subject to erosion.

To combat this, the Authority has engaged in an intensive program of reforestation, farm terracing, erosion control, and improved tillage to conserve the soil and check the water.

More than 88,000,000 trees have been planted by T. V. A. in cooperation with C. C. C. workers. Erosion control has been practiced on 94,400 acres on 8,900 farms, covering 1,314,000 acres.

The problem of low rural income was an obstacle, a study showing that between 1933 and 1936 some 6,000 families in T. V. A. reservoir areas had median net family cash incomes of $100 to $318 per year.

Low-cost farm practices were essential, and T. V. A. is now engaged in a program of (1) research and demonstration of special low-cost machinery for handling soil-conservation crops; (2) research and demonstrations of local processing of the region's farm crops; (3) studies of cooperative business; and (4) projects relating to the effective utilization of electricity.

During the past year the agency's extension service specialists conducted 775 meetings, demonstrations, and schools on farm and home uses of electricity. The meetings were attended by 24,517 people.

Such is the Tennessee Valley Authority as it nears its seventh anniversary.

New York's Stake in Forestry

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

LETTER FROM R. M. EVANS

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a letter from Mr. R. M. Evans, Regional Forester, in regard to the forest and timber resources of the State of New York.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D. C., March 23, 1940.

NEW YORK'S STAKE IN FORESTRY

(By R. M. Evans)

New York, as you know, has a real stake in forestry. Farm woodlots and other privately owned commercial timberlands cover about 40 percent of its area. The forest problem, involving the best management of these lands and the resources produced from them, is of direct interest to the owners. In addition, hundreds of industries, trades and carriers, who use or handle wood and water in one form or another, are affected by the extent and profit with which supplies of forest raw materials are produced in the State.

New York's extensive forest lands play an important part in the maintenance of income and of supplies of raw materials for forest-dependent communities, the protection of domestic water, the control of unseasonable stream flow throughout the State, the reduction of soil erosion, the maintenance or increase in productive capacity of land, and the alleviation of tax delinquency through good land use planning.

Although New York timberland owners have made some progress in the adoption of sound forest practices, further safeguards are still needed if the State's economy is to continue to be favorably affected by her forests. Moreover, conditions in other States form a cumulative problem of national scope. In his last report, Mr. Silcox points out that we have taken our forests for granted too long and are faced with a crisis that requires joint private and public action if we are to insure adequate resources to meet local and national social and economic needs. I believe you will be interested in the solutions he suggests through State and National aids in this problem which seems so great and fraught with so much national public interest that private effort alone may not secure the desired results.

In reviewing this report, you will probably want to recall some of the cooperative work being done in New York by the United States Forest Service, such as the technical and financial aid available each year to your Director of Lands and Forests for fire prevention and the production of forest-planting stock. Also working with him, help is given private timberland owners in developing management practices designed to put their resources on a permanent and profitable basis. As an example, the Forest Service made the basic resource cruise on which the operations of the Tioga Woodland Owners Association, Inc., were established. It is cooperating with State agencies in operating the first forest-farming unit under the Norris-Doxey Act, located in Essex County, N. Y. In the interest of general forest improvement, the Service cooperates in the supervision of the activities of 32 C. C. C. camps engaged in forestry work in the State.

The Forest Service maintains and operates the Northeastern Forest Experiment Station, with headquarters at New Haven, Conn. This organization cooperates with State agencies in forest research. It has under way the project dealing with cooperative management and utilization at Cooperstown, N. Y., referred to on page 12 of the forester's report. It has made an analysis of the forest resources on the individual properties of the members, and marks the trees to be cut by a system designed to improve the quality and growth rate of the stand. Techniques developed at Cooperstown have attracted widespread interest and have served as model for a new forestry cooperative recently established in the vicinity of Saratoga Springs. In January 1940, an analysis of outlets available for forest products from a specific economic unit in the white-pine region of northeastern New York was begun with funds obtained under the Norris-Doxey Cooperative Farm-Forestry Act.

Forest planting ranks as a major forestry activity in New York. In this field, the station is studying methods of establishing hardwoods and desirable mixtures of hardwoods and softwoods on the Chenango Experimental Forest near Norwich, N. Y., an area made available by cooperation from the State conservation department.

The Finch-Pruyn Experimental Forest, near Newcomb, N. Y., is managed under cooperative agreement with Cornell University and Finch-Pruyn & Co. Here several phases of a large-scale study of forest management of the spruce-fir and northern hardwoods types are being made.

The Northeastern Station is directing investigations in eastern New York under the Flood Control Act of 1936. A survey has been completed on Buffalo Creek, and work on the upper Susquehanna watershed is now in progress. Preliminary examination has also been made of a local flood problem on Walkill Creek.

R. M. EVANS, *Regional Forester.*

The 1940 Census

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE DES MOINES REGISTER

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Des Moines Register of March 29, 1940, printed under the heading, "What to Do When Census Man Knocks."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Des Moines Register of March 29, 1940]

WHAT TO DO WHEN CENSUS MAN KNOCKS

Starting next Tuesday, the census man will be knocking on doors all over the United States. If you want to be prepared for him, this article will help.

A census of the census man shows he can take it, as well as dish it out.

Before he could get a crack at us, we went down to census headquarters at the old Federal Building and put Ross Ewing, census director for Des Moines and western Iowa, on the spot.

HE WAS UNDAUNTED

Here's what Ewing, surprised but undaunted, replied when he was quizzed about the census he and his assistants will conduct starting Tuesday.

Question. To begin with, Mr. Ewing, how are we to know whether the guy who comes to the door isn't a deputy sheriff, a bill collector, or a fraternity brother from Iowa City?

Answer. The census enumerator has official credentials which he will show if he is asked.

Question. Should we ask?

Answer. Sure, if there's any doubt in your minds.

Question. How much of our very valuable time will he take, if we are average housewives—if we were housewives?

Answer. About 15 minutes.

Question. Should we give him a cigar or a highball?

Answer. You can offer such, but the census enumerator will not accept. He will not mind, however, if he is offered a place where he can sit down and open his enumerator's book—it's about the size of a pillow case.

Question. This stuff we tell him—is it on the q. t.—strictly between us and Uncle Sam?

Answer. Sure. To divulge census information would cost the enumerator up to $1,000, or 2 years in jail, or both. But he averages 100 names a day and wouldn't remember any particular case, anyhow.

Question. How do we know that the income-tax people or the G-men will not check back on us through these census reports?

Answer. The reports are available only to the Census Bureau, and no other agency is permitted to see them for purposes of taxation, investigation, or regulation.

Question. O. K. Now, what will the enumerator want to know?

Answer. First off, he'll ask whether the home is owned or rented, and what the valuation or rent is. Then he'll ask the name of every person in the household and relationship to the head of the house.

He'll ask about the sex, color, age, marital status, education, birthplace, and citizenship of each.

Next he'll inquire where the family lived on April 1, 1935. That's to get some sort of a check on migration trends, particularly among such people as the dust bowlers, and the like.

AMOUNT OF WORK

He'll ask how many over the age of 14 are working in private industry, or are doing nonemergency work for the Government, how many hours each worked during the preceding week, and how many weeks in 1939.

Then will come a few questions about anybody working for W. P. A., C. C. C., N. Y. A., and so on, how long they've been looking for work or have been on these emergency jobs up to March 1940.

He'll also ask about those who neither are working nor seeking work—whether they're keeping house, going to school, or what.

WHAT INDUSTRY?

He'll ask about the type of work each does, what kind of industry he works in, what class of worker he is—that is, whether he's a salaried employee, an employer, and so on.

Finally he'll inquire about the amount of income in 1939.

(Secretary of Commerce Harry Hopkins recently ruled that any person may, if he wishes, write the answer to the income question on a blank without appending his signature and give it to the enumerator to be mailed by him to the Census Bureau in Washington.)

Question. Is that all he'll ask us?

Answer. That's all, except in certain cases. For statistical purposes, the Government is asking 5 percent of the population some supplementary questions—every fourteenth, twenty-ninth, fifty-fifth, and sixty-eighth person enumerated.

Question. What do these additional questions deal with?

Answer. The enumerator will ask about the place of birth of the person's father and mother and what was the mother tongue spoken in the home during childhood.

He'll ask whether the person is a veteran of the United States military forces and what the service was. If the person is not a veteran, the enumerator will ask if he is related to a veteran.

SOCIAL SECURITY

Then there's a social security question—whether the person has a social-security number and whether social-security deductions were made in 1939.

For people past the age of 14 there is a work question dealing with the usual occupation, the usual industry, and the usual class of work done.

Finally, women who are or have been married will be asked whether they were married more than once, their age at first marriage, and the total number of children born.

Question. And that's all?

Answer. Yep.

Question. What if we're not home when the enumerator comes?

Answer. If nobody's home the enumerator will inquire from a neighbor how many persons are in the family, leave the proper number of lines in his book, and come back some other time. If he still can't connect, he'll leave a self-addressed card on which the person can state what hour and day he is available. There'll be no foot-in-the-door business.

Question. Suppose the enumerator asks questions we don't want to answer? What then?

Answer. We never threaten penalties. If the enumerator can't sell himself, he calls in his squad leader, then his supervisor. I've never known a case where the person finally refused to answer.

Question. Mr. Ewing, why is all this excitement about the current census?

Answer. There, gents, you've got me. The population census has been held since 1790, the manufacturers' census since 1810, and the agricultural census since 1840.

Below the Rio Grande

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ARTICLE BY LEON PEARSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD a very interesting article by the pen of Mr. Leon Pearson, columnist, entitled "Below the Rio Grande," with a subtitle "Hollywood Has Upset Latins' Respect for Our Democracy."

The motion-picture producers gave to millions, no doubt, a laugh at the expense of the United States Senate when they filmed and released a motion picture entitled "Mr. Smith Goes to Washington"; but apparently they have not provided a laugh for the State Department, which has been endeavoring to create more friendly feelings, respect, and increased trade in the Latin American countries, according to the opinion of Mr. Pearson.

The clipping to which I refer was taken from the Washington Times-Herald, issue of Sunday, March 31, 1940.

As Mr. Pearson has so truthfully said, by the distribution of this motion picture in the countries south of the Rio Grande, "Hollywood has put a kink in the good-neighbor policy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BELOW THE RIO GRANDE—HOLLYWOOD HAS UPSET LATINS' RESPECT FOR OUR DEMOCRACY

(By Leon Pearson)

Hollywood has put a kink in the good-neighbor policy. South of the border, they used to think North American democracy was the paragon of perfection. Every gringo had told them so. But now they are going to the movies and getting other ideas.

Mr. Smith Goes to Washington is now being distributed throughout Latin America, and with harsh results. The Latin audiences are suddenly led to believe that the Government in Washington is occupied only with venality, corruption, and intrigue.

Diplomats in Washington, who know the United States Senate better than Hollywood does, are alarmed over reports from Latin America. After seeing the picture, audiences are exclaiming, "So this is your much vaunted democracy. You speak scornfully of our revolutions, but look at the scandalous things in your own Government."

Officials here are disturbed. They know that the Latins get acquainted with the United States principally through the films; that young Brazilian girls beg to study English so they can understand what Clark Gable is saying to Vivien Leigh.

Conferences on the question have led to the decision that Hollywood must be brought in on the carpet. Knowing that the Latin American market is now the largest foreign outlet Hollywood has, officials intend to point out that a big responsibility goes with the big market.

The point will be made that the "Mr. Smith" film plays right into the hands of Nazi-Fascist propagandists, who have been the principal foes of the good-neighbor policy in Latin America.

Some kind of pan-American trade scheme will have to be devised to break a serious economic impasse. Even before the war broke, we were selling Latin America far more than we bought.

That created for them an unfavorable balance of trade and a troublesome exchange shortage. Now it is worse. Since September, we have tremendously increased our exports to Latin America. And more than ever they are scratching around for dollars to make payment.

In January of this year, United States exports to South America were more than twice the exports of January 1939. To Mexico and Central America the increase was more than 33 percent.

The trend continued in February. During that month last year, we sold Brazil $5,000,000 worth of goods, this year the figure was $10,000,000. The increase with Argentina was even greater, and with Chile, greater still. Today, Chile is taking 60 percent of her imports from the United States, as against 25 percent a year ago.

There are only two ways to make payment for such imports. One is to borrow the dollars and the other is to create them by sales to the United States. The borrowing is only a temporary expedient, and at present the principal lending agency—Export-Import Bank—is not in a position to make any substantial credits to Latin America. True, the bank has just got a fresh $100,000,000 from Congress, but already three-fourths of it has been earmarked for non-Latin countries.

The other is far more sound, namely, to take more products from Latin America.

When Ambassador Najera came back from Mexico and resumed discussions with Secretary Hull, conjecture centered around the reported settlement with Sinclair. But there was another phase of their discussions, as yet unreported.

Hull asked Najera, in effect, how about international arbitration?

The moot question was whether President Cardenas had closed the door on arbitration, or had left it open a crack. In a press interview 2 months ago, Cardenas, without waiting for a United States proposal of arbitration, declared he would have none of it.

But this was not an official declaration, and the State Department here took no official cognizance. But they did want to know how much the President of Mexico really meant what he said. So they asked Najera to find out.

He brought back an answer which in Hull's opinion still leaves the door open a crack. Result probably will be a proposal for international arbitration under the Washington treaty of 1929. Meantime the Sinclair discussions are making no progress whatever.

The Silver Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ARTICLE BY HENRY H. HEIMANN

Mr. TOWNSEND. Mr. President, I ask consent that there be printed in the Appendix of the CONGRESSIONAL RECORD the article by Henry H. Heimann in the March 15, 1940, Monthly Business Review of the National Association of Credit Men, entitled "Our Silver Program."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR SILVER PROGRAM

Last month's review, carrying certain observations about the gold inflow into this country and its effects on our economic and financial situation, brought a number of approving letters and some requests for comments on the silver-buying policy of this country. At the time of its adoption in 1934 I wrote that "the use of silver cannot be objected to if it is utilized on a market-price basis. To try to establish a ratio out-of-market as between silver and gold indicates poor judgment."

The results of the silver-purchase program bear witness to the poor judgment exercised. Witness the record.

The law requires the Treasury to buy silver until it has achieved either of these two objectives: (a) Succeeded in lifting the price of silver to $1.29 an ounce, or (b) accumulated silver in quantity equal to one-third of our gold stocks.

Despite our buying since 1934 of $900,000,000 worth of foreign silver—not including purchases of American-mined silver—the price of silver is still not $1.29 an ounce. As this is written it is around 35 cents an ounce.

Despite our buying since 1934 of $900,000,000 worth of foreign silver—not including purchases of American-mined silver—we are farther from the one-third-must-be-silver goal than we were when we started, because our gold inflow has been greater than our silver buying.

What is the solution? Discontinuance of the foreign-silver-buying program is part of the answer. If we feel it is advantageous—as good business or good politics—to subsidize our domestic silver industry, let us at least discontinue foreign silver purchases. Contrary to the claims of the policy's advocates in 1934, benefits have not been realized. China went off the silver standard, ostensibly because of our program's effects on its financial set-up, instead of

being aided by it. And whatever purchasing power has been developed abroad by our silver-buying program has come at the expense of the American people who provided the funds which bought that foreign silver.

The bill now before Congress, which would call a halt to this program of foreign silver buying, deserves the support of American business.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

ARTICLE BY LOUIS J. TABER

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis J. Taber, published in the April issue of the National Grange Monthly:

[From the National Grange Monthly for April 1940]

BRISTLING FACTS PROVE THE FALLACY OF THE TRADE AGREEMENTS ACT—NATIONAL MASTER TABER MARSHALS UNANSWERABLE ARGUMENTS BEFORE A COMMITTEE HEARING AT WASHINGTON

At a hearing before the Senate Finance Committee on March 4, Louis J. Taber, master of the National Grange, made a statement bristling with facts intended to prove that the workings of the Trade Agreements Act have not been beneficial to agriculture.

One of the arresting features of his statement was to the effect that our competitive imports of agricultural commodities displace more than 33,000,000 acres on American farms. This, according to the grange spokesman, amounts to more than the reduction in acreage that has been brought about since 1933 in connection with the corn and cotton control programs, which aggregates 29,401,000 acres.

"Thus," said Mr. Taber, "we have the spectacle of the Government, under the guise of soil conservation, paying the farmers of the country approximately $500,000,000 a year to reduce acreage production, while permitting and even encouraging competitive imports of farm products valued at the same amount." The full text of Mr. Taber's statement was as follows:

In appearing before the Finance Committee, I want to make it clear that the National Grange continues its opposition to the renewal of the Reciprocal Trade Agreements Act for another period of 3 years. Before the Ways and Means Committee on the 25th of January, the views of the National Grange were presented in an extended brief. To conserve the time of the committee, we but reemphasize some of the compelling reasons why this act should not be continued.

We oppose the passage of this legislation in its present form for six general reasons:

1. Since this act was passed, the exports of agricultural commodities have been reduced and the importation of competitive farm products has been increased.

2. The general effect of reciprocal treaties and the legislation itself has had a depressing effect on the agricultural price level, and reduced farm income.

3. This legislation has reduced import duties and customs receipts. It violates the constitutional provision that revenue legislation should originate in the House of Representatives.

4. It affects both domestic and foreign commerce, a responsibility belonging to the Congress of the United States.

5. These trade agreements are in fact treaties, and as such violate the constitutional requirement which calls for ratification by the United States Senate.

6. With the adoption of acreage limitation for the farmer and wage and hour restrictions in labor and industry we should not permit importations from countries where wages are lower or hours are longer, or where the farmers have no limitations on production.

We want to make it clear at the outset that the attitude of the National Grange on this question is not a matter of recent development. Under a former administration the Grange opposed the reciprocal-treaty program between the United States and Canada because we were convinced that it would be detrimental to the best interests of the American farmer. In 1934 when this legislation was pending before Congress we registered our opposition because it was feared that it would work out to the disadvantage of the American producers. In 1937 the Grange registered a protest before both the Ways and Means Committee and the Finance Committee against the extension of the provisions of the act at that time.

For many years the National Grange has continuously and unanimously declared in favor of the American market for the American farmer, to the limit of his capacity to efficiently supply the same.

This information is given to emphasize the fact that the Grange has always been nonpartisan in its approach to this question. Our resolutions are adopted at the annual conventions, with delegates present from the North, the South, the East, and the West; and our position on this question has always been approved in an overwhelming manner. For more than 50 years the Grange has led the fight for tariff justice. Our fathers demanded "tariff for all or tariff for none." When the Farm Board legislation was being enacted, the Grange appealed to this body to include the export debenture or some other method of bringing tariff justice to agriculture. At our last annual session, held at Peoria, Ill., in November, the Grange again went on record in opposition to the extension of the trade-treaty program in its present form. We are glad to note that every farm organization is now opposed to the passage of this act without some type of corrective amendment.

As advocates of the trade-agreements program have placed so much emphasis on the importance of our export market, and have minimized the disastrous effects of competitive imports, we feel it necessary to call attention to the fact that the trade-agreements program has not increased the percentage that our farm exports have to the total value of goods shipped abroad. In 1934 the percentage of agricultural to total exports was 32.1. After 6 years of reciprocal treaties, according to the latest data available, our agricultural exports for 1939 were but 21 percent of the total, the lowest in the entire history of the Republic. On the other hand, agricultural imports remained at approximately 50 percent of the total in value of all goods imported into the United States.

AGGRAVATES FARM-SURPLUS PROBLEM

As we are all well aware, the surplus problem has been the most difficult with which American agriculture has been faced since the close of the World War. In our efforts to solve this question, Congress passed the Agricultural Marketing Act of 1929, the Agricultural Adjustment Act of 1933, and the various subsequent acts that were passed in this connection. It stands to reason that this problem cannot be solved, but that it will be aggravated by importing foreign surplus of competitive farm commodities and piling them on top of the American surpluses.

In appraising the workings of the Trade Agreements Act from the standpoint of the farm population, it will be recalled that in 1932 Mr. Roosevelt made an address in Baltimore, during the course of which he declared:

"I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived."

Nevertheless, the tariff has been reduced on approximately 200 items coming under the agricultural schedule. In numerous instances the rates have been reduced on commodities of which we have troublesome surpluses. While the Surplus Commodities Corporation has been buying up these surpluses in an effort to stabilize the price level, the Department of State, in one trade agreement after another, has been lowering the duties on items that the Surplus Commodities Corporation has been buying and distributing among families on relief. With the permission of the Chairman, I should like to insert in the RECORD at this time a table giving a list of 18 selected commodities having a bearing on this question.

Purchase of selected agricultural commodities by the Federal Surplus Commodities Corporation, and imports of those commodities, fiscal years 1936 and 1939

Commodity	Quantity purchased	Amount spent	Imports	
			Quantity	Value
Apples, fresh ..... bushels	6,180,847	$4,978,816	52,000	$90,000
Beets ..... pounds	17,858,256	149,383	1,000	(1)
Cabbage ..... do	152,706,155	1,562,503	339,000	8,000
Carrots ..... do	7,612,950	72,379	270,000	3,000
Cauliflower ..... do	793,576	17,968	39,000	1,000
Celery ..... do	20,391,300	381,384	96,000	3,000
Cheese ..... do	3,445,500	478,211	110,167,000	23,584,000
Eggs ..... dozen	11,319,300	2,255,659	551,000	106,000
Fish ..... pounds	3,677,398	262,966	658,345,000	60,259,000
Grapefruit ..... do	188,441,360	2,524,313	12,753,000	155,000
Grapes ..... do	15,830,826	319,489	[2] 771,000	1,050,000
Milk, fluid ..... gallons	18,440,847	4,229,949	22,000	5,000
Peas:				
Canned ..... cases	864,192	1,427,780	[3] 1,610,000	165,000
Dried ..... pounds	6,000,000	122,813	4,616,000	183,000
Fresh ..... do	77,940	2,808	4,582,000	223,000
Potatoes: White ..... bushels	6,579,548	4,286,457	[4] 1,697,100	1,444,000
Raisins ..... pounds	50,199,000	2,137,251	825,000	92,000
Rice, milled ..... do	85,948,000	2,861,207	[5] 137,024,000	2,294,000
Tomatoes: Fresh ..... do	20,741,815	465,259	120,692,000	2,633,000
Wheat cereal ..... do	106,550,500	1,942,517	(1)	(1)
Total		30,479,112		92,298,000

[1] Not available.
[2] Cubic feet.
[3] Pounds.
[4] Includes seed potatoes.
[5] Broken rice.

Source: Annual Reports of the Federal Surplus Commodities Corporation. Fiscal years 1938 and 1939; Foreign Crops and Markets, Nov. 17, 1939.

As this table shows, during the fiscal years of 1938 and 1939, the Surplus Commodities Corporation spent $30,479,112 in buying up surpluses of the commodities listed in the table. During the 2 years in question, our imports of these same commodities were valued at $92,298,000. It should be understood that these figures apply only to the commodities listed in the table to which I refer. This list, of course, is not all-inclusive and could easily be lengthened.

We all approve of the work that has been done by the Surplus Commodities Corporation under the conditions prevailing during recent years. The Grange has supported the appropriations made by Congress for this work. But who would go so far as to say that the Government should buy up not only our own farm surpluses but foreign surpluses that have been imported and give them away?

It is being continually dinned into our ears that if we want to sell to other nations, we must buy from them, and that trade is a matter of give and take. No sensible person will dispute the soundness of that proposition, which is self-evident. It is well to remember in this connection that the United States has the biggest free list of any nation in the world. During the calendar years of 1938 and 1939, 61 percent of all our imports entered the country duty free. It would seem, therefore, that with the exercise of a little ingenuity and Yankee trading skill, we should be able to find an outlet for some of our own surpluses without pursuing a policy that results in flooding our markets with commodities that we do not need and of which we already have more than enough.

Certainly we should take from other nations the things that we need and do not produce at home. That is exactly what we have always done, but, most emphatically, we should not make it easier for other nations to send us the things we do not need and of which we already have a surplus.

Labored efforts have been made by the supporters of the trade-agreements program to convince the farmers of the country that they are being benefited by it, and that our imports of agricultural commodities are so small as to render them inconsequential.

IMPORTS DISPLACE VAST AMERICAN ACREAGE

Nothing could be farther from the truth. According to official Government statistics, our imports of competitive farm products for the fiscal years of 1937 and 1938 averaged $537,198,000 annually. Let us now consider the acreage of American farms displaced by those competitive imports. According to the Department of Agriculture, the average acreage under cultivation in the United States for the fiscal years of 1937 and 1938 was 341,475,850. The average value of the crops grown on this total acreage for the two years in question was $5,524,015,000 per annum. The average value of crops grown per acre was $16.02. By dividing this figure into the value of our competitive farm imports for the period under consideration, it will be seen that the acreage displaced on American farms was 35,533,000 per year.

The total value of all the farm crops grown in the imperial State of Texas during 1938 was $302,957,000. During the same year the total value of all crops produced in Iowa was $310,166,000. During 1938 the total farm value of all the crops grown in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania was only $393,521,000. The value of all farm crops grown in Missouri, North Dakota, South Dakota, Nebraska, and Kansas during 1938 was $529,668,000, which was $7,530,000 less than the value of the competitive farm products imported during that year. I want to make it plain that the figures quoted in this connection refer solely to crops and do not include the value of livestock and poultry products.

The 33,533,000 acres of cultivated land displaced by competitive farm imports amounts to more than the reduction in acreage that has been brought about since 1933 in connection with the corn and cotton control programs. In the case of corn, the reduction amounts to 14,171,000 acres. The reduction in cotton acreage between 1933 and 1938 was 15,230,000, giving us a total reduction of 29,401,000 acres for the two crops.

Thus we have the spectacle of the Government, under the guise of soil conservation, paying the farmers of the country approximately $500,000,000 a year to reduce acreage and production, while permitting and even encouraging competitive imports of farm products valued at the same amount.

It is important to keep in mind the fact that our imports are priced on the basis of foreign costs. The import figures do not include the cost of transportation, insurance, and customs duties. If these items were added, the total import figures would be much higher.

Then, too, it must not be forgotten that competitive imports are always offered at a lower price than that which prevails at home. These imports place a ceiling, so to speak, on our price level, rendering it virtually impossible for domestic producers to secure prices commensurate with our higher costs of production and the American standards of living.

TREMENDOUS DROP IN COTTON EXPORTS

When the trade-agreements legislation was passed 6 years ago, the hope was held out to our farmers that under this program an export market would be found for our unwieldy and price-depressing surpluses. But all the rosy and alluring promises that were made in this connection have not been fulfilled.

In support of this statement, let me cite the fact that during the fiscal year ending July 1, 1934, we exported 8,366,000 bales of cotton. During the fiscal year ending July 1, 1939, our exports amounted to only 3,605,000 bales, showing a loss of 4,761,000 bales. Roughly speaking, therefore, our cotton exports have been more than cut in half. During the fiscal year ending July 1, 1934, our exports of pork and pork products amounted to 705,981,000 pounds. For the fiscal year ending July 1, 1939, exports of these products totaled 350,372,000.

Our exports of wheat, including flour, increased from 35,000,000 bushels in 1933 to 115,734,000 bushels for the year ending July 1, 1939. However, most of the wheat we have exported has gone out of the country under a subsidy and not under the workings of the reciprocal-trade agreements. The same has been true with reference to cotton during the past year.

Our exports of leaf tobacco showed an increase of 111,700,000 as between the fiscal year ending June 30, 1934, and June 30, 1939. However, since the outbreak of the new European war, Great Britain, one of the countries with which we made a trade agreement, which formerly took the bulk of our tobacco exports, has made arrangements to buy most of her tobacco in Turkey, so that this export market will be lost to us.

Summing it all up, during the fiscal year ending June 30, 1934, the last year before the reciprocal-tariff program went into effect, our exports of farm commodities totaled $787,343,000. Our agricultural exports for the fiscal year ending June 30, 1939, amounted to $682,962,000. This shows a loss of farm exports amounting to $104,381,000. On the other hand, during the fiscal year ending June 30, 1934, our imports of farm commodities totaled $998,616,000. This shows an increase in imports of $159,664,000. In the light of all this, it is difficult to see how it could rationally be argued that the workings of the trade-agreements program has been beneficial to agriculture.

When the Reciprocal Tariff Act was passed in 1934 it was viewed as an emergency measure and was made self-repealing at the end of 3 years. But it was renewed for another period of 3 years in 1937, and now the proposal is to extend it for still another term of 3 years, on the theory that we are still confronted with an emergency. It seems to us that any situation which persists for a duration of 9 years cannot properly be classified as an emergency but must be regarded as a settled condition.

AN UNSOUND AND DELUDED POLICY

Among other things, the Grange objects to the unconditional most-favored-nation policy that has been pursued in the making of the reciprocal-trade agreements that are now in effect. The nations that are benefiting by our generosity in this connection are not responding but are making bilateral agreements among themselves. A policy under which we gain concessions from one country while making concessions to virtually all other countries producing and exporting a given commodity places us at a distinct disadvantage. Moreover, each new agreement we make under this policy, generalizing tariff reductions to the rest of the world, leaves us with so much less bargaining power when it comes to making future agreements.

Again, proper steps have not been taken to protect American interests against foreign-currency depreciation under the workings of these agreements. This is placing us at a further disadvantage in our foreign-trade relations.

Many domestic producers resent the fact that appeal to the courts is barred under this legislation by virtue of the provision that section 516–B of the Tariff Act of 1930 does not apply in matters relating to reciprocal-trade agreements. Nor is it any longer necessary to make fact-finding investigations regarding the difference in the cost of production as between this and other countries before changing tariff rates, as was the case under section 336 of the Tariff Act of 1930.

If this legislation is to be reenacted, it should certainly be amended so as to call for congressional ratification of any future trade agreements that may be made thereunder. Every agreement we make affects the revenues of the Federal Government, and it is expressly provided in the Constitution that all matters relating to taxation must originate in the House.

Since 1934 we have reduced the duty on imports of sugar from Cuba from 2 to 9 cents per pound. Between September 3, 1934, and December 31, 1939, the Treasury sustained a loss of revenue in this connection amounting to $133,924,000. In the meantime, the retail price of sugar to the consumer has not been reduced to the extent of a single mill. The chief beneficiaries have been two of the biggest banks of Wall Street, which own the major portion of the Cuban sugar industry. All this was done in violation of the constitutional principle that revenue legislation must originate in the House.

Viewing these agreements as treaties, which they really are, it is interesting to keep in mind the fact that in 16 of the 22 countries with which we have dealt, they were subject to some form of parliamentary ratification. Those who take the position that the United States Senate cannot be trusted to perform its proper functions in this matter not only turn their backs upon the Constitution, but they betray their lack of faith in the processes of popular government.

Neely Block Booking Bill

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

EDITORIAL FROM THE ARGONAUT

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Argonaut, a 64-year-old paper published in San Francisco, Calif., and edited and published by W. W. Chapin. The editorial is entitled "Legislative Sabotage Threat to Movie Industry," and presents strong arguments against the proposed Neely block booking bill from a nonpartisan point of view.

THE ARGONAUT PUBLISHING CO.,
San Francisco, March 20, 1940.

Hon. LELAND M. FORD,
House Office Building, Washington, D. C.

DEAR MR. FORD: We wish to call your attention to a significant editorial entitled "Legislative Sabotage Threat to Movie Industry," which appeared in the Argonaut on February 23 of this year. As the oldest publication on the Pacific coast, independently and fearlessly fighting the battle of capital investment and freedom of enterprise, the Argonaut stands unalterably opposed to any form of legislation which unjustly cripples an industry whose home is in the West, but which is of great importance to the entire United States. We hope, therefore, that in the forthcoming controversy centering around the Neely bill, each Member of the House will be aware of the strong arguments against the proposed law which the Argonaut, from a nonpartisan viewpoint, presents.

Sincerely yours,

W. W. CHAPIN, *Publisher.*

[From the Argonaut of February 23, 1940]

LEGISLATIVE SABOTAGE THREAT TO MOVIE INDUSTRY

What may appear to be sound legislation, because of clever wording which gives a very definite impression of the righteousness, is more often than not inimical to the honest purpose which it proposes to serve. Such is the case of the Neely bill which was passed by the Senate in the last Congress and which is now receiving the attention of the House. To all intents, this bill is a stiff blow directed at the seemingly monopolistic powers that be which rule the motion-picture industry, whereas it is actually a moralistic attempt to subvert the creative genius of this young and thriving industry by an unjustified censorship. The proposed statute has its roots in that variety of groups and individuals which feel so keenly the responsibility of public morality and have set themselves to do something about it. Their reasoning, even if sincere, is specious and therefore must be vigorously opposed if the art of motion pictures is not to suffer an immediate decline.

Expressly, this bill intends to prohibit compulsory block booking and blind selling in the leasing of motion pictures. Block booking refers to the practice of selling a quantity of pictures to exhibitors, at one time; while blind selling concerns the practice of arranging the sale of pictures before production has begun. The bill in question will require the single sale of pictures and the necessity of submitting a detailed synopsis, from which there can be no deviation without penalty, before the picture is produced. If nothing else excites suspicion this last proposal should. The picture which must adhere to a prearranged pattern, without benefit of the countless ideas and inspirations which contribute to its effectiveness and merit in the process of making, is doomed to dullness. There are, however, more important reasons why the Neely bill should be defeated.

A decade ago Hollywood was distributing pictures which appealed to the lowest tastes, which achieved notoriety for a varying degree of obscenity. That is all past. Violent public protest forced the industry to establish a censorship of its own, and from that day to this motion pictures have in the main been free from these offensive qualities. The so-called sex pictures are produced by independent companies of minor importance and are always sold singly. What the Neely bill is supposed to combat it does not even recognize. It might be pointed out, as an additional argument, that the exhibitor, assuming that there are certain pictures which he does not like, is permitted to turn back 10 percent of those for which he has signed a contract.

From an economic standpoint, the major producers cannot forego these privileges of block booking and blind selling. Because of the great expense involved, they must have a reasonably certain guaranty of their market in advance. If distribution were reduced to peddling after production the entire industry would become a dispirited commercial enterprise fallen into a hopeless stereotype. Block booking makes experiment possible; by assuring profits from the routine productions it permits the development of cultural or educational subjects which are of superior artistic, though not financial, value. The masterpieces of the screen owe their existence to this system. It follows that were the industry forced to sell its productions singly it would be burdened with numerous additional expenses which, in consequence, would lower the standards of achievement and increase the cost to the consumer, i. e., higher admission prices the country over.

Perhaps the motion-picture industry has not devised the best way of distributing its products, but to other than a minority of busybodies, it has been quite satisfactory. The product placed before the American public in recent years has constantly improved, and at times has achieved real greatness. These methods, which will also improve with time and not with legislation, must be given the credit. We should like to advise Congress, in the name of common sense, to keep hands off.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

Mr. SPRINGER. Mr. Speaker, just before we became involved in the disastrous World War the then President, Woodrow Wilson, sent his special emissary, Col. E. M. House, to Europe on a mission to investigate the conditions across the ocean and to make report upon his return of the things discovered while there. The people in this Nation have not forgotten that quite soon after the return of Colonel House to this country a relentless submarine warfare was inaugurated and our ships were torpedoed by Germany, our citizens were killed and drowned, our property was destroyed, and our flag was wholly disregarded. If the people of our country have forgotten those historic incidents, then I am certain my comrades of the World War have not forgotten those successive steps which led us into that terrific conflict which made invalids and cripples of thousands of our buddies and which sent to their graves during that war and since it was over many, many thousands of those boys who marched by our side, behind our flag.

Quite well do we recall, Mr. Speaker, that Colonel House made his trip to Europe in secrecy; his mission was then unexplained as to why he went. When Colonel House returned to this country, after he had acquired the knowledge he sought in Europe, he was closeted in secrecy with the President and the Secretary of State, and he made his report, we assume, to those high officials. Colonel House did not make any report to the Congress of the United States; and the people of this country, although they craved information regarding the conditions in Europe, were not given any information on those foreign conditions. The report was locked in secrecy, and the people were without advice or information on a very important subject which, in the end, proved so disastrous.

Can the present be leading us into a parallel with the past? Every American is deeply interested in our foreign policy and in our foreign conditions. The people of this Nation seek to avoid war. They do not want any participation in this European conflict. The men and women of our country—the boys upon the farm, in the factory, in the mines, and in business and industry—are entitled to know something about our foreign affairs and the existing conditions in Europe; they are entitled to know whether there is danger of our involvement in this European war, and, if so, how we may avoid it. If there should come the time when this great Nation is involved in the present European war, I wonder who would fight the battles for the people? Would it be the President of the United States? Would the Secretary of State, Hon. Cor-

dell Hull, bare his breast to the bullets of a foreign foe? Or would Mr. Sumner Welles, Under Secretary of State, who has been in Europe on the secret mission, participate in a single battle? If those gentlemen who now possess all of the facts Mr. Welles obtained while abroad are to fight the battles of our country in case of war, let them withhold all of the information obtained. In that event, the people do not want any of the secret knowledge obtained. If the President desired to obtain the information for which Mr. Welles was sent to Europe in order to determine his attitude respecting a third term as President, and which trip was paid for by the people of this country, then he might well desire to retain the information obtained in secret.

Since the return of Mr. Sumner Welles from his "blackout" trip to Europe, at the expense of the taxpayers of this country—which trip he made on foreign ships I am advised, attended by a foreign valet, and while in Europe he purchased many suits of clothing which were made by foreign tailors—he has been heralded as the "best-dressed man in our country." In the face of it all, we have millions of starving and struggling people in our country who would enjoy just one crust of bread purchased from the wasted money on that needless and highly dangerous sojourn in Europe for some mission which is known to but the three people—the President, the Secretary of State, and the sojourner, Mr. Sumner Welles.

If a foreign policy is adopted unknown to the people of this Nation which would involve us in this European war who would be drafted and forced into the military forces of our country to fight the battles for our Nation? It would be the men and boys of our country—the boys in college, the boys upon the farm, the boys in the factory, the miners, the clerks, the office assistants, and those of every walk in life. The men who are heads of families would not be excluded. The war would directly affect every home and every family in our land. We have not forgotten those memorable years, 1917 and 1918, when the boys went away to war.

Then I wonder who—who is entitled to know about our foreign policy? There is but one answer—there can be but one answer—the people. Those who must bear the hardships, the sacrifices, the burdens, and the sorrows in case of war are entitled to know from the lips of Mr. Sumner Welles what he knows and what our foreign relations are; they are entitled to know whether we are on the threshold of war, or whether we can and will remain in peace in our country. The President of the United States of America knows the answer, the Secretary of State has the same information, and Mr. Sumner Welles, the sojourner who sought that information from European countries, can tell us. Then let them speak to the American people. The people want to know.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and to include therein a very brief but carefully written editorial which appeared in the Palladium-Item, of Richmond, Ind., on the 28th day of March 1940, on the subject "Another Practical Lesson"; I urge every Member of the House to read this illuminating editorial; the editorial follows:

[From the Richmond (Ind.) Palladium-Item of March 28, 1940]

ANOTHER PRACTICAL LESSON

The visit to Europe of Sumner Welles started with a bang and seems to be ending as a fizzle.

It has been some days now since the Under Secretary was the cynosure of all eyes at home and abroad. His mission apparently was to promote a basis for peace, but as in the past, American diplomacy is far behind in its dealings with the power politicos of the old country.

From the beginning it was obvious that Welles would be tolerated as a possible tool of government leaders overseas in their attempt to gain advantage over their foes. Welles has had little to announce, but he has admitted he returns with no peace formula. Now the question is whether the trip was not more a matter of gaining first-hand data for President Roosevelt's private benefit. Critics have contended all along that Mr. Roosevelt would await Welles' report before determining his third-term stand.

Developments among the belligerents and the pressure being placed on European neutrals demonstrates our foreign neighbors are far ahead of the United States in the subtle art of waging war diplomatically as well as practically. Finland's dictated peace; Russia's warning against a Scandinavian defense alliance; collaboration between Germany and Russia and possibly Italy, and stern measures being taken by England and France, all counsel citizens of the United States to stay at home and prepare to preserve their own liberty.

Gold and Its Power, Part 6

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

Mr. THORKELSON. Mr. Speaker, in this, the sixth discourse on Gold and Its Power, I shall conclude my discussion of the Gold Reserve Act. I have read Gold Clauses in Obligations, a 42-page pamphlet of the Opinions of the Supreme Court of the United States. After having perused this legal gem, I comprehend and recognize the unseen hand.

THE COURT ERRED

The Court erred in that it held the power of Congress greater than that of the United States, when in reality the contrary is true, for Congress has no greater power than that given to it in the Constitution, by the people of these United States.

The Court erred, furthermore, in that it misinterpreted the written meaning and did not give full consideration to the unwritten rights in the Constitution, which the people have reserved to the States and to themselves. These rights are fully protected under the ninth and tenth amendments, and must not be treated disparagingly by the Government or denied to the people.

The Supreme Court, in the upholding of the act, did not only deprive the people of gold, which has always been considered a private property, but did, in addition to that, confuse sound gold-secured standard money with unsound legal tender unsecured money, and both of these with the purchasing power of the dollar.

GOLD MONEY

The Court should have recognized that a nine-tenths fine 25.8 grains gold dollar is acceptable in all countries in the world on its face value, and is today the standard upon which the ounce value of gold is based.

The Court should also have recognized that the present nine-tenths fine 15.521 grains gold dollar is only used in foreign transactions, and was in reality set up to give favored foreign nations the advantage to buy $35 credit or merchandise for one ounce of gold, the actual value of which was and is now $20.67—a transaction in which we donate $14.33 worth of merchandise for every $20.67 or ounce of gold spent in the United States.

LEGAL TENDER

Legal-tender money is devoid of standard value, and is not redeemable or secured by gold. It is purely an inflated dollar, which will, as long as it is acceptable, buy about the same quantity of merchandise or credit as the old gold dollar of 1932. It is the unchangeable buying power of this dollar that is confusing, for I often hear this question: "What is the difference? This dollar will buy as much as the gold dollar." I can only reply that there is no apparent difference in the buying power, for when we abandoned the gold standard and adopted the inflated dollar, prices on commodities remained the same, and this price level is now maintained by importing such merchandise as increases in price. In other words, under the present monetary system and legal-tender dollar, price level must be maintained, either by imports or by subsidizing our own producers. This, of course, is a hopeless outlook, as there can be no increase

in wages or in earnings, in agriculture or in industry, without provoking a wild inflation that will, like all inflations, terminate in national bankruptcy.

THE FINANCIAL TRICK

The internationalist is a financial Moloch as he contaminates the world with his insatiate greed. Many of these international financiers assembled in Washington, March 4, 1933, and under the elected leadership of the President established a bank holiday for Shylock.

Speaking from my viewpoint or from that of the people, I am firmly convinced that were they aware of the full effect of the Gold Reserve Act, everyone who gave it support would be removed from Government service. The Gold Reserve Act will without doubt be recorded as one of the blackest betrayals in the history of the Republic.

HOW THE ACT AFFECTED OUR OWN PEOPLE

Under the act the President abandoned the gold standard only within the borders of the United States, an action which led to repudiation of Government obligations to our own people. It also led to confiscation of gold, gold money, and gold certificates including forced sale to the Government of mined produced gold, under the pretense of an increase in price per ounce. This act has left our own people unsecured, our industries and agriculture strangled, and our working people idle and in despair.

HOW THE ACT AFFECTS FOREIGN NATIONS

We did not abandon the international gold standard. No, indeed, the administration was good-neighborly and more concerned with the welfare of foreign people than of our own. We cheapened the international dollar by reducing its weight in gold, so that foreign nations could buy 35 of our dollars for 1 ounce of gold, whereas, before the act was adopted, they could buy only $20.67 for the same ounce of gold. In other words, we are now donating to favored foreign nations under the President's good-neighbor policy 70 percent of all merchandise and credit they buy in the United States. To recapitulate, we, the taxpayers of the United States—and in this category I include all of us—furnish free to favored foreign nations or friendly neighbors $70 worth of merchandise out of every hundred dollars spent by these favored governments in the United States. Is it any wonder that we are broke, that our people are idle, and that we are looked upon by foreign nations as the biggest suckers in the world?

HOW THE ACT AFFECTED SHYLOCK

The international bankers were the powers behind this act, and the international bankers are the beneficiaries of this law. This crowd of exploiters is in a more secured position today than ever before in history since the golden calf has been an issue. They have had and have now complete power over gold, and the loyal support of the majority in the three branches of the Government of the United States. These international racketeers could not share the gold with the people, the owners of it. No, indeed. To be doubly secured, even gold certificates were confiscated and gold securities repudiated. This all happened under the Gold Reserve Act, which was enacted by a bunch of "rubber stamps" in the Seventy-third Congress. The act deprived the people of all gold, even of the monthly production from mines and smelters. This gold, a little over $18,000,000,000, is no longer owned by the people of the United States, and it is not owned by the United States Government, but all of it—lock, stock, and barrel—is owned by the international bankers or by their instrumentalities, who are holding industrial investments and bonds amounting to over $13,000,000,000. The remainder of the gold in the United States Treasury and vaults is owned by interests outside of the Treasury and by the Board of Governors of the Federal Reserve banks, who are private preferred owners of a property that rightfully and legally belongs to the people of the United States.

I hope this will lift the curtain on the owners of the gold and reveal to the Supreme Court the injustice it visited upon our people when it upheld the act, for it sanctioned the biggest steal in the history of this Republic.

WHERE ARE WE TODAY?

We are helpless as we realize the $29,000,000,000 liabilities which are held against the gold in the Treasury of the United States. It does not matter whether this is a real or fictitious claim, for the result is the same. The situation that confronts us is something like this: A relatively small group of international bankers control the world supply of gold and can, by liquidation of securities held by them, deplete the gold supply of any nation they select to punish by gold withdrawals. This power should never be left in the hands of a private group of international exploiters, because gold and other money is in reality earned by the people and, therefore, their property. The international bankers are in no sense the actual earners of this gold, but in ownership and control of banks they have used this gold money and credit to enrich themselves at the expense of those who have spent their time and their lives to build this great Nation in which we live.

This is a brief synopsis of what the Gold Reserve Act has done to the people of the United States, which in itself is sufficient to condemn those who were instrumental in the adoption of the law.

The Supreme Court should now study the Constitution, so that it will be in a position to deliver an intelligent opinion based upon the Constitution itself instead of upon case citations, which can only lead the Court further and further away from the basic principles of the Constitution itself.

The Constitution is a basic law that belongs to the people, and in which the people set up a government of their own choice to carry out all administrative functions prescribed by them. The powers which the people delegate to the Government in the Constitution are explicit and expressed in plain understandable language. Some of these powers which may appear to be incomplete should not be misconstrued or liberalized, for they are the unwritten or unexpressed powers which the people reserve day by day to the States and to themselves.

Banking, ownership, and use of money exemplify such unwritten rights of which the people must not be deprived. Gold and money was looked upon as a commodity to always remain in free circulation for the convenience and the benefit of the people. As long as our Nation was free of those whose god is gold and whose saviour is a bribe, nothing unforeseen happened, for everyone was willing to live and let live. Banks and private depositories were well distributed and located in convenient localities throughout the whole country. In this wide distribution, development was rapid, for money could be had when needed for development of such sound business as the bank felt was to the better interest of the community. It was this freedom of ownership and the rights that go with it that the people reserved to themselves.

Conditions have changed since that time, for the Nation is now overrun with money-mad monsters, who are short on principles and long on greed. This group now has a strangle hold upon the national finances, through their bank corporations, banking chains, and associate banks which are held in hand and under control of bank monopolies. Gold and gold money should never be allowed to remain under the domination of a private group of people, but should, instead, be owned and stored in the Treasury of the United States, as a security for our Nation and for our people. The various bank corporations and bank chains should be abolished, including our own Export and Import Bank, for all of them retard development and are destructive to our own industries. Personally, I favor a wide distribution of banks of different types, based upon the use to which the deposits are put. We should have at least three types of banks, one type in which all deposits should be fully protected by reserve and surplus; another paying greater interest on deposits, but allowed a wider range of investments, and the third paying a still greater interest on deposits, but less liquid because of a much wider range of investments and loans. In such arrangement, the people would know and could place their deposits in depositories of their own selection. It was because

of this that the Constitution conferred limited power to Congress in disposition of money. I shall now quote article I, section 8, paragraph 5:

> Congress shall have the power to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

There is no confusion in this paragraph, for a clear distinction is drawn between the words "regulate" and "fix." The latter refers to a permanent state of fixing weights, but the word "regulate" was purposely used in referring to money, because the value must be established upon the weight of the piece of gold which is assayed, and value regulated by the weight of gold in grains in different pieces of money.

This should be clear, for the only control we have in regulating the value of foreign money is in melting, refining, or assay, which establishes the value of the piece of money itself. We cannot regulate the value of foreign money except when we coin such money by the request of foreign governments. Congress, of course, is at liberty to regulate the value of our own money, but regulation of value actually refers to the regulation of the size of the piece, such as 5-, 10-, and 25-cent pieces, and is not that of an arbitrary increase or decrease in the grain gold content of the dollar, for did we indulge in such foolish procedure, we ourselves could not know the value of each piece unless the weight of gold was stamped on the money.

It was to avoid confusion that all nations agreed upon a fixed price for gold and a predetermined number of grains in each piece. We, to conform to this, designated 25.8 grains of gold nine-tenths fine as the standard value of our dollar. This should never be changed and need not be changed, because international credit is balanced upon grains of gold instead of dollars, francs, and shillings.

Devaluation of money and playing with gold is a trick of the internationalist to confuse those who will not learn and to satisfy his own ego. In 1934 we reduced the gold content of our dollar from 25.8 to 15.521 grains of gold, and I have already stated why this reduction was made and the beneficiaries of this foolish venture. So much for article I, section 8, explanation of which I hope is clear.

What I am interested in is this article I, section 10. Did the Supreme Court consider that section of the Constitution? Yes, it did; a part of it which states that: "No State shall emit bills of credit," but the honorable Court failed to consider the statement that: "No State shall make anything but gold and silver coin a tender in payment of debts." I shall now quote the whole paragraph:

> No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

How can the Supreme Court reconcile its stand upon the Gold Reserve Act, a law which makes it impossible for the States and for the people to pay debts with gold and silver coin, as provided for in the Constitution? An act which makes criminals of the actual owners of this property if it is found in their possession and used in the manner which the Constitution provides?

The Gold Reserve Act transcended the very essence of the Constitution itself, for it nullified article I section 10. This act, therefore, is tantamount to an amendment of the Constitution. This is clearly a matter which should have been placed before the people, according to the procedure set forth in article V, and to think that five Justices of the Supreme Court required 30 pages for delivery of assentors' decisions!

I shall now discuss in brief the general aspect of the arguments which were employed by the Supreme Court in its consideration of this act.

The Court errs in that it upholds and defends acts of Congress when it should instead "preserve, protect, and defend the people's rights," as set forth in the Constitution. No acts of Congress are right, nor should any of them be protected by Court ruling, except such acts as conform to the Constitution of the United States. It is true that Congress is empowered to legislate; but we, the people, in granting this power to Congress, assume that the Members elected to serve in the Congress of the United States understand the document which they obligate themselves "to preserve, to protect, and defend."

Congress, therefore, has no greater power than that which is given to it by the people in the Constitution, and which it must not exceed.

The Supreme Court does not quote the Constitution except for a reference on page 8—Senate Document No. 21, Seventy-fourth Congress, Gold Clauses in Operation—which was used in arguments on the Legal Tender case. This I shall not discuss, for it is perfectly obvious that it is within the right of the Federal Government to issue money, no matter whether such currency is designated legal tender or legal money. Surely no one will deny that it is an extremely silly procedure for the Government to borrow the deposit money of the people of the United States through the medium of private bankers, and pay interest on such loans to these banks upon a property or money which never belonged to them. This is particularly true today, when we take into consideration the fact that money now in use cannot be redeemed in gold or silver. As a matter of fact, it is this connivance between our own Government and our private bankers which is responsible for the transfer of gold to them as security for extension of credit.

If ownership of the $18,000,000,000 now in the Treasury were vested in the people of the United States, we would be in a reasonably secure position, even considering the present national debt. As it is now, we do not own the gold in the Treasury, and we are confronted with a $45,000,000,000 national debt, upon which we pay interest to private bankers, who never at any time owned the money, which they loaned to the Government and which is secured by interest-bearing Government bonds.

We are now using a purely inflated currency called legal tender, similar to money used in nations which have no gold. We should, if we had good sense, place an embargo on the gold in the Treasury of the United States, repudiate gold certificates, and prohibit gold payment on private or industrial investments whether held by foreign nations or by banks in the United States. We would in such procedure, at least, save the interest we are now paying on the present national debt, and at the same time, protect the gold reserve for the benefit of the people and the security of the Nation.

EMERGENCY

Congress should be commended because of its blind response to the emergency. Under this slogan, powers of Congress were turned over to the President, the gold was turned over to the international bankers, and the American people were left on their backs with a commodity or managed money. Who was the "emergency" for? For the internationalist?

SUPREME COURT

In the Opinions of the Supreme Court appear citations of many cases which were employed to substantiate majority decision on the Gold Reserve Act. Some of these decisions obscure the issue, for they relate to cases where the purchasing power was the sole consideration. In such cases there is no cause for action as there is no difference in the purchasing power of the gold dollar and the legal-tender dollar. Other cases are also confusing, for they are evidently based upon the so-called sweating of gold or loss of weight sustained by handling. In such cases value depends upon the weight of gold, and will be deducted if the piece is underweight.

I shall now, in honor to the Justices who dissented, quote the minority opinion, which in this case is correct:

FEBRUARY 18, 1935.

Mr. Justice McReynolds, dissenting:

Mr. Justice Van Devanter, Mr. Justice Sutherland, Mr. Justice Butler, and I conclude that, if given effect, the enactments here challenged will bring about confiscation of property rights and repudiation of national obligations. Acquiescence in the decisions just announced is impossible; the circumstances demand statement

of our views. "To let oneself slide down the easy slope offered by the course of events and to dull one's mind against the extent of the danger * * * that is precisely to fail in one's obligation of responsibility."

Just men regard repudiation and spoliation of citizens by their sovereign with abhorrence; but we are asked to affirm that the Constitution has granted power to accomplish both. No definite delegation of such a power exists; and we cannot believe the far-seeing framers, who labored with hope of establishing justice and securing the blessings of liberty, intend that the expected government should have authority to annihilate its own obligations and destroy the very rights which they were endeavoring to protect. Not only is there no permission for such actions; they are inhibited. And no plenitude of words can conform them to our charter.

The Federal Government is one of delegated and limited powers which derive from the Constitution. "It can exercise only the powers granted to it." Powers claimed must be denied unless granted; and, as with other writings, the whole of the Constitution is for consideration when one seeks to ascertain the meaning of any part. * * *

The power to issue bills and "regulate values" of coin cannot be so enlarged as to authorize arbitrary action, whose immediate purpose and necessary effect is destruction of individual rights. As this Court has said, a "power to regulate is not a power to destroy" (154 U. S. 362, 398). The fifth amendment limits all governmental powers. We are dealing here with a debased standard, adopted with the definite purpose to destroy obligations. Such arbitrary and oppressive action is not within any congressional power heretofore recognized.

I could quote much more of the dissenting opinions, which I am sure would be of the greatest interest to those who believe in the fundamental principles of this Republic as set forth in the Constitution of the United States. Space, however, forbids, so I shall conclude with the prayer that God may bless those four who did not forget their obligated duty to the people of this Nation.

Walter Winchell on Preparedness

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ARTICLE BY WALTER WINCHELL

Mr. MEAD. Mr. President, I have before me a rather remarkable article on preparedness, written by Walter Winchell, which I ask to have printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WINCHELL ON PREPAREDNESS

(By Walter Winchell)

A tough-guy world calls for a hard-boiled statement, and here it is: Any nation which has much to lose has much more to defend. For example:

If patriotism alone were enough, Poland would be alive today. If courage and love of liberty were themselves enough, the Czechoslovakian legions would be occupying Berlin now.

But they aren't enough, and the time has come to say so. Any country believing in a bill of rights needs heavy artillery. Any nation with a free constitution needs plenty of pursuit ships and bombers. Too many worth-while things have ceased to exist behind second-best navies.

In this crisis, which has infected the world, the United States carries a double responsibility. Besides having ourselves to protect—with one of the smallest armies of them all—we have told the world for 120 years that we would fight to protect Canada and South America. In brief, the Monroe Doctrine is more than our fixed policy—it is now our sacred promise.

We know now that Poland fell at Munich, and that Czechoslovakia fell at Vienna. And we know now that in the game of power politics Washington might fall along with Halifax, Habana, or Rio de Janeiro. Therefore, let no nation, or combination of nations, make any mistake about this: If so much as one foot of land from Alaska to the Argentine is occupied by any foreign invader, these United States will fight for that foot of land until that invader is expelled or destroyed.

But history must never say of us that the good neighbor in peace was a false ally in war. And that we wanted to help our neighbors, but that we were not prepared. We must stop kidding ourselves that Americans can lick anybody. Maybe we can't. Don't forget that we have fewer soldiers than tiny Belgium; we have fewer guns and tanks than Switzerland; and we have more old-fashioned and obsolete fortifications than any other country.

It is said that the road to international brotherhood is paved with good intentions. Let the United States start patroling that road with more first-class fighting men than any enemy would want to meet.

Dedication of Federal Building, Harrisonburg, Va.

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. SMITH W. PURDUM

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address made by the Fourth Assistant Postmaster General, Hon. Smith W. Purdum, on the occasion of the dedication of the post-office and courthouse building at Harrisonburg, Va., on March 23.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed an honor for me to be here today with the people of Harrisonburg and Rockingham County and to join with you in the dedication of your new post-office and courthouse building.

The Postmaster General, Hon. James A. Farley, has asked me to present his personal greetings and his congratulations upon the completion of this well-deserved public improvement for your community.

I desire to express my sincere thanks to Hon. A. WILLIS ROBERTSON, Congressman from this district, and to your postmaster, Mr. G. Frederick Switzer, for their kindness in inviting me to be present and to participate in the dedication.

It makes me very happy to be with you all here in Harrisonburg today. I always recall with most pleasant memories my previous visits, covering a long period of years, to this fine section of the State of Virginia. It always gives me great pleasure to come within the confines of this splendid State. I am proud to say that I know Virginia well, and likewise her people, whom I regard with great affection.

The visitor to Virginia, and particularly to this section, is impressed with the lavish beauty of its scenery, the fertility of its soil, and the variety of its agricultural products, and especially the culture and hospitality of her people.

All of us should ever be mindful of the early history of this State, for in these sections were planted the seeds of those things that have meant so much to the people of our country down through the years to the present time.

We should pause to pay tribute to those brave men and women who came to Virginia in the early days and who played so large a part in the founding and formation of this State and of our Nation. They bequeathed to their descendants those attributes of courage, wisdom, and sturdy independence that has enabled Virginia to maintain the place that it has always held among the States of the Union.

It is also fitting that on this occasion we should mention particularly Alexander Spotswood, Governor of Virginia in Colonial days, and Deputy Postmaster General for the Colonies from 1730 to 1739. His service to the people of Virginia is well remembered.

In building a community there are three important factors—the spiritual, the educational, and the material—the spiritual as represented by its churches and clergy, and reverence for the divine Providence; the educational as represented by its schools, colleges, libraries, and civic organizations; and the material as represented by the secular affairs and the business life of the community. Harrisonburg has always been mindful of these three important factors, as evidenced by its fine schools, colleges, churches, and business houses, with a constant growth from year to year.

I take this opportunity to mention one of Virginia's fine institutions of learning located in Harrisonburg which has made history and is held in high esteem by those who are familiar with the splendid work it has done and is doing. I am very proud to say that some of my daughters attended this institution, for which I shall always be grateful. Right now I express my gratitude to the instructors and their associates of the State Teachers' College, now so well known and well-named Madison College.

Good postal service is as important to your splendid community as it is to the largest commercial and industrial cities of our Nation. Each home and each family await the daily visit of the mailman for news from friends or relatives from near or far-off places; for the newspapers or the weekly or monthly periodicals

which contribute so much to the information, intelligence, and happiness of our people.

Now, and as it has been through the years, efficient postal service is of utmost importance in the business and social life of our communities, our States, and our Nation. Even in colonial times, its necessity was fully realized. The system of postal communication between the Colonies which was developed by Benjamin Franklin was a vital factor in securing united action by the Colonies in their fight for freedom and independence.

When the Constitution was adopted in 1789 there were 75 post offices doing an average business of about $100 a year each. Fifteen of these post offices were in the State of Virginia, at Alexandria, Bowling Green, Cabin Point, Colchester, Dumfries, Fredericksburg, Hampton, Hanover Court House, Norfolk, Petersburg, Richmond, Smithfield, Suffolk, Williamsburg, Yorktown.

From this humble beginning the United States Postal Establishment has grown into the largest single business enterprise in the world, with approximately 44,000 post offices and revenues of about $750,000,000. Of necessity, the Postal Service had to keep pace with the tremendous growth and development of our country. The successful accomplishment of this objective has been due to several factors. In the first instance, we are indebted to the founding fathers for the sound base upon which the American Postal System was established.

The Constitution gives the Congress the power "to establish post offices and post roads," and all through our history the Congress has exercised this prerogative with discretion and good judgment. The Members of the House of Representatives and of the United States Senate have always been mindful of their obligations to the people of the country in the provision of good postal service, and, through the granting of appropriations and the enactment of wise and beneficent legislation, have provided for the expansion of the Postal Service and its functions in an orderly and efficient manner to meet the increasing demands of a growing nation and a progressing civilization.

The multitude of postmasters and postal employees throughout the country are giving their best efforts to the end that the American people might at all times have the best possible Postal Service, without waste and extravagance. All of these factors have contributed to make our Postal Service what it is today, an efficient, courteous service for all the people, and one which embraces among its employees the highest type of American citizenship. This is especially true of the State of Virginia and your own city of Harrisonburg, where Postmaster Switzer and the postal employees working with him are striving to render courteous and efficient service.

Good Postal Service requires adequate and modern quarters and facilities. The need for better facilities for the post offices, the United States courts, and various Federal agencies was recognized by Congress, and for several years, beginning in 1934, annual authorizations were made for the erection of Federal buildings throughout the Nation in every State and in the Territories and insular possessions. These building programs have met the housing requirements of the post office and other Federal agencies in about 1,900 individual communities over the country.

In the dedication of this Federal building, it is proper that credit be given to the Public Buildings Administration of the Federal Works Agency, which supervised the preparation of the plans and the construction of the building; to the general contractor, A. Farnell Blair, of Lake Charles, La., and to the Government's construction engineer, Mr. Bruce K. Jones. However, we should not forget that without the hands of labor, this building would not have come into being, and this applies not only to the carpenters, bricklayers, and mechanics and artisans of every character who participated in the actual construction but as well to the lumbermen in the forests, to the miners, to the men in the stone quarries, and to the workers in the mills and factories who produced and fashioned the materials necessary in making possible this imposing edifice. In the dedication of this building, therefore, let us pay sincere tribute to all those whose physical efforts have contributed to its consummation.

I have told you that it is always a pleasure for me to come back to Virginia, and I am doubly pleased when I have the opportunity to come into the Seventh Congressional District because it is represented in Congress by one of the finest types of public servants that it has been my privilege to know. He has carried into the National Congress the same diligence in behalf of the people of his district, the same industry, and the same devotion to duty that has characterized his entire public career. He is respected in the House of Representatives for his sound judgment, clear thinking, and intense interest in the welfare of the people, not only of his district and of his State, but of our Nation. I am happy to have the opportunity to pay sincere tribute to your Congressman and my good friend, Hon. A. WILLIS ROBERTSON.

It is also fitting and proper that we should mention at this time a man who is well known to all of you in this section of Virginia, who bears a name outstanding in the annals of this State, and whose career has been such as to bring further honor upon that name. He was one of the finest Governors Virginia ever had, and now serves with ability and distinction as the junior Senator from this State—a great American and statesman—Hon. HARRY FLOOD BYRD.

The dedication of a Federal building is a noteworthy occasion. The dedication of this building is an important event to the citizens of your splendid city, county, State, and to our Nation. Such an event is so representative of our great Republic, for our people in all walks of life gather together and give testimony by their presence and voice to their fidelity, loyalty, and love for our National Government and its institutions.

It gives me much pleasure, and I am sure that it is a source of gratification to the fathers and mothers here, to see so many young men and women and boys and girls present. These young people will in due time take up the work and carry on when we drop out of the picture. Therefore it behooves us to so conduct ourselves at all times and to let our speech in private and in public be such that it will be of value to the youth of the land.

It is my belief that of all the governmental activities to be housed in this structure, those which are closest to the lives of our people are the postal establishment and the United States courts. The postal establishment is one to render an important daily service in every city, village, hamlet, and rural section of our land, coming into direct contact with the lives of all our citizens. The United States courts render a service of justice to all, regardless of creed, color, or position in life, as indicated in that wonderful oath to which all United States judges subscribe before entering upon their duties, and which is in part as follows:

"I do solemnly swear that I will administer justice without respect to persons, and do equal right to the poor and to the rich, and that I will faithfully and impartially discharge and perform all the duties incumbent on me, according to the best of my abilities and understanding, agreeable to the Constitution and laws of the United States; and that I will support and defend the Constitution of the United States against all enemies, foreign and domestic."

I have mentioned the valuable contributions of the postmasters and postal employees to the success of the Postal Service. However, no business organization or line of endeavor can be successful without competent leadership. In the Post Office Department we are fortunate to have as our chief a man who brought to that high office excellent business qualifications which, coupled with humane administrative principles, have not only maintained the Service at a high level of efficiency, but have also vastly improved the working conditions of postal employees. I shall always be grateful for the opportunity afforded me to share in the administration of the Postal Service under the leadership of a splendid citizen and a great American—Postmaster General James A. Farley.

We, who are a part of the postal establishment, one of the great Departments in the executive branch of our National Government, must constantly bear in mind that we are the servants of the people, and that we have no authority which does not come to us from the people through their duly elected Representatives in the National Congress. It is the duty of each and every one of us in the Postal Service to strive to do our utmost to render an efficient and economical service. To do so will redound to our credit and will have the approbation of our people, the Members of the House of Representatives, the United States Senate, the Postmaster General, and the President of the United States.

I thank you.

Robert H. Hinckley, Chairman, Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, April 1 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. SCHWELLENBACH. Mr. President, on Saturday morning there appeared in the Washington Times-Herald an excellent article about Hon. Robert H. Hinckley, Chairman of the Civil Aeronautics Authority. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of March 30, 1940]

WASHINGTON DAILY MERRY-GO-ROUND

(By Drew Pearson and Robert S. Allen)

The story has been told how at 4 o'clock last Tuesday morning, while European aviation was chalking up new records for death and destruction, the far-flung air lines of the United States set a different kind of record—1 full year of operation without a single fatality or serious injury.

A number of factors have deservedly been given credit for this historic achievement: Better planes, better personnel, better airports and radio facilities. There also was one other that played a leading part in the spectacular holiday from death—a man who eats, drinks, and sleeps aviation.

He is Robert H. Hinckley, the quiet-mannered, indefatigable Chairman of the Civil Aeronautics Authority, to whom air safety records are an old passion.

Twelve years ago, long before there was anything even resembling the C. A. A. and when almost every passenger plane that took off flirted with death, Hinckley organized the Utah-Pacific Airways. Its route was over some of the most treacherous flying terrain in the country—the Rockies. But in the 3 years that he directed the line, it suffered not one fatal mishap.

It's not strange that only a few know this. There are many things about the tall, handsome Utahan, who will be 50 in June, that even his best friends don't know. He is that kind of man. Publicity is not his forte. But doing outstanding jobs definitely is. In his retiring, genial way he has been doing them all his life.

PILGRIM DESCENDANT

Bob Hinckley is one of the most unusual men in Washington. He is a Pilgrim descendant, a onetime missionary, a highly successful businessman, one of the most brilliant executives in the Government, and an ardent new dealer.

One of the things that few know about him is that he has a jail record. Hinckley is proud of it. It happened when he was seriously considering becoming a different kind of "sky pilot."

In his veins flows the blood of a long line of religious ancestors. One of them was Thomas Hinckley, Puritan Governor of the Plymouth Colony from 1681 to 1692. Another was Hinckley's grandfather, Ira Hinckley, who accompanied Brigham Young to Utah and became a pillar of the Mormon Church.

The religious zeal of his forbears burned bright in young Bob. At the age of 19 he gave up his studies at Brigham Young University and accepted a call as a Mormon missionary in Europe. Most of his 3 years there was spent in Germany, where he had two experiences that greatly influenced his later life.

One, in 1913, was his first airplane flight, with Melli Beese, famous pioneer aviatrix. The other was the interlude in the cooler.

Hinckley was arrested by German authorities for spreading the Mormon gospel. The Kaiser's police were outraged that a foreigner should be doing missionary work in the Reich and they jailed young Hinckley on a charge of "disturbing the peace." After a few days he was released on condition that he leave the country.

AIR-LINE PIONEER

Returning to the United States, Hinckley decided he was not cut out for a clerical career, and reentered the university to prepare himself for teaching. But after 2 years as a high-school instructor in Mount Pleasant, Utah, the fever of the motor age gripped him and he went into the automobile business, becoming in a few years one of the largest dealers in the State.

It was a natural step for him to become interested in aviation and to envision its commercial possibilities. But others in those days of early planes were less optimistic. They commended his daring but held on to their own cash.

Hinckley was undaunted. He went ahead alone, organized the Utah-Pacific Airways and made it one of the few successful pioneer air lines.

During all this time, while immersed in his extensive business activities, he also was alertly interested in public affairs. He found time to serve several terms as a liberal Democrat in the Utah Legislature, as mayor of Mount Pleasant, and as president of the Utah Municipal League.

In the historic campaign of 1932, Hinckley was one of the leaders who put Prof. ELBERT THOMAS into the field against the powerful veteran Republican Senator Reed Smoot and defeated him. This accomplishment, plus his record as a liberal and his success in business, brought Hinckley to the attention of President Roosevelt early in 1933.

RELIEF PIONEER

At that time the New Deal was preparing to set up its first relief program. Roosevelt sent for Hinckley to ask him to help with the job.

"My business affairs need me badly, Mr. President," Hinckley replied, "but I'll drop everything and pitch in. I think we can get the set-up you want going in 3 months, and then I'll have to get back to my own problems."

That was 7 years ago. Hinckley is still in Washington.

After the emergency-relief job was completed, he was commandeered to formulate a permanent-relief program. When that was done and the W. P. A. was established, Hinckley again was impressed as western director in charge of 11 States.

His record in this post was so outstanding that when the C. A. A. was created to replace the chaotic Bureau of Air Commerce, Roosevelt again refused to allow him to quit, and put him on the new agency. Six months later, when Chairman Edward J. Noble was elevated to Undersecretary of Commerce, Hinckley was the unanimous choice to succeed him.

SERENE CRUSADER

Outwardly there is nothing of the dynamo about Hinckley. He is one of the mildest and kindliest of men. But things have a way of moving with dispatch and order when he is on the job.

It was Hinckley who, almost single-handed, sold the student-pilot-training program to a scary Congress. The politicos admitted the need for more pilots, but were afraid that accidents would boomerang against them. Hinckley talked them out of their funk and they gave him the money he requested. This year 10,000 youths are receiving flying instructions—and there hasn't been one serious accident.

It was Hinckley who summoned air-line operators and quietly but firmly told them there was only one way to stop fatalities, and that was to put an end to bad-weather flights.

"Now, gentlemen," he said, "you can do this in one of two ways. Stop chiseling on one another and voluntarily agree among yourselves to cancel flights in bad weather, or the C. A. A. will step in and make you do it. Take your choice. What will it be?"

The operators chose voluntary regulation, and the past year's spectacular record is a tribute to the sincerity with which they abided by their pledge and Bob Hinckley's confidence in them.

The Republican Party is the Peace Party

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, OVER THE BLUE NETWORK OF THE NATIONAL BROADCASTING CO., MARCH 30, 1940

Mr. THILL. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio address by Hon. HAMILTON FISH, of New York, over the National Broadcasting Co.'s Blue Network on Saturday evening, March 30, 1940:

Someone coined the phrase that "Thomas Jefferson founded the Democratic Party, and Franklin D. Roosevelt dumfounded it." Certainly he has dumfounded it with his policies of internationalism, interventionism, and quarantinism of foreign nations, a complete departure from our traditional foreign policies.

Jefferson was most outspoken against involvement in Europe. He said, "I have ever deemed it fundamental for the United States never to take an active part in the quarrels of Europe. * * * They are nations of eternal war."

The German White Book, released to the press yesterday, proves my contention that the war hysteria in the United States emanated directly from the White House and has been ably abetted by our Ambassadors in Europe and the warmongers at home.

If the American people do not wake up, we will be sold down the river into war by the New Deal internationalists.

It is no answer to the charges contained in the German White Book to raise the hue and cry of "propaganda," or to sprinkle a few grains of salt on its tail.

The German foreign office has made extremely serious charges that cannot be brushed aside or laughed off, as is the custom of President Roosevelt. The entire foreign policy of the United States and the lives of American citizens are at stake.

If Mr. William C. Bullitt, our Ambassador to France, acting as a representative of President Roosevelt, gave any commitments of our entrance into the European war, or even that we would finance it, it would constitute an impeachable offense. The Congress of the United States, thank God, has the only constitutional power to declare war.

I do not propose to prejudge Mr. Bullitt or President Roosevelt, but both owe it to the American people to give a categorical and detailed answer to each and every charge made by the foreign office of a nation with whom we are at peace.

Unfortunately, the remarks attributed to Ambassador Bullitt by the Polish Ambassador at Washington have a familiar ring, but are somewhat stronger and more concrete than have been reported previously.

Apparently under the New Deal quarantine policy some of our ambassadors and ministers, instead of promoting peaceful relations abroad, have sought to foster war in Europe. Last week, Mr. James Cromwell, our Minister to Canada, sounded off the battle cry to war. Where there is so much smoke, there is apt to be a good-sized fire.

The whole sequence of events can easily be traced back to the tragic quarantine speech of President Roosevelt in Chicago a few years ago, when the American people were aroused and alarmed as if by a fire bell in the middle of the night.

The American people are entitled to know whether Ambassador Bullitt gave any assurances of America's participation in the European war, or even of any financial assistance.

The Congress will probably wait for the publication of the full text of the correspondence in order to properly examine it and determine its authenticity.

The alarming part, and crux of the charges, are contained in a report of an interview of Ambassador Potocki at Washington with Ambassador Bullitt a year ago. This is what Ambassador Potocki is reported to have sent to Foreign Minister Beck: "From the

interview with Bullitt I gained the impression that he had received from Roosevelt a most exact definition of the standpoint that the United States occupies today in regard to the European crisis: (1) Activation of foreign policies under leadership of President Roosevelt against totalitarian states; (2) war preparations by the United States; (3) decided opinion of President Roosevelt that France and Great Britain must put an end to all policy compromise and not make any territorial changes; and (4) that the United States will participate actively and place war supplies and finances at their disposal." This is nothing new, but it substantiates the charges I have publicly made against President Roosevelt on numerous occasions, of promoting war hysteria, destroying American neutrality, attempting to intervene in Europe, and seeking to finance its wars.

I shall demand a complete investigation of the statements alleged to have been made by Ambassador Bullitt. After careful examination of the facts, if the evidence warrants action by the House of Representatives, I shall introduce a resolution of impeachment.

There is ample precedent for such action. Former Ambassador Bayard was censured for making a tariff speech in Great Britain and impeachment procedings were instituted. The remarks made by Ambassador Bullitt were not on mere tariff or domestic subjects, but involved the war-making powers of the Congress.

It is the duty of the Congress to safeguard its constitutional functions and to impeach the President or any Ambassador or Minister who seeks to usurp such powers and drag us into war.

If these charges are true, they would constitute virtually a treasonable act. If President Roosevelt has entered into secret understandings or commitments with foreign governments to involve us in war he should be impeached.

President Roosevelt's internationalism and his dangerous halfway policies of intervention and his measures short of war are well known in America and abroad.

The Congress will probably adjourn by June 1, and there will be a critical period of 7 months before the new Congress will convene. I hope that the Congress will either repeal the emergency powers given to the President under existing laws or make them subject to a declaration of war or emergency to be proclaimed by the Congress.

All permanent emergency war powers should be withdrawn and be retained by the Congress and thereby restore representative and constitutional government in the United States.

The President already has vast powers to promote peace or entangle us in foreign wars. It is foolhardy to extend his authority by additional emergency powers that would place the destiny and security of our great Nation at the whim of any one man. That is dictatorship with a vengeance. It is not the American way. Let Congress revoke its grant of emergency powers and fear of intervention will disappear as the morning mist before the rising sun.

The American people have not and should not be divided into peace and war groups along party lines. The preservation of peace should be the continuous policy of both the Republican and Democratic Parties and of the American people.

However, we are confronted with an actual situation wherein President Roosevelt controls and dominates the foreign policies of his party to such an extent that he has forced his own League of Nations and internationalist views upon the New Deal, and has made it the party of intervention—and he is rapidly making it the war party in the United States.

This unfortunate situation is parallel to that of 1916, when President Wilson was seeking reelection on an issue of keeping out of war. He actually got us into war within 30 days after his inauguration.

This must not happen again in America.

At that time Secretary Lansing, Colonel House, our Ambassador at Large, and Ambassador Page at London had, as we now know, already determined to take us into the World War.

Today we have the same types in the administration, such as our Ambassador to France, our Minister to Canada, swashbuckling members of the Cabinet, and a host of prominent New Dealers—and some not so new, such as Senator CARTER GLASS—and the old League of Nations group.

The spring and summer months will bring with them an increased tempo in the winter-stagnated European war. Foreign propagandists will flourish and multiply like spring flowers and increase their activities in the United States. War hysteria and passions will be inflamed by atrocity stories as in the World War. Hatred and excessive partiality will crush and pervert the truth and sacrifice our own interests. Increasing economic entanglements and the siren call of profits will make war seem natural and inevitable.

Such is the course of war and the power of propaganda.

How can this be checked, if not actually prevented? The Dies committee should investigate and expose all foreign propagandists—British, French, Nazi, Fascist, and Communist—and the source of such propaganda, without fear or favor.

We have enough troubles in America without being made victims of a mass barrage of inflammatory and poisonous foreign propaganda.

War is man-made. Therefore, man can keep out of war, particularly in great nations and where there is a strong enough will to preserve peace. The public registration of foreign agents should be required by law. War-profit taxation should be levied up to 90 percent in order to take excessive profits out of wars and to discourage our participation in them.

Up to now some of the Presidential candidates of both the Republican and Democratic Parties seem to be playing a game of hide-and-seek, as evidenced by their silence and evasion of the war issue, which is uppermost in the minds of all the American people.

While the voters are seeking their real views they are adroitly attempting to hide and conceal them by generalities and lip service to peace. This issue, affecting the security of our country and the lives of our youth, is discussed daily in American homes. Most of our citizens, irrespective of party, are vitally interested in keeping America out of foreign entanglements and wars.

The electorate are entitled to know exactly where each candidate stands, without equivocation and mental reservation, on Americanism as against intervention in the eternal wars of Europe. There is a vast difference between the foreign policies of the Roosevelt administration and those of the Republican Party as expressed by its Members in Congress.

Public polls demonstrate that more than 90 percent of the people want to preserve American neutrality and stay out of foreign wars. They have a right to express their sentiments on this issue at the polls next November.

It would be the most unfair and cruelest kind of political deception and fraud if the candidates of both parties should give mere lip service to peace while privately undermining American neutrality and secretly favoring intervention.

The Republican candidates for the Presidency must stand on the record created by the Republican Party in the Congress against the internationalism and interventionism of President Roosevelt since his Chicago speech in 1937 proposing that we quarantine nations with whose forms of government we do not agree.

The Republican Party in the Congress has insisted on adhering to our traditional policies of neutrality, nonintervention, and no entangling alliances, and 88 percent of the Republican Members of the House of Representatives voted to oppose the repeal of the arms embargo as being the initial step toward destroying American neutrality.

Practically 100 percent of the Republican Members of Congress are firmly opposed to granting any power to the President to establish economic sanctions, to determine the aggressor nation, or to quarantine foreign nations with American blood and treasure.

A clear-cut issue has been made by the Republicans in Congress against the foreign policies of President Roosevelt.

I cannot understand the reason why any Republican candidate for President or any other national office, who is in accord with the practically unanimous expression of his party in the Congress in thwarting the internationalism of the New Deal administration, should fail to take the voters into his confidence as to where he stands on the record made in Congress by the elected Representatives and Senators of his own party on international issues.

It is all very well to elucidate about domestic issues, such as debts, deficits, and taxes, but all of these will be meaningless—and doubled—in no time if we are involved in another foreign war.

In addition, it would mean a black-out of representative government, our free democratic institutions, and our own liberties, to be replaced by a dictatorship that even Stalin or Hitler would envy.

Presidential candidates are important in themselves, but party platforms on which they and the candidates for Congress stand are more important.

The election of a Republican majority in the House of Representatives is just as vital as electing a Republican President.

Nothing contained in the Republican national platform in 1940 will be more scrutinized than its foreign-policy plank.

The framing of such a plank, reflecting the views of the peace elements within the Republican Party and of millions of Democrats who are striving for more abundant life instead of more abundant death on the battlefields of Europe, will be essential to party success.

There must be no platitudes, generalities, or lip service to peace. It must be a ringing challenge against interventionism, and for Americanism against internationalism, and a forthright answer to the disciples of despair and intervention who prattle that war is inevitable.

As ranking Republican member of the Committee on Foreign Affairs of the House of Representatives, I propose to use every influence at my command to have the Republican Party adopt a strong antiwar platform at its national convention. If this is done, it will establish in the minds of the people that the Republican Party has a real peace program, and is the party of peace in America.

I submit for the consideration of the delegates at the Philadelphia convention, to be held on June 24, the following plank on foreign affairs:

REPUBLICAN FOREIGN POLICIES

We pledge the Republican Party:

(1) To stand squarely against involvement in foreign wars.

(2) To uphold our traditional foreign policies, proclaimed by George Washington, of neutrality, nonintervention, no entangling alliances, and respect for international law.

(3) To maintain adequate national defense and uphold the Monroe Doctrine.

(4) To oppose the granting of power to the President to enter into economic sanctions, collective security, and to quarantine foreign nations, or to make any secret understanding or commitment with any nation that would weaken American neutrality.

(5) To combat all propaganda from whatever source aimed to undermine the will of the American people for peace, and require the public registration of all foreign propagandists.

(6) To expose the contentions of the warmongers and interventionists that war is inevitable.

(7) To refrain from denouncing foreign forms of government and spreading hatred against nations with whom we have peaceful relations by "measures short of war."

(8) To cease the purchase of gold and silver at artificial prices from foreign nations, enriching them, and impoverishing ourselves.

(9) To stop making foreign loans.

(10) To take the profit out of war by enacting an excess-profit tax on munitions of war.

(11) To repeal the emergency powers given the President, and make them subject to a declaration of war, or an emergency proclaimed by the Congress.

(12) To exert our moral influence to promote peace in Europe, based on the principles of arbitration, mediation, and peaceful settlement of international disputes.

Why a Union, and What Can It Do for You?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

Mr. HOFFMAN. Mr. Speaker, a union is an organization of employees who have joined together for mutual benefit. Usually they seek improved working conditions, shorter hours, and higher wages, and attempt to bring these about through collective bargaining.

A union is not only advisable but it is necessary where an employer refuses to maintain healthful working conditions, reasonable hours, and pay an adequate wage. The reason for the formation of a union and the presentation of requests for improved conditions by a bargaining agent, rather than by each individual acting for himself, is that an individual making such a request or demand might be discharged, while, if the demand comes from a representative of a majority or of all the employees, it carries a great deal more weight, as the employer cannot often discharge all those who make such a request.

A union, however, should be made up of, and its bargaining agent should represent, the employees in the plant where the demand is made. An outsider who has no interest in the employees themselves, no interest in the business, should not be permitted to interfere and bring about dissension between employee and employer.

Before employees who have formed a union and selected as their bargaining representative some outsider, permit him to make demands upon their employer, they might well ask themselves whether this bargaining agent, this outsider, is prepared to give them a job at better wages, shorter hours, and better conditions than they are now enjoying.

The foregoing thoughts are brought to mind because of information requested in a letter received from a friend in my home town of Allegan, Mich., a small city of some 4,000, where the C. I. O. has recently formed a union in the plant known as Blood Bros., and by the statement attributed to one Thomas, head of the U. A. W. A., to the effect that bargaining negotiations will soon start with Blood Bros.

Thomas, you may recall, is the fellow who claims credit for the last Chrysler strike, which had that plant shut down for some 54 days with a demand that Chrysler employ only C. I. O. members. The strike ended with a small increase in pay—something like a 3-percent and in some few instances as much as a 6-percent increase in pay. But the loss of wages was such that it will take the employees of that company something over 3 years to make up what they lost during the strike, if they have steady work, while with lay-offs and subsequent strikes there is no assurance that any of them will ever make good the wages lost during the 54 days.

Contrary to the oft-expressed opinion of my political enemies, I am a firm believer in unions and in collective bargaining, but I have no use whatever for labor racketeers and organizers who come from other cities, bring violence and lawlessness, and who make their living and draw exorbitant sums out of the pay checks of workers.

Long ago we were told that a laborer was worthy of his hire. There is no doubt about the soundness of that doctrine. Before employees in any plant give up a portion of their pay checks to labor organizers from outside their city, they should ask themselves what they may expect to gain by such a procedure.

Mr. Thomas, so the press states, says he is going to Allegan to bargain with Blood Bros. That may increase the prestige of Mr. Thomas. Just what will it do for the employees?

I have no financial interest in Blood Bros. I do not know whether they are paying a fair wage; whether they are forcing the men to work too long or not giving them work enough. I know nothing about their financial condition. But one or two things I do know. One is this: That jobs in Allegan are none too plentiful.

Another is that neither Thomas nor the C. I. O. will create a job in Allegan; that neither will give anyone employment at an industrial job or pay anyone wages.

If Blood Bros. are not paying fair wages, and if they can afford to pay more, then they should do so. On the other hand, what can be gained by following Thomas, calling a strike, if the company cannot and will not pay more? Will Thomas or the C. I. O. give a better job when the trouble is over?

I have often wondered why, if the C. I. O. knows so much about what should be paid and the hours that should be worked and the rate of production, it does not, in some small community like Allegan, establish a factory and operate it as a factory should be operated. The C. I. O. had something like $3,000,000 in cash at the end of 1936. What a wonderful thing it would be if that organization would, in some community in the United States, in Allegan, for example, give us a demonstration of just what an employer should do in operating a factory.

There are buildings available in Allegan. Undoubtedly, the city would be glad to furnish a building if the C. I. O. will open a factory, hire men, pay them the wage that the C. I. O. thinks is just and equitable, and operate the business in the manner that the C. I. O. has been attempting to force private industry to operate its plants.

If the C. I. O. wants to be fair and just, why does it not follow such a course? Why continually find fault with all those who are giving employment, who are meeting pay rolls, who are enabling men to live and to buy some of the luxuries as well as the necessities of life? Is it not about time that the C. I. O. show us how an industrial plant should be operated rather than always finding fault with the man who is operating one?

If Thomas closes Blood Bros. by a strike or drives it out of the town, will he have another job ready for the Allegan workers? The C. I. O. never has provided an industrial job for anyone. It never operated a factory nor met a pay roll.

That organizers are not always solicitous about what happens to the local men is well illustrated by a strike not so long ago at Dowagiac, Mich. A couple of organizers who, it was said, received $15 a day and expenses, went to that town and organized a strike. They incited some of the employees to violence and, when the strike was over, a local man went to jail for destruction of company property, while the organizers went on their way to another job.

Wonder what the employee, as he sat in jail because he carried out the suggestions of the organizer, thought about.

No one denies the right of employees to strike. No one questions their right to picket. It is equally true that neither pickets nor strikers have the right to prevent another man who wants to work from going to his job, and those who state otherwise are just giving bad advice.

Local folks should remember that these outside men do not own homes in Allegan; they do not depend for their livelihood upon Allegan jobs. What they are doing is organizing unions, collecting initiation fees and dues, and

drawing their salaries, and all too often calling strikes. They cannot draw salaries; they have no job, unless there is, or they can stir up, trouble between employers and employees.

Another thing I know: If Thomas thinks for one moment that he can go into Allegan County, pull a strike and by force keep men from going to their jobs, either in Blood Bros. or in any other plant, then he has another guess coming.

If Thomas takes his plug-uglies from Detroit or Flint or some other community to Allegan and puts on his so-called educational campaign by use of a piece of gas pipe or a loaded rubber hose, he is quite likely to run into law-enforcement officials who believe and will maintain that their oath of office requires them to enforce the law.

Moreover, if he by force beats up any man who wants to work and who does not want to join his union in order to hold his job, he will find himself involved in damage suits that may be a novelty to him.

Nor have Blood Bros. any right, under the National Labor Relations Act, to compel their employees to join a union. They cannot discharge an employee because he belongs to a union nor have they any right to discharge him because he refuses to join a certain union.

Personally, I wish the employees of Blood Bros, all the good luck in the world. No one questions their right to form a union of their own or to join what is termed an outside union, and I would be the first to assist them, did they ask it, in securing fair working conditions, adequate wages, and continuous employment.

I practiced law in Allegan for almost 40 years, and no man ever came to my office seeking legal aid and was turned away because he could not pay a fee. That policy will be continued, and the fact that Thomas has raised so much hell in Detroit, that the C. I. O. has had in its ranks so many Communists, that it has in its treasury millions of dollars, will not enable it to run roughshod lawlessly over Allegan.

From some place in these United States must come the lesson that here in America man is still free to work at a job offered him without being compelled to join any organization. That lesson might as well be learned in Allegan, Mich., the State which Murphy gave over to the C. I. O., their communistic allies, and the sit-down strikers early in 1937.

I hope that if any differences of opinion arise between the men who work at Blood Bros. and the management of that company they can be settled in a friendly spirit; that no one connected with the management of Blood Bros. will be arbitrary or unfair and that no single employee will get the notion that Thomas or the C. I. O. is going to give him a job if Blood Bros. is put out of business.

My memory goes back to the time when we lost the Overton Creamery. Our home folks remember it. Farmers in our little community were getting some $50,000 a month for their milk. A lawyer told them they were not getting enough, although they were receiving more than other producers in other parts of the State. A strike was the result. It ran on and on. Finally Overton sold his plant to the Pet Milk Co., which closed the plant, taking its business to Wayland, at which point they now operate. The net result was that Overton went out of business (he later made good financially, so the strike was a blessing in disguise to him); Allegan merchants and Allegan County farmers lost the benefit of a $50,000-a-month milk check and dairying became a minor industry.

Allegan needs industrial plants. Industrial plants have left some of the larger cities because of labor trouble. It has been stated that both Holland and South Haven and certainly Kalamazoo are to get new industrial plants because of labor troubles in the larger cities.

The C. I. O. has ruined business in more than one small city. By its activities it aided in throwing permanently out of employment some 20,000 rubber workers at Akron, Ohio. It practically wiped the town of Coral, Pa., off the map.

Aided by Governor Murphy at Flint, it cost the workers a wage loss of $44,000,000. With Murphy's help, it defied the courts, it violated the law, it took possession of Lansing for a day.

But Murphy is no longer Governor of Michigan, and Governor Dickinson will not stand for the same kind of violence, intimidation, and coercion which the C. I. O. got away with at Flint. Allegan has always been a law-abiding town. There is no reason to believe that either the city administration or the county authorities will sit idly by and see men beaten or driven from their jobs by Thomas and those he may mislead.

Thomas should remember that Washburn went to jail for inciting a riot at Lansing and that if he proposes to bring lawlessness to Allegan city or Allegan County he will undoubtedly discover that neither the prosecuting attorney nor the sheriff of Allegan County subscribe to the doctrines of the prosecutor and sheriff of Wayne County, who were so recently indicted.

I hope that if industrial troubles arise in Allegan they will be settled, as all such matters should be settled, over the council table. And I hope if lawlessness comes to Allegan County that it will be met as it should be met, by the forces of law and order, and that those who believe that under the guise of picketing and of striking they have the right to crack the heads of those who want to work will learn once and for all that such a procedure will not be tolerated in Michigan outside of Detroit.

Home Ownership Encouraged Under President Roosevelt's Administration

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

Mr. PATMAN. Mr. Speaker, before President Franklin D. Roosevelt was nominated, he caused to be published some very interesting articles on home and mortgage financing, and especially about usurious interest and different items costing an excessive amount, which retarded home ownership. The successful way that President Roosevelt's views have been carried out since he became President is almost unbelievable. His statements were made the year before he was nominated for the Presidency and long before he was nominated. The Democratic platform in 1932 embodied his views. Today the small saver and home owner of this country can thank the Roosevelt administration for the safety it has thrown about his savings and the security it has given him in the ownership of his home. I desire to describe conditions prior to 1933 and outline what President Roosevelt has caused to be done since that time to correct them.

SAVINGS AND HOME OWNERSHIP SINCE 1933

I. CONDITIONS PRIOR TO 1933

The crisis of 1933, which confronted the present administration at the outset, represented the culmination of a series of maladjustments and inequities. As far back as 1915, during the administration of President Wilson, Mr. John Skelton Williams, Comptroller of the Currency, had recognized the existence of serious abuses in the mortgage financing field. He startled the American public with the statement that more than one-third of the national banks of the United States were exacting usurious interest charges on mortgage loans. In the September 2, 1915, call report Mr. Williams found that in 36 States 1,247 national banks were charging on some of their loans rates in excess of those permitted by the usury laws of their States. In fact, Mr. Williams pointed out that the maximum rate charged by 26 banks was 100 percent per annum or more.

Obstacles to new construction

Because of the housing shortage in New York City in 1921, an investigation was made by the Lockwood committee of the obstacles to new construction. The committee unearthed overwhelming evidence that the New York State usury law was being flagrantly violated by mortgage lenders. It found

that savings banks, life-insurance companies, and lending institutions in general were charging effective interest rates as high as 20 to 50 percent on real-estate loans. During the hearings conducted by the Lockwood committee, Mr. Samuel Untermyer obtained sworn statements that financial institutions in general had been demanding and receiving bonuses, commissions, and discounts reaching as high as 20 percent on loans where the stated charges were only 5½ or 6 percent.

Farm mortgages also included

This unjust condition was found to exist not only in the urban real-estate field but in that of farm mortgages as well. Bulletin 1045, an official publication of the Department of Agriculture, contains a detailed analysis of interest charges by banks on farm-mortgage loans in 1921. This study of the Department of Agriculture, made under the auspices of a Republican administration, likewise shows that in many States the prevailing rate charged by banks exceeded the maximum rate permitted by usury laws. A number of devices were used for evading these laws, such as discounts, commissions, bonuses, and other similar charges which were not figured in the interest rate but which very effectively raised the cost to the borrower.

President Hoover's first conference

The situation as shown by these reports and studies continued through the decade of the twenties. As late as 1931 even President Hoover recognized that all was not well in the home-financing field and, as was his custom, called a conference to consider the question. An analysis of questionnaire surveys conducted by this conference showed that the usury laws were still being circumvented and that home owners were paying exorbitant prices for the privilege of home ownership. The final reports of the President's Conference on Home Building and Home Ownership indicate the wide prevalence of such practices as the charging of bonuses, commissions, premiums, discounts, and exorbitant interest rates on second-mortgage loans.

Interesting report of President's conference

The report of the President's Conference on Home Building and Home Ownership, volume II, page 65, shows in tabular form charges exacted on straight-mortgage loans by banks. This table, which is reproduced below, is a national summary of replies received from 884 banks. It will be noted from this table that in 1931 loans usually were made at only 48 percent of market value. Loans were made for a very short period of under 3 years and at a nominal interest rate of 6.34 percent. In addition to this interest rate, a commission of over 2 percent was charged, and renewals, which were a practical necessity, involved an additional charge of almost 1.7 percent.

	1931	1924
Usual percentage of market value lent ..... percent	47.69	52.14
Maximum percentage of market value lent ..... do	53.92	55.98
Loan periods ..... years	2.89	3.10
Interest rate ..... percent	6.34	6.45
Commission rate ..... do	2.01	2.11
Renewal rate ..... do	1.68	1.76

Terms of buildings and loans at that time severe

The terms of mortgage loans written by building and loan associations at this time were also exceedingly severe, from the borrower's standpoint. The President's conference on home building and home ownership, on the basis of information collected from 1,242 associations, published the following information on the mortgage practices of building and loan associations. This table has been reproduced from volume II, page 67, of the conference report.

	1931	1928	1924
Usual percentage of market value loaned ..... percent	57.36	62.94	64.15
Maximum percentage of market value loaned ..... do	64.34	69.03	69.78
Usual loan period ..... years	10.15	10.11	10.06
Interest rate ..... percent	6.88	6.91	6.98
Payment per $1,000 per month ..... dollars	12.26	12.48	12.53

Home ownership under President Hoover expensive

From this table it can be seen that in 1931 building and loan mortgages were usually made at only 57 percent of market value, that the loan period was only slightly longer than 10 years and that the common interest rate was 6.88 percent. It is obvious from this study that the privilege of home ownership during the Hoover administration was indeed an expensive one.

However, it should be pointed out that at the time of President Hoover's Conference on Home Building and Home Ownership, building and loan associations were the only type of financial institution in this country which had ever made a general practice of financing home ownership on the basis of long-term amortized loans. From the time these institutions were first established over 100 years ago, they have consistently financed American homes on this basis. It is true that until recently the lending term of building and loan associations was only slightly longer than 10 years. Nevertheless, compared with the lending terms of other financial institutions, this was a liberal amortization period. Through the years the only consistent source of home mortgage funds on other than a short-term, high-interest rate, straight basis was the building and loan association of this country.

Major step to reduce cost of home ownership

With the establishment of the H. O. L. C. in 1933, a major step was taken to reduce the cost of home ownership to the average American citizen. This Corporation, for the first time in our Nation's history, provided a loan to be gradually amortized over a 15-year period, with interest at 5 percent. The 5-percent interest rate on H. O. L. C. loans represented an effective charge of just this amount. No commissions, bonuses, fees, discounts, or other hidden charges were employed to increase the effective cost of home ownership. Prior to the establishment of the H. O. L. C., the average monthly payment per thousand dollars on amortized mortgage loans, as shown by the above table, regularly exceeded $12. In the case of H. O. L. C. loans, this charge was reduced to $7.91 per thousand dollars. At that time this represented far and away the lowest monthly carrying charge ever offered to an American home owner who was financing his home on an amortized mortgage.

In addition, H. O. L. C. borrowers were not required to pay the full $7.91 per thousand dollars until after the Corporation ceased its lending operations on June 12, 1936. Up to this time collections were made on an interest basis only. In other words, the very liberal refinancing plan of the H. O. L. C. not only provided for a generous amortization period, and a very low interest rate, but also gave its borrowers the additional advantage of a 3-year moratorium on principal payments.

Further liberalization of H. O. L. C. terms

Even these very liberal lending terms of the H. O. L. C. have been further liberalized in recent months. Last fall, by action of the Federal Home Loan Bank Board, the interest rate collected on H. O. L. C. mortgages was reduced from 5 percent to 4½ percent. During the closing days of the last session of Congress, a bill was enacted authorizing an extension of the amortization period on H. O. L. C. loans from 15 to 25 years. Truly no borrower in the history of this country has ever enjoyed the liberal terms made available to him through the H. O. L. C.

Homes can be easily and safely purchased today

To illustrate the comparative ease and safety with which homes can be purchased today, let us take a typical example of an F. H. A. insured mortgage loan. Instead of being written for a period of 2 to 10 years, this mortgage is written for a term of 20 to 25 years, the interest rate is only 4½ percent instead of 6 percent to 7 percent. The typical F. H. A. mortgage is written at 80 percent to 95 percent of appraised value instead of 45 percent to 60 percent. High interest rates, onerous second and third mortgages have been eliminated, and the home owner relieved of this particularly heavy burden. In short, the prospective purchaser of a $5,000 home today, if he finances it with F. H. A. insurance, can purchase his home

at a monthly mortgage cost of $26.83, where under the Hoover administration he would have been forced to pay an average of $63 to $65 for the same house. In order to show this comparison in a graphic manner, the following table has been prepared, based on the report of the President's Conference on Home Building and Home Ownership and present regulations of the F. H. A.

	1931, building and loan associations	1931, banks	Present Federal Housing Administration practice
Down payment	$500	$500	$500
First mortgage	3,200	2,500	4,500
Second and third mortgages	1,300	2,000	
Monthly mortgage payment:			
First mortgage	39.23	[1] 13.21	[2] 26.83
Second and third mortgages	[3] 26.00	[4] 50.00	
Total	65.23	63.21	26.83

[1] Interest only.
[2] The figure of $26.83 represents the monthly cost of a $4,500, 25-year loan at 4½ percent, plus a ½ percent mortgage insurance premium.
[3] Monthly payment of $20 per $1,000 assumed.
[4] Monthly payment of $25 per $1,000 assumed.

The foregoing comparison of the costs of home ownership under the Hoover administration and the present administration represents, in both cases, the average minimum cost. No attempt has been made to present figures on financing costs other than nominal interest charged. For example, it was very common practice in 1931 to levy commissions, bonuses, discounts, fees, fines, and forfeitures, all of which raised the effective costs of home ownership to the borrower. While most of these charges have been very materially reduced today, certain fees and commissions are still permitted under the law and regulations of the F. H. A.

Share sinking-fund plan burdensome on borrowers

Mention should also be made of the more advantageous loan plan which is today available to every home seeker. Prior to 1933 practically all building and loan associations in the country made their mortgage loans on what was known as the share sinking-fund plan. Under this plan the borrower paid interest on the full face amount of his loan, although he was required to make regular monthly payments to curtail this principal. The effective result of this plan was that the borrower was, in actuality, paying at least 1 percent more than the contract rate called for. In addition, expensive fines and forfeitures were levied against the borrower whenever his payment was not made exactly on time.

New plan much better

This whole picture has been changed through the introduction of the direct reduction loan, now the most common type of loan plan among savings and loan associations. Under this plan the borrower makes monthly payments which are credited both to the payment of interest and the reduction of his principal. At no time is he charged interest on more than the outstanding balance of his mortgage loan. The borrower knows exactly, under this plan, that after the payment of a stipulated number of monthly installments he will own his home free and clear. The contract rate is the effective rate under this plan and the borrower is at no time penalized by the imposition of hidden charges.

Federal institutions established

All Federal savings and loan associations are required by regulations of the Federal Home Loan Bank Board to confine their mortgage lending to loans of the direct reduction type. The establishment of these institutions was provided by Congress in the Home Owners' Loan Act of 1933. There was a real need for these institutions, operating under Federal charter and supervision, and on a basis which embodies the best practices of the building and loan development in this country. Not only do Federal savings and loan associations make all of their mortgage loans on the modern direct reduction basis, but each investor in these associations is insured up to a maximum of $5,000 by the Federal Savings and Loan Insurance Corporation. As evidence of the confidence in which the American public holds these institutions during 6 short years of operation, their number had grown to 1,409 by the end of 1939. Total assets of these associations on that date were $1,577,981,000.

Bank failures aggravated situation

When provision was made for the establishment of Federal savings and loan associations, the country was confronted with one of its greatest emergencies. The financial crisis of 1933 came at the end of one of the wildest and unrestrained periods of speculation in our country's history, indeed, in the history of the world. When that speculative orgy collapsed it left American financial institutions in a state of virtual paralysis. During the period 1921–32 more than 10,000 banks, with deposits of nearly $5,000,000,000, failed. On February 14, 1933, the situation became so tense in Michigan that the Governor was forced to proclaim a State-wide moratorium because it was apparent that the larger banks in Detroit could no longer withstand a serious run. This action by the Governor of Michigan was rapidly followed by a series of such proclamations, which by March 4 had closed all of the banks in 30 States. The institutions remaining open at this time could not possibly survive the strain, therefore the President, on March 6, ordered all banking transactions suspended for a period of 4 days.

R. F. C. with very limited powers created under Mr. Hoover

The only action of a positive nature taken by President Hoover to forestall the growing financial crisis was establishment of the Reconstruction Finance Corporation with authority to make loans to distressed banks, corporations, and public utilities. The theory motivating this action was that if sufficient funds were poured into the top of the financial funnel, they would trickle down to assist the small borrowers and savers of the country. It was thought, in short, that if the position of large banks and corporations was maintained, the prosperity corner would immediately be turned. It took the banking crisis of 1933 to prove the unsoundness of this argument.

Building and loan associations suffered along with bank depositors

The millions of depositors in commercial banks were not the only ones to suffer during the financial panic which culminated in 1933. Savers in building and loan associations and other mortgage lending institutions also found themselves in the same boat. The accumulated savings of these people, built up over long periods of years and at great sacrifice in many cases, were wiped out. Again the Hoover administration approached this problem only by supporting institutions and not through direct aid to individuals.

Wholesale foreclosures

This collapse of financial institutions was accompanied by a catastrophic increase in the foreclosure rate. During 1932 nonfarm foreclosures totaled 273,000, a figure three and a half times the normal annual average of 78,000. During 1933 foreclosures reached the staggering total of over 1,000 a day.

Very limited powers granted Federal Home Loan Bank System under Mr. Hoover

The Federal Home Loan Bank System was established in the closing days of the Hoover administration as a measure designed to remedy the paralyzed condition of the real estate and mortgage field. The measure as recommended by the Hoover administration provided for a credit system designed entirely to support mortgage lending institutions. There was no intent to assist the millions of savers and home owners through the measure other than as a result of general aid granted to home financing institutions. In fact, President Hoover issued a statement from the White House on November 13, 1931, as follows: "The proposed banks (are) to make no initial or direct loans to home owners."

Indirect methods unsatisfactory

There is no doubt that the indirect methods advocated by President Hoover as an adequate solution of the problem were of some assistance. However, there were several factors which prevented the Federal Home Loan Bank System from providing an effective remedy. In the first place, the system was not

established until the situation had become so severe that direct Government intervention was the only solution. The act was not passed until July 22, 1932, and by the end of that year the system had only 101 members, an insignificant total. The 12 Federal home-loan banks simply could not exert enough influence when that influence was most needed to stem the wave of foreclosures.

Over the protests of President Hoover and his advisers the Congress adopted an amendment proposed by Senator Couzens to permit the 12 Federal home-loan banks to make direct loans to home owners. The restrictions and regulations established by the original Federal home-loan bank were so stringent and unworkable, however, that the banks made only three small loans for a total of $9,000 and at a cost of $136,591. Although thousands of applications for direct loans were filed, the bank system proved a complete failure as a means of saving the homes of distressed borrowers.

Real problem not tackled

Throughout the Hoover administration the only positive attempt to counteract the depression was the establishment of the Reconstruction Finance Corporation and the Federal Home Loan Bank System as credit agencies for the large financial institutions and corporations of the country. The Hoover administration failed utterly to tackle the real problem with which it was confronted. Time after time President Hoover called White House conferences attended by business leaders of the country to confer with him and advise him of steps to be taken to bring back prosperity. Let us review the ineffectiveness of this means of combating a national emergency.

Methods to combat national emergency ineffective

During the week of November 16, 1929, shortly after the stock market crash, President Hoover called a White House conference of prominent bankers, businessmen, and public-utility executives to make plans for saving the country from the effects of the panic. After this conference, statements were issued by the President referring to the development of a cooperative spirit and responsibility in the American business world and the need for mobilization of industrial and commercial agencies. At this conference it was decided that some definite organization should be established under a committee representing the different industries which would undertake to follow up the President's program. Another conference, held in Washington on December 5, 1929, was called by the United States Chamber of Commerce and was opened by President Hoover. The conference was told by President Hoover that "The cure for such storms is action; the cure for unemployment is to find jobs." As a result of this conference, a committee was appointed to cooperate with the Government in overcoming the effects of the stock-market panic. The committee met in Washington on January 23, 1930, and issued a statement to the public that "The current situation is favorable." The committee never met again.

A series of optimistic business reports was issued monthly until March of 1931, when even these stopped. During all of this period the President took no steps to see that the business of the Nation was organized to combat depression and unemployment.

Another conference called

In the spring of 1932 a committee was formed in the New York Federal Reserve District to see what could be done to improve the credit situation by permitting extensive use of acceptances and certain other devices. It was suggested to President Hoover that similar committees be formed in other Reserve districts. The President immediately called another Washington conference to be held on August 26. Again this White House conference duly assembled and appointed another organization committee to cooperate with committees then organized in Federal Reserve districts. This committee was practically identical in personnel with the first. Like its predecessors, this committee did nothing but issue optimistic reports on the state of American business.

It was not at all a surprise that the ineffectual efforts of President Hoover to revive confidence and combat the depression resulted in what was perhaps the greatest loss of public confidence in our Government that this country has ever seen. Bank failures became everyday experiences. Unemployment mounted to staggering totals. Construction reached a virtual standstill. It is small wonder that millions of the savers and depositors of the country withdrew their funds from financial institutions wherever they could, and kept whatever they could salvage in hoarding.

Hoarding denounced

President Hoover's only attempt to allay this national fear in the stability of financial institutions was to ask Col. Frank Knox, on February 6, 1932, to head a Nation-wide drive to combat hoarding. On February 17, 1932, Colonel Knox announced the establishment of an organization to be known as Citizens' Reconstruction Organization, and he authorized the use of the initials "C. R. O." as an official abbreviation. Colonel Knox's campaign had no positive results whatsoever. Total bank deposits declined from $56,900,000,000 on June 30, 1931, to $45,400,000,000 in 1932. This represented the period during which the C. R. O. operated.

Investigating committees to investigate reports of investigating committees

The Hoover practice of appointing investigating committees and holding conferences to discuss national problems became notorious in its circumlocutions and its impotence. One conference followed another in rapid succession, put out voluminous reports, which interpreted for the public the nature of national problems and possible solutions. Each conference and report led only to further conferences and further reports. The administration seemed unwilling to apply the remedies recommended or to assume any initiative or responsible leadership for correcting conditions which became more and more critical.

Republican newspapers and Republican leaders in both Houses of Congress expressed chagrin and despair. Cartoonists exposed to ridicule the appointment of investigating committees to investigate the accuracy of investigators' reports, but no influence either within or without the Republican Party was strong enough during the critical days preceding the inauguration of President Roosevelt to stem the tide of deflation and discouragement.

II. CHANGES IN THE HOME-MORTGAGE FIELD

At the same time President Hoover was following his do-nothing procedure in the White House Mr. Roosevelt, then Governor of the State of New York, wrote and published a number of articles giving his viewpoint on what should be done to meet the very critical situation facing the country at large. The statements, made and published as early as 1931 and 1932, show that President Roosevelt had a complete grasp of the problems and the remedies needed to correct them. We have already seen that President Hoover and his Republican advisers were willing to take only such recovery steps as would provide assistance to the top of our financial structure.

As President Roosevelt stated in 1932 in an article appearing in Liberty Magazine:

> The Reconstruction Finance Corporation is loaning a greater portion of its $2,000,000,000 fund to the great interests—on collateral which is supposed to have a sound value but which is frozen. It is saving some industries and railways from receiverships and some stockholders from losing their properties. It is also true that a lesser portion of this fund is going to the smaller banks and lenders. A still smaller portion will eventually save some individual borrowers from foreclosure. But in spite of extravagant claims this fund is in the main helping the corporations. This is commendable, but it is but half the human job to be done immediately.

Mr. Roosevelt's views opposed to those of Mr. Hoover

Mr. Roosevelt's views on the way to solve the problem were diametrically opposed to those of Mr. Hoover. He stated in the same article—

> Credit is absorbed from bottom to top as well as it filters from top to bottom. A little of the enormous fund now in use will trickle down to the best risk. But at the same time another

fund dedicated to the individual borrower through the smaller banks should be rising up. This fund should be used where essential to prevent foreclosures by reducing the present rates of interest and to hold amortization in abeyance.

In this statement appears the germ of such agencies as the Home Owner's Loan Corporation and the Federal Housing Administration. The H. O. L. C. was indeed a fund dedicated to the individual borrower. The whole purpose of the Corporation was to save from needless foreclosure the hundreds of thousands of American homes which were threatened with this catastrophe. Mr. Roosevelt's interest was in protecting these homes for their owners; not in pouring vast sums of money into financial institutions in the fond hope that sufficient credit would filter through to accomplish this same end.

Usury imposed several ways

In particular, President Roosevelt was concerned about the usurious rates of interest then being charged to home owners. In the same article quoted above, he said:

Usury is the lending of money at more than the legal rate of interest. Usury is imposed in several ways. A loan is arranged on paper at the legal rate; a commission is charged of 2 or 4 or 6 percent in addition. Or a note is signed for the full amount of the loan and less is actually received, thereby costing more than the legal rate.

More than 6 and 7 percent is illegal in almost every State. Yet in many places in this country today even the best risk—a man who needs to borrow half the cash to buy a farm, a home, or to build—must pay considerably more than the legal rate of interest for his mortgage.

Interest rates considerably reduced

In the home financing field, agencies of the Federal Government have brought about a very considerable reduction in charges to borrowers. The H. O. L. C. loaned a total of over $3,000,000,000 to a million home owners. In this operation the Corporation obtained from prior mortgagees concessions of approximately $200,000,000 in the principal amount of the loans. All of this saving was passed on to the borrowers. Until last October the H. O. L. C. charged 5 percent on its loans. Since that time the interest charge has been reduced to 4½ percent. This represents a saving of 2 to 2½ percent on the rates previously paid by H. O. L. C. borrowers on their first-mortgage loans.

Enormous savings to borrowers

On the basis of careful studies made by officials of the H. O. L. C., it is estimated that total savings to H. O. L. C. borrowers are approximately $103,000,000 per year. Not only is the H. O. L. C. saving its borrowers a very substantial sum in interest payments but, together with the F. H. A., it has forced a reduction in interest charges generally throughout the country. The combined total of estimated savings to mortgage borrowers throughout the country, due to the reduction in interest rates and the elimination of second and third mortgages, is $323,000,000 per year.

Fewer foreclosures

Largely through the activities of the present administration in the housing field, stability has been restored to the real-estate market since 1933. The number of foreclosures has been declining at a rapid rate for the past few years and is now only about one-third the 1932–33 annual rate. The problem which threatened to dispossess countless American families has been successfully met and the danger is past.

Residential construction increasing

The volume of residential construction has been steadily increasing from the low point of the depression. Last year about ten times as many homes were constructed as in 1933. Under the guidance of the Federal Government, the houses being constructed today have advantages of skillful design and construction inspection, and are constantly meeting a wider market. Home ownership is every day becoming a real possibility and not a visionary hope for more and more American families in the low-income brackets. From 1929 to 1933 the number of home owners in this country declined by approximately one million. Since 1933, not only did the H. O. L. C. save hundreds of thousands of homes from foreclosure, but other housing agencies of the Federal Government have reversed the downward trend in home ownership and increased markedly the number of home owners in this country.

Money comes out of hoarding under Mr. Roosevelt

We have already pointed out how, in the closing days of the Hoover administration, vast sums of private savings were withdrawn from financial institutions and put into hoarding. It was not until the New Deal came into existence that any constructive plan was devised to restore public confidence in financial institutions and put these vast sums of money back to work. On June 30, 1933, the total deposits of all active banks in the United States stood at only $41,533,470,000. By June 30 last they had risen to $64,576,694,000.

The establishment of the Federal Deposit Insurance Corporation to insure deposits played an important part in the return of cash from hoarding. Similarly, the Congress established the Federal Savings and Loan Insurance Corporation to restore the confidence of small investors in home financing institutions. As in the case of insurance of commercial bank deposits, the knowledge that share accounts in building and loan associations are guaranteed as to safety by an instrumentality of the Federal Government has brought millions of dollars out of hoarding into these associations.

Very few bank failures

The increasing confidence of the American public in its financial institutions is supported by the fact that since the establishment of the F. D. I. C. only 17 national banks, with deposits of $11,848,952, have failed. During the years 1921 to 1933, prior to the establishment of the F. D. I. C., the number of active banks in the United States and possessions declined from 30,812 to 14,624. Because every individual account in insured institutions is guaranteed up to $5,000, no American saver with this amount or less to his account in an insured bank or savings and loan association has suffered the loss of a single penny since 1933.

Credit for American recovery

To President Roosevelt and those who have carried out his purposes must go the credit for American recovery. The record shows that in the field of housing and mortgage finance administrative efforts have averted what threatened to be a major catastrophe and have brought about not only recovery but a period of real progress.

The above statement from the heading "Savings and Home Ownership Since 1933" to the end was submitted to Mr. John H. Fahey for comment. The following copy of my letter to him and his reply to me are self-explanatory:

MARCH 22, 1940.

Hon. JOHN H. FAHEY,
Chairman, Federal Home Loan Bank Board,
Washington, D. C.

DEAR MR. FAHEY: Recent criticism of New Deal policies and administration have led me, within the past week, to assemble information of significance upon which the public can rely as to accuracy. The public is entitled to have the facts and to have the means of ascertaining with certainty that they are the facts.

I am enclosing draft of one of the statements affecting the Federal Home Loan Bank Board and its agencies, statements which I propose to present to the House in the near future. Because of my determination to make sure beyond peradventure that each statement is accurate, I am writing to request that you read the text carefully and let me have the benefit of your advice as to whether each statement is clear and accurate. I know of no one in a better position to advise with reference to the background and experience of the Home Owners' Loan Corporation and the Federal Home Loan Bank Board than you.

You know what the financial and real-estate conditions were in the twenties and early thirties. You know of the usurious practices, of the speculative orgies, of the appalling insecurity and

costliness of home ownership. You know what the former administration failed to do about them and what the present administration has done.

Will you kindly give me the benefit of your advice with the return of the enclosed text at your earliest convenience?

Yours sincerely,

WRIGHT PATMAN.

FEDERAL HOME LOAN BANK BOARD,
Washington, D. C., March 29, 1940.

Hon. WRIGHT PATMAN,
Committee on Banking and Currency, House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I have your letter of March 22 and have read with interest your excellent statement referring to the Federal Home Loan Bank Board and its agencies. I thoroughly agree with you that the public is entitled to these facts and your statement will, I am sure, erase from the public mind many false impressions based upon misstatements relative to constructive changes which have been effected since 1933.

The experience of our Board in the home-mortgage field leads me to conclude that not only is your statement clear and accurate but that it could, indeed, go much further. The Home Owners' Loan Corporation, for example, in its wholesale refinancing of over 1,000,000 home-mortgage loans, brought to light many flagrant injustices and malpractices. In its files the H. O. L. C. has a large number of cases where mortgages, before they were refinanced by the Corporation, carried effective interest rates of 15 percent to 20 percent and even higher. We found, time after time, that borrowers trying desperately to pay off their mortgages were burdened at every turn by prohibitive costs.

For example, our files show that in cases where borrowers regularly paid an effective rate of about 7 percent on their first-mortgage loans they were also forced to carry usurious second and third mortgages. On these the effective interest rate was usually 15 to 20 percent as a result of commissions, bonuses, and discounts exacted by the lender. To cite only one example, the H. O. L. C. found that a prominent lending institution operating in one of our largest cities customarily charged a 40-percent discount in addition to the regular interest rate of 6 percent on its second mortgages. This meant that the borrower received only $600, although he obligated himself to repay $1,000 plus interest. When many of such loans were refinanced by the H. O. L. C., the borrowers were relieved of their obligations on the second-mortgage notes.

In its refinancing operations the H. O. L. C. came in contact with many thousands of cases of suffering caused by usurious second-mortgage practices. A typical case of this sort involved an elderly couple in my own State of Massachusetts. They had suffered severe reverses during the early days of the depression and, sorely in need of funds, signed a second-mortgage note on their home. The note required by the lender was written in the amount of $2,000, although the elderly borrowers received only $1,627.43. In other words, there was a discount of approximately 19 percent. In addition, the terms of the contract provided that the borrowers had to pay interest at 6 percent per annum on the loan until it was paid up. When the Corporation stepped into this case, the second-mortgage lender was forced to accept a substantial write down on his note and the borrowers were no longer required to pay these unjust charges.

If the Home Owners' Loan Corporation had done nothing else for the home owners of America, it would have paid for itself many times over in the savings it has effected for them in eliminating these burdensome costs.

You may be interested to know what President Hoover's Conference on Home Building and Home Ownership discovered to be common mortgage practice among mortgage companies and banks in the twenties and early thirties. The report of this conference shows that lending institutions of this type quite commonly made second-mortgage loans for terms of only 1 or 2 years on which they charged, in addition to 6- or 7-percent interest, a discount of anywhere from 10 percent to 20 percent.

The H. O. L. C. found that the vast majority of the first mortgages it took over from banks and mortgage companies were straight loans with an average term of less than 3 years. Renewal commissions of 2 percent to 3 percent were regularly charged on these loans. As a matter of fact, building-and-loan associations were, for all practical purposes, the only type of lending institution which made long-term amortized loans prior to 1933.

You know well the vast improvement which has been brought about in the general credit structure of our country, and particularly in the field of mortgage finance, in the last 8 years. The home borrower of today, largely as a result of the activities of the Federal Government, has ample credit available at low interest rates to make the purchase of his home a sound, safe, and economical business proposition, not the onerous and exacting burden that it was in years gone by.

I sincerely hope that the statement you have prepared drawing attention to these facts will be given the attention it deserves. It should be deeply significant to every home borrower and saver in the country.

Sincerely yours,

JOHN H. FAHEY, *Chairman.*

The Pelley Letters

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

LETTERS FROM HON. FRANK E. HOOK, OF MICHIGAN, AND ROBERTS & McINNIS

Mr. HOOK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letters to the Attorney General:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 1, 1940.

Hon. ROBERT H. JACKSON,
Attorney General of the United States,
Washington, D. C.

DEAR SIR: You will recall that some time ago I placed in the CONGRESSIONAL RECORD extracts from letters purportedly written and signed by William Dudley Pelley, leader of the Silver Shirt organization, and that later officers of the Dies Committee stated that these letters were forgeries based on the testimony of David D. Mayne taken under oath before that committee.

I need not go into a long dissertation of the facts surrounding this matter because I feel that you are well acquainted with them. However, on February 10 Gardiner Jackson and Harold Weisberg made the matter the subject of a sworn complaint. After quite a space of time and then only after recourse to the Department of Justice, an investigation was concluded by the Federal Bureau of Investigation and an inquiry was commenced before the grand jury for the District of Columbia. A presentation was conducted by United States District Attorney David A. Pine, who has now been elevated to the Federal bench, and Mr. John Wilson, one of his assistants. It is my understanding that the grand jury has finished its deliberations and has taken no action thereon and that all charges against David D. Mayne were ignored.

I respectfully refer you to the speech I delivered in the House of Representatives on March 29, which is contained on page 3709 of the CONGRESSIONAL RECORD of that date.

I believe that a grave question is involved, including the powers and the methods of legislative bodies. I am very serious when I request that you personally investigate the circumstances of the action of the grand jury and the methods of the presentation of the cause to the grand jury. I believe this investigation should be such that the doubt which now exists as to the adequacy of the presentation of the facts should be cleared up. I personally feel that if this case was properly presented that the present situation would not exist.

It is not a personal question with me, and it is not a question of the individual characters that may be involved, but the wide scope of public reaction that may result with regard to this whole matter.

I might say further that I am going to use every effort in my legislative capacity as a Member of the House of Representatives to get to the bottom of this whole matter.

I would be pleased to confer with you at any time and give you all the information I have that may touch upon this entire matter.

Sincerely yours,

FRANK E. HOOK,
Member of Congress.

MARCH 29, 1940.

Re David Mayne.

Hon. ROBERT H. JACKSON,
United States Attorney General, Washington, D. C.

DEAR SIR: You will recall that Congressman FRANK HOOK, of Michigan, placed in the CONGRESSIONAL RECORD extracts from certain letters purporting to have been written and signed by William Dudley Pelley, leader of the Silver Shirt organization, and that officers of the Dies committee stated that the letters were forgeries, their statements being based on testimony under oath of David Mayne before the Dies committee. Shortly thereafter these conflicting versions precipitated a hearing before the Rules Committee of the House of Representatives, at which both Messrs. Pelley and Mayne testified. Mayne testified, again under oath and without immunity, that the letters were forgeries and that, in substance, he had forged them and sold them to Harold Weisberg for the purpose of entrapping and causing injury to Mr. Weisberg and Mr. Weisberg's associate, Mr. Gardner Jackson. Pelley testified before the same committee that he had not written nor signed the letters in question, thus corroborating Mayne's testimony that the letters were forgeries. Mr. Weisberg testified before the Dies committee that with certain money received from Mr. Jackson he had purchased the letters from Mayne, after causing Mayne to swear before a notary that they were genuine; that it was through Mr.

Jackson and himself that the letters reached Congressman HOOK; and that the effect of the sale of the letters as genuine and of their subsequent repudiation was great injury to the reputation and business of Mr. Jackson and himself.

The matter was made the subject of a sworn complaint addressed to the United States attorney for the District of Columbia and executed by Messrs. Jackson and Weisberg. After a considerable lapse of time and recourse to the Department of Justice, an investigation was concluded by the Federal Bureau of Investigation and an inquiry was commenced before the grand jury for the District of Columbia. The presentation was conducted by the then United States Attorney, Hon. David Pine, and Mr. John Wilson, one of his assistants, and was very prolonged, voluminous testimony and documentary evidence being received. Today the report of the grand jury was tendered to the district court, and it appears that all charges against Mayne were ignored.

The specific allegations were that Mayne was guilty of forgery with intent to defraud and injure Messrs. Jackson and Weisberg; that he was guilty of conspiracy with intent to violate a Federal statute; that he was guilty of perjury, necessarily so because of the conflict in his sworn testimony before the Dies committee and the Rules Committee, if not on his oath on the authenticity of the documents; and that he was guilty of obtaining money under false pretenses.

While Mayne declined to testify before the grand jury on the ground that he would incriminate himself, both of the parties to the complaint and numerous supporting witnesses appeared before the grand jury and presented all of the documentary evidence they had, including great quantities of documents indicating that Mayne was in a position to have had bona fide letters of Pelley. The Silver Shirt publication Liberation editorially commented that Mayne was entitled to protection by the Dies committee and that it anticipated that he would receive such protection.

Today I talked with Mr. Wilson, Assistant United States Attorney, and he told me that the case had been fully presented in his opinion; that he had reached the view that there was no perjury involved as a matter of law and had so advised the grand jury. He added that he was also doubtful as to whether or not "the documents could be the subject of forgery" and he had so advised the grand jury. Since my clients have advised me of their testimony before the grand jury and since Mr. Wilson stated that there were no witnesses who appeared for Mayne or who controverted the essential facts, I find myself hopelessly mystified at the action of the grand jury, unless:

1. They found that the documents were not forgeries but true documents, which would eliminate the forgery and the false pretenses charges, perhaps, but would aggravate the offense of perjury in his testimony before the Rules Committee of the House of Representatives which certainly constitutes testimony under oath before an official or governmental body, or

2. That so many doubts on questions of law were placed before the grand jury that it became confused as to its powers.

Since Mayne is practically penniless, no adequate civil remedy exists although it may be that an action in which we can know all of the testimony in a public forum may be advisable. However, a grave public question is involved, including the powers and the methods of legislative bodies. For this reason I earnestly request that you personally investigate the circumstances of the action of the grand jury and the methods of the presentation of the cause to the grand jury so that no doubt may exist as to the adequacy of the presentation of the facts—and the law—before it.

Respectfully yours,

ROBERTS & MCINNIS,
By WILLIAM A. ROBERTS,
Counsel for Gardner Jackson and Harold Weisberg.

The Wheeler-Lea Bill

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1940

LETTER FROM JOHN L. BOGERT

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter by Mr. John L. Bogert, associate editor of the Marine Journal, as follows:

MARINE JOURNAL,
New York, March 18, 1940.

Mr. FRED BRENCKMAN,
Representative, the Grange,
Washington, D. C.

DEAR MR. BRENCKMAN: In your excellent radio address delivered last February 17, you used the following words:

"This raises the question: Who owns the rivers of the United States?"

Your question was most pertinent. Congress has no constitutional right to limit the use of the navigable waters landing into the Mississippi and St. Lawrence, since the Northwest Territory Ordinance distinctly specifies the contrary and also that this rule shall "forever remain unalterable, unless by common consent."

Accordingly, the abrogation of this rule would have to be passed on separately by the several States who were signatories to the original Northwest Territory Ordinance.

When the United States took over the jurisdiction of the Northwest Territory it entered into a contract with the grantors, and accepted the conditions imposed by the grantors.

You are absolutely right when you say: "If this bill should be enacted there would be no new carriers for the simple reason that the restrictions of the legislation virtually instruct the Interstate Commerce Commission to deny any person or concern a certificate of convenience and necessity if the Commission comes to the conclusion that present transportation facilities are adequate to take care of existing commerce."

The Grange would be performing a great service to the Nation if it would get an expression of opinion on this point from the ablest constitutional lawyers.

Very truly yours,

JOHN L. BOGERT,
Associate Editor, Marine Journal.

The Warsaw Documents

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

EDITORIALS FROM THE BOSTON HERALD AND THE BOSTON POST

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Boston Herald of March 30, 1940]

THE WARSAW DOCUMENTS

As forgery, according to Nazi doctrines, is not even a petty offense, but a laudable accomplishment if it works to the advantage of the state, the 16 "documents" made public in Berlin yesterday may be merely an item in German propaganda. The famous Ems telegram of Bismarck which precipitated the Franco-German War 70 years ago was cooked up. Faked passports counterfeited letters, and fraudulent material of other kinds are but negligible incidents when unscrupulous diplomats are hard pressed.

Even if they are not spurious, the memoranda issued in Germany do not seem to be of any great importance. They include oral remarks imputed to Ambassadors Kennedy and Bullitt and reports said to have been sent to Warsaw by Count Jerzy Potocki, Polish Ambassador to the United States, in November 1938. Mr. Bullitt's supposed opinions were his own, not those of his Government. Nor was Mr. Kennedy speaking with any authority for his country. The contents of the Potocki letter are, in part, so grotesque that it is difficult to believe that he wrote it.

What Bullitt is accused of having said to Count Potocki about the antipathy of the President toward the Soviet and Nazi regimes happens to be in accord with the well-known facts. But there is as much bitterness toward Hitler and Stalin among Americans who distrust and hate the President as there is among the most pronounced of the new dealers or even among the French and English.

If Mr. Bullitt actually declared that the United States would ultimately become a belligerent, he was showing a maximum of obtuseness. There is a firmer resolution today than there was at the time of the Munich crisis or when the war began 6 months ago to keep our soldiers and sailors on this side of the Atlantic. Every test of public opinion, from Nation-wide polls to letters published by the newspapers, indicates this unmistakably; Republicans and Democrats alike have the objective of peace at almost any price compatible with decency and honor. Each party is striving to obtain credit for making war impossible.

Forged or unforged, the seized documents are not of a nature to affect our attitude in the slightest, whatever their efficiency may be in Germany, where the people are denied access to truth which hurts.

[From the Boston Post of March 30, 1940]

GERMAN EXPOSÉ

The "startling" revelations by the German foreign office from documents found in the Polish capital assert that American officials assured Poland that the United States would come to the aid of the Allies. They consist in reports made by the Polish Ambassador

to the United States and Polish Embassy officials in London to their government of conversations with American Ambassadors Kennedy and Bullitt and second-hand reports about the President.

There is nothing sensational in them. It must be realized that the Polish Ambassador was eager to show his Government how much he knew of American public opinion and the inside of things here. He naturally sent what he though would please.

Even if what he reported was correct, the quotations really mean nothing.

If the Germans thought Americans would be stirred by the "revelations," they will find themselves mistaken.

Putting Christ Into Uniform

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

ARTICLE FROM THE CHRISTIAN CENTURY

Mr. GEYER of California. Mr. Speaker, we claim to be a Christian nation—I use the term "Christian" in its broad sense. The houses of our 48 State legislatures, the United States Senate, and this body open with prayer. We put on our coins "In God We Trust." Most Members of this body are members of some organized religious body. The above facts being true, all should be interested in the following article written by Dr. Harry Emerson Fosdick, pastor of one of the largest churches in New York. This article appeared in the December 13, 1939, issue of the Christian Century:

[From the Christian Century of December 13, 1939]

PUTTING CHRIST INTO UNIFORM

(By Harry Emerson Fosdick)

This new European war calls up many memories of the last war, with some of which the pulpit has no particular concern. One memory, however, we may well face—we put Christ himself into uniform. Willingly would we let that be forgotten, that the younger generation might not know what we said and did in 1917; but with another war rampant, we had better confess frankly what we did, what war always tempts Christians to do—we put Christ into uniform. Jesus was our Lord; we could not go to war and leave Him behind. We wanted Him for the comrade of our sacrifice and the sponsor of our task, and we took Him along.

WOULD CHRIST FIGHT TO KILL?

First, we made Him our recruiting sergeant. As one of the foremost ministers in America in 1918 said: "Jesus Christ calls His followers to the colors and * * * their response to the call constitutes a triumph for Christianity such as the world has never before known." But that was not enough. These men from Christian homes and churches were going out to kill; in all the ingenious ways that science gives us skill with, they were going to slaughter men—yes, women and children—in the mass murder of a modern war; and we put Christ into uniform and sent Him with them.

Said one of our leading intellectual lights in the pulpit in 1917: "As Christians, of course, we say Christ approves of the war. But would He fight and kill? * * * There is not an opportunity to deal death to the enemy that He would shirk from or delay in seizing! He would take bayonet and grenade and bomb and rifle and do the work of deadliness." Indeed, one of the loveliest Christians I knew, an intellectual, a devout spirit, whose very devoutness made it impossible for him to do anything that he thought Christ would disapprove, said this: "I would not enter this work till I could see Jesus himself sighting down a gun barrel and running a bayonet through an enemy's body." So we put Christ into uniform.

There have been statements aplenty about what war does to everybody else, but not so many about what it does to Christ himself. It conscripts Him too. It sends Him to the front too. One scene in the New Testament provides our inevitable text. In Pilate's court, after Pilate had condemned Him, the soldiers led Jesus into the Praetorium and mocked Him before they took him out to crucify Him. Some items in that scene we vividly recall—the crown of thorns, the spitting in the face, the beating with the rod—but one item often is lost sight of. They "put on Him," we read, "a scarlet robe." What was that scarlet robe? Undoubtedly, part of the uniform of a Roman officer. Somewhere in the Praetorium they found the cloak of a military chieftain and, putting that on Jesus, mocked Him. See Him there, the Prince of Peace, forcibly clad in the garb of military authority, while the soldiers, mocking, salute Him! Would not any Christian in his senses cry, "Take that scarlet robe off Him! Of all the disguises that misrepresent Him, that is the worst!"

That was bad enough when in the Praetorium long ago His enemies did it, but how often His friends have done that too. They have conscripted Christ. The burden of our message is—whatever you and I personally may think or do about war—in the name of historical accuracy, intellectual clarity and common decency, take that robe off Jesus.

CHRIST DIED ON CALVARY LONG AGO

Consider, to begin with, that the Christian's motives for conscripting Jesus are easily understandable. War is a costly and terrible affair—so terrible that no one can sustain it until he sees it as a sacred duty. No nation can maintain war without idealizing it as a holy cause. Now, for Christians the simplest way to idealize any enterprise is to get Jesus into it. That does the business. If He can go to war, we can too. We say that a Christian is one who adores Christ. Beware of saying that too easily. A man who adores Christ wants above all else to agree with Christ. But when a man deeply desires to agree with Christ, nothing is easier than to make Christ agree with him. The psychologists call that rationalization. Adoring Christ, we face what seems a social necessity—some enterprise such as war that seems to us wrong and yet seems necessary. How can we make it seem right? Of course, we use Jesus. We elect Him chairman of the board of sponsors for the war. What can He do? He cannot talk back. He died on Calvary long ago.

That crucifixion did not hurt Christ. He handled that magnificently. But what we, His friends, have done to Him—using him as sponsor of every sort of evil social custom, employing Him as a rubber stamp to guarantee the rectitude of the most damnable things on earth, from czardom and feudal systems to slavery and war—that is the greatest tragedy that ever has befallen Him. And this tragedy springs—strange anomaly—from our adoration of Christ, from men and women who want so much to agree with Him that they make Him agree with them.

So, in the 1850's an American minister defended slavery thus: "American slavery is not only not a sin, but especially commanded by God through Moses, and approved by Christ through His apostles." That sort of rationalization concerning war we were guilty of in 1917. We hated war. It was against our principles. We had had 3 years to watch it in Europe. We knew what it was like. We even had before us the words with which drillmasters in the camps taught boys the uses of the bayonet. Here is a verbatim report of one drillmaster: "You've got to get down and hook them out with a bayonet; you will enjoy that * * * Get sympathy out of your head. We go out to kill. We don't care how, so long as they are killed. * * * And I say to you, if you see a wounded German, shove him out and have no nonsense about it. * * * Kill them, every mother's son of them. Remember that your job is to kill them—that is the only way—exterminate the vile creatures."

We knew that war meant that and a thousand things like that. Yet it seemed necessary; we thought we had to go in; we could not go in without idealizing it; so we conscripted Jesus to make it a holy cause. Especially we ministers did that. We could not go to war and leave Him behind. One of the leading ministers in this country said, "We must keep the flag and the cross together, for they are both working for the same ends." My soul! In hooking them out with a bayonet, the flag and the cross both working for the same end!

If you say, "We would not do that now," I reply that you may be sure some of us would not. Never again! And I agree that in these last weeks the American clergy on the whole have been much more conscientiously and courageously Christian than some dared expect. Still, ever and again from some of my ministerial brethren, I hear echoes of the old abomination. If the heat were put on, they would do it again. Unable conscientiously to go to war without Christ, they would put a scarlet robe on Him and take Him along. That is why a British general in the last war said of the clergy, "The clergy are the best fomenters of blood lust that we have." Yes, indeed, for they have Christ to use.

NOT PEACE, BUT A SWORD

Consider, now, the arguments we Christians commonly have employed to justify the scarlet robe on Jesus. For, of course, we have sought in the Gospel records for historical backing to support our picture of Jesus doing the deadly business of a modern war. Some American Christians are doing that today, falling back on the same two passages that were used in the last war and arguing from them that Jesus would sanction bloody violence and even participate in it.

The first passage is the one where He says, "I came not to send peace, but a sword." One of the best selling books on the market now has for its title "Not Peace, but a Sword," and multitudes of Christians fall back on that phrase of the Master when they wish to justify the scarlet robe. But read the passage in the Gospel. Jesus is telling His disciples that when they break free from orthodox Judaism they will have divisions in their families. Loyalty to Him, He says, will break up households, and they must have courage to endure that. So concerning that He says to them: "I came not to send peace, but a sword. For I came to set a man at variance against his father, and the daughter against her mother, and the daughter-in-law against her mother-in-law: and a man's foes shall be they of his own household." That is what the passage is about. It has nothing to do with war. The word "sword" is a metaphor for difference of opinion within families about religion, and in Luke's

parallel passage, as though that evangelist feared someone might crazily take the word "sword" literally, he drops the metaphor and uses the word "division" instead. Says Jesus, according to Luke, "Think ye that I am come to give peace in the earth? I tell you, nay; but rather division."

Yet if tomorrow America should be dragged into this war you would find Christians falling back upon that phrase, "Not peace, but a sword," ripped from its context and twisted to meanings that were not in Jesus' mind, whereas the historic fact is that when Jesus used the word "sword" literally, he said, "All they that take the sword shall perish with the sword." * * *

How helpless a man is when he is dead! No sooner has he gone than, as it were, men fall upon him, the very men who were his friends. They use his name for things he never would have used it for; they twist his words in meanings that he never held; they claim his sponsorship for enterprises that he hated. And what can he do? He is gone, and his name and memory are at the mercy of those that are alive. And nowhere is this tragedy of Christ more terrible than when, on the basis of things He never said and never did, men put on Him a scarlet robe and lead Him off to war.

DOCTRINE OF DOUBLE STANDARD DANGEROUS

Indeed, Christians, in their insistent endeavor to put Christ in khaki, have used still another device; Jesus, they say, did stand for benevolence and brotherliness. He did protest against the use of violence. He pleaded for good will, and even for love of enemies. We are not denying, they say, that this is the distinctive emphasis of Jesus' ethic, but all this applies to individuals only in their personal relationships, and not to the policies of nations. * * *

There are few things on earth today more dangerous than that doctrine of a double standard. Are we prepared to see it through? Then individuals should tell the truth, but nations may lie all they will; individuals should be cooperative, but nations may be ravenous, greedy, imperialistic to their hearts' desire; individuals should keep their word, but nations may tear up promises like scraps of paper; individuals should be tolerant toward diverse opinions, but nations can crush out minorities with ruthless cruelty; individuals should practice intelligent, constructive, tireless good will, but nations may plunge into wars that slay 10,000,000 men and burn up the accumulated savings of generations. And, say some Christians, with such conduct of nations Jesus' ethic has no concern—it applies only to individuals.

Consider where that doctrine of a double standard leads. It backs up all the worst in Hitlerism and Stalinism; it supports the most damnable aspects of Machiavelli and his followers; it countenances those actions in the history of Britain, France, and the United States that must fill honest men with shame. As for Jesus, see what we do to him when we tuck his great ethic off into a corner and turn the public affairs of the world over to the devil. A house of ethics so divided against itself must fall.

Moreover, as a matter of historic fact, Jesus in the Sermon on the Mount was not talking merely to individuals. He was speaking on a point of national policy. He lived in one of the tensest social situations in the world. Palestine was seething with revolt against Rome. One of the most powerful parties in Israel was the Zealots—insurrectionists, fiery militarists fomenting rebellion against Roman rule. Jesus was outspokenly against them. Scholars, I think, increasingly agree that when in the Sermon on the Mount He enjoined refusal to resist evil with evil and violence with violence, He was thinking of the Zealots. So He was talking on national policy.

This fact lies behind the scene in Pilate's court where the crowd insisted that Barabbas, not Jesus, be set free. Who was Barabbas? One, we read, who in an insurrection had committed murder. That is, he was a Zealot—an insurrectionist, a fiery militarist, fomenting rebellion against Rome. When the crisis came at Jesus' trial, the crowd cried that Barabbas should be set free, but as for Jesus, the advocate of peace, the pleader for intelligent, constructive, tireless good will even in a national emergency—crucify him!

Even in that ancient situation Jesus turned out to be realistically right. When in the year 70 A. D. the party of Barabbas, that is the Zealots, got their way, and plunged their people into a bloody war against Rome, the Jews, alas, signed the death warrant of their national home to this day. * * *

If someone says, as doubtless some do, that, even so, the ethic of Jesus in the Sermon on the Mount applied to international relationships is visionary, idealistic, and will not work, I ask if you think the opposite ethic now dominant in the world is working. With your realistic hard-headedness, do you think this present world exhibits a way of life that works? In all history, did you ever hear of a war like this in Europe? They are armed to the teeth. They have bled their people white to provide armaments. They have been threatening the bloodiest conflict of all time, and now, on the verge of it, nobody wants to start. This whole business of settling international relationships by war has become so ridiculous, so dangerous, so incapable of bringing victory to anyone, so certain to bring not triumph to some but social revolution to all, that we may be now at the turning of the road in history about this whole impractical absurdity.

TAKE OFF THE SCARLET ROBE

At any rate, so far as Christ is concerned, take that scarlet robe off Him. Not only in personal, but in public conduct He stood for a way of life and a principle of ethics absolutely different from war. Let Him stand for it. If this world is going to have any future worth having, it belongs to him.

Finally, the most powerful temptation leading Christians to put Jesus into uniform comes from a more personal source. Did I not myself succumb to it in 1917? War demands and evokes self-sacrifice—splendid, conscientious, devoted, self-sacrifice, and is not that Christian? Is not that what the cross stands for? Why may we not then invoke Christ's blessing on this courageous outpouring of loyal and sacrificial living for which a high-spirited soldier stands? So, Christendom marches into war after war, taking Christ along on both sides of the battle line, and the Christians sing with exalted spirit, "As He died to make men holy, let us die to make men free." In the interest of intellectual clarity, if for nothing else, I should like to get the record straight. That typical war song of Christendom, dragging Christ to battle, needs to have the sentimentality squeezed out of it. Realistically it must read like this: As He died to make men hold, let us kill to make men free. Alas, that spoils the song. We cannot sing it that way. We cannot easily fit Jesus into it. We can imagine Him dying to make men free. Can we imagine Him killing to make men free? That is to say, it is sheer intellectual befuddlement to lump all self-sacrifice together and baptize it en masse in the name of Christ. All self-sacrifice does not mean the same thing. Christ sacrificed Himself rather than use violence: He did not sacrifice Himself in using violence. * * *

See what we have done with Christ. We have made Him an omnibus and have piled into Him all kinds of duty doing, all kinds of conscientiousness, all kinds of loyalty and self-sacrifice. We have made Him an indiscriminate receptacle into which we have put everything—good, bad, and indifferent—we thought we had to do and wanted backing for. And so we have obscured His distinctive message and have made Him stand for everything from slavery to war, until, in consequence, He has stood for nothing clear, characteristic and distinctive that He did stand for. That is the most tragic thing that has happened to Christ. Far better for one of us with intellectual clarity to recognize what Jesus did distinctively stand for, even if one says one cannot follow Jesus, than to go on with this perennial rationalizing, this endless use of Christ in sponsorship of things that He was everlastingly against.

As for me, I have no intelligent and conscientious choice except this: I must take that scarlet robe off Jesus and, as the Gospel record says even the Roman soldiers in the Praetorium had the decency to do, put on Him his own clothes. And as I must take the scarlet robe off Christ, I must take it off myself.

Presentation of "I Am An American" Emblems to Senate and House Pages

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

PROGRAM IN THE SENATE RECEPTION ROOM, MARCH 29, 1940

Mr. SHEPPARD. Mr. Speaker and Members of the House, I wish to call the attention of the Members of the House to a program which took place in the Senate reception room Friday, March 29, and which I think is strictly in keeping with the times, as I know of nothing better that could be accomplished than instilling in all citizens of this Nation the definite thought and application of the pledge of "I Am An American":

PRESENTATION OF "I AM AN AMERICAN" COIN TOKENS AND RECITATION OF CREED IN HONOR OF PAGES OF THE UNITED STATES SENATE AND HOUSE OF REPRESENTATIVES

SENATE RECEPTION ROOM,
Washington, D. C., Friday, March 29, 1940.

Present: Hon. Alben W. Barkley, Senate majority leader; Hon. Charles L. McNary, Senate minority leader; Hon. Harry R. Sheppard, Representative from California; Hon. Joshua L. Johns, Representative from Wisconsin; Mr. Ben Neal, president of "I Am An American" Citizenship Foundation; Mr. Leo S. Spencer, director of public relations of the Citizenship Foundation; Mr. Walker Totty, spokesman for Senate pages; Mr. Berry Sullivan, Senate page, reader of the Citizenship Creed; also present, the Senate pages and the pages from the House of Representatives.

Mr. SPENCER. Senators BARKLEY and MCNARY, gentlemen of the House of Representatives, Mr. JOHNS and Mr. SHEPPARD, and boys of the staff of pages of the United States Senate and the House of Representatives: It is a pleasure to introduce to you Mr. Ben Neal, president of "I Am an American" Citizenship Foundation.

Mr. NEAL. Honorable gentlemen and honored guests: The "I am an American" Citizenship celebration is one movement that has originated from Los Angeles which is pleasing to every true American on the west coast. I know that the majority and minority leaders are extremely busy today, and my remarks shall therefore be very brief. This is a happy occasion, an American occasion. These young men, pages from the Senate and House, are especially fortunate because they live in this free country. They have gathered here today to be given a memento that will last forever; a coin that can remain in their possession as a permanent reminder of the fact that, as citizens of this Nation, they have inherited exceptional benefits, and, at the same time, serious obligations and responsibilities. I am particularly happy because this event happening in the Capital of our country will serve as an impetus to communities throughout America to form citizenship committees and stage celebrations on "I Am an American" Day, honoring the young men and women who have or will become 21 years of age during the year 1940. Without further remarks, and with humble thanks to the gentlemen from the Senate and the House who join with us today, I introduce Senator ALBEN W. BARKLEY.

Senator BARKLEY. Mr. Neal and young men, it is certainly a pleasure for me to be here with you this morning. I served in the House for 14 years. It has been a great pleasure to me to see some of the page boys who served with me in the past now occupying stations of responsibility in the civic and business life of our country.

I think the program which has been arranged by the "I Am an American" Citizenship Foundation is an important program. In these times, when the world is overwhelmed with chaos and confusion, and our young men are coming out of colleges, universities, and high schools, and are standing on the threshold of a busy life, it is important that they be impressed, and that you cooperate in the effort to impress all the young men of our country with the necessity not only for education and training to fit them for the duties of citizenship in the future, but that they also be impressed with the superiority of American citizenship and the opportunity which comes to Americans for service not only in our country, but in the entire world. There has never been greater need in the history of the world for the inculcation of the ideas of democracy, equality, and justice among the rising generation than at this time.

I congratulate you boys on the fact that you have had a brief opportunity to observe the operation of the legislative branch of our Government. I am sure that in years to come you will realize that that has been an important item in your education.

It is a pleasure to be here and see all of you this morning, and I wish every one of you the greatest success in the world in your future activities. [Applause.]

Mr. NEAL. That the "I Am An American" citizenship movement is nonpartisan is eloquently evidenced today. I now introduce Senator CHARLES L. MCNARY. [Applause.]

Senator MCNARY. Mr. Neal, Senator BARKLEY, and boys of the House and Senate, I have not served in the House, as has my distinguished colleague, Senator BARKLEY. Therefore my education has been somewhat neglected. [Laughter.] I observe that the boys from the House seem better looking than the boys from the Senate. [Laughter.] However, probably the brains lie on the Senate side. [Laughter.]

I am happy to be here, and I think if you belong to this organization you will be benefited. I wish to extend to you all a cordial welcome. [Applause.]

Senator BARKLEY. I omitted to say—probably Mr. Neal has already said it—that the little emblem which you are about to receive is an emblem of your interest in the American ideal of citizenship. I am sure you will all carry it with pride.

Mr. NEAL. I hope they will carry it in their pockets always. I now introduce Representative SHEPPARD, of California.

Representative SHEPPARD. Mr. Neal, Senator Barkley, Senator McNary, and page boys of both branches of Congress, I consider this as one of the outstanding privileges I have been permitted to participate in since I have been a Member of the House of Representatives. [Applause.] I have always been vitally interested in furthering the principles of Americanization and what American citizenship stands for. I think if you boys will read the inscription on the pocketpiece which will be given to you: "My heart is in America. America is in my heart. I am an American." and if you will follow the principles of the creed sponsored by the I Am An American organization, you will undoubtedly become an outstanding group of American citizens and take your proper places in American life. I am sure the ceremony in which you are now participating is an important part of your education and one which in future years will mean much to you. [Applause.]

Mr. NEAL. Thank you, Congressman SHEPPARD. And now I am happy to introduce the author of the citizenship resolution in the House, Congressman JOHNS.

Congressman JOHNS. I am delighted to be here this morning, and as the author of the citizenship-day bill, which has passed the House. I deeply appreciate the interest that the people from California, Mr. Neal, Mr. Spencer, and Mr. Edward Arnold, have shown in support of this great movement.

I am glad that these great, young Americans are here this morning to hear read a creed, which I think is as fine as anything that I have ever read in the way of English language, I Am an American.

You pages, who are from both Houses of Congress, today in a very short time will take up the duties and responsibilities of handling the affairs of this Government. The kind of a government that we will have when you take charge will depend in a large part on your education of democracy in a republic. If you will study this creed and carry out the fine sentiments expressed in it I have no fear for the future of America.

Mr. NEAL. Gentlemen of the Congress of the United States, I will not attempt to express my appreciation of your participation in this simple little citizenship ceremony. Let me now introduce Mr. Walker Totty, assistant secretary of the majority group in the Senate.

Mr. TOTTY. Mr. Neal, Senators, and gentlemen, it was a difficult task to select one boy from the 21 Senate pages to recite the American Creed. They are all a very fine bunch of boys. However, I have selected Berry Sullivan, of Massachusetts, for this honor.

(Berry Sullivan, of Massachusetts, a Senate page, recited the following creed "I Am An American," by Benjamin E. Neal.)

I am an American;
The Golden Rule is my rule;
In humility and with gratitude to Almighty God,
I acknowledge my undying debt
To the Founding Fathers
Who left me a priceless heritage,
Which now is my responsibility.
With steadfast loyalty
I will uphold the Constitution
And the Bill of Rights;
I will treasure my birthright
Of American ideals;
I will place moral integrity
Above worldly possessions.
Problems of interest to my country
Shall be of interest to me;
I will count my right of suffrage
To be a sacred trust;
And I will diligently strive
To prove worthy of that trust.
I will give my full support
To upright public servants,
But those with unclean hands
I will firmly oppose.
Each obligation that comes to me
As a true American,
I will discharge with honor.
My heart is in America,
And America is in my heart.
I am an American.

Mr. SPENCER. Senators BARKLEY and MCNARY must return to their offices. They will present the first two or three tokens.

(The Senate and House pages were then each presented with an "I Am An American" coin token.)

Wheeler-Lea Bill

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

LETTER FROM THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks I wish to include in the RECORD a letter from the International Longshoremen's Association on the Wheeler-Lea bill.

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION,
New York, N. Y., March 20, 1940.

Hon. VINCENT F. HARRINGTON,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: The Wheeler bill (S. 2009) has passed the Senate, and the Lea bill (S. 2009) has passed the House of Representatives, with widely divergent provisions, and both bills have been referred to a conference committee, which is now engaged in its deliberations. Either of these bills, if enacted into law as originally written, will destroy coastal and inland water service by raising water rates to the level of rail rates, and impose upon water carriers other arbitrary and restrictive regulations.

Any change or diversion of traffic from the water services will throw thousands of our members out of employment, among which members are not only longshoremen but pier clerks, checkers, cargo repairmen, pier maintenance men, lightermen, bargemen, and tug personnel.

We therefore urge that you not only oppose this legislation, but in the event that the conference committee does not report a bill that contains the Wadsworth amendment section 307 (f), page 262, lines 9–17, to the House bill, that you vote against the acceptance of the conference report.

Very truly yours,

JOSEPH P. RYAN,
International President.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

ARTICLE BY CARL H. WILKEN

Mr. JENSEN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I ask unanimous consent to include therein the following article by Carl H. Wilken, secretary of the Raw Materials National Council, 203 Trimble Building, Sioux City, Iowa:

THE SCANDAL OF THE TRADE AGREEMENTS

The people in the Middle West, farmers, businessmen, and labor, have been propagandized into believing that the trade agreement was designed to help their economic situation by restoring a condition of prosperity. As a result the Smoot-Hawley tariff has been accused of many sins. But the fact remains that it has not been repealed and industry has kept its tariff protection at the expense of the farmer and other producers of raw materials.

The trade-agreement program seems to have been conceived to furnish cheap raw materials to industry in order that they might become the industrial leaders of the world. With the program in effect the United States has been forced to increase the national debt approximately $25,000,000,000 to take care of the unemployed, resulting from the destruction of our domestic market through reduction of tariff schedules on farm products and small manufacturing plants, who the leaders considered nonessential to prosperity and without the political power to cause them any concern.

The tariff question is not one of high or low tariffs, but of parity, equal tariff protection for all groups, based on the parity or domestic price level needed for prosperity.

Our political leaders, and large business interests who have seemingly dominated or outsmarted the raw-material producing States, in their selfishness have killed the goose that laid the golden egg.

In their zeal to get an export market for industry, they have lost $150,000,000,000 of domestic business with our own citizens.

In spite of propaganda, wishful thinking, and theory, the proof is in pudding and below you will find the 6-year record of exports and imports under the trade-agreement program. Note that the only favorable balance is for industry while agriculture was forced to compete with $10,000,000,000 of imports, of which $4,000,000,000 was used to pay for exports of manufactured products. The picture shows that big business is still holding the reins, even though they have been held up as enemies of the administration.

The same old story with a new streamlining called trade agreements.

Period 1934–39

	Imports	Exports	Net
Gold	$11,256,406,826	$134,669,422	[1] $11,122,737,400
Silver	1,047,787,456	64,572,612	[1] 983,214,844
Agriculture	10,326,833,692	6,299,202,580	[1] 4,027,631,112
Manufactures	3,006,233,913	9,975,606,998	[2] 6,969,373,085

[1] Import. [2] Export.

Net imports for 6 years show a net import of $9,163,210,275 of gold and silver after farm imports and gold and silver have been used to settle the favorable balance for industry. This balance has not been liquidated with goods and is represented by foreign ownership of domestic bonds, stocks, securities, etc.

The ownership of these stocks, securities, etc., is the financial threat which foreign nations hold over our head. Would the stock market crash of 1929 be repeated if the foreign-owned securities were dumped on the market? Is history repeating itself? As a citizen what are you going to do about it? Your welfare is at stake and being used as a pawn in international power politics while Congress has delegated away its power to protect you. Awake America.

Schools Should Be Streamlined

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1940

Mr. LANDIS. Mr. Speaker, a strange thing about good education is that no Representative or Senator, no Governor, or other political leader anywhere ever comes out against it. Education is like peace in that respect. Everybody and his uncle says, "I am for it."

But when you ask to have something definite and constructive done for education—that is another story.

Before the House Committee on Education is a bill, H. R. 3517, introduced more than a year ago. No hearings have been scheduled. That bill provides for modest grants-in-aid to individual States in order to make a beginning toward equalizing educational opportunity for all our boys and girls. A similar bill was favorably reported from the Senate Education Committee and is on the Senate calendar. Since the bill has to do with authorization of appropriations, I think the House Committee on Education should hold hearings on it. I think the boys and girls of our land have a right to demand that the House committee consider this bill and take some action on it.

In times of economic stress, more education is needed, not less. Everybody agrees with this thought, in principle. Yet somehow it happened, in the face of greatly increased school enrollments, that total appropriations for public education sank to a low point for these United States, particularly in 1934. I am telling you nothing you do not already know when I say that teachers are so low paid in this country that we should be ashamed of ourselves. Thousands of them work for less than $1,000 yearly salaries. Yet on the shoulders of these teachers rest vast responsibilities. They should be well trained, well equipped, well paid.

Unemployment during the last 10 years has continued at shockingly high figures. W. P. A. has tried to give needy men and women jobs where they could keep up their morale, retain their skills, and even in some cases fit themselves for new types of work. Business has seen some spasmodic improvements here and there, but continually complains of "lack of incentives to expand." Wars abroad have been pronounced by our manufacturers evil in all their long-range aspects. Authors such as John Steinbeck have written novels about human wreckage and social problems. Even in our theaters today the dramas we see are chiefly those of "social significance."

Yet side by side with all these happenings have appeared certain signs of the times, which should have indicated to us the way out. I refer to those news stories and reports which have told us that today there is a scarcity of alert, intelligent, skilled workmen in such fields as soil conservation, chemistry, machine manufacturing, tool design, and elsewhere. Help-wanted advertisements for skilled airplane mechanics are today commonplace.

Why do we lack skilled workers? For one thing, we have never developed an adequate apprentice system in this country. For another, we formerly got many skilled men through immigration. Great numbers of these are now reaching retirement age and their jobs are open.

The schools ought to do something about it," people have said.

At this point the Educational Policies Commission of the National Education Association has come forward with the results of the most exhaustive and intensive economic report it has made to date. The report is called Education and Economic Well Being in American Democracy. Here is the commission's recommended program:

First. Every American child should receive compulsory education for at least 10 years. In these 10 years the American

child of today must receive, in addition to fundamental education, some instruction in mechanics and mechanical skills. This is necessary because machines and engines are today such a large part of American life.

Second. Much more than the 10-year minimum should be received by the American child of average ability. The average youth should be educated for 14 years. He should get much more vocational guidance and training than he is receiving today. States should adopt the rule that was suggested to New York State by officials, namely, that compulsory education should continue to that age where a boy or girl can get a job and keep it.

Third. Continuous long-range occupational surveys should be kept up to date, so that children will not be trained for occupations already overcrowded or low paid.

Fourth. Six years of elementary work should be followed by a 4-year junior secondary schooling. Children of average ability should go on to a senior secondary school, where there will be courses of study lasting from 2 to 4 years. Students should be fitted for definite jobs before they leave the senior secondary school.

Fifth. Any child who needs financial assistance to secure the 10-year minimum should receive this help, whether it means supplying shoes, transportation, medical care or food, or all these services. To do this is not only a matter of common humanity, but is also good business.

Sixth. Any child capable of using to good advantage the training of the senior secondary school should likewise be financially aided, if this is necessary.

Seventh. Children of superior ability, who wish to proceed to the universities and colleges for advanced training must have it made possible for them, regardless of their financial circumstances. Wealthy men who can afford it will be rendering their country a great service if they offer a great many scholarships. Individual States, counties, and cities should do their share in this respect. The Federal Government has been of aid in this respect in the past through its N. Y. A. grants, and these are of great value in the conservation of human resources. We cannot afford to exclude our gifted boys and girls from the best training. These children are the leaders we must have for the future.

Yes; this program means more money for public education. The cost, however, will surely be much less than that required to cope with the unemployment of these same children later on, if they are not prepared for life when they are young. The Educational Policies Commission estimates that approximately an additional billion dollars would be needed if we should expand and revise our public-school system to a point where the above conditions were fully met. However, it is not proposed to accomplish the expansion and revision all at one time, or even within the space of 1 year. H. R. 3517 asks only for a total of $75,000,000 for grants-in-aid for the first year, with progressive increases annually for a period of 6 years. I believe that $75,000,000 would be sufficient to initiate and begin the program.

The Educational Policies Commission, in referring to the recommendations above, calls the new plan for education the best self-liquidating project possible. I believe this is true. Put this plan into effect and 5 or 10 years from now graduates of our schools will go forth equipped with productive power, consuming power, purchasing power. They will be good citizens, well-informed consumers.

Statisticians have compared States as to educational opportunities and economic status. Invariably the States which spend the most for education have been shown to have the greatest per capita wealth in years which follow.

Donald Eugene Gorseline made a study at Indiana University—my own alma mater—in 1932 as to the effects of schooling on income. He decided that just three extra grades of schooling gave a man between $350 and $515 more income per year than that commanded by his blood brother who quit school at an earlier age to go to work.

The United States Office of Education recently took a look at the case histories of 46,000 graduates of 31 universities in 20 States, covering the period 1928 to 1935. Some of the women were too busy as wives and mothers even to think about other jobs. A few of the men were back in school studying for medical and law degrees or Ph. D.'s. Of all the others, however, 96 percent of the men and 93 percent of the women were employed.

Today the technically trained graduate is most certain of a good income. Top-notch technical schools report a strong demand for their graduates in major accounting, advertising, commercial art, engineering, industrial relations, legal and patent work, service and works management, policy making, and major supervision.

The Committee on National Resources of the United States recently reported major business and manufacturing trends in hundreds of technical lines. Among these were the developments of the "electric eye" and those of the televox or "electric ear"; synthetic rubber and its uses; rural electrification with possibilities of refrigerated barns for storing perishable crops, electric hotbeds for seedlings, electric insect traps, and other developments; new textiles from skim milk, soybeans, and other products; fermentation of garbage to produce fuel for cities; recovery of minerals such as magnesium and potash from the sea; television by wire for the blind.

It appears that there are many technical frontiers ready for exploration by the youths of our land, if they have been so trained as to be able to undertake the work. I believe a technical institute would thrive today in every city of 50,000 or over.

I have talked with officials at the National Education Association and the Educational Policies Commission. I find that the plans for revised and expanded education in our public schools include considerable practical consumer and civic education. This is called functional education. It is streamlined and modernistic and very practical. It means teaching school children to get food and furniture, housing, and pleasure value for the money they spend.

In a democracy we, the people, must be able to cope with big economic problems. Labor groups need to know their relation to other producer groups. High-school students of today should have good working knowledge of the how and why of collective bargaining. They should know what public expenditures are for and how they are financed. They should know practical procedures with regard to savings and investments. The new educational plans would include training in these lines.

I am perhaps most of all interested in a program which will develop more vocational training and guidance. A great increase in technical training is vitally necessary today, because we must increase the productive capacity of the average worker. Both governmental and Brookings Institution reports show that we were nowhere near using our full plant capacity even in 1929. Had we employed it to the full in recent years the national income would have been increased somewhere between fifteen billion and fifty-three billion dollars a year.

Irons Fork Experimental Forest, Ark.

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

EDITORIAL FROM THE FORT SMITH TIMES-RECORD

Mr. CRAVENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Fort Smith Times-Record, Fort Smith, Ark., under date of March 8, 1940, concerning the Irons Fork Experimental Forest in

the Ouachita National Forest in the Fourth Congressional District of Arkansas, which editorial is as follows:

OFF THE RECORD

(By C. F. Byrns)

The trouble about the political battleaxers is they don't always use good judgment.

Word came Thursday that the Forest Service appropriation bill has been approved by the House of Congress with no provision for funds to equip and operate the Irons Fork Experimental Forest, 20 miles northeast of Mena, in the Ouachita Forest in Arkansas.

Congressmen FADJO CRAVENS and DAVE TERRY, who are familiar with the project and its value to the whole area of timbered mountains in the South, made a valiant but losing fight before the House committee for an appropriation of $25,000 for the Irons Fork project.

The next step is to try in the Senate to get an appropriation written into the bill.

The Irons Fork project is much more important than the modest amount requested would indicate.

The Federal Government is spending multiplied millions for flood control in various ways. Only recently, bids were taken for construction of a flood-control dam at Nimrod on the Fouche La Fave River in Arkansas. All kinds of plans are on foot to spend all kinds of money to hold water after it has run off the land where it fell and is down in the valleys causing trouble. The Irons Fork project is designed to find out how to hold water where it falls, on the lands at the headwaters of the streams, make it useful there and rob it of its terrors in the valleys. It is quite logical to insist that $25,000 spent on this research project may eventually save millions in future flood-control appropriations and other millions in flood damage.

Doubtless the Arkansas Senate and House delegations will do all they can to get proper recognition of this important project. It is not just an Arkansas idea. It was located in Arkansas, because the United States Forest Service officials decided, after careful investigation, that the Arkansas site offered the best opportunity to get at facts which will be useful and used in all the timbered mountain areas of the South. It is the only project of its kind in the South, and one of very few in the entire Nation.

Sale of Farm Properties by Federal Land Bank of St. Paul

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

RESOLUTIONS OF THE WISCONSIN ASSOCIATION OF REAL ESTATE BROKERS

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by Wisconsin Association of Real Estate Brokers:

MILWAUKEE, *February 28, 1940.*

Whereas the Wisconsin Association of Real Estate Brokers, an organization of licensed real-estate brokers, is informed that it is the policy of the Federal Land Bank of St. Paul to sell its farm properties only through field men employed by the bank; and

Whereas this association believes that local licensed real-estate brokers, being much more familiar with local values and conditions and also having greater opportunities for making such sales, are in better position to serve in such sales the best interests of the Federal Land Bank and all of the stockholders thereof and the general public; and

Whereas local real-estate brokers are almost all taxpayers and have done much to promote and maintain real property values in, and to contribute to the progress and development of their respective communities: Now, therefore, be it

Resolved, That the Wisconsin Association of Real Estate Brokers hereby respectfully protests to the Federal Land Bank of St. Paul and to the Farm Credit Administration, Washington, D. C., against the policy of said Federal Land Bank in connection with the sale of its farm properties and strenuously urges that said policy be changed to permit local licensed real-estate brokers to sell the bank's farm properties and to pay said brokers the regular rate of commission on sales of such properties; and be it further

Resolved, That a copy of this resolution be forwarded to the Federal Land Bank of St. Paul; Farm Credit Administration, Washington, D. C.; United States Senators ALEXANDER WILEY and ROBERT LAFOLLETTE; all Members of Congress from Wisconsin to His Excellency, Hon. Julius P. Heil, Governor of Wisconsin.

Gold and Its Power, Part 5

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

Mr. THORKELSON. Mr. Speaker, I have repeatedly said that the Gold Reserve Act is unconstitutional, a statement which I shall now attempt to prove, after having declared my position in regard to the people's document, the Constitution of the United States.

I maintain that the basic principles upon which this Nation came into being are those originally set forth in the Constitution, and to perpetuate our Republic, we must return to such basic principles. The States should resume their former power in the Government of the United States, so they may resist usurpation of rights and oppose Federal regimentation.

I also maintain that the Constitution is a basic law in which the people delegate certain specific powers to Congress, to the President, and to the Supreme Court, but retain the unwritten power and the power not specifically delegated to the three branches of the Government, to the States, and to themselves.

In order that there will be no misunderstanding about the reserved powers, I shall quote article X:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

Article 10 is clear; but, even so, I realize that occasionally questions will arise before Congress and the Supreme Court as to the permissible widening or literal interpretation of the powers granted or denied to the three branches of the Government. I maintain when questions arise as to the actual meaning or the manner in which the laws should be construed, Congress and the Supreme Court are obligated "to preserve and to protect" the people's rights, as set forth in the Constitution of the United States. It was to protect themselves against erroneous interpretations and against the now prevalent liberal construction of the Constitution that the founders of this Nation incorporated the ninth amendment in the Bill of Rights:

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

The wording of this article is clear and understandable, for it directs Congress and the courts to give the people the benefit of any doubt which may arise as to the meaning of the orders issued in the Constitution to the three branches of the Federal Government.

I maintain that we, the people of the United States, are the first power and that the Constitution is a basic law in which we empower Congress, the President, and the Supreme Court to perform such duties as are set forth in the document.

Congress is elected to represent and protect the States and the people's rights, and is in performance of this duty granted the power of legislation, regulation, and appropriation, according to and within the meaning as expressed in the Constitution. Have you watched your Government and the men you sent to Congress to preserve and to protect your rights? Have you taken note of bills signed by the President and bills upheld by the Supreme Court? Do not forget the President signed the Gold Reserve Act and the Supreme Court held it constitutional by a 5-to-4 decision.

COMMON SENSE

Why not take stock? Why not do your own thinking? Surely you know by this time that truth is taboo in the kept press until return of American ownership. It would be great to have one real patriotic national newspaper, and what a circulation it would have today, when people are hungry for facts.

Let us now see what happened to us when Congress enacted, when the President signed, and when the Supreme Court held the Gold Reserve Act constitutional. The Gold Reserve Act took the gold from us, the owners of it, and gave it to the international financiers. It left us poor and "Shylock" rich. We are unsecured but Shylock is well secured. We are slaves to the financial internationalists. We are using inflated money, but the internationalists are using gold money. We hold legal tender; Shylock holds gold certificates. We pay for the storage and for the protection of the gold, but the financial internationalists who own it call us "goyim fools." We sit and wait for a hand-out while the international financiers use our gold money and credit to acquire ownership of the Nation's industries so as to furnish employment for their own people.

Is the $18,000,000,000 in gold which is supposed to be such a burden of wealth owned by the United States? It is not. Thirteen billion three hundred and forty-eight million eighty-eight thousand nine hundred and eighty-five dollars is owned by foreign nations in industrial bonds and similar investments. Sixteen billion one hundred and five million five hundred and sixty-five thousand eight hundred and ninety dollars and sixty-four cents in gold certificates are held by interests outside of the United States Treasury and by the Board of Governors of the Federal Reserve banks, and while we are speaking about these banks, remember that they are privately owned.

AMERICANS, APPRAISE YOUR POSITION

Under the Gold Reserve Act we, the people, become criminals should we be found with gold money, gold, and gold certificates in our possession, but the Shylocks, with full title to gold money and gold, and with gold certificates in their possession, are backstage rulers of the Government.

What a surprise it will be to those who just cannot believe and to the gullible goyim dupes as they sit on the ruins of a collapsed currency structure and view Shylock disappearing on his Trojan horse into the golden temple built by this act.

Do you believe this act is constitutional? Do you believe that Congress, the President, and the Supreme Court had the people's interest at heart when they allowed this legislation to pass?

I often wonder what the final outcome will be if Congress keeps on enacting laws. How will it end? How long will the people tolerate laws which restrict them in their business and private affairs? The condition in which we find ourselves today is the result of too many laws, and the greatest enemy of a free people is legal persecution. Pernicious laws are the destructive weapons of the minority, and the Gold Reserve Act is, in my opinion, a good example of such legislation. Lacking a better name I have referred to this as "subversive legislation," and my reason for such designation is based upon apparent logical premises and illogical conclusions, such as the act I shall now quote, House Joint Resolution 192:

> To assure uniform value to the coins and currencies of the United States.

The purpose of this appears to be logical and sound, but the manner in which it is to be accomplished is wrong, for the Gold Reserve Act removed gold money and gold from circulation and even made it a crime for us to have gold in our possession, yet the final paragraph in the resolution and the Gold Reserve Act explicitly state that weight of gold establishes value:

> All coins * * * shall be legal tender * * * except that gold coins, when below the standard weight and limit of tolerance provided by law for the single piece, shall be legal tender only at valuation in proportion to their actual weight.

I shall ask those who are interested to get a copy of the Gold Reserve Act and read it, but also, in support of my statement, I quote from the act:

> Wherever reference is made in this act to equivalents as between dollars or currency of the United States and gold, $1 or $1 face amount of any currency of the United States equals such a number of grains of gold, nine-tenths fine, as, at the time referred to, are contained in the standard unit of value.

The law is predicated upon the unconstitutional authority granted to the President to increase or decrease the gold content of the dollar. The President reduced the grain gold content of the dollar from 25.8 to 15.521. He can now, under the same law, reduce this to 12.9 grains of gold nine-tenths fine. If he does, let us remember that no one benefits from that except foreign nations. As a matter of fact, such reduction will be destructive to the people of the United States.

I do not believe that anyone will disagree with me when I say that Congress had no right to take the gold away from the American people and give it to foreigners or citizens of foreign governments; that Congress had no right to leave our people unprotected and unsecured, and with the same law protect and secure people of foreign nations. However, the act did just that, and nothing else, and I want the people to know it.

Law is one thing, and common sense is another. What we need is less law and more common sense. As an example of senseless law, I quote again from the same resolution:

> Whereas the holding of or dealing in gold affect the public interest and are therefore subject to proper regulation and restriction.

It would be ridiculous to think otherwise than that "the holding of or dealing in gold affect" public interest, for the very food we eat and clothes we wear affect public interest. So why should not sound gold money, the medium that pays our way, be of the utmost public interest? This should be obvious inasmuch as this very act recognizes gold alone as a standard medium of value.

This statement, "subject to restriction," is the strange part of this act, for what right has Congress to restrict the people in ownership and in the use of sound and stable money? Under what strange spell or delusion could Congress construe that the word "regulate" meant to restrict, and then finally to confiscate the gold, a property of the people since the dawn of America? The words, "to coin money, regulate the value thereof, and of foreign coin" should be easy to understand, for the value of foreign coin is regulated by the weight of gold in the piece of money to be valued, and our money is regulated exactly in the same manner, namely, by assay and weight of fine gold.

How Congress could read authority in these 10 words to give it the right to confiscate the Nation's gold and so deprive the American people of protection, is a question for Congress to answer. I contend that the public was betrayed by those who voted for the act, by him who signed it, and by the Court which declared it constitutional.

We, the people, should make it our business to find out just how far Congress will go to deprive the people of the rights they reserved to the States and to themselves in the ninth and tenth amendments. This is particularly pertinent as we read article I, section 10:

> No State shall * * * emit bills of credit; make anything but gold and silver coin a tender in payment of debts.

This provision of the Constitution is mandatory, but in spite of that, the Congress, the President, and the Supreme Court made this provision of the Constitution null and void, for it is now impossible for any State to conform to this provision of the Constitution. The five Justices who held this act constitutional should resign and retire without pension, for they either ignored or did not understand the Constitution of the United States.

In order to acquaint the people with other strange and conflicting reasoning, I quote another paragraph:

> Whereas the existing emergency has disclosed that provisions of obligations which purport to give the obligee a right to require payment in gold or a particular kind of coin or currency of the United States, or in an amount of money of the United States measured thereby, obstruct the power of the Congress to regulate the value of the money of the United States, and are inconsistent with the declared policy of the Congress to maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts: Now, therefore, be it * * *.

From this we may assume that the planned emergency disclosed to Congress that the Government was obligated to

repay money borrowed from the people with the same kind of sound gold dollars the Government had received. Those who voted for and supported the legislation found that such honesty on the part of the Government obstructed the power of Congress to regulate the value of money, and on the strength of this extraordinary conclusion, Congress destroyed all value of money by confiscating and removing all trace of gold in possession of the people and from every coin used within the United States.

Then Congress assumed the most extraordinary responsibility in declaring that it was the "policy of Congress to maintain at all times the equal power of every dollar coined or issued by the United States, in the markets, and in the payment of debts." This, of course, is too silly for discussion, for Congress, nor anyone else, can ever hope to carry forward such policy to a successful conclusion. The remarkable part of this declaration may be found in its erroneous reasoning, for sound gold-standard money would not obstruct but would instead be of the greatest aid for Congress to regulate the value of money, and quite consistent with congressional policy if the majority of the membership were endowed with good sense.

The next paragraph which I shall quote is very interesting, for it states:

Now, therefore, be it
Resolved, etc., That (a) every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby, is declared to be against public policy; and no such provision shall be contained in or made with respect to any obligation hereafter incurred. Every obligation, heretofore or hereafter incurred, whether or not any such provision is contained therein or made with respect thereto, shall be discharged upon payment, dollar for dollar, in any coin or currency which at the time of payment is legal tender for public and private debts. Any such provision contained in any law authorizing obligations to be issued by or under authority of the United States, is hereby repealed, but the repeal of any such provision shall not invalidate any other provision or authority contained in such law.

This paragraph declares that Government debts which are payable to our people in sound gold money is against public policy. I say that it is a most extraordinary reasoning by Congress, the Members of which are obligated to preserve and protect the people's rights. This conclusion by Members of Congress is open to criticism when we consider that the people had not been consulted in regard to this policy. To me, it appears that Congress passed sentence upon the people without giving them the benefit of a hearing. It was upon the strength of this paragraph that the President forgot that he had sworn "to preserve, to protect, and defend the people's rights," and the promise to take care that the Constitution be faithfully obeyed. It was also upon this paragraph that the Supreme Court committed a grave injustice upon the people of this Nation, a decision that soiled the escutcheon of justice.

I shall now quote section 2 and the final paragraph of Public Resolution No. 10, Seventy-third Congress:

The last sentence of paragraph (1) of subsection (b) of section 43 of the act entitled "An act to relieve the existing national economic emergency by increasing agricultural purchasing power, to raise revenue for extraordinary expenses incurred by reason of such emergency, to provide emergency relief with respect to agricultural indebtedness, to provide for the orderly liquidation of agricultural indebtedness, to provide for the orderly liquidation of joint-stock land banks, and for other purposes", approved May 12, 1933, is amended to read as follows: * * *

The statements in this paragraph are silly and ridiculous, for it could not and has not increased agricultural purchasing power. The Government has not collected greater revenue from normal increase in business but has, instead, collected such revenue at the expense and to the destruction of a dying industry. There is no possibility today for orderly liquidation, except under the direction of someone who understands the real sinister power which is now directing the Federal Government. I grant that our national riddle may be solved, but no one as yet has even touched upon the solution of it, and I doubt very much whether those who seek leadership have the knowledge and courage to go ahead and set our Nation right, for such procedure will challenge the most insidious enemy of all nations, namely, those who use gold and money as a weapon of destruction.

What is an emergency? This subject is discussed in Congress, in the press, and seems to be the President's pet rattle. Under this misused word, many Members of Congress have lost their sense of responsibility to obligated duty. Some of these gullibles, no doubt, labor under the impression that an American savior leads the administration, when nothing could be further from the truth.

Why not take time to indulge in retrospection? What has the administration done in the past 12 years for America? I recall these:

First. Planned stock-market gamble which left the American people broke.

Second. Organizations of chain banks and restriction of credit to outlying districts.

Third. The beginning of the now vicious economy planning and deliberate deflation to bring about despair.

Fourth. In 1933, continuation of the past and the birth of an emergency which is now a full-fledged and vicious monster.

Fifth. The bank holiday and promotion of banking monopoly under the able direction of the international bankers.

Sixth. Unwarrantable transfer of power from Congress to the executive department.

Seventh. Confiscation of gold and replacement of sound currency with a purely inflated and worthless currency with no background, called legal tender.

Eighth. Confiscation and destruction of standard-value securities with possible loss in depreciation of life-insurance incomes.

Ninth. Steady increase in Federal operative cost, resulting in greater deficits and doubling of the national debt.

Tenth. International intrigue to involve the United States in foreign wars.

Eleventh. Transfer of ownership of gold from our own people to governments of foreign nations.

Twelfth. Subsidizing foreign nations by increase in the dollar value of gold.

Thirteenth. Destruction of agriculture, industry, and labor by imports from foreign nations to keep prices down and wages low. This, of course, is necessary in order to maintain purchasing power of the hocus-pocus money we, the people, are permitted to use by the kindness of an internationalistic administration.

Fourteenth. Reorganization and playing with Federal departments, including appointments of judges who are self-designated radicals, of judges who study law after the appointment, and of judges who spend their time traveling and vacationing, because they know nothing about law.

I submit this to you, Mr. Citizen, and I shall leave you to judge whether this is an American administration or a mere front for the internationalists.

The Late Joseph R. Sheehan

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

TRIBUTE BY THE UNITED STATES MARITIME COMMISSION

Mr. WELCH. Mr. Speaker, I ask unanimous consent to extend my remarks and print in the RECORD a tribute by the United States Maritime Commission to the late Joseph R. Sheehan, former executive director of the Commission and at the time of his death president of the American President Lines:

The shipping industry has lost a vigorous and talented leader in the death of Joseph R. Sheehan. A stanch advocate of the American merchant marine, he was in large part responsible for the restoration of American leadership in trans-Pacific shipping.

As the first executive director of the newly organized Maritime Commission he gave fully of his time and services in the difficult early days of administration of the Merchant Marine Act, 1936.

After 18 months of loyal and efficient service to the Commission he became president of the American President Lines, Ltd., where his industry and efforts continued to serve the American merchant marine.

United Mine Workers of America

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

Mr. LANDIS. Mr. Speaker, it is a pleasure to call the attention of the Members of the House of Representatives to the fact that today is the anniversary of the establishment of a shorter workday for the United Mine Workers of America. For many years miners worked from 10 to 16 hours a day, many of them entering the mine before daylight and emerging after dark. They never saw sunlight except on idle days. The miners gradually forced a shortening of the workday until now the uniform 7-hour day prevails. Instead of working 6 and 7 days a week, they now work 5 days a week.

As a resident of a coal-mining community and as a former member of a mine rescue team, I am proud to represent a district whose chief industry is mining. No other force in America has been more potent in the development of progress in industry, in business, and in the home life and welfare of the common people than has the United Mine Workers of America. They favor and support every movement for the more general education of the people, especially the children, as a means of developing a high type of citizenship in America. They favor the abolition of slums and poor housing in the country, as well as in the cities, and the substitution of decent and sanitary housing and living conditions. Old-age pensions, unemployment insurance, and similar local security ideals always have had their support and encouragement. Miners do not oppose the introduction of modern methods of production, but they do believe that the workers should share in the profits that result from the introduction of such modern methods and machines.

The United Mine Workers of America now has a membership of 600,000 and is the largest labor union in America. It is what is known as an industrial union, with approximately 96 percent of all men employed in and around the coal mines enrolled in its membership. When the United Mine Workers of America was organized in 1890, it immediately began its struggle for collective bargaining for wages and working conditions. Wages were disgracefully low. In certain places and at certain times, miners received as little as a dollar a day. Through the efforts of the United Mine Workers there has been a steady and gradual improvement in wage rates until at this time the basic-wage rate in the northern soft-coal fields is $6 per day and in the southern fields $5.60. Working conditions have been vastly improved. There is a greater degree of safety in the mines today than ever before. Miners are no longer required to trade at a company store but are free to buy where they please. Collective bargaining always has been, and is now a basic principle of the United Mine Workers of America. Miners have a right to bargain through representatives of their own choosing. In fact the entire labor relationship between employers and employees has been stabilized. This stabilization has benefited the operator as well as the miner.

The United Mine Workers have taken a leading part in bringing about the enactment of the national labor relations law and wage and hour law. They are fighting and will continue to fight with all their strength and resources against all attempts by enemies of labor to weaken or destroy these acts.

Paying the Freight

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1940

EDITORIAL FROM THE LINCOLN (ILL.) EVENING COURIER

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Lincoln Evening Courier, of Lincoln, Ill., of March 28, 1940. This editorial is very timely and should be read by every "Mr. Average American Citizen." It emphasizes the fact, apparently unheeded, that Uncle Sam derives most of his tax collections in one form or another from the people of moderate means. While most of the revenues now raised come from sources referred to as "painless taxes," the bald fact remains that whether we feel them or not at the moment of payment the pockets of our jeans are emptied, nevertheless, by this indirect method of taxation. As to "painless taxes," there "just ain't such an animal."

The editorial is as follows:

[From the Lincoln (Ill.) Evening Courier of March 28, 1940]

PAYING THE FREIGHT

Don't laugh out loud if you were one of the many people who didn't need to pay any Federal income taxes this year. Don't for a minute think you're getting away with something. You're not. You're paying for the privilege of free government just the same as the man who mailed a check with his tax return is paying for it. Only you don't notice it quite as much.

If you paid an income tax, you know, at least, where some of the money to run the country is coming from. But the combined income and inheritance taxes collected this year will make up less than 25 percent of the money needed to operate the Government.

The 1940 census will probably show about 132,000,000 people in the United States, but only 3,500,000 of them are paying income taxes. This means that only 1 out of every 38 persons pays an income tax, or 1 out of every 15 voting citizens. Uncle Sam will collect about $2,000,000,000 from this form of tax together, but the expenses for the year will total nine billion.

The income tax, in fact, just about pays for W. P. A., with very little or nothing left over. The number of persons on W. P. A. has varied between two and three millions since 1935. A year ago there were nearly 3,000,000 collecting W. P. A. checks, almost as many persons as were paying income taxes. The Federal Government spent $2,065,000,000 for this form of work relief alone during the fiscal year ending in June 1939, and the year ending next June will have cost about one and one-half billions.

Who pays for the rest of the governmental expenditures? You do, of course. It comes in various indirect ways—customs, corporation taxes, undivided-profits taxes, taxes on checks and on safety deposit boxes, taxes on cigarettes, liquor and amusements, processing taxes and taxes on gasoline. Altogether, Uncle Sam has figured out several hundred different ways of extracting cash from his citizens. Most of them the average person never even notices from day to day.

Painless taxation? At the moment of extraction, yes; because you don't notice it; in the aggregate, no. In a year's time, the pennies and nickels add up to incredible amounts. And, remember, what Uncle Sam doesn't collect in taxes, he borrows. That's a little matter which your children who have had nothing to say about it, will have to settle up.

If the People Only Knew—Mr. Rich Makes His Daily Error

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. RANKIN. Mr. Speaker, on yesterday the gentleman from Pennsylvania [Mr. RICH] under reservation of objec-

tion, made some of the wildest misstatements I have ever seen in the CONGRESSIONAL RECORD. I did not have an opportunity to reply to them then, and he was talking so fast, and there was so much noise in the Chamber, I did not know exactly what he said until it was printed in the RECORD. I doubt if he realized what he was saying.

For instance, in the course of his excitement, he said: "The gentleman from Mississippi"—meaning your humble servant—"is interested in having the Government get into all kinds of business." Of course that statement is untrue, as every Member of the House knows. It just goes to show what wild statements he can make when he gets excited.

I draw the distinction between a public business and a private business, and I class the electric-power business as public, since it must inevitably be a monopoly and since it has to do with—I might say control—the generation and distribution of electric energy, one of the necessities of our modern life. Especially is this a public business when it deals with public power generated in a navigable stream that belongs to all the American people.

In referring to the T. V. A., the gentleman from Pennsylvania said:

> The Federal Government pays the taxes, pays for the investment, and gives the people of Mississippi electric power for less than it costs the Federal Government, which sets up the corporation for the benefit of Mississippi, Alabama, Georgia, and Tennessee, and the Government provides 45 percent of the money in Mississippi for electric appliances; then the people go and borrow the other 55 percent from Government agencies, and everything is done down in the gentleman's State at the cost of the taxpayers of Pennsylvania and my district and the other States.

It would certainly take a genius to put more misstatements into one sentence than are contained in this short quotation from the gentleman from Pennsylvania. In the first place, he tells the Congress, under reservation of objection, when no one could reply to him without unanimous consent, that the T. V. A. is selling electricity in that area for less than it costs the Government to produce it.

As a matter of fact, every municipality and every cooperative power association in that area is paying the T. V. A. more for electricity, wholesale, than the Philadelphia Electric Co. pays wholesale for the power produced at Conowingo Dam.

The report of the Army engineers of March 24, 1930, which was signed by the Honorable Patrick J. Hurley, Republican Secretary of War in the Hoover Cabinet, says that power could be generated at Wilson Dam and sold at the switchboard at 1.35 mills a kilowatt-hour.

Today Florence, Ala., right at the dam, is buying this power from the T. V. A. at 4.18 mills a kilowatt-hour or just about three times what the Army engineers said it was worth. And remember, the Army engineers stated that this was the selling price necessary in order to pay 4 percent on the investment in plant and transmission lines and to cover the cost of operation and maintenance indefinitely.

This same report made during the Hoover administration, and signed by a Republican Secretary of War, states that this power 100 miles from the dam should be sold at 1.99 mills a kilowatt-hour. Tupelo, Miss., is a little less than 100 miles from Wilson Dam, and yet the lowest wholesale price Tupelo has ever paid for electricity generated at the Wilson Dam is 4.82 mills a kilowatt-hour, or considerably more than twice what the Army engineers said it should be sold at in order to pay 4 percent on the investment, and to cover the cost of operation and maintenance. This report further says that 200 miles from the dam this power should be sold at 2.31 mills a kilowatt-hour. Yet Macon, Miss., which is only about 150 miles from the dam, is paying 6.63 mills a kilowatt-hour wholesale for this power.

In other words, these municipalities and cooperative associations are paying the T. V. A. a profit of more than 100 percent on every kilowatt of electricity they buy from it wholesale.

But the difference is—and I fear this is where the resentment of these friends of the utilities come from—the difference is that the private power companies that were buying Muscle Shoals power from the Hoover administration at a little less than 2 mills a kilowatt-hour, were selling it to the ultimate consumers at 10 cents a kilowatt-hour, whereas these municipalities and cooperative association that are now buying it, paying all the way from 4 mills to 8 mills a kilowatt-hour, are selling it to the ultimate consumers at a maximum of 3 cents a kilowatt-hour; and still some of them are making so much profit that they have been compelled to reduce their retail rates every year. Tupelo has reduced her maximum residential rates to 2½ cents a kilowatt-hour. In those days 30 kilowatt-hours cost a residential consumer in Tupelo $3; the cost now is 75 cents. In those days 100 kilowatt-hours cost him $8.60; it now costs him $2.25. In those good old days 1,000 kilowatt-hours cost him $66.10; it now costs him $8.15.

Power could be generated anywhere in Pennsylvania with Pennsylvania coal, or Pennsylvania water power, and distributed to the ultimate consumers of that State at the T. V. A. yardstick rates, without loss to legitimate investors. But instead of that, the people of Pennsylvania are compelled to pay overcharges for their electricity amounting to more than $72,000,000 a year.

But the worst blunder of all is that part of his statement in which he said:

> The Government provides 45 percent of the money in Mississippi for electrical appliances, then the people go around and borrow the other 55 percent from the Government agencies and everything is done in the gentleman's State at the cost of the taxpayers of Pennsylvania and my district and the other States.

Now, as a matter of fact, the Government does not pay a penny on electrical appliances. These appliances are bought from the local dealers who in turn are financed through the Electric Home and Farm Authority. The Electric Home and Farm Authority gets more interest on its money than the Government has to pay for it, and for that reason has made a profit every year of its existence.

All these frantic efforts to besmirch the T. V. A., the R. E. A., and the power program of this administration generally, is not registering with the masses of the American people who have to pay these bills every month. The people of Pennsylvania are not paying for the electricity we use in Mississippi, as he would have you believe, but they are certainly paying—through the nose—for what electricity they use. They are overcharged on an average of more than 100 percent.

I realize these attacks on me have no personal implication. They are simply made because of my untiring efforts to protect the overburdened consumers of electric lights and power in every State in this Union, to bring these rates down to their proper levels, to enable the people to use the necessary electrical appliances, and make my country a better place in which to live.

I have before me an editorial from the Electrical World, which is a fair sample of the misleading propaganda now being fed to the American people.

In that editorial the Electrical World feels called upon to enter an apology for the private utility industry. The editors take note of the fact that—

> There is a feeling in the minds of some people that Government power agencies, and particularly R. E. A., are much more active than private utilities in initiating new construction and operating ideas.

This, they feel, is unfair. They try to show it is unfair. In doing so they carefully give a number of the reasons why Government development of rural power systems is more rapid and effective than private utility development. They know that the private utilities never intended to electrify the farm homes of this country. They made no efforts in that direction until after the creation of the T. V. A. and the R. E. A. They were interested in making their rake-offs through inflated valuations and exorbitant rates.

It is a fact—

The editorial concedes—

> the R. E. A. has been aggressively searching for new lower-cost methods and equipment and has lost no time in making experiments on a grand scale.

"Searching"? Had the editors glanced at R. E. A.'s latest annual report? Before R. E. A. was established, rural distribution lines cost $1,500 to $2,000 per mile to build, in some cases even more. Today R. E. A. systems are building at an average of less than $750 per mile.

That means that twice as many miles of line can be built with a given amount of money. And it also means that each mile of line carries less than half the previous investment, to be repaid out of income—and no watered stock at all.

Making experiments? The editors of Electrical World seem to write editorials without getting the facts. Do they not know that Tennessee Valley Authority lines and Rural Electrification Administration lines meet all the requirements of national and local safety codes? Do they not know that these lines are giving satisfactory service to hundreds of thousands of farms today that probably never would have had electricity if they had depended on these private utilities?

There is no intention here to imply that R. E. A. experiments are so hastily conceived as to be crackpot.

This Electrical World editorial continues—

In fact, some of their ideas may prove beneficial to private utilities.

Where have the editors been for the last few years? Do they not know that many utility companies are now trying to adopt R. E. A. methods of rural line construction? Do they not know that vertical construction and long spans, the two major changes which R. E. A. was the first to use on a large scale, are now standard in rural areas? Have they not seen the new 1-dial meter the R. E. A. has introduced to take the place of the 3-dial contraption? R. E. A. now has a meter a consumer can read, and it costs only about half as much as the old one did.

The fact of the matter is that there was little rural electrification before R. E. A. and T. V. A.—practically none. About 1 farm in 10 had power, and even they had been electrified incident to the electrification of cities and towns. Rural lines then were merely extensions of urban lines to people living in the edge of town. There were very few exclusively rural systems, and the rates on them were so high as to amount almost to confiscation.

Private utilities claimed they could not electrify American farms because the American farmer could not afford to pay the price. The R. E. A. and the T. V. A. showed that it could be done on a self-liquidating basis. Now the private utilities, copying R. E. A.'s and T. V. A.'s methods, are building rural lines to every part of the country. There was one rural line in my county on which a farmer paid $4.50 for 25 kilowatt-hours that now costs a rural consumer in that county $1.

The editors comment that—

R. E. A. * * * is beholden virtually to no one and can experiment on any scale without regard to cost. This is supposed to explain why so many new ideas have come from R. E. A.

The utilities could do the same thing if it were not for the cost of failure or for commission regulation.

Say the editors—

They have no unlimited treasury, fed by taxpayers, to dip into. They must account for every penny on a "useful" basis.

This begins to sound like Alice in Wonderland. The editors seem to believe that whenever a Federal agency begins to run low on money it sends an office boy over to the Treasury with a wheelbarrow to get more.

Have they not ever heard of the General Accounting Office, the Bureau of the Budget, or, for that matter, the Congress of the United States? What do they do with that $1,000,000,000 of overcharges they wring from the helpless consumers of this country every year?

Their statement that utilities cannot experiment with new equipment and methods because they must account for every penny of their money on a useful basis comes close to being the year's prize tall story. Anyone familiar with the workings of private utilities could cite hundreds of strange and wonderful examples of what some of the leading companies class as useful.

All through the editorial it is conceded that, to the naked eye, it would seem that R. E. A. is more progressive than the utilities. But the very fact that R. E. A. has done things which the utilities have not, and that the utilities are indeed copying R. E. A. pioneered methods, is not proof. In fact, the editors seem to say that to judge merely by what is actually happening is unfair.

They give a number of reasons to explain the contrast, and every reason points to the advantages of Federal sponsorship of rural electrification. The editors conclude by making an apparently good case against private development. By their own description they seem to show that private utilities are so organized as to make progress impossible, or at least very slow, if not undesirable.

And at the last it is to this slowness that the editors turn to find their moral. It is not that R. E. A. is more progressive than the utilities, they say, but only that R. E. A. seems to move faster.

That the Government bodies may appear to go faster does not necessarily imply greater progressiveness.

They conclude—

We seem to still remember the old fable of the hare and the tortoise.

As I remember that fable, the tortoise won the race by moving steadily forward while the hare slept beside the road.

In this instance, however, it seems to me that the tortoise fell asleep. After all, the private utilities had 50 years before R. E. A. started to show what they could do. Their best amounted to almost nothing.

The editors of Electrical World and the private-utility people may be content with this kind of progress, but the American farmer certainly is not.

If these private utilities would eliminate about six or eight billions of dollars of wind, water, and inflated valuations from their capital structures they could supply electricity to every consumer, including every farmer, in America, at the T. V. A. yardstick rates—including the now overburdened people of Pennsylvania.

The Legislature of Hawaii, Its Composition and Apportionment

EXTENSION OF REMARKS

OF

HON. SAMUEL W. KING

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. KING. Mr. Speaker, under leave to extend my own remarks in the RECORD I wish to discuss the composition and apportionment of the Legislature of Hawaii. This is primarily a matter of local concern, and would ordinarily under our democratic system of government be determined by the people of Hawaii themselves. But our status as a Territory requires Congress to pass upon any changes which might be proposed to the Hawaiian Organic Act, wherein the present organization of the legislature is prescribed.

It is a matter of pride to the citizens of Hawaii that Congress has never had to initiate any amendments to our organic law. As new conditions have shown the need for changes, our legislature has accepted the responsibility of sponsoring such changes, adopted resolutions to effect them, and memorialized Congress to approve the desired amendments to the Organic Act. In nearly every instance congressional consent has been promptly granted. The people of Hawaii, experienced in self-government, have during 40 years

as a Territory maintained a stable local government in accordance with American institutions and completely in the American pattern.

Legislative reapportionment, however, has lagged behind the need for a more equitable plan of representation caused by the rapid increase of, and shifts in, our population, in the past 40 years. The 1939 legislature tackled this problem and despite conflicting ideas, finally evolved a plan which was embodied in a Senate resolution, to which a majority of the Members of both Houses have expressed their approval. In accordance with the request that I offer the amendments to the Hawaiian organic act necessary to carry it out, I introduced H. R. 6453 on May 22, 1939.

The purpose and effect of this measure was explained by me in the RECORD of May 29, 1939, under leave to extend my remarks. The bill was referred to the Committee on the Territories, where it is still pending. Further study of the details of the proposed plan, and of other suggested plans indicates the desirability of presenting to that committee in concrete form a number of measures which can then be considered on their respective merits. I have accordingly introduced four bills, as alternative means of obtaining the objective; that is, a more equitable distribution of the membership of the legislature.

Before describing these bills, I wish to explain briefly the present situation. The Legislature of Hawaii as constituted by the Organic Act is a bicameral body, consisting of 15 senators, elected for terms of 4 years, and 30 representatives elected for terms of 2 years. The senators are apportioned among four senatorial election districts, each of which comprises one of the four counties of the Territory. From the first district, the County of Hawaii, 4 senators are elected at large; from the second, the County of Maui, 3; from the third district, the city and County of Honolulu, 6; and from the fourth, the County of Kauai, 2. At each biennial election approximately half of the membership of the senate is elected, the other half being hold-over members who have not completed their terms.

The representatives are apportioned among six election districts. The county of Hawaii is divided into two such districts, the first and second, each electing 4 representatives at large, or a total of 8 for the county. The county of Maui comprises the third representative district, electing 6 members at large. The city and county of Honolulu is divided into the fourth and the fifth representative districts, each electing 6 representatives at large, a total of 12 for the city and county. The county of Kauai comprises the sixth representative district, electing 4 representatives at large. The organic act prescribes that the legislature—

> Shall reapportion the membership in the senate and house of representatives among the senatorial and representative districts on the basis of the population in each of said districts who are citizens of the Territory.

On that basis it has been estimated that the city and county of Honolulu, comprising the island of Oahu, on which the city of Honolulu is located, would gain 3 senators, making a total of 9, and 6 representatives, to make a total of 18, divided between the two representative districts. Every other county would have its representation in both houses reduced. The present system of having a number of candidates run at large from one district would result on Oahu in 9 senators being elected from the one senatorial district and 8 to 10 representatives being elected from each of the two representative districts into which the island is divided.

Even with the present number of candidates, the elections have become burdensome to both the voters and the candidates. There are simply too many aspirants for office seeking the attention of the electorate to permit a fair consideration of their respective merits. When Hawaii had only about 12,000 voters the present system worked satisfactorily. Now that Hawaii has over 80,000 voters and will soon have over 100,000, some simplification of the election machinery is greatly needed. Other faults have developed from the present method, such as bloc voting and plunking, or voting for only one of the number to which the voters are entitled to cast their ballots.

It is obvious that, however the question of reapportionment between the counties is answered, it is very necessary that the present election districts should be divided into smaller units; in other words, that the Territory should be redistricted at the same time as the legislature is reapportioned. Whether redistricting shall be carried out to the fullest extent by providing for individual senatorial and representative election districts, or whether somewhat larger districts electing more than one legislator are preferable may be open to argument because the single election districts might be considered too small, especially in urban areas. But practically every student of our local politics agrees that smaller election districts are necessary, and would result in better representation of the different sections and economic groups of the Territory. As it is now, the urban centers, whose population growth has been proportionately greater than the rural areas, capture most of the membership of the legislature. Redistricting would assure each section, rural or urban; and in our cities, each economic group, its proportionate membership in the legislature.

The next debatable question is whether both houses of the legislature should be reapportioned between the counties or only the lower house. The objection has been made to the plan proposed by the Hawaiian Senate, and approved individually by a majority of the members of the Hawaiian House of Representatives, that the Senate was not redistributed between the counties, but only redistricted within the several counties. As previously pointed out, strict adherence to this principle of reapportionment in accordance with numbers, either of population or voters, would give Oahu a majority in both houses of the legislature. With 9 senators out of 15, and 18 representatives out of 30, the Territorial government would be dominated by the Oahu delegation. As the city of Honolulu, comprising the small urban portion of the Island of Oahu, contains about two-thirds of the population and four-fifths of the voting strength of that island, in effect the plan advocated by some would result in the city of Honolulu being in complete control of the legislature.

Such a plan naturally arouses the strong opposition of the other counties. Hawaii is divided into several islands, each with distinctive problems and slightly different needs. The old battle between the city and the country has more justification when there is a physical separation of the urban and rural areas. Heretofore the outside counties have shared fairly with Honolulu in all general legislation, and their welfare has not been subordinated to that of the city. Standards for the health, public instruction, and public construction programs have been the same throughout the Territory. The people of the three counties of Hawaii, Maui, and Kauai are apprehensive that this equal consideration may not continue if the legislature becomes entirely controlled by city members. They concede that Oahu is entitled to more representation, but feel that some balance of power would better protect their interests. To them it is a matter of great importance. On the other hand, the people of Oahu, while desirous of better representation, are sympathetic toward the fears of the other counties and are willing to accept a compromise.

The issue is not a partisan one. Every spokesman from the other islands, regardless of his party affiliation, is opposed to any plan of reapportionment that would give Honolulu a majority in both houses. In fact, in most cases candidates for office and other leaders have only reluctantly approved of reapportionment on the express understanding that the outside counties would be permitted to continue in control of one house. On Oahu the desire for better representation in the legislature as expressed by leaders of both parties is not nearly so vehement. Apparently any reasonable compromise would be acceptable to the rank and file. Many precedents for the situation in Hawaii can be found

on the mainland. Nearly every State in which great cities are located deny such urban populations their proportionate representation in the State legislatures.

The National Government, of course, bases senatorial representation on State sovereignty rather than population. Whether Hawaii could use such precedents as justification for reapportioning the house of representatives in such a manner as to give the island of Oahu the majority membership its population warrants, while leaving the membership of the senate distributed between the counties as at present, is an open question. As a fair compromise, in view of the sentiments of both the urban and rural populations, I believe it can be upheld. Such a compromise would obtain reapportionment now and give Oahu at least a majority in one house. If coupled with redistricting, the newly constituted legislature would represent a better cross section of our community than at present.

Insistence on reapportionment of both houses in accordance with population would mean that no legislation of this type would be accomplished for some time.

As part of the compromise between the interests of the urban and the rural areas, it has been rather generally agreed that, rather than decrease rural representation in the house in order to give Oahu its larger membership, the total membership of the house should be increased and the additional number be added to Oahu's present representation. Twelve additional representatives would bring Oahu's total up to 24, while leaving the 3 outside counties with the same number—18—distributed as at present. The larger body would appear to be desirable for many reasons, and Hawaii's nearly threefold increase in population since the legislature was inaugurated certainly deserves an increase in popular representation in the lower house.

The premises I have accepted as guides in this question are as follows:

First. That redistricting is a necessary part of reapportionment.

Second. That the senate shall be distributed among smaller election districts, but shall not be increased in numbers, nor reapportioned between counties.

Third. That the house shall be increased from 30 to 42 members, and the entire increase allotted to the city and county of Honolulu, comprising the Island of Oahu.

Fourth. That smaller representative election districts shall be established.

Fifth. That the basis for redistricting and reapportionment shall be the number of votes cast at any designated preceding election, as preferable to population figures; and that new election districts shall be as nearly as possible of equal voting strength, taking into account the necessity of using present precinct boundaries in establishing such districts.

Sixth. That in addition to equal representation due consideration be given to natural geographical and historical factors in setting up new districts, and that adjacent precincts of homogeneous character be grouped together wherever possible.

I have therefore introduced the four alternative measures that provide solutions of our problem, in the assurance that in doing so I am following out the wishes of the great majority of my constituents, and in the hope that Congress will be able to approve of one of these measures during the present session.

The first of these bills, H. R. 9186, carries out the plan proposed by the Hawaiian Senate. It is similar to the previous bill I introduced on this subject, but has been corrected to incorporate a number of changes and minor amendments that appear to be necessary to the original plan. It provides that the distribution of the senate as between the four counties shall remain as at present, but creates seven senatorial election districts from which two senators will be elected at large, one every 2 years, and one district electing one senator every 4 years. It leaves the number of representatives from the outside counties the same, but establishes smaller representative election districts, each electing two representatives at large every 2 years. For Oahu the number of representatives is increased from 12 to 24, and six representative election districts, each electing 4 representatives at large, are established. The following table lists the precincts that would comprise the proposed election districts, together with the votes cast by them at the last general election.

TABLE 1.—TO ACCOMPANY H. R. 9186

Reapportionment of the Legislature of Hawaii

As an alternative to the above plan, I have introduced H. R. 9187, which, while based on the same principles as the preceding bill, carries out redistricting to its logical conclusion by providing single senatorial and representative election districts throughout the Territory. This plan would greatly simplify campaigns and elections. Candidates would be selected for office from their own immediate neighborhoods, and could carry on their campaigns with a minimum of expense. A better cross section of the electorate would be elected to office. Sections and groups of our people unable at present to obtain representation would be assured of the opportunity of electing one of their own neighbors to the legislature. The smallness of the election districts and the cohesiveness of our community life precludes the possibility of creating any real conflict of interest between representatives of the different districts. On the other hand, minority groups would be assured of at least minority representation whenever they can cast a majority of the votes in any of these individual districts.

The table below lists the precincts that would comprise these districts. Until the legislature can establish new boundaries it is necessary to retain the present precincts in making up the new districts, as the only units concerning which figures as to the number of votes cast are available. This leads to some disparity between districts, but in most cases the smaller districts are in rapidly growing areas. No mathematically correct division is possible. The discrepancies can be ironed out by the legislature under its general authority, and the bill requires that this be done before July 1, 1941.

TABLE II.—TO ACCOMPANY H. R. 9187

Reapportionment of the Legislature of Hawaii

(Based on the total number of votes cast at the general election, Nov. 8, 1938)

Anticipating that the actual establishment of election districts might be considered more properly a subject of local legislation, even though the plans I have proposed are based on recommendations of the Hawaiian Senate, I have introduced H. R. 9188. This bill amends the present provisions of the organic act by requiring the legislature to reapportion the membership of the house not later than July 1, 1941, and every 10 years thereafter, on the basis of the number of votes cast rather than on the basis of the population who are citizens of the Territory. Under this bill the legislature may alter the boundaries of both the senatorial and representative districts; reapportion the house between the counties; and increase the membership of the house up to a total of not more than 42. The bill does not permit the legislature to reapportion the senate between the several counties. In other words, my third alternative is permissive legislation, granting authority to the legislature to put into effect the plan outlined in the two preceding bills. Because our biennial session takes place next year, the new program could not apply before the elections of 1942, which is an objectionable feature of the bill to those who believe in the urgency of reapportionment. I enclose a copy of the bill herewith for ready reference.

A bill (H. R. 9188) to amend the Hawaiian organic act so as to provide for reapportionment of the membership of the house of representatives of the Legislature of the Territory of Hawaii and authorizing the legislature to alter senatorial districts

Be it enacted, etc., That section 55 of the Hawaiian organic act be amended by substituting for that portion thereof reading:

"The legislature, at its first regular session after the census enumeration shall be ascertained, and from time to time thereafter, shall reapportion the membership in the senate and house of representatives among the senatorial and representative districts on the basis of the population in each of said districts who are citizens of the Territory;" the following:

"The legislature, not later than July 1, 1941, and every 10 years thereafter, shall reapportion the membership in the house of representatives among the several counties and the city and county of Honolulu on the basis of the total number of registered voters voting at the last preceding general election and in making such reapportionment it may change the boundaries of representative districts, may increase the number of representatives to a total of not more than 42, and may provide for the number of representatives to be elected from representative districts;".

SEC. 2. The Legislature of the Territory of Hawaii may alter the boundaries of senatorial districts within counties or within the city and county of Honolulu and may change the number of senators to be elected from such districts; provided, however, that

the total number of senators elected from each of the counties and from the city and county shall not be changed.

SEC. 3. In the event the Legislature of the Territory of Hawaii fails to reapportion the membership of the house of representatives thereof as required by the terms of the Hawaiian organic act as amended by this act, the representatives to be elected thereafter to serve in said legislature shall be elected at large by the voters of the entire Territory and without regard to districts (in case of an election at large and for the purpose of eligibility of candidates at such election the entire Territory shall be considered as one representative district) until such time as the legislature reapportions the membership of said house of representatives upon the basis required by said organic act.

SEC. 4. This act shall take effect from and after the date of its approval.

Finally, as a modification of the above measure, I have introduced House bill 9189. This latter bill simply amends the Organic Act by granting the Legislature of Hawaii full authority over its own composition and apportionment. It places the responsibility upon the legislature, where it properly belongs, to provide for equitable representation between all sections of the Territory and all classes and groups of the electorate. This proposal should meet the objections of those who contend that the senate as well as the house should be reapportioned, as it gives them the opportunity of urging their point before the legislature. The principle of home rule, of granting to each community the greatest possible degree of local self-government, should be in favor of this last alternative. There is no particular reason why the Organic Act should prescribe the manner in which the legislature should be reapportioned. In fact, the method laid down 40 years ago would today make for greater confusion and less equitable representation than ever. After outlining the original basis for legislative representation Congress might well leave future changes to Hawaii. The matter can safely be left to the legislature itself to meet changing conditions without further necessity for congressional action. Our legislative record merits such confidence, and the veto power is a sufficient brake on any ill-considered legislation. Although the legislature will be unable to effect any changes before its next session, to become operative in 1942, yet the problem by this bill becomes one to be discussed and solved by those most concerned, familiar with all the phases of the question, and competent to find a solution that will be on the whole satisfactory to the people of the Territory. For convenience I include herein a copy of this last bill.

A bill (H. R. 9189) to provide for fixing the number of members and reapportionment of membership in the Legislature of the Territory of Hawaii by the legislature

Be it enacted, etc., That so much of section 55 of the Hawaiian Organic Act as reads as follows: "Legislature, at its first regular session after the census enumeration shall be ascertained, and from time to time thereafter, shall reapportion the membership in the senate and house of representatives among the senatorial and representative districts on the basis of the population in each of said districts who are citizens of the Territory; but the" is repealed.

SEC. 2. Section 30 of such act is amended to read as follows:

"SEC. 30. The senate shall be composed of 15 members, or such other number as may be fixed by the legislature by law, who shall hold office for 4 years."

SEC. 3. Section 35 of such act is amended to read as follows:

"SEC. 35. The house of representatives shall be composed of 30 members, or such other number as may be fixed by the legislature by law, elected, except as herein provided, every second year."

Resolution Providing for the Appointment of a Select Committee to Investigate the German White Book

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. FISH. Mr. Speaker, in all fairness to President Roosevelt and our Ambassadors in Europe, there should be a complete and thorough investigation of the charges made by the German Foreign Office of the alleged Polish documents. I cannot conceive that the German Foreign Office should fabricate or forge documents, as it is certainly in the interest of the German Government to maintain peaceful relations with us.

Congress has no power to recall or dismiss any official in our Foreign Service. It may investigate the conduct of any such public officials or any intemperate or inflammatory speeches or statements made by them that might involve us in foreign entanglements or wars. The Congress may censure such diplomats or lay down rules for their guidance, but cannot force them to resign.

If upon investigation the facts warrant impeachment of any American Ambassador or Minister, or even of the President, for making secret commitments that might jeopardize our neutrality and involve us in war, then it is the duty of the House of Representatives to initiate impeachment proceedings.

With this purpose in view I have introduced a House resolution, and shall endeavor to secure its early consideration before the Committee on Rules, to which it has been referred. I appeal to all American citizens interested in preserving American neutrality to write their Representatives to support the following resolution:

House Resolution 450, Seventy-sixth Congress, third session

(In the House of Representatives April 1, 1940: Mr. FISH submitted the following resolution; which was referred to the Committee on Rules)

RESOLUTION

Resolved, That the Speaker of the House of Representatives is hereby directed to appoint a committee of five Members of the House, three from the majority party and two from the minority, to inquire into the authenticity of the correspondence contained in the German White Book, with particular reference to statements alleged to have been made by Ambassadors Bullitt and Kennedy, endangering the peace, safety, interest, and neutrality of the United States and in violation of official duty, the laws of our country, the spirit of the Constitution, the practice in our Diplomatic Service, and the regulations established by the State Department, and report back to the House within 30 days.

Major Problems of Social Security

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 2 (legislative day of Monday, March 4), 1940

ADDRESS BY PAUL V. McNUTT BEFORE NATIONAL INDUSTRIAL CONFERENCE BOARD

Mr. HARRISON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Paul V. McNutt, Federal Security Administrator, before the National Industrial Conference Board at New York City on March 28, 1940, on the subject Major Problems of Social Security.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Our 5 years' experience with social security has disclosed two major problems which I should like to discuss this evening. One has to do with the public-assistance program and the other with the old-age and survivors insurance program. It may be well to remind you of the theory of the two aspects of our efforts to provide for the aged.

The old-age-insurance plan provides only for those workers in covered industries who qualify for benefits by reason of the contributions which they and their employers have made. The public-assistance plan provides grants for the States on a matching basis for distribution to the needy aged of the State. The first plan is in theory an insurance device. The second, a pension scheme for those with insufficient income. It is in this connection that we have the so-called "means" test. In connection with this program

of public assistance, the problem which has harried us from the beginning is the wide variation in benefit payments among the States, some paying relatively generously; others, amounts utterly inadequate on any standard of living, however low. The problem in connection with the insurance plan is the limited coverage, many millions of wage earners being excluded under the present law.

There is today an unwarranted and cruel disparity between the assistance payments to aged needy individuals. I want the American people to be keenly aware of the situation, and I feel that public opinion will force a decent level of payments to be made regardless of State lines.

Regardless of any abstract theory, I can find no justifiable basis for any law which results in a "dime a day" Federal pension to citizens who live in certain States, and Federal benefits of $20 per month to other United States citizens who happen to live in more prosperous States. They are all American citizens.

Unless this present gross injustice to so many of our aged citizens is corrected, we may anticipate increasing pressure for pensions entirely on a Federal basis, and abandonment of the present Federal-State plan of public assistance. This pressure would seem to me justifiable and right if such change in system is the only possibility of securing a decent, universal level for public-assistance payments to the aged. Theory must yield to fact. This situation must be corrected.

The existing State pension systems have been greatly expanded, and in many States originated in the system of Federal grants-in-aid set up in the Social Security Act. I believe it may be said without fear of contradiction that States are at present financing these public-assistance payments to the extent of their several abilities, and that the great disparity in payments from State to State is because of the variance in the financial abilities of these States.

The practical effect of the present grant-in-aid program is to penalize the aged in a State by cutting down the Federal funds given the State for assistance so that they will not exceed the funds the State is able to raise for this purpose.

It would seem manifest that the existing grant-in-aid system should be modified. I do not believe that the Federal grant should necessarily be limited to match the funds the State can raise. There should be more liberal Federal participation, particularly in States where financial limitations have resulted in pitifully poor pensions. It seems to me unjustifiable that any aged citizen of the United States who must look to a pension for his support should be given only a $5 or $10 per month pension.

The basis of Federal grants-in-aid, in my judgment, could well be changed to put a floor under the amount of pension which will be paid a person, regardless of the State in which he lives. It would seem to me that a change in the present system to accomplish this is not only desirable, but is a change demanded by simple justice.

There have been several concrete suggestions made for changes which would remedy this condition in varying degrees and at varying increases in cost to the Federal Government—ranging from some ten million dollars annually to between two and three hundred million dollars annually. I, for one, favor the larger expenditure for this purpose.

The Federal Government has assumed—and, I believe, has properly assumed—responsibility toward its citizens of relieving them of the blight of dependency in their declining years. I feel that this responsibility is owed to all citizens without regard to the particular locality of their residence. The present system can and should be so modified as to result in both an equitable and adequate discharge of this obligation.

The principal problem in connection with old-age and survivors insurance is that of extending coverage. A long step could be taken toward wider coverage by the inclusion of the millions of self-employed persons in the country. In considering extension of coverage to self-employment, we should bear in mind that in our old-age and survivors insurance system—

(1) benefits are based on wages;

(2) employee (and employer) contributions are measured by these wages; and

(3) employers report these wages.

It could be said that the general philosophy of the system is that a person's contributions are based on his wages, and are used toward purchasing protection against his wage loss in the event of his death or old age. So the relation of benefits based on wages and contributions measured by wages is a basic idea of contributory social insurance. We could, of course, substitute "remuneration from gainful employment" for "wage" and the effect would be to better carry out, rather than thwart this general philosophy. The restriction to "wages" in the present law was made for practical reasons only.

It should be noted that while there is a philosophical connection entailed in the idea of purchasing protection, there is nothing like an actuarial relationship between a person's contributions and the value of his protection. In the case of those now old, the actuarial value of the annuity may be 20 times the contribution.

What is to be charged the self-employed is accordingly rather the practical financial problem and the problem of what he should pay as compared to an employee with similar income. We seem to have practical limits to the latter factor.

(a) He should have no more favorable treatment than an employee.

(b) If he has less favorable rates of contribution, we must stand ready to justify them, and

(c) It would appear impossible to justify a rate in excess of the commercial premium cost of similar protection.

Besides the psychological value of purchased protection, connected with the employee contribution, the employee and the employer contributions will for a number of years support total benefit costs. If we are to extend coverage to cases where there will be no employer contributions, one of the problems is to determine upon a substitute for the employer contribution, and justify this substitute.

It might be mentioned that the general justification for the special benefits for "wage earners" has been that "the employer and employee are footing the entire bill." This was the general principle of the original act. It is now rather generally admitted that a Government subsidy will be necessary. How much the amount of such subsidy is affected by the recent amendments is uncertain. At any rate, the philosophy has to be modified as it is not a self-contained "employer and employee" wholly financed system. The philosophy will be more accurate if we say: This is a system in which a large portion of the cost is borne by direct contributions from those gainfully employed. The remainder of the cost is from an excise tax on employers and from general taxes. These latter contributions are justified because all gainfully employed and their dependents are protected.

It is, of course, of basic importance if we are to have a benefit system based on wages or remuneration for gainful employment, that we should have reasonable and accurate evidence as to the wages. When the reporting of wages is by the employer his self-interest plus the self-interest of the employee creates a situation where the tendency is for an accurate report. The employer has records, and these records are subject to checking.

When we extend the system beyond cases where there is an employer to report and include cases where the person who is to receive the benefit is the one who makes the contribution and makes the report, it must be recognized that three types of situations tend to incorrect reports.

(a) The reporter's failure to keep books;

(b) The temptation in some instances to under report to save in contributions; and

(c) The temptation in other instances to over report to gain in benefits.

Generally speaking, in the case of those now young, the temptation would be to under report. The basic $20 benefit is purchasable for exactly half the monthly contribution required of the $25 benefit.

In the case of those who will retire in the next few years, the temptation would be to overreport. A person with $25 per month wages could report $250 at an extra cost of $2.25 per month, during the next 3 years, and instead of $10 per month benefit obtain a $30 per month benefit.

Thus, there may be serious drains on the fund both because of under reporting and over reporting. There is also, of course, a break-down in the general morale of the system if it becomes known that many benefit payments and contributions have a false reporting basis and it is common knowledge that the system can be worked.

To cover self-employment on a reporting and contributory basis would require a workable system of reporting, which can be used by farmers (including sharecroppers), odd-job men, fruit-stand and other small entrepreneurs.

We might provide that those with no gainful employment in quarter, or with gainful employment of less than $50 might at their option pay $1.50 at their post office, and receive credit for $50 in wages in that quarter.

The $50 figure is an arbitrary one, of course, and is based on the present provision that $50 is required for a quarter of coverage. Consideration might be given to $75, as this is the average wage which gives a $10 per month benefit.

Such a provision would avoid "nuisance" reporting, would enable those who at times are in covered employment to maintain eligibility, and would prevent long-continued illness from necessarily making one lose status.

This provision should, of course, receive very careful study. In some measure it represents a distinct departure from the present philosophy and ingrafts a voluntary provision in the system. It would greatly extend the coverage of the system and would reduce, proportionately, the amounts required for public assistance.

As to the cost of covering the self-employed in some such way as I have indicated, estimates, of course, are only approximate. There are approximately 14,000,000 self-employed persons in the United States. On the assumption that all the self-employed would exercise the option of obtaining credit for $50 in wages every month, complete coverage of all self-employed would cost about $500,000,000 in 1980. Initially, there would be a surplus of receipts over benefits just as there now is in the old-age insurance scheme. The estimate for the ultimate annual deficit of the present law with the self-employed included is about $750,000,000 annually in 1980. Offsetting this would be a substantial reduction in savings in public-assistance payments.

I have presented two major defects of our system and suggested two methods of approach to them. In these or in some other way they must be solved. In spite of its defects our system of social security is a splendid attack upon one of the gravest of our problems. By giving it the thought, study, and attention which it deserves we can make it a magnificent achievement in democracy.

Democratic State Convention, Bangor, Maine

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 2 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. F. HAROLD DUBORD

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the keynote speech delivered before the Democratic State Convention held at Bangor, Maine, March 27, 1940, by Hon. F. Harold Dubord, of Waterville, Maine, Democratic national committeeman for Maine, and temporary chairman of the convention.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the convention, the Democratic Party of Maine convenes today in the Queen City of Bangor, under the happy augury of a complete triumph in the elections of 1940. Widespread dissatisfaction, rapidly assuming a spirit tantamount to loss of faith on the part of thousands of Maine citizens, in the very integrity of our State government, is lending strength to the prevalent belief that Maine will turn to the Democratic Party to right the governmental ills which so grievously afflict our Commonwealth.

Consequently, I regard this convention the greatest, without doubt, in the history of Maine Democracy as a highly momentous occasion. You are gathered here from the length and breadth of our great State as leaders and representatives of the party of Thomas Jefferson, of Andrew Jackson, of Grover Cleveland, of Woodrow Wilson, and of our peerless leader of the present day, under whose vigorous direction the abysmal despair of 1932 gave way to confidence and faith, and under whose guidance the American Nation, in the throes of an unparalleled economic crisis, so threatening and appalling as to strike at the very foundation of our Republic, was once again set in the fortunate course of recovery and prosperity, our great President, the man of destiny, the universally beloved Franklin Delano Roosevelt.

That I have been accorded the honor of addressing this assembly is a privilege, the memory of which I shall ever cherish. History is in the making today, and I sincerely believe that 1940 marks a turning point in the fate of the political parties of Maine.

We are met today as members of a great party, a political party whose inception dates back to the birth of our Nation, a party whose political principles of equal justice for all with special privilege to none have gone down through the years of our national history steadfast and unwavering. We have every reason to be proud of our political heritage; every right to glory in our past; but, above all, our gratification over the accomplishments of our party, in the earlier development of our Nation, comes to us a sense of happiness and comfort, at the thought of the great achievements of the Democratic Party since the advent of the present Democratic national administration.

The record of the Democratic Party since 1933 is one of achievement, never equaled in the annals of the political history of this Nation. Never since the days of Abraham Lincoln was the unity of America, as we have known her, in graver danger than on that fateful fourth day of March 7 years ago. In the distressed cry of the farmer, whose freehold was disappearing under the ruthless hammer of the auctioneer; in the doleful plaint of the home owner, driven from his hearthstone by the dread specter of foreclosure; in the hopeless despair of the fathers of America, unable longer to envision the suffering and hunger of their loved ones, grim revolution stalked the highways and byways of our land.

It was under just such conditions as these that nation after nation, in the Old World, gave up the blessings of liberty and freedom and bowed to the invincible will of the dictator. How close we came to a similar disaster, under the lack of leadership of those who nearly encompassed our ruin, and who now ask the American people to return them to power, will never be known. That this Nation, conceived in liberty and dedicated to the holy principles enunciated in the Declaration of Independence, and embodied, for our protection, in the Constitution of the United States, did not take its place beside the decadent political states, which have disappeared, and whose past glories are written only upon tablets of history is, in my opinion, due only to Divine intervention. God works in devious ways to accomplish His ends and His purposes. He must have loved America, because, through Him, who is the Giver of all things, America has been preserved. Surely we should be thankful. Here, in all the world, lies the remaining bulwark of liberty and freedom. Here we remain as the only great nation enjoying the blessings of peace and prosperity. As a really religious nation, let us this day resolve to continue, in our national life, by precept and by example, to so conduct ourselves as to continue to merit the approbative regard of the Creator.

Because people are often prone to forget the pangs of adversity, after time has removed the anguish which first comes to the heart, it is well to contemplate briefly on the dread despair which distressed us in those depressing years from 1929 to 1933 in the light of the present economic rehabilitation which has been brought about by the achievements of the present Democratic national administration. Now that we have been saved from the folly and maladministration of the leaders of the Republican Party, whose political philosophy has become admittedly outmoded, let each American voter carefully search his conscience, and see if he can discover any sound reason why the control of the Nation should be taken from those, who, disregarding all else, have legislated for the welfare of the masses, and be placed in those who left behind them a trail of wreckage, the traces of which, unfortunately, are not yet entirely effaced.

It is interesting to note the tactics employed by the high command of the Republican Party to beguile enough voters to their cause, so that they may once more enthrone, in positions of influence, the same barons of big business whose tenets of political faith are grounded on the premise that the Government of the United States exists alone for their benefit; the same representatives of the powerful moneyed interests, who, seeing the structure which they had themselves created, crash about their worried heads, came crying to be saved by the President they now would execrate.

Their attitude reminds me of a poem which for years hung on the wall of a very dear friend of mine, a physician and surgeon of high repute, now passed on:

> "God and the doctor, alike we adore,
> Just on the brink of danger, not before;
> The danger past, both alike are requited:
> God is forgot, and the doctor slighted."

In 1936, barren of a program, the Republican leaders placed a low rating on the intelligence of the American electorate, when they assumed their candidates could win by assailing the New Deal in general terms, and by loudly asserting they should be returned to power in order to preserve our democratic institutions. Based on the well-known fact that there are 48 States in the Union, and, with a vivid recollection of Maine and Vermont, they accomplished the very remarkable feat of being 96 percent wrong.

Hoping to avoid in 1940 the melancholy results of 1936, they set about the task of developing ways and means of returning themselves to power, not so much to do something for the people, but to bring to an end that listless period in their political existence, the beginning of which had tossed them into a condition of oblivion, entirely unsuited to those so accustomed to rule. It was a rude awakening for the representatives of a philosophy that all economic virtues are included in the policy that the way to help the poor and the lowly is to make more wealthy the rich and the powerful.

Realizing that the people were so tired of mere captious criticism that many of their own newspapers were asking for something constructive, they began their work.

First, a committee of 46 Republican Members of the House of Representatives in Congress roved the Middle West to see what they could evolve in the way of a farm program. It was not so much that they were interested in the farmer, because, for 50 years the Republican Party was so little concerned with his welfare, that they did not even mention him in their platform, secure in the belief that a safe majority of the farmers were traditionally Republicans and would stay put, in spite of political neglect and exploitation of their interests. The Republican Party has never kept faith with the farmer. It cannot keep faith with the farmer, at the same time it takes orders from Wall Street, the Liberty League, and big business. No; it was not interest in the farmer, as such, that prompted action, but a genuine fear that no longer could they depend upon the farm vote. Sad for the Republican Party to relate, its committee of 46 returned to their base with no other suggestion than an endorsement of what the Democratic Party had already done for the farmer.

Then on the 5th day of November 1937 a great event occurred. On that date the Republican National Committee appointed a program committee of 200 members, selected from every section of the land, and this committee was charged with the solemn duty of taking the old G. O. P. machine to the garage for a complete overhauling. It was not expected that the committee would buy a brand new machine, but it was at least recognized that the knocks should be eliminated, the carbon cleaned out, and the valves ground.

After more than 2 years, in more than 30,000 words, the committee of 200 has reported, and, lo and behold, the only suggestion emanating from these worthy persons, after ascertaining, in accordance with the mandate of the Republican National Committee, the various views held by the rank and file of the Republican Party, is a complete endorsement of every objective of the New Deal. Consequently, henceforth, instead of complete 100-percent criticism of every act of the New Deal, we should hear nothing but praise from the Republicans for the reforms adopted by the Democrats. We should only expect them to say that they should now be put into office to administer these Democratic reforms, which they opposed, until forced by the public opinion of their own party members to publicly avow, but which they still privately gainsay. Surely, it will be interesting to listen to the Republican candidates

in Maine expound praises of the Social Security Act, of the Securities Exchange Act, of the law guaranteeing bank deposits, of the Federal Housing Administration, of the farm program, and of the reciprocal trade agreements policy, and of the many other constructive policies of the New Deal. Of course, it is to be expected that they will tell the people of Maine that the Republican Party is much better equipped to put these great policies into effect. Still it will be interesting to hear them just the same, and, of course, they will have to take this rather curious position or else be at odds with the report of the program committee of the Republican National Committee, which after 2 years has discovered from its own party members of the rank and file that the people of America believe in the New Deal and its objectives. Apparently our Republican friends are now face to face with the dilemma of choosing between buying a brand new machine or simply being satisfied with putting on a new coat of paint on the old bus and letting it go at that.

The report of the program committee is strongly reminiscent of the story of the dusky client who went to a lawyer to seek a divorce from his wife. The lawyer inquired: "So you want a divorce? What's your complaint?" To this his would-be client replied: "Dat woman, she jes talk, talk, talk, night and day. Ah jes can't get mah rest, and she's drivin' me crazy." "And what does she talk about?" "Ah don' know. She don' say."

While they have been talking, the Democratic Party has been doing—doing things for the welfare of the farmer and of the worker, and for the improvement of general business conditions.

There are many things of great significance in the report of this program committee. In the first place, it starts out with the statement that the American depression struck bottom in 1932. This is the first public acknowledgment on the part of the Republican leaders that we were in a bad way in America when President Roosevelt assumed command of the situation. At this point it may not be considered impertinent to ask the rather embarrassing question as to just who was to blame for the conditions which ensued after 12 years of uninterrupted Republican rule.

At the outset, the report seeks to depreciate the accomplishments of the New Deal during the 7 years of its incumbency. I propose to confine myself to a few salient features.

The report charges the New Deal has not solved the problem of unemployment and alleges there are 10,000,000 unemployed. This figure is subject to dispute; but assuming it is correct, let us analyze the situation. The New Deal came into power at a time when it was estimated the total number of unemployed was 15,000,000. The report of the Republican program committee admits that since that time the number of workers has increased by 5,000,000. Our total production in 1939 equaled the total production of 1929, but it is estimated that it takes 1,500,000 less men to secure this production. In other words, the total potential unemployed, based on the number of unemployed in 1933, is 21,500,000, so that as a result of New Deal policies 11,500,000 people have been placed at work in the last 7 years. The problem of taking care of the remainder is still unsolved, but it certainly could not have been solved by the do-nothing policy of the Republican Party. If they have a plan to meet the situation, they are woefully silent about it. A careful study of the report discloses nothing but the statement that there will be relief as long as necessary and jobs as soon as possible. They are rather vague about telling us when that happy day will occur.

In an endeavor to minimize the actual results obtained by the Democratic administration they make the very absurd comparison of the last 6 years of the Hoover administration with the first 6 years of the Roosevelt administration and point out that some lines of business have not reached the high point of 1929 just before the precipitation of the worst panic in our history. Candor would require that the results obtained by the New Deal should be compared with the low point of 1932, since which date dividends of corporations have increased 55 percent, wages and salaries have increased 62 percent, the national income has increased 71 percent, cash farm income has increased 82 percent, our foreign exports have increased 97 percent, and weekly pay rolls have increased 145 percent.

One chapter of the report ends with the statement that after 7 years we have doubt, confusion, and uncertainty, instead of confidence, clear and assured understanding of where we are headed. I venture the remark that the only doubt, confusion, and uncertainty exists in the Republican Party; doubt of its ability to win the election of 1940, confusion on the part of its would-be leaders who cannot and will not agree on any definite program, and uncertainty as to its future. The American people have a confident, clear, and assured understanding that they are headed for a better Nation under the leadership of Franklin Delano Roosevelt.

The Republican Party may return to power some day, but only when the Democratic Party forgets its principles; only when we fail to represent liberal America; only when we attempt to imitate the Republican Party. The Republican Party will never regain the confidence of the electorate until it honestly admits the error of its ways, until it openly repents for its misdoings, and humbly asks to be forgiven.

The Republican program committee charges the New Deal with impeding business expansion. Daily reports of increasing business to be found in the newspapers confound this charge. Let me cite only a few statistics. The oil output of the Texas Corporation in 1939 was the largest in its history and its net profit was nearly $33,000,000. The Sears, Roebuck & Co., whose activities range over the whole country, reported the largest Christmas sales in the history of the company by 25 percent. The secretary of the Pennsylvania State Department of Commerce, a Republican, reported to the Philadelphia Real Estate Board that more than $100,000,000 would be spent on new industrial expansion in Pennsylvania in 1940. As part of this construction, $14,000,000 worth will be undertaken by the Sun Oil Co., whose principal owners, the Pews, are among the chief financial backers of the Republican campaign against the New Deal. While spending millions in expanding their business, in view of favorable economic conditions, they give thousands of dollars to the Republican Party to tell the public that business is being throttled and destroyed by the Roosevelt administration.

These examples could be multiplied manyfold and the newspapers have just reported that income-tax returns have increased over 31 percent.

One outstanding statement in the report of the Republican program committee clearly shows what can be expected of the Republican Party if returned to power. Income taxes in the higher brackets will be reduced because they say high taxes are "murdering incentive." It should not be the desire to tax business to an extent that taxation will retard business development and that is not the plan of the Democratic Party. Let us see whether or not there is just cause to complain. In 1932 the Du Pont Co. paid Federal taxes of a little less than $1,000,000. In 1937 their Federal taxes increased to $11,000,000, but in 1932 the net income of the Du Pont Co. was only $26,000,000, while in 1937 it was $88,000,000. Its tax bill went up $10,000,000, but its income went up $62,000,000. Which year was better for the Du Pont Co.? The experience of this company is duplicated by the experience of hundreds of other large corporations.

Among the methods suggested for improving business conditions, a program of housing construction is suggested. The suggestion comes rather late in the light of the Federal Housing Act enacted by the present Democratic Congress.

The position of the Republican Party on relief is worth attention. They, whose policy was to tell the people prosperity was just around the corner, while millions were suffering the pangs of hunger, in no degree assuaged by glowing stories of two chickens in every pot, now say they would give relief as long as it is necessary, but, they say the administration of relief should be in the hands of local authorities, assisted by grants from the Federal Government. May God delay the evil day when men and women, unable to support themselves through no fault of their own, are made dependent for relief upon local politicians. The administration of relief should be upon a nonpartisan basis. Admitting that some abuses may have crept into the administration of relief during the earlier days of the present national administration—these abuses have been corrected. That a few dishonest persons were to be found on the relief rolls among the many thousands throughout this broad land, was to be expected. However, it is to the credit of the Democratic Party that no scandal has attached to its name. In all the long history of the National Democratic Party, there has never been a Democratic administration that was corrupt. Democratic administrations have been clean and honest administrations. The same cannot be said of many other administrations. Some person on relief may have had an extra bag of potatoes or drawn a small check to which he was not entitled, but we have had no Teapot Dome and no "little green house" on K Street.

We have every reason to be proud of the record of President Roosevelt and the Democratic Party.

Our fiscal policy has been sound. The American dollar is the strongest monetary unit in the world. The credit of the Nation never was stronger.

Our farm policy, now adopted in its entirety by the Republican Party, has been of immeasurable benefit to the farmer. In Maine alone from May 1, 1933, to January 1, 1940, the Farm Credit Administration has made 19,000 loans, totaling over $20,000,000, and 5,000 Maine farm families are being served and rehabilitated by the Democratic national administration. When did the Republican Party ever do this for the farmers of Maine?

Employment has been furnished through the Work Projects Administration and through a program of useful public works. The money expended has flowed into all the channels of trade and is reflected in the best business conditions in 10 years. In Penobscot County alone the Democratic national administration has expended, in the form of loans and grants, nearly $18,000,000. In these loans and grants, made on a strictly nonpartisan basis to nearly every community in Maine, lies the reason why the financial standing of our cities and towns has so much improved and why our municipalities have been able to substantially reduce, and in many cases wipe out, their indebtedness.

Moreover, the Federal grants have kept local taxation down materially. Let us take Penobscot County as an example. From March 4, 1933, through June 30, 1939, the Federal Government expended in nonrepayable grants in Penobscot County approximately $5,500,000. The assessed taxable valuation of all property in Penobscot County is somewhat less than $75,000,000. On a basis of $75,000,000, one mill of taxation brings in $75,000. The sum of five and one-half million dollars expended in Penobscot County by the Federal Government amounts to more than 72 mills of taxation. In other words, if this money had not been given to the cities and towns of Penobscot County during the 6 years in question, the taxpayers in this county would have had to pay an average of 12 mills additional per year on their tax bill. If it is argued that

some of the projects were unnecessary, the answer to that is that the money was paid to people who needed it badly; and if they had not received this Federal aid, the cities and towns or the State of Maine would have had to meet this expense which the Federal Government took care of in the State's hour of need.

Complaint is made of the back-breaking burden of taxation which they say will plague us, our children, and our children's children. The fact of the matter is that the cost of carrying the national debt under President Hoover was higher than it now costs us to carry the present national debt. This has been brought about by the strong financial policy of the administration, resulting in lower interest charges, which proves, apparently, there is less strain on the back of the taxpayer under President Roosevelt than under President Hoover.

Under President Roosevelt more legislation beneficial to the workers of America has been enacted than in all prior history of the Nation. The American worker will remember this when he goes to the polls this fall. He knows that it is to the Democratic Party that credit goes for the Social Security Act, the Railroad Retirement Act, the Fair Labor Standards Act, Unemployment Compensation Act, and the National Labor Relations Act—the Magna Carta of labor. The Republican program committee complains that the National Labor Relations Act has not accomplished the purpose for which it was intended, and in support of this contention argues there has been much strife between capital and labor. Admitting there has been trouble between capital and labor, pray, who is to blame for this sad condition? The forces of big business opposed with all the power at their command the enactment of the law. Defeated in these attempts, what was their next step? They employed what they supposed was the best legal talent in America, and these attorneys told the employers the law was unconstitutional and openly advised them to violate its provisions. Is it to be wondered that with this type of advice industrial strife occurred? The blame lies squarely on the shoulders of big business; and what of the advice of the constitutional lawyers? The Supreme Court of the United States disagreed with them, and the legal rights of labor are now secure. Normal adjustments in the administration if the law will, undoubtedly, soon give satisfaction to both capital and labor.

A careful reading of the report of the Republican program committee indicates clearly that if the Republican Party is returned to power, while retaining the National Labor Relations Act on the statute books, it will be stripped of all its beneficial provisions. The same course may be expected in reference to other New Deal laws which the report so glibly endorses. The promises of the Republican Party should be viewed in the light of past peformance.

To the Democratic Party goes the credit of enacting the Social Security Act, with old-age pensions, unemployment compensation, assistance to blind and crippled children, and many other humane provisions, long desired by forward-looking citizens. This law is too broad for me to try to explain it at this time. When it is more fully understood and its beneficial results have been observed, men and women will look back to President Roosevelt, its sponsor, and hail it as the finest piece of legislation ever enacted into law. Let me cite you just one example of its benefits. A man, aged 43, who earned $35 a week as a clerk, died suddenly as a result of a heart attack. Before there was a Federal Social Security Act, his wife and son would have had to depend on a little insurance and the help of relatives. Under the liberalized law his widow and son will receive $38.84 a month until the boy leaves school at 18. In the 8 years between now and that time they will be paid $3,728.64. There are no humiliating strings attached to the money. The widow does not have to prove need. She need not sell the family radio. The money will come to them as a right and not a charity. The widow does not remember that her husband mentioned social security particularly. She knew that 35 cents per week was deducted from his pay envelope, but she did not realize that this little payment might make the difference some day between dependence and independence. Of all the reforms of the New Deal, social security will prove the most important and the most popular. Any political party that attacks or attempts to weaken it is doomed. It is based upon a deep-seated need of the people which will be increasingly recognized as time goes on.

In a world torn by wars and rumors of war, we should never let a single day pass by without expressing devout thanks to God that we live in America. In other lands, dictators hold sway. The forces of destruction sweep on. Men, women, and children hunger, and war has no respect for anyone, as bombs rain from the skies and strike terror and death. Here, under the leadership of a man who understands international as well as national problems, we enjoy peace and happiness. Our relations with every nation are cordial, and we have put into effect the policy of reciprocal-trade agreements, which not only is rebuilding our foreign trade and improving our domestic markets but is universally acknowledged as the greatest factor for an enduring peace. The greatest man in the world today is Franklin Delano Roosevelt, and the people of America know our peace is safe in his hands. He has preserved and will preserve the American democracy.

In conclusion, lest we forget, it was the policies of the Republican leaders that brought on the depression. It was the Democratic Party that got us out of it. From 1929 to 1933, Republican leaders totally forgot the worker, the farmer, the unemployed, the aged, and the common people of America. Now, that the tempest which they created has passed on, is it wise or safe again to entrust them with the destinies of the American people? The New Deal was made necessary by the economic collapse which engulfed us. It was an energetic and forceful program. It brought results. There is no other program. It is a program backed up by the solid weight of almost unanimous public approval. In its development, the rank and file must cooperate. To us, the President and the Democratic Party are looking. In the humdrum of our daily existence there may be no applause for our efforts, but our reward will lie in the self-satisfaction that we will know we are rendering a service to our country.

The only hope of providing the kind of government which the American people desire lies in the Democratic Party. Let me close with this admonition in the words of the ancient philosopher:

"Men having often abandoned what was visible for the sake of what was uncertain have not got what they expected, and have lost what they had."

Senator Vandenberg's Proposal for a Foreign-Trade Board

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, April 2 (legislative day of Monday, March 4), 1940

ARTICLE BY WALTER LIPPMANN

Mr. BILBO. Mr. President, I ask permission to put in the Appendix of the RECORD an article by Walter Lippmann appearing in the Herald Tribune on the 10th of February 1940, under the title, "Mr. VANDENBERG's Pup."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald-Tribune of February 10, 1940]

TODAY AND TOMORROW

(By Walter Lippmann)

MR. VANDENBERG'S PUP

Mr. Hull has had two successes in the last 10 days. His trade-agreement policies have been endorsed by the House committee. But even better, Mr. Hull's most formidable opponent, Senator VANDENBERG, of Michigan, has ventured to introduce a bill (S. 3238) defining his ideas of the alternative, his ideas of what the commercial policy of the United States should be if it rejects Mr. Hull's policy, and of how the policy should be put into effect.

If Mr. Hull can now persuade the Republicans to read and appreciate Mr. VANDENBERG's bill, he will win his fight with a landslide vote. Mr. Hull's only difficulty will be to make the Republicans believe that a leading candidate of their party is sponsoring the program that Mr. VANDENBERG is sponsoring. Mr. Hull may even have difficulty in making Mr. VANDENBERG himself believe it.

The Vandenberg bill abolishes the Tariff Commission and sets up a new agency composed of six men called the Foreign Trade Board. In this board are vested not only all the powers of the Tariff Commission but also the powers of the State Department as they deal with commercial treaties. What must interest us, however, are the new powers that Mr. VANDENBERG would vest in this board.

They begin in section 11, which gives the board the right to compel "every person within the United States" (meaning individuals, partnerships, corporations, banks, trust companies, etc.) to produce all books, contracts, letters, or other papers relating to the following subjects: Any transaction in foreign exchange, the transfer of credit or payment between American and foreign banks, the export or import of securities and of gold and silver.

Whether or not Mr. VANDENBERG realizes it, this is a proposal to establish the machinery of exchange control. The Vandenberg bill does not propose to use this machinery right away. But it would set up the machinery by which the board of six men could, under a slightly broader interpretation of its powers, control every kind of financial transaction across the frontiers of the United States. Now, such machinery as Senator VANDENBERG wishes to establish here exists, of course, in many other countries. But no country, excepting only Soviet Russia, has ever willingly adopted it. Elsewhere in time of peace it has been adopted only by debtor countries, like Germany and Italy, which, needing to import more than they were able to pay for, have been constrained to adopt exchange control in order to conserve funds for foreign purchases. Only the most lunatic of the Nazis have ever pretended that the system was anything but a horrid necessity; every sensible German and Italian has deplored the fact that his country had to adopt such a system. In Britain and France the system of exchange control was not put into effect until the war compelled them to conserve their resources for the purchase of essentials.

No country would dream of adopting this system if it were in the position of the United States. For exchange control is necessary only when a country does not have the means of buying abroad the things that it needs to buy. When a country is in our position, possessing an inexhaustible stock of gold, attracting to itself free funds from all over the world, the idea of instituting exchange control is an absurdity. It is like a fat man taking a cure for undernourishment.

Why, then, does the Vandenberg bill propose to vest in the new board the inquisitorial powers, the vast, complex regulatory mechanism, the immense overhead bureaucratic supervision of private transactions, that are employed elsewhere only by impoverished countries, by countries under a dictatorship and by countries at war? I really do not know why Mr. VANDENBERG thinks such powers need to be vested in another board in Washington.

But perhaps the answer is to be found in section 13 of his bill, which, believe it or not, provides for the abolition of the tariff and the substitution of embargoes "to prevent the importation" of articles "at an import price" which is "less than the reasonable cost of production of a like or similar domestic article, in the case of articles other than agricultural commodities." The reader may think that Mr. VANDENBERG merely wants to raise the tariff. He will be mistaken. M. VANDENBERG wants to prevent imports. And he means to prevent them not merely by having the board raise the tariff rates as high as may be necessary but, if this does not prevent imports, to impose "import restrictions" which he describes as "limitations, prohibitions, charges, and exactions other than duties imposed on importation or imposed for the regulation of imports."

Since he believes in such a policy, it is perhaps understandable why he thinks it necessary to get the country ready for exchange control. For this policy of the embargo would not only wreck foreign trade but would throw the currency and financial markets of the United States and elsewhere into such disorder that it probably would be necessary, even for us, to establish Government control of all exchange transactions. Thus section 11 becomes intelligible in the light of section 13. For section 13 might succeed in producing the calamity that section 11 would then be needed to deal with.

This leads us into section 14 which provides that the United States should descend to the level of carrying on its foreign trade by barter agreements. After section 13, which would do so much to destroy normal commerce, section 14 would undoubtedly be necessary. For the country, having wrecked its foreign trade, would be landed with unsalable surpluses of all sorts of commodities. Mr. VANDENBERG's new board would then have plenty to do trying to get rid of these surpluses by barter agreements.

So Mr. VANDENBERG offers us as a commercial policy an embargo on imports of nonagricultural products, the prospect of exchange control, and the conduct of our commerce by the primitive method of barter. And this, I suppose, is to be done under the impression that Mr. VANDENBERG is saving the American system of free enterprise.

If it were not obvious that Mr. VANDENBERG is an innocent man, one might wonder how he ever came to sponsor a proposal so utterly alien to American principles, so naively acquiescent in the very worst practices of the age we live in. Mr. VANDENBERG cannot possibly mean seriously to commit his party and his country to the economic philosophy which his bill describes. He cannot have understood what he was doing when he accepted these ideas.

But this time somebody has certainly sold him a pup.

Proposed Federal Administrative Procedure Legislation

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 2 (legislative day of Monday, March 4), 1940

JOINT REPORT OF THE COMMITTEES ON ADMINISTRATIVE LAW AND ON LEGISLATION, OF THE BAR OF THE CITY OF NEW YORK

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a joint report of the committees on administrative law and on Federal legislation, of the Association of the Bar of the City of New York, on Senate bill 915, introduced by the late Senator Logan, and its companion bill, House bill 4236, introduced by Representative CELLER, which are intended to provide for the more expeditious settlement of disputes with the United States, and for other purposes.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

JOINT REPORT OF THE COMMITTEES ON ADMINISTRATIVE LAW AND ON FEDERAL LEGISLATION OF ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK ON S. 915 (76TH CONG.), INTRODUCED BY MR. LOGAN, AND ITS COMPANION BILL H. R. 4236 INTRODUCED BY MR. CELLAR, BOTH ENTITLED "A BILL TO PROVIDE FOR THE MORE EXPEDITIOUS SETTLEMENT OF DISPUTES WITH THE UNITED STATES, AND FOR OTHER PURPOSES."

The committees on administrative law and on Federal legislation of the Association of the Bar of the City of New York respectfully submit this report disapproving S. 915 and H. R. 4236.

These identical bills, which will hereafter be referred to in the singular, were drafted by the special committee on administrative law of the American Bar Association. It is, therefore, with great reluctance that these committees feel compelled to report unfavorably on the bill, particularly as we are in complete sympathy with many of the objectives of the framers of the bill.

The bill, with specified exceptions, deals with all Federal agencies (which includes departments and independent establishments), and independent agencies (which includes boards, commissions, authorities, and other organizations). It prescribes a procedure for the making of rules and regulations and for judicial review thereof. It likewise provides for intraagency review of administrative actions and failures to act, by means of departmental boards, and for judicial review of the action of such boards. The exceptions from the application of the act include such matters as internal revenue, customs, patents, and trade-marks. There is no need to deal with these exceptions except to remark that they were in part at least due to practical rather than theoretical considerations. If any principle were involved, its application would require much more widespread exceptions.

We believe that detailed legislation, if it would be sound, should not attempt to apply an identical technique to the innumerable agencies and departments which are made subject to the present bill. Rather, it should deal with the particular problems arising in each such agency or department. The scope of the substantive authority granted to various departments and agencies varies greatly. Their procedures, in some instances regulated by the statutes creating them and in others grown up through practice, likewise vary in many respects. These variations are not for the most part accidental, but arise out of the substantive differences in the functions of the various agencies and in the type of administration best suited to achieving their respective objectives. We suggest that what is needed is a thorough survey of these administrative bodies with particular reference to the different types of rules, orders, actions, and failures to act of each individual agency. After such a survey, an attempt should be made to formulate a proper procedure for rule making and to decide in the case of each type of action or inaction to what extent review, whether intra-agency or in the courts, is desirable, both for the protection of those subject to the regulations and for the orderly conduct of governmental business.

To illustrate the great diversity of problems involved, let us take as an example the powers conferred upon a single administrative agency, the Securities and Exchange Commission, by only one of the statutes which it is charged with administering, the Securities Exchange Act of 1934. It would seem obvious that the same procedure for internal and judicial review may not be desirable in the case of an order initiating an investigation, on the one hand, and an order expelling a member from a securities exchange on the other. Other types of action or nonaction under that statute may be found in a refusal or failure to order a dealer's registration effective in advance of the prescribed 30 days, a refusal to allow information in a registration statement to be held confidential, an order appointing a trial examiner, a dismissal of an employee, an order referring a matter to the Attorney General of the United States, etc. Many other types of action or nonaction can be found in the same statute; and we feel that there is no reason why all should be regulated in the same way. When the vast number and widely varying characteristics of the many agencies which are embraced within the scope of the present bill are taken into consideration, it becomes clear that they ought not to be dealt with in an omnibus fashion.

Aside from doubt as to the wisdom of any attempt to regulate the administrative procedure and judicial review of many different kinds of administrative agencies to conform to a single pattern, we consider that three principles embodied in the present bill are inconsistent with the proper functioning of many of the agencies subject to it. These are (1) the provision that all rules and regulations of the administrative agencies shall be issued only after public hearings; (2) the provision for an immediate judicial review of all rules and regulations by proceedings in the nature of a suit for a declaratory judgment; and (3) the provision for intra-agency and judicial review of any decision, act, or failure to act on the part of any officer or employee of any administrative agency by any person aggrieved thereby.

1. Public hearings on rules and regulations: Section 1 of the bill provides that all administrative rules of the agencies covered by the bill shall be issued only after public hearings.

While much may be said in theory in favor of full public discussion before the promulgation of any administrative rule, we are of the opinion that in practice in the case of many of the

administrative bodies covered by the bill the actual benefits to be derived by any such procedure would be very small and the disadvantages great. The bill assumes that a public hearing would insure due consideration of all points of view. Actually, it is doubtful that public hearings would evoke those considerations which should serve as the foundation for rule making.

The administrative agencies can call informally upon persons interested or expert in the subject matter with which they have to deal or may respond to the requests for consultation by such groups. It is our belief that, in the main, persons qualified to contribute to rule making will be more apt to respond and can be more effective if the procedure is informal. In informal conferences and discussions, experience has shown that there can be a very great measure of cooperation and mutual help between Government agencies and private persons. Public hearings, however, are apt to develop the antagonisms incident to adversary proceedings, or be perfunctory in form, and time is often wastefully consumed. In brief, a conscientious administrative body can and will obtain, from the industry or group subject to its jurisdiction, as much cooperation and assistance as is feasible, in ways more effective than any public hearing and will combine the information so obtained with its own expert knowledge and experience. Conversely an agency which wishes to act arbitrarily cannot be compelled to exercise its rule-making discretion impartially and fairly by any requirement of the formality of a public hearing. Nothing in this bill, or in any other bill, could effectively require the rule-making authority of an administrative body to give proper weight to any evidence adduced at any hearing, if that authority were determined to disregard or minimize certain evidence and to act arbitrarily.

2. Judicial review of rules: Section 2 of the bill provides that the United States Court of Appeals for the District of Columbia shall have jurisdiction, upon petition filed within 30 days from the date of publication of any administrative rule, to determine whether any rule is in conflict with the Constitution of the United States or the statute under which issued. The defense of the rule is to be conducted by the Attorney General of the United States and not by the rule-making body itself. This review of rules would be in addition to all other existing remedies by which the validity of a rule may be tested. The purpose of this proposal is to minimize litigation and promote certainty by having a rule promptly tested in the abstract, rather than in terms of actual controversies which may not arise until months or years after the rule was issued.

We are sympathetic with the purposes aimed at in this section and recognize that there are certain kinds of rules to which such types of procedure may reasonably apply, but we do not believe that a case is shown for departure in all cases from normal requirements under which courts do not pass upon the validity of statutes or rules in vacuo, but act only in cases or controversies in which the actual application of a statute or rule can be shown. In many cases a court attempting to act under this section would either pass upon the validity of a rule without the necessary factual background or would be led into a burdensome and yet necessarily incomplete consideration of many possible factual variations. Again the complexity of many rules would involve almost endless litigation under this provision. Judicial review would often involve an indecisive debate as to what rules meant before the court could arrive at a consideration of their validity. Where the existence of a rule constitutes a grave and imminent threat to the demonstrable interests of a particular person, it ought to be possible to test it in advance of its actual application, and we are inclined to believe that in such cases a speedy remedy, where not already available, should be provided. Except in such cases, however, it seems preferable as a general matter to test rules and regulations only as their effect is observed in practical operation.

3. Departmental boards of review and judicial appeal therefrom: Section 3 provides for the establishment of intraagency boards of three members by all administrative agencies, such boards to hear appeals by any person aggrieved by a decision, act, or failure to act of the agency with respect to which the intraagency board is created. Section 4 of the bill provides for an appeal to a circuit court of appeals by any person aggrieved by the final decision or order of any agency entered in a proceeding after hearing by the intraagency board.

The objective of section 3, namely, provision for ready appeal within an administrative body, is one to which we subscribe. We further subscribe to the principle that administrative bodies should be so organized as to separate the judicial from prosecutory functions. It is our view, however, that while this general principle might well receive legislative sanction, the application thereof should be largely a matter of administrative discretion.

But more fundamental than this is the objection that this provision is far too sweeping in scope. Any decision, act, or failure to act, no matter how trivial, is covered by the terms of this section. How far reaching the bill is in this respect is shown by the fact that the framers found it necessary specifically to except from its provisions cases in which the aggrieved party was denied a loan or failed to receive employment. Undoubtedly, it is not simple to draw the line between determinations which ought to be appealable and those which ought not. This difficulty becomes insuperable if the attempt is made to deal by one formula with a great many administrative agencies.

What has already been said with respect to the provisions for intradepartmental appeal applies with much greater force to the provisions of section 4 authorizing an appeal to the circuit court of appeals by any party to a proceeding under section 3. The failure to limit in any manner the type of order, decision, act, or omission from which an appeal can be taken to the courts seems to us quite indefensible.

It is a frequent complaint that the administrative process often operates to impose a control so rigid, meticulous, and all-pervading as to destroy rather than reform. The present bill would apply to administrative bodies a similarly objectionable technique. It proceeds from the premise, which we accept, that grave abuses exist. Particularly we believe that the present remedies of an individual, faced with an arbitrary or illegal exercise of power by an administrative body, are not in practice adequate, and we sympathize with an effort to provide the individual with a practical means of defending himself in such a situation. Nevertheless, we think that the present bill, under the guise of reform, would force administrative and departmental agencies having a wide variety of functions into a single mold which is so rigid, so needlessly interfering, as to bring about a widespread crippling of the administrative process.

Accordingly, we record our disapproval of this bill.

Respectfully submitted.

Organized Agriculture Opposed to Wheeler-Lea Bill; Leading Farm Organizations Have Gone on Record Against It Since Introduction of Bill

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. CULKIN. Mr. Speaker, the distinguished gentleman from Pennsylvania [Mr. VAN ZANDT], in an extension of remarks which appeared in the Appendix of the RECORD, at page 1533 makes the amazing statement that the farmers of the United States are definitely on record as supporting the Wheeler-Lea bill. He then cites the resolutions by various farm bodies which he claims gives verity to his assumptions.

Every one of the resolutions that he cites were passed before the Wheeler-Lea bill saw the light of day. They are all dated in 1938, and the Wheeler-Lea bill was not introduced in the House and Senate until 1939. In other words, the gentleman gives the bill a prenatal baptism, cleansing it of all sin. He dusts off some old resolutions obtained by the railroad lobby and attempts to give agricultural sanction to a bill which every major organization in agriculture has condemned most vigorously since its introduction.

I desire to present to the House the true position of organized agriculture on the Wheeler-Lea bill. Let me call the roll of the leading farm organizations.

THE NATIONAL GRANGE OPPOSED

First: The oldest and perhaps the most generally respected farm organization is the National Grange. Oppressive freight rates which were destroying the western farmer brought the Grange into existence. The Members of the House have been in receipt of vigorous letters of protest against the Wheeler-Lea bill from the National Grange. In the Appendix of the RECORD, page 962, in an extension of remarks of the gentleman from Iowa [Mr. HARRINGTON], appears a radio address by Mr. Fred Brenckman, the Wash-

ington representative of the National Grange. I quote from this address as follows:

There is justification for saying that those who inspired and drafted the legislation under consideration (the Wheeler-Lea bill, S. 2009) have lost sight of the fundamental purpose for which Government regulation was established, and that was to protect the public interest. We have drifted so far away from this original and legitimate purpose that the effort of our lawmakers now appears to be to equalize competition as between different modes of transportation. The truth is that an attempt is being made under the guise of regulation to raise the rates of water and motor carriers to the point where they will be comparable with rail rates. This is not only unsound economically, but it is prejudicial to the welfare of the entire country.

Agriculture, in particular, would be hard hit if the proposed legislation should be enacted. Transportation constitutes the heaviest service charge that the farmer has to pay. The farmer pays the freight both coming and going. Last year the farmer received only 39 cents out of every dollar paid by the consumer for food. At the depth of the depression the farmer's share of the consumer's dollar dropped to 33 cents. While transportation and distribution must be regarded as legitimate and indispensable functions in the affairs of our civilization, the fact remains that when those who merely transport and distribute the products of our farms receive vastly more than the share that goes to the producer, it amounts to the same thing as an economic crime.

The House should note that this address was delivered on February 17, 1940, and represents the authoritative and responsible findings of the Grange on this question. So much for the Grange.

FARM BUREAU FEDERATION OPPOSED

Second. The next national farm organization quoted by the distinguished gentleman from Pennsylvania [Mr. VAN ZANDT], was the American Farm Bureau Federation. Prior to the introduction of this legislation the American Farm Bureau Federation had blown hot and cold on this question. However, after this organization's membership in the country learned of the devastating effect of the Wheeler-Lea bill on the carriage of farm products it suffered a complete change of heart. The apprehension of the members of this organization is evidenced in a resolution adopted at its annual meeting in Chicago on December 1939, from which resolution I quote as follows:

Each House of Congress has passed a transportation bill, both of which are now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a reasonable time be permitted the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

In the formulation of such bill we urge that the Interstate Commerce Commission be directed to give more attention to the rightful interests of shippers in the regulation of transportation systems, to investigate and remove any unjust discriminations against regions or commodities within any particular type of transportation, and we especially insist that no provision of law or regulation permitted thereunder restrict any natural or inherent advantages of any type of transportation where such advantages in rates and service are reflected to the shipping public.

The House will note that the Farm Bureau Federation insists that when this resolution comes back from conference a reasonable time be permitted to study the bill. It also insists in words of one syllable that no provision of law or regulation be permitted by this legislation, the Wheeler-Lea bill (S. 2009), to restrict any natural or inherent advantages of any type of transportation. This is a definite declaration against the Wheeler-Lea bill for the reason that the Wheeler-Lea bill does in fact murder water transportation. If the Wheeler-Lea bill passes, the farmer will pay through the nose in order to get his product to market.

FARMERS UNION OPPOSED

Third. The Farmers Union. At its meeting in November 1939 the Farmers Union adopted a resolution expressing—

its opposition to regulation of truck and water transportation that tends to increase transportation costs.

The effect of this declaration automatically places the Farmers Union in opposition to this legislation. The purpose of the legislation is to raise truck and water transportation to the level of the railroads and thus create a monopoly of transportation under the moribund and railroad-minded Interstate Commerce Commission.

LIVESTOCK GROWERS OPPOSED

Fourth. The American National Live Stock Association which represents the cattle raisers of the United States, big and little, both north and south, condemn the Wheeler-Lea bill without the use of weasel words. This association adopted a resolution at its convention of January 1940, as follows:

Resolved, That we are unalterably opposed to Senate bill 2009, and companion House bill of the same number, commonly known as Wheeler-Lea bills, respectively, in the following particulars, to wit:

1. Senate bill in all respects.
2. Declaration of policy and the rate-making rule of the House bill.
3. Regulation of water carriers under either bill.

WOOL GROWERS OPPOSED

Fifth. The National Wool Growers' Association, which represents a considerable branch of agriculture, usually not very vocal on national matters, are unequivocal in their condemnation of the Wheeler-Lea bill. In their seventy-fifth annual convention, held in January of 1940, their traffic resolution states definitely that the association could not endorse the bill as passed by either the Senate or the House. They include in their resolution the following statement:

We do not favor the regulation of water carriers under the provisions of either the Senate or House bill.

VEGETABLE DISTRIBUTORS OPPOSED

Sixth. The National League of Wholesale Fresh Fruit and Vegetable Distributors, an organization vitally concerned in getting the farmer's production to market by truck and water, recently petitioned the Congress as follows:

The National League of Wholesale Fruit and Vegetable Distributors urge upon Congress that action upon any conference report which may be submitted by the joint Senate and House conference committee on the Wheeler-Lea omnibus transportation bill (S. 2009), or any substitute thereof, be delayed for a period of at least 30 days to permit producers, shippers, the interested public, and Members of Congress themselves to study its far-reaching and highly technical provisions. Any report submitted by the joint conference committee must represent a compromise between the numerous conflicting provisions of the Wheeler Senate bill and the Lea House bill, with or without the vitally important amendments written into both bills while they were under discussion on the floors of the Senate and of the House.

The National League of Wholesale Fresh Fruit and Vegetable Distributors, being vitally concerned with any legislation which may have the effect of increasing costs of transportation on the necessaries of life in which they deal, calls the attention of Congress to the fact that the transportation legislation now under consideration by a joint Senate and House conference committee introduces radical changes in land- and water-transportation supervision and rate-making control. There is no immediate public demand for such legislation and no reason exists for its hasty passage by Congress.

This organization realizes that both the House and Senate bills were introduced and passed as railroad relief measures, but it is our belief that the railroads will obtain very little real relief from either bill or any combination of the two bills. Possibly some railroads might benefit from restrictive regulation of certain types of water or highway carrier, but we believe they would benefit more by certain reforms within their own ranks.

This organization is convinced that by allowing sufficient time for mature consideration of this important legislation Congress will be performing a distinct service to the public.

NEBRASKA FEDERATION OPPOSED

Seventh. The Nebraska Farm Bureau Federation: The gentleman from Pennsylvania [Mr. VAN ZANDT] cites this organization as proponents of this legislation in a 1938 resolution. In December of 1939, 10 months after the Wheeler-Lea bill was born, they not only view with alarm but condemn this legislation unqualifiedly. I quote verbatim from their resolution of December 1939, as follows:

We are unalterably opposed to those provisions of the Wheeler-Lea bill now pending before Congress which place the control of rates on water-borne commerce under the control of a Government rate-regulative body because we believe such a provision of law will be used to deprive the Mississippi and Missouri Valley agricultural interests of a competitive low-cost system of transportation so vital to the economic recovery of business and agricultural interests of the Midwest agricultural States.

NEBRASKA FARM UNION OPPOSED

Eighth. The Nebraska State Farmers' Union: This organization, after the Wheeler-Lea bill became a lusty infant, and

not during its prenatal days, condemned it, root, stem, and branch. Here is what they say in a resolution passed on February 15, 1940:

We are opposed to any legislation, State or National, that would have a tendency to increase transportation costs either directly or indirectly. We believe the best interests of agriculture will be served by a continuation of private ownership and operation of our railroads.

We believe that each form of transportation should stand on its own merit and that the rules, rates, and regulations for the various types of transportation should not be made arbitrarily uniform. The competitive features of the different forms of transportation should be preserved rather than destroyed. Rules and regulations that are not necessary for the safety of the public and the protection of property should be greatly modified or eliminated.

Each House of Congress has passed a transportation bill, both of which are now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a period of 30 days, or more, be permitted for the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

We are opposed to those provisions of the Wheeler-Lea bills now pending before Congress which place the control of rates on water-borne commerce under the control of a governmental rate regulatory body.

MINNESOTA FARM BUREAU OPPOSED

Ninth. The said extension of remarks cites the Minnesota Farm Bureau as being proponents of this legislation. The fact is that this organization in January of 1940 adopted a resolution almost identical with that of the American Farm Bureau Federation urging Congress to stop, look, and listen, and urging that time be allowed for study of this complicated and far-reaching legislation prior to action by Congress on the conference report.

MISSISSIPPI FARM BUREAU OPPOSED

Tenth. The Mississippi Farm Bureau. In November of 1939 this organization stated its unalterable opposition to "any legislation attempting to eliminate competition by discriminating against any one form of transportation to the advantage of another" and further urged that—

transportation legislation, if and when adopted, specifically provide for the movement of agricultural commodities for domestic consumption and for export at rates comparable to those for industrial products for domestic consumption and for export; that it also provide specifically that all transportation operations shall be allowed to reduce rates as long as those rates are compensatory with the cost of such service.

It may be said that the recommendations of the Mississippi Farm Bureau are, of course, embodied in the so-called Jones and Wadsworth amendment which were inserted in the bill in the House under the determined opposition of the proponents of the legislation, including the gentleman from Pennsylvania [Mr. VAN ZANDT]. The rumor now is that these amendments which protected the farmer, the shipper and consumer have all been done to death in the murky depths of the conference.

OTHER FARM GROUPS OPPOSED

Among other agricultural organizations which have, since the specific proposals became known, gone on record as either definitely opposing or feeling considerable apprehensions concerning the legislation, are the following: The Kansas Farm Bureau; the Kansas Farmers' Union; the Kansas State Grange; the Iowa Farmers' Grain Dealers Association; the Iowa Farm Bureau Federation; the National Cooperative Elevator Association (Iowa, Kansas, Nebraska, and Oklahoma); the Missouri Farm Bureau Federation; the Texas Sheep and Goat Raisers' Association; the Indiana Farm Bureau, Inc.

Many other State, regional, and local agricultural organizations as well as many farmers' cooperatives, have likewise expressed their opposition to this legislation which proposes to strangle an economical form of transportation for the benefit of its great and powerful competitor.

DEPARTMENT OF AGRICULTURE OPPOSED

In calculating the effect of this legislation upon the agricultural interests of the Nation, certainly great weight should be placed upon the study, comments, and criticisms of Government agencies established and maintained for the purpose of promoting the welfare of the American farmer. The Secretary of Agriculture, in a letter to the Speaker of the House under date of July 15, 1939, presented a clear and thorough analysis of the situation and of the dangers contained in the legislation. His opposition to the bill was further emphasized in a more recent communication in which he joined with the Secretary of War and the Chairman of the Maritime Commission in a statement to the effect that not only was this legislation unnecessary but that it was definitely unwise and would prove harmful to American agriculture and industry, as well as to the water carriers.

Despite the skillful attempt of the gentleman from Pennsylvania to use resolutions phrased in general terms and adopted long prior to the drafting of this legislation as specific endorsements of the bill, the facts remain unassailable—not only does the American farmer not favor the bill but they have expressed a uniform belief that it will eliminate a low-cost competitor which is serving the farmer, and forcing the railroads to serve the farmer at rates considerably below those normally charged by the railroads.

American agriculture today is suffering from several mortal diseases, one of the malignant of which is high transportation costs which are inevitably present except in the neighborhood of improved waterways. It is worthy of note that the Canadian farmer is today paying just one-half as much to transport his grain by rail as does the American farmer. When he gets to the Great Lakes or the Mississippi or Missouri Rivers rail rates are tremendously reduced and a great saving made to the farmer in the transport of his grain to the seaboard.

At a later date I shall go more deeply into this question and demonstrate this fact without the fear of successful contradiction.

I desire to cite one more instance of what waterways save the farmer. It costs the farmer one-quarter as much to transport a bushel of wheat from Buffalo or Oswego, N. Y., by rail as it does to carry it a comparable distance in the States of Montana, Kansas, and Iowa. The reason for this is that New York State has maintained and continues to maintain a toll-free canal from the Lakes to the seaboard.

STATUS OF WHEELER-LEA BILL

In conclusion and for the purpose of refreshing the recollection of the Members of the House, let me give you a brief history of the Wheeler-Lea bill, Senate bill 2009, and its present status.

Three bills were introduced in the House—the Lea bill, said to be drawn by the Brotherhoods and the railroad executives, which divided the country up like a captured province; the Fletcher bill, drawn by a railroad attorney; and the Wheeler bill, introduced in the Senate, which provided for a codification of existing law. The Lea and Fletcher bills were merged and passed by the House with four important and saving amendments. The Wheeler bill passed the Senate, and both bills were sent to conference. All of this occurred in the last session of this Congress. For practically 4 months this bill has been in conference, with the conferees meeting almost daily. It is difficult to get information as to what has occurred, but there is a well-founded rumor that all of the saving amendments written into the bill by the House have been eliminated, and at present the legislation ties every form of transportation into a hard knot in the interest of the railroads.

REASONABLE WAITING PERIOD

The resolutions of the farm organizations cited above all urge a waiting period of 30 days after the conference report is filed and before it comes up in the House. This for the fair and decent purpose of giving Congress and the country an opportunity to see what is in this legislation. Common decency requires this procedure, and the country demands it. Distances in America are so great that transportation will always remain a vital problem to every phase of American life.

I trust that the Congress charged with the responsibility for providing adequate low-cost transportation to the people will insist on a waiting period before considering this conference report. Personally, I feel that the Congress will prove true to the trust reposed to it by the people.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 2 (legislative day of Monday, March 4), 1940

ARTICLE BY JOHN T. FLYNN

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by John T. Flynn, published in today's Washington Daily News, on the subject of the reciprocal-trade agreements.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAIN ECONOMICS

(By John T. Flynn)

CHICAGO, April 2.—Here is a sidelight on the Hull trade pacts which Congress has been struggling with:

The object of these pacts is to break down the barriers to trade between this country and others because of tariffs. That is a good thing. But you would suppose that those who are so vocal about this would take a really serious look at the whole picture.

At present one of the things that operates as a powerful barrier against international trade is the Government's gold-buying policy. Here is the way it works:

The cheaper our dollar is, the easier it is in theory for other countries to buy here. If I have an English pound in London and can buy four American dollars with that pound, I can use the dollars to buy four dollars' worth of anything in the United States. But if dollars get cheaper, and I can buy five dollars with my English pound, then I can buy five dollars' worth here. It has the effect of making things cheaper here to the Englishman.

But it has also the very opposite effect on our buying abroad. If it takes five of my dollars to buy a pound, then I cannot buy as much in England with those five dollars as I could if I could buy a pound with four dollars. While in theory it seems to stimulate foreign buying here, it cuts off our buying abroad. And there must be buying both ways in order to have international trade.

But it also has the effect of draining away from foreign countries all of their gold. The only way foreign countries can trade with us is by paying for what they buy with gold or with goods. But the more we drain away their gold the more impossible it becomes for them to use gold to buy. Their reserves become so depleted that they simply dare not let any more go save for the most imperative reasons. They are reduced, therefore, to the absolute necessity of buying only those things they can pay for with goods of their own.

It is this, more than anything else, which has driven so many countries to barter. They cannot buy goods from us and pay us with their goods unless we buy from them. And the gold-purchase plan with its high price for gold makes it more difficult and expensive for us to buy from them, so we buy less.

And thus this strange policy has the effect, at once and for different reasons, of cutting down our purchasing power abroad and cutting down the purchasing power of foreign countries here.

Therefore, to be making such a pother about these Hull treaties on the ground that we want to stimulate foreign trade, while at the same time persisting in a gold policy which tends to stifle international trade, is one of the prize contradictions of trade history.

The reciprocal-trade treaty is a good thing in itself, provided it is in the right hands (and the Department of State is the last place it should be, save for merely negotiating pacts), but it is trivial in its results for good or bad compared with the far more vital gold policy.

Gen. Robert E. Lee

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting a poem written 70 years ago by Henry Mazyck Clarkson, A. M., M. D., at Columbia, S. C., March 30, 1870, referring to Lee's welcome.

I have from my youth been deeply interested in the lives of outstanding and great men of our country, and I know of no citizen whose life and character have been more outstanding than that of Gen. Robert E. Lee.

Many of us in the past can remember various citizens who happen to be able to make for themselves a name politically or otherwise, who have been willing to sell that good name, knowing at the time that it would be used perhaps for what we might call a selfish purpose.

The records will show that the war of 1861–65 had scarcely ceased and General Lee's condition of what we might call narrow circumstances financially became known when offers of places of honor and profit began to come in to him—offers of the presidency of insurance companies and of other industrial enterprises—proposals that he should allow his name to be used for the highest office in the gift of the State; even offers from admirers in the old country of an asylum on that side of the water where a handsome estate was tendered him as a tribute of admiration, so that he could spend the residue of his life in peace and comfort.

His reply to all these allurements was that which we now know was the only one he could make—a gracious and irrevocable refusal. During the war, when a friend had suggested to him the probability that the people of the South would demand that he should be their President, he promptly and decisively declared that he would never accept such a position. So now, when the Governorship of Virginia was proposed to him he firmly refused to consider it. With the same firmness he rejected all proposals to provide him with honorable commercial positions at a high salary.

On one of these occasions he was approached with a tender of the presidency of an insurance company at a salary of $50,000 a year. He declined it on the ground that it was work with which he was not familiar. "But, General," said the gentleman who represented the insurance company, "you will not be expected to do any work; what we wish is the use of your name."

"Do you not think," said General Lee, "that if my name is worth $50,000 a year, I ought to be careful about taking care of it?"

I wish to quote from a letter addressed to the president of the Southern Life Insurance Co., of Atlanta, Ga.:

LEXINGTON, VA., *December 14, 1869.*

Gen. J. B. GORDON,
President, Southern Life Insurance Co.,
Atlanta, Ga.

MY DEAR GENERAL: I have received your letter of the 3rd instant, and am duly sensible of the kind feelings which prompted your proposal. It would be a great pleasure to me to be associated with you, Hampton, B. H. Hill, and the other good men whose names I see on your list of directors, but I feel that I ought not to abandon the position I hold at Washington College at this time or as long as I can be of service to it. Thanking you for your kind consideration, for which I know I am alone indebted for your proposition to become president of the Southern Life Insurance Co., and with kindest regards to Mrs. Gordon and my best wishes for yourself, I am

Very truly yours,

R. E. LEE.

His correspondence shows that many like propositions were made to him.

LEE'S WELCOME AT COLUMBIA, MARCH 30, 1870 (70 YEARS AGO TODAY)

All day the murky clouds hung low
  Above the silent city;
The skies seemed draped in robes of woe—
  To weep in very pity—
In pity for our wounded pride,
  In pity for our people,
While, since the dawn the winds had sighed
  'Round crumbling tower and steeple.

The wrecks of old ancestral halls,
  In all their desolateness,
The ruined walks and blackened walls
  To foeman's hate bore witness.
Against the sky the toppling stacks
  In solemn, sad sedateness,
Seemed sentries on their beaten tracks—
  Grim ghosts of former greatness.

Each somber mart deserted seemed,
The day wore dull and dreary,
While men moved on, as men that dreamed,
With footsteps flagging weary.
But, hark! that sudden clamor hear!
That hum of human voices!
Whilst everywhere, with shout and cheer,
The very air rejoices.

One little word, first faintly heard,
Now thousands echo loudly,
And every Southern heart is stirred,
And every head held proudly!
Maimed men and matrons shout—"'Tis Lee!"
Fair maidens swell the chorus;
The children clap their hands in glee;
The sky grows brighter o'er us.

'Tis he! 'Tis he! the hero Lee!
No hostile sword can sever
Our hearts from him, for he shall be
The sovereign of them ever.
The tidings leap from street,
Each tongue that name repeating,
Any many meet with hastening feet
To give the hero greeting.

See how the brave old chieftain comes—
No banners o'er him soaring;
No roll is heard of mighty drums,
No cannons 'round him roaring.
On every heart himself engraved,
What need of laureled arches?
'Neath lifted hats and kerchiefs waved
Our gray-haired warrior marches.

When in the Christian cause of peace
His sword was sheathed forever,
With him we wept, that we must cease
Our brave but vain endeavor;
And still we love him as of old,
When 'mongst the dead and dying,
He rode the boldest of the bold,
Our foe before him flying.

Ah! 'Twas a splendid sight to see
Our Southern chiefs assembled
To greet their grand old leader, Lee,
'Fore whom once foeman trembled!
And though our flag be furled—yet we
Forget our heroes never;
We can but shout, "Long live our Lee!"
"The South and Lee forever!"

(The above poem was written by Henry Mazyck Clarkson, A. M., M. D., who lived in Columbia as a young man. He was a graduate of the South Carolina college. A nephew and niece live in Columbia: A. Crawford Clarkson, and Harriet J. Clarkson.)

The Challenge of Freedom

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

ADDRESS BY MR. THOMAS W. McMANUS OF BAKERSFIELD, CALIF.

Mr. GEARHART. Mr. Speaker, on the 22d day of February of this year, Mr. Thomas W. McManus, of Bakersfield, Calif., delivered a tremendously interesting address to the Loyalty Group at San Francisco, Calif.

Because I believe that Mr. McManus deserves and should have a much wider audience, I am constrained to and do ask unanimous consent that this most timely utterance be spread upon the pages of the CONGRESSIONAL RECORD of this day's proceedings.

There being no objection, Mr. McManus' speech follows:

No tribute of mine or of any man's can add to the luster of the greatest name in American history. George Washington's life as an inspiration to us can best be exemplified by the great number of American citizens who are today fighting to perpetuate his spirit and his principles in support of the kind of government he gave his country.

When Washington was born there was little true freedom on the earth. Men were imprisoned for petty offenses, for owing a little money. Small boys were hanged for stealing food. It was a cruel and bitter world. Many were bond servants—slaves, not freemen. Thousands who came to America in those days were exiles from their European homes, paying a penalty for some small debt, or atoning for some negligible offense.

Men gave years of their lives in bondage simply for passage to this, the land of the free—the land of new opportunity. Seven years of hard labor was not too great a price for some to win their way to America—though the cost of passage was then only $35. Freedom as we know it today was then unknown to the world.

It is a new thing, this democracy—this representative government of ours. But, whether we know it or not, our own Government is being challenged today as were governments abroad during the past decade.

Recently, Herbert Hoover told of his last trip through Europe. There he saw the governments which hold sway over the lives of hundreds of millions of people. Time was when there was in those countries at least a semblance of freedom in the courts of law, in religion, in political activity. But that liberty was forsaken under the plea that totalitarianism was safer—that the people would have more security by letting their liberties go.

Their tragedy is that they gave up their freedom with practically no resistance. Less than 100,000 persons were actually involved in the movement that brought dictatorship—1 in 2,000 of the population was responsible for the destruction of the most priceless possession known to mankind—human freedom.

"Let us examine the record," as a great American used to say. In our own time we have seen more freedom in America—not less, as in Europe. There are still men alive who were born into slavery, but that ended long ago and will never return. All of us have seen the liberation of women from the virtual position of chattels, without rights of property, without the right to have a part in determination of the destiny of children to whom they gave birth, without the right to vote.

Even so, it is less than a hundred years that we have had real freedom in this country. At first it seemed a very precious thing, this hard-won liberty. It was a thing to be worried over, to be cherished almost above life itself.

OUR BEST-PAID EMPLOYEE

But it is difficult to act as a free man. It is hard to shoulder the responsibilities of sovereign citizenship. Theodore Roosevelt once said that it was one of our most difficult duties, but at the same time one of our greatest responsibilities.

In other lands that responsibility lies in the sovereign—in the king, or the king's army, or in Hitler's army, or Stalin's army. In America the citizen is the sovereign and the army is his Government. The President of the United States is only the best-paid employee of our Government, and he is actually our servant. What he does he does because we have given him temporarily the power to act for us. His only authority comes from the people he serves, and when the majority of the people become dissatisfied with him, out he goes.

But whether we shall be able to maintain the freedom we have so laboriously secured is today a serious question. Right now it is being challenged—and the freedom of the business that you and I represent is especially under fire. Seventy percent of the current assets of the financial institutions of the country are today in Government securities or Government-guaranteed securities. As an old insurance agent I know that the man who has the money generally tells you where he is going to place the policy.

Because of a financial disturbance, we have shifted our own responsibilities to the Federal Government. A prominent banker said to me just the other day, "I don't care whether a loan is good or not; just give me the Government guarantee." Think of a banker saying a thing like that! It is a sad commentary on the State of American enterprise and of the money brains upon which we used to depend, when many bankers become mere clerks for a prodigal government.

THE INROADS OF GOVERNMENT

But it is not too late, even yet, for us to control that situation—if we will. What, after all, is the Government but ourselves? If Government fails we all fail. The answer, of course, is that all of us must take such interest as never before in our Government and in our politics.

Actually, we are all in politics, whether we know it or not. Every business, every employee, every laboring man who bears a share of the tax load is a party to the Government's activities. Every industry, every financial institution has the Government as a partner in its business.

We can see these inroads of Government in our affairs on every hand. In this State of California, one branch of the insurance business is now almost entirely in the hands of the State government, and the State is now demanding the right to make it a monopoly.

It is for us in the insurance business to determine whether we are going to stay in business for ourselves, or whether it is eventually all going to be the Government's business.

All of us have pride in this business of ours and what it has meant to the country during the past hundred years of world development. It has been made possible because of our freedom. Insurance had given men a sense of security and liberty that no other institution in our civilization has accomplished. And all of this has been done by individual effort—by salesmen in local fields; by special agents. We have great reason to be proud of our efforts.

LET YOUR CONGRESSMAN KNOW!

But if we intend to keep this business we shall have to fight to protect it. And we cannot protect it if we leave the Government in the hands of those who would destroy capital investment and individual initiative.

There would be little insurance sold if it were not for special agents and local agents. Yet the men who serve our Government seldom hear from us, and they know nothing of our problems and of the service we have rendered society.

I have a special message for you tonight. I urge each and every one of you to take more seriously your individual responsibilities as free citizens. Every man in the insurance business can be, should be a force for the preservation of democratic institutions in this country. Every man should know his Senators, his Congressmen, his assemblymen—should know all the candidates for public office.

Those of us who are in the insurance business must let our representatives in the Government know our views. We must choose whether we are to have continuance of free opportunity in this country during the next decade or whether we are to be set to work in a regimented government such as exists abroad.

Remember this: The men who set up those centralized, regimented governments across the sea, wherein liberty has been sacrificed for false hope of security, built them on a plea of help for the unfortunate and promises to alleviate the distress of the common man.

Remember, too, that the result has been more misfortune, more desolation, more suffering for the people whose misery helped the dictators to power.

Mussolini was a socialist and a radical. He promised to lessen the suffering of the Italian people. Let's give him what credit we can: He has done better than any of the other dictators.

Hitler was a beer-hall orator and a radical. He promised security to the masses in Germany, but instead of the promised security he gave them bayonets and regimented the people into industry under force of arms. And now he is giving them war and chaos and destruction and hunger.

THE BLIGHT OF COMMUNISM

Stalin was going to take away the crushing burden from the backs of the Russian people. But instead of taking away the load he burdened the people beyond human endurance with a form of mass slavery unequaled in the world's history. Thousands of officers of the army, 300 generals, 4 field marshals, have all been killed by him. In his terroristic rule, more than 3,000,000 Russians have been murdered by order of Stalin. And now the people under his dictatorship are forced to wage a war upon the free men of Finland—though that war so far has demonstrated that one free Finn is the equal of 10 Russian slaves.

In our own country we are faced by many serious problems. We shall have to determine whether this country shall become involved in the terrific conflict now smoldering in Europe. We are assailed on every hand by opinions and propaganda—pleas for the sake of the democracies, and denunciations of the totalitarian states. No man with a heart can support Stalin and Hitler in their war-making. But with the world in such a precarious state, it is essential that every man can make our Government's activities his own personal concern.

There is no more important heritage from the Father of his Country than his words of warning that we keep clear of foreign entanglements. In his own administration he refused to be drawn into the war between England and France.

We of today must keep the light of democracy burning. If we permit it to go out in this land there is no other hope for the world. I say in all seriousness that the only hope for this world is that we maintain an exemplary democracy here in the United States of America. For we alone have true freedom, true democracy. No thinking man has any illusions about the governments of South America. They are not democracies. The quickest trigger-finger controls the governments there.

THE MIGRANT PROBLEM

But we must do something about our own home problems before we try to solve the problems of the world. Here in America we have 3,000,000 families that live on incomes of less than $200 a year. Their children are emaciated; they are victims of pellagra and diseases of every kind. Many of these unfortunate people have come to California to find assistance.

I have given the past 2 years to the problem of the migration of these helpless people from the southern and midwestern areas of our country to California. They are people who have failed in the economic struggle; who have endured in their home States things which we cannot ask any human being in America to endure.

They have come to California because to them it seems the promised land of plenty. They have accomplished a population movement unparalleled in modern history. They have come because we have given the most generous help among all the States in the Nation.

There are three to four hundred thousand of these migrants. They are truly countrymen of ours—whose forebears fought with Washington. In their home communities they had been living at less than subsistence levels. They could hardly read and write; they were wracked with disease, suffering from malnutrition. They were losers in the life of today.

We are sorry for them, but California cannot become the poorhouse of the Nation. Our State cannot be the sanitarium for all the helpless. The problem in its essence must be dealt with by the combined efforts of the Federal Government and the governments of the States from which the people come.

Insofar as one group of our people is threatened with insecurity, the entire Nation is threatened.

SECURITY FOR ALL

I agree with the proponents of liberal old-age pensions; something certainly must be done for the aged and the helpless and the poor. But there can be no security for the aged without security for the young. There can be no security for the employee without like security for the businessman and his investment. There can be no security for any until there is security for all.

Security is interdependent. It is not for one group alone. It must of necessity be for all. There is no security in the Nation so long as this problem confronts us.

The United States has recently been stirred in its emotions by novels written about the destitution of the migrant people. I have only this to say: They are tragic stories of tragic people. But let me say this too: The tragedy did not originate in California. It originated in the States from which the migrants came. And all the States must have social understanding and vision sufficient to realize that this is a national as well as a local problem.

There are other matters of grave importance that you must consider in your new interest in politics and economics: We now have 11,000,000 people without work in America, and another 10,000,000 on public works. But as we increase the tax load, the ability of industry to employ the unemployed decreases. So what shall we do? We have the greatest amount of idle capital that our country has ever seen, and at the same time we have the greatest natural resources, the most capable and ingenious people in the world. This new problem will be solved as others in the past have been solved.

Civilization has made greater advances in adding to the comfort and well-being of mankind during the past hundred years than in all the years since the dawn of time.

MIRACLES BY FREEMEN

Well do I recall the study of religion as a boy, and the promise that the theologians conceived to be the ultimate blessing of the human soul living in perfection before its Maker—that the soul would fly through the air. Michelangelo lent his imagination to this promise and painted upon the backs of the angels heavy wings to help them fly. But the genius of living man has developed the airplane which flies faster than the mind of man ever imagined that the angels would fly.

There was another old promise to be fulfilled—a universal voice that would be heard through walls and through space. And then science gave us radio, so that if I had a microphone hooked up before me now my voice would circle the globe and be heard on the other side of the world before you in this very room would hear it.

Many of the modern miracles of medicine have come to pass in the time of our own lives. In my boyhood, old men would tell of the plagues that had to be endured, plagues that they looked upon as punishments sent from heaven. Now scientists have made those plagues a matter of history. Cholera, smallpox, diphtheria—such diseases were the scourge of ignorance, and when man's intelligence was pitted against them they were wiped from the face of the earth.

And it took the intelligence of free men to bring about the modern miracles of other scientific accomplishments that have lifted backbreaking toil from the shoulders of men and women. But let me emphasize one point: These accomplishments have been possible only because our people have been free. Men in slavery, in bondage, would have led no such industrial and intellectual advances.

COMMUNISTS NEVER FORGET

Knowing that, it is strange that certain people now active in our land can follow the misguided philosophies of government that lead to certain human servitude. There are those who would have us follow the policies of Stalin—though the blight of communism would shrivel the spiritual and intellectual growth of mankind here as abroad.

We find such theorists, men and women, in places of prominence in our Government, and I say to you that all those who work and pay the bills must be watchful and diligent always lest their own indifference permit our Government to be subverted to foreign ideologies.

It is up to you and to me and to the 5,000 agents of this Pacific coast department of the Loyalty Group and our associates in the insurance business throughout America to fight now with all our might to give something in the same spirit of love and devotion and sacrifice that inspired the life of George Washington.

Recently we have seen marching on Sacramento, to threaten the members of the legislature of this State, a group under the leadership of an organization directed by the Communist Party. The Communists never forget; sometimes we do. All too often we are too busy to write to our representatives in Sacramento or to send word to our Congressmen in Washington to tell them how we want our Government protected. If we neglect a manifest duty whom shall we blame when a minority imposes its subversive will upon us?

Our lawmakers want to hear from us. They have told me so many times. They have told me how sick at heart they were when, after fighting for the principles of American liberty and democracy, they have had to take the abuse of men like Bridges and his ilk, while they received never a word of encouragement from the folks who have jobs and property.

If we are to do our full duty as citizens we must never be too busy to express ourselves vigorously on the issues before Congress and the legislature. We must take time, however occupied we may be, to indicate our appreciation to those who battle for the maintenance of American principles of individual opportunity.

NOT EASY TO BE FREE

That other recent incident when a dictaphone was discovered in the hotel room of the speaker of the California State Assembly at Sacramento indicates how close are we to the loss of our precious liberty. How shameful that such a thing should occur in America! That is the spy system—espionage of the kind that is well known in the totalitarian states of Europe. It is like the work of Hitler and Stalin, destroying life and freedom. It is the work of dictatorship, and whoever is responsible for so dastardly an act has no right to call himself an American.

No, it is not easy in these days to be a freeman. You can never be indifferent to your responsibilities if you are to remain free. The government that levies taxes and makes laws also takes a toll from every man, and great institutions such as the Loyalty Group and these fine insurance companies can exist only so long as our Government is a representative government and answerable to every freeman.

The priceless privilege which was given to us by George Washington will perish from the earth unless we take it upon ourselves individually to do something to keep it alive. Remember that while you can build great buildings and great institutions, their safe future depends upon constructive and good government.

I am asking you—each one of you—to preach the doctrine of Americanism, to be willing to make personal sacrifices for it, and to take a personal interest in your Government. Support those who believe in individual opportunity and free enterprise, the American system upon which our country has grown to unsurpassed greatness.

We must not fail to do this duty.

More than 150 years ago, when our flag was first unfurled to the breeze, as it came from the loving hands of Betsy Ross, George Washington stood before it and uncovered his head. It has ever been the symbol of human freedom, the hope of mankind, the pledge of ideal government.

God make us worthy and unafraid to fight for the Americanism of Washington. We must not fail to pass on to posterity a land of the free and a land of opportunity.

Americanization Work by David Wisted Post, American Legion, of Duluth, Minn.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. PITTENGER. Mr. Speaker, I believe it will be of interest not only to Members of the House but to people throughout the country to know that David Wisted Post, of the American Legion, of Duluth, Minn., recently carried on an Americanization project. We believe that this is the first of its kind in the United States. The work was carried on in the Duluth public and parochial schools. Each classroom was presented with a framed copy of the Declaration of Independence during the annual observance of Americanization week, starting with Lincoln's Birthday, February 12, and ending with Washington's Birthday, February 22.

This program resulted in proper tribute being paid, not only to George Washington and Abraham Lincoln, but to other men who had to do with the early history of America. Addresses were made when the framed copies of the Declaration of Independence were presented.

The best way to combat communism and its dangerous doctrines is to have a revival of the study of American history. The better informed people are in reference to the Declaration of Independence and the Constitution of the United States the more likely they are to appreciate our form of government and the opportunities for life, liberty, and the pursuit of happiness.

David Wisted Post is to be congratulated on its fine and outstanding achievement in connection with this program. I attach hereto a short summary showing the different steps taken:

DAVID WISTED POST, AMERICAN LEGION,
Duluth, Minn., March 18, 1940.

A brief review of the distribution by David Wisted Post, American Legion, of 1,000 framed copies of the Declaration of Independence to 1,000 classrooms in Duluth's public and parochial schools during Americanism Week, February 12–24, 1940—the first time such a project has ever been undertaken in any American city. The review has been prepared to serve the many inquiries that have been received by Wisted Post from communities interested in the project

During the 1940 national Americanism Week, starting with Lincoln's Birthday, February 12, and ending with Washington's Birthday, February 22, David Wisted Post, of the American Legion, in Duluth, distributed 1,000 framed parchment copies of the Declaration of Independence to 1,000 classrooms in all of Duluth's public and parochial schools.

This is the first time in the history of America where such a project has ever been undertaken and already inquiries have been received by the Duluth Legion post from all sections of the country.

High praise for inaugurating the novel plan to spread a better understanding of America into every schoolroom has been given the Duluth post by Raymond J. Kelly, national commander of the American Legion; Frank E. Samuel, national adjutant; James F. Barton, director of national Legion publications; and Allan Briggs, Minnesota State Legion commander, as well as Dr. H. H. Eelkema, superintendent of the public schools in Duluth; the Reverend Father Martin Larkin, superintendent of the parochial schools of Duluth; and leading educators and city and school officials of Duluth.

Originator of the plan is A. B. Kapplin, Duluth newspaperman, who is a past commander of the Minnesota department of the Legion, former eighth district commander and past commander of Wisted Post, who served as the first chairman of the committee that directed the framing and distribution of the 1,000 copies of the Declaration of Independence in the schools in February 1940.

Permission to distribute the framed copies in the schools was obtained by the chairman from the Duluth School Board and the parochial-school authorities, who also approved the plan to have each pupil bring a penny to help pay for the framing costs. This was urged by the Legion to spread the idea into Duluth's 25,000 homes, so that all the parents would know and understand the project and its purpose.

The teachers and principals supervised the collection of the pennies the week before Lincoln's birthday, starting February 5th. The children contributed a grand total of $116.34, Wisted Post paying the difference in framing costs and other expenses, including a small label pasted in the left bottom corner of each copy:

"Presented by
David Wisted Post
American Legion
1940"

Duluth firms bid on the framing contract, and the work was handled by two institutions at a cost to the post of 42 cents each, all wired and ready to hang. The 1,000 parchment copies were donated to the Legion by the Duluth and Minnesota agencies of the John Hancock Life Insurance Co.

The first framed copy was presented by Chairman Kapplin to Dr. Eelkema, superintendent of schools, on Lincoln's Birthday, as a group of Wisted officers watched the ceremonies. The incident was photographed and published in the Duluth News-Tribune, copies later appearing in the State and national Legion papers.

Additional framed copies were presented by the post to the mayor of Duluth, to the publisher of the Duluth papers, to the two radio stations which arranged special ceremonies broadcast over the air, and to Allan Briggs, State Legion commander, several district commanders, and 17 post commanders of the eighth district attending the annual midwinter district conference at Duluth February 24.

Dr. Eelkema wrote the following to Chairman Kapplin at the completion of the project:

"Permit me in behalf of the schools to express sincere appreciation to you and to David Wisted Post for having initiated and carried through the plan for presenting copies of the Declaration of Independence to each classroom in the Duluth public schools. It is my opinion that the students will profit materially from the contact which they will have with this famous document and year by year will attain a greater respect for the principles set forth therein."

There was such an unusual demand for similar framed copies that the executive committee of the post voted to sell a supply on

hand for 50 cents each, approximately the actual cost to the post. This was done after the presentation in the schools was completed.

The schools arranged for special presentation ceremonies at public assemblies, with legionnaires of Wisted Post assigned by the committee to make brief talks. In many schools there were Washington-birthday programs and an impressive patriotic atmosphere created for the event.

As each Legion speaker accepted his assignment, a letter of instructions and a sample speech was mailed him by the committee. The principal was requested to have a pupil selected by each room to receive the framed copy, many of these children having memorized brief responses for their classmates.

Instructions to the teachers were prepared by the committee and mailed out by the school superintendents over their own signatures.

After presentation in all the schools was completed, a mimeographed letter reviewing the project and including a brief historical sketch of the Signing of the Declaration and its part in American history, also prepared by the committee, was sent out by the superintendents to all the teachers. These are to be kept on hand and used at all important anniversaries and patriotic celebrations in the future.

Scores of letters were received by the post from superintendents, teachers, and principals of the Duluth schools in appreciation for the framed copies of the Declaration presented the classrooms. Many parents also wrote congratulating the post.

In explaining the project and its purpose, Mr. Kapplin, originator of the plan, declared in addressing members of the school board:

"This is an Americanism project of the Legion to emphasize those fundamentals that make our Nation the greatest in the world. We want our school children to see this great document every day and to grow to appreciate this country more and more through the years. Maybe if we build this deeper understanding in the hearts of the present generation, America will never again have to fear foreign 'isms' influencing the youth of our land."

Yours very truly,

DAVID WISTED POST, AMERICAN LEGION.

Our Nation Demands a Sound Transportation Policy

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1940

EDITORIAL FROM THE EAST GRAND FORKS (MINN.) RECORD

Mr. VAN ZANDT. Mr. Speaker, amidst all the propaganda being foisted upon the American public at this time by the promoters of the so-called waterway improvements, the editor of East Grand Forks (Minn.) Record in an editorial of January 26, 1940, stresses the fact that the lack of a sound transportation policy has been costly to the United States.

To those of us who are interested in S. 2009—the Wheeler-Lea railroad bill now in conference—the attention of our colleagues is invited to the above referred to editorial:

[From the East Grand Forks (Minn.) Record of January 26, 1940]

LACK OF SOUND TRANSPORTATION POLICY COSTLY TO UNITED STATES

The failure of the United States to adopt a sound national transportation policy 20 years ago "has cost the country as a whole a wasteful expenditure running into billions of dollars," according to Senator CLYDE M. REED, of Kansas.

During the last two decades, the Kansas Senator pointed out in a recent address, the investment in transportation facilities of all kinds has been more than doubled. "None of them is prosperous," he said, "because there is more transportation being offered than there is traffic to move." While the recent improvement in business has lessened the tension, Senator REED warned that it has not solved the transportation problem.

"There may have been periods in our national history," he said, "when it might have been advisable to use the Public Treasury to subsidize some form of transportation. That period has passed. We have come to a time when every character of transportation should stand on its own feet without burdening the taxpayer by wasting his money, whether by unwise governmental expenditure or wasteful competition between private capital investing in unneeded transportation facilities."

"The inland waterways," he continued, "never have, do not now, and never can handle traffic as efficiently, as expeditiously, or as cheaply as the railroads, or, for that matter, as the highways."

"River transportation," he said, "is the highest cost of any of the general forms of transportation. The difference between the charges on the inland waterways or the railroads and the highways is made up by a subsidy out of the Public Treasury which is paid by the taxpayers as a whole."

Senator REED charged that river improvements had become a racket. "Many smart men," he said, "are making a living out of promoting a so-called inland waterway improvement. They get support from cities, from newspapers, large corporations that own their own barges and can move their own freight on a publicly built right-of-way at a lower charge than the railroads make; they make a business of interesting chambers of commerce and commercial bodies; in putting pressure on Senators and Representatives for huge appropriations for river improvement which will give some particular city or number of cities a freight-rate advantage."

Besides demanding the continuance of these subsidies, Senator REED said they are opposing the regulation of waterway transportation. He said that legislation now pending in Congress would afford a start toward a sound national transportation policy.

Relief Problems

EXTENSION OF REMARKS
OF
HON. LUTHER PATRICK
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1940

ARTICLE FROM THE BIRMINGHAM (ALA.) AGE-HERALD

Mr. PATRICK. Mr. Speaker and fellow Members of Congress occasionally one hears a speech or sees an article that arrests his attention by reason of its simplicity, clarity, or splendid approach to its subject matter. Good fortune has placed in my hands an article by Russell Kent on the subject of relief problems which recently appeared in the Birmingham Age-Herald, the South's leading morning daily. I commend this article to you, and that you may study it, hereby place it in the CONGRESSIONAL RECORD.

[From the Birmingham (Ala.) Age-Herald of March 19, 1940]

RELIEF PROBLEMS

(By Russell Kent)

Birmingham and Jefferson County face a serious situation regarding relief of the unemployed. So do other cities and counties in varying degrees, some more acutely, others less so.

There is nothing sudden about this development. It has been known for months that Federal assistance, through W. P. A., would be reduced. President Roosevelt asked, and Congress voted, only two-thirds as much money for W. P. A. in the fiscal year starting last July as was provided for the preceding fiscal year.

Anyone studying the picture would have concluded that private industry could not absorb the unemployed, no matter to what heights industrial activity climbed—and it has climbed. This is because over 70 percent of those on W. P. A. rolls are unskilled workers, and the demands of industry are for skilled, or semi-skilled, workers. Also, a large proportion of those on W. P. A., or seeking to be placed there, are men and women, of 40 and upward. Many of them never will get permanent jobs in private industry, because if private employers are going to start to train employees, they will draw upon the great reservoir of young folks rather than the untrained oldsters.

So far as concerns the requirement that local sponsors contribute 25 percent of the cost of W. P. A. projects, this was written into law by Congress at the end of last June, to become effective January 1. There was a little more than 6 months' notice of this requirement.

The 25 percent contribution requirement is on a State-wide basis. The State government could, if it desired, contribute from its funds a larger share to Jefferson County than to other counties. Probably this would be both impractical and inexpedient. The Federal Government has nothing to do with this. So long as some extra arrangement is not made by the State, Col. W. C. Henderson, W. P. A. administrator for Alabama, has no discretion; he must demand a 25-percent contribution from Jefferson County, or from Birmingham, for support of all non-Federal and non-State W. P. A. projects they sponsor.

This is a legal requirement, fixed by Congress. It is not an administrative policy, subject to flexibility.

Colonel Henderson has discretionary authority to allocate workers within Alabama as he sees fit and proper. He could, if he considered it proper, which naturally he would not do, allocate all W. P. A. workers allowed Alabama to within Jefferson County's borders. But still 25 percent of the total cost of the projects would have to be borne by the county or city governments, or both.

The fact is that Alabama has not fared badly at all by comparison.

The President and Congress decided to cut W. P. A. funds one-third. That meant rolls had to be cut one-third—W. P. A. planned

for the present fiscal year to carry an average of 2,000,000 on its rolls instead of the average of 3,000,000 it carried a year ago. Wages were rearranged, by direction of Congress. The result was average W. P. A. wages in Alabama, and other Southern States, were increased. Hence the cost of local projects was increased.

On March 6, W. P. A. had a national enrollment of 2,323,000 workers. On the corresponding date of 1939 it had 3,900,000.

Alabama, on March 6, had 54,811 W. P. A. workers. A year ago it had 58,551. The difference in the 12 months, in Alabama, is very much less proportionately than in the country as a whole.

Of course, these figures, in the State and in the Nation as a whole, must be reduced. The rolls were increased during the winter—and it has been a severe winter with genuine suffering for the poor, particularly severe in Alabama because of the unusually low temperatures for that State. The rolls must be decreased to keep within the 2,000,000 average for the year; they must be cut, rather steadily, below 2,000,000.

Alabama had an authorized W. P. A. enrollment of 57,000 for February. This was cut 8,000 to a total authorization of 49,000 for March—yet on March 6 the official figures show that 54,811 were carried on the rolls. The authorized enrollment in Alabama for April will be 43,500.

Colonel Henderson did not cut the Birmingham and Jefferson County allotment for March, and he told a conference last week he would not cut it for April. That is because of the large waiting list there, 7,000 certified eligibles unable to get on the W. P. A., as many waiting to get on the rolls as actually are on the rolls.

In the Nation as a whole, 228,000 W. P. A. workers must be dropped in April.

Just what is the answer to this relief situation?

President Roosevelt announced in January his intention of asking $1,000,000,000 for W. P. A. for the fiscal year to start next July 1. That was a tentative figure, for he said a later study would be made before the actual request for an appropriation would be made. A billion-dollar W. P. A. appropriation for the 1941 fiscal year necessarily would mean a cut of one-third below the average number being carried this year.

In other words, if W. P. A. is given $1,000,000,000 for next year, it can enroll not more than an average of around 1,300,000 workers, instead of the 2,000,000 being carried this year and the 3,000,000 who were carried on the average during the 1939 fiscal year.

In other words, to bring the situation directly home, if W. P. A. is giving employment to 7,000 persons in Birmingham and Jefferson County today, with a liberal leaning by the State W. P. A. administrator, the Federal agency a year hence could not employ more than 4,227 with the same identical sympathetic leaning.

That is, of course, if Congress votes only $1,000,000,000 for W. P. A. for the new fiscal year.

As for the 25-percent contributory provision, regarding which the Alabama congressional delegation has been asked to take action, it is perfectly obvious there will be much difficulty in getting this out of the law. If it does go out, then, by simple arithmetic, it will be impossible for W. P. A. to carry as many workers on its rolls as it otherwise would do. A dollar can be stretched only so far. If W. P. A. has 75 cents to apply to a project, and the local sponsor puts up 25 cents, it is clear that W. P. A. cannot list as many projects or employ as many workers if it is required without additional total funds to spend 80 or 85 cents per project worker.

A controversy has been started regarding how many unemployed there are in the Nation. Nobody knows; we will know a year hence how many there were this week, for the census will disclose that.

To say there are only 4,000,000 appears ridiculous. Back in the roaring twenties there were 1,000,000 unemployed at all times.

Anyhow, such controversy does not fill the stomachs of those who are unemployed and without means of support, be they 4,000,000 or 12,000,000 in number.

The most crying need of the entire relief situation is for an objective, long-range, carefully planned program. Neither the President nor Congress has attempted any such thing. We have been temporizing from year to year on this relief program. We have gotten exactly nowhere toward a final solution and we are not going to get anywhere, except into difficulties, until the subject is faced more honestly.

For the Nation's Disabled

EXTENSION OF REMARKS

OF

HON. HAROLD K. CLAYPOOL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

ARTICLE BY HON. JOHN W. McCORMACK

Mr. CLAYPOOL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. JOHN W. McCORMACK:

FOR THE NATION'S DISABLED

(By JOHN W. McCORMACK, author of V. F. W. measure, says pension plan is best means to solve disabled-veteran problem)

I am definitely in favor of having Uncle Sam pay out pensions to all permanently disabled veterans of the World War who served honorably for 90 days or more. I am in favor of their receiving the same amounts of pension for the same degrees of disability, under the same circumstances generally, as such disability pensions are now payable to veterans of the Spanish-American War, who were honorably discharged after 90 days or more of service.

To help to bring about such disability pensions for World War veterans, on January 17, 1940, I introduced H. R. 7980, at the request of your national legislative representative, my good friend Millard W. Rice. My bill, the V. F. W. bill, would provide pensions ranging from $20 to $100 per month, depending upon the severity of the veteran's permanent disability. For a 10-percent permanent disability, he would receive a pension of $20 per month; for 25-percent disability, $25 per month; for a 50-percent disability, $35 per month; for 75-percent disability, $50 per month; and for a total disability, $60 per month, provided that age 65 should be considered as total disability, and, if in need of an attendant, $100 per month.

Such pensions for Spanish War veterans were based upon the precedent established as to disabled veterans of the Civil War, who found themselves unable to prove service connection of their disabilities, as had been provided for before that as to veterans of the Mexican War of 1848, the War of 1812, and the Revolutionary War.

Immediately following each war in which our country has been engaged, pensions have been payable to veterans for their service-connected disabilities, and then from 20 to 30 years after each such war, for their permanent nonservice-connected disabilities.

Those who have given up a part of their normal lives to serve our country in a military capacity during time of war have thus made such contribution to their country as it can never repay. Very few of these patriots who respond to the country's emergency call would ever otherwise have chosen to go into the United States Army, Navy, or Marine Corps. Those who served honorably as much as 90 days not only severed themselves from their normal pursuits of life but stood ready to sacrifice their lives or their health, if fate so decreed, upon the altar of service to country.

War veterans served the entire Nation—not merely their home State or their home town. Since their honorable discharges many World War veterans, in their search for jobs and health, have shifted around from city to city, and from State to State, so that there are now many more veterans residing in some communities and States than the number who were originally enrolled therefrom, with proportionately less in other States.

The tendency of disabled veterans to move into certain States, where living conditions are more agreeable, will very probably continue for the next 20 or 30 years, as more veterans become handicapped by disability or age. A greater number of them will consequently become unemployed and unemployable.

The American people will not permit their past war veterans to starve. Those who have become unemployable and in need will be provided for in some manner by the American people.

Local private and public charity is already beginning to find this burden a heavy one and in certain communities and States too heavy to bear, where an unusual number of veterans have become concentrated. It is unfair for the Nation—whom these men served in its most dangerous occupation during time of war—to expect such communities and States to assume such responsibility indefinitely in the future. The only equitable arrangement is for the Federal Government to assume the sole responsibility of providing adequate pensions for all disabled war veterans. Doing so would lessen the relief load for many local veteran organization posts, ladies' auxiliary units, Red Cross chapters, community chests, public-assistance agencies, and charity asociations now making increasingly larger expenditures to take care of unemployed veterans and their families.

Having been a World War veteran myself, and having two brothers who served overseas, who are members of the V. F. W., I know something about the experiences of war veterans. I know something about the hardships, the exposure, the unsanitary conditions, the lack of good, wholesome, properly prepared fresh food, and the stress and strain experienced by hundreds of thousands of veterans who served during the World War, particularly as to those who served overseas.

I know that many a soldier and sailor kept his ailment to himself in order to be able to stay with his own "buddies." I know that many of them received inadequate or no medical treatment when badly in need thereof. I know that thousands of others received medical treatment concerning which no official record was made, and as to which their buddies, if still living, knew nothing, or can no longer remember. I know that many medical records actually have been lost or destroyed or never coordinated with the veteran's own service record, and therefore have not been made available to the Veterans' Administration.

I know that those who served, particularly overseas, were shifted around from place to place, from one outfit to another, so frequently that they did not get a chance to find out the full names and home addresses of their buddies, knowing them only by their nicknames of "Mike," "Pat," "Ole," "Johnny," etc. I know that most of those who served were darn anxious to get back home to mother's good old home cooking, to loved ones and friends, just as soon as possible after the armistice had been signed on November 11,

1918, and that scores of thousands of them who were actually suffering with some developing ailment or disability, bravely stuck out their chests and insisted that they were in good physical condition when looked over hurriedly or carelessly by medical examiners, immediately prior to their discharges, and as a consequence had their honorable discharge certificates marked with the notation: "Physical condition, good."

I know that thousands of our comrades figured that, after they got back home and got themselves well rested up, and well nourished on good home cooking they would be able to "snap out of it" and get back to normal. Many of them pursued this vain hope for months, sometimes years, end on end, relying on home remedies, failing to consult physicians until long after. I know that many of the physicians who did examine veterans shortly after their return from military service failed to keep records of such examinations, and can no longer remember what the veteran then complained of, or what they then found wrong with him, or such doctors have since died with their records destroyed.

A thousand and one other factors beyond their own control have, I know, frequently made it very difficult, and, in many cases, impossible, for World War veterans to establish the legal service connection of their actual service-incurred disabilities. Establishing service connection for a chronic ailment, as to which no official record was made during service, is more difficult for an overseas veteran, generally, than for a home-service veteran.

As a Congressman, I have had the experience of personally assisting thousands of veterans in the prosecution of their deserving claims. I know that many of them would never have gotten the necessary affidavit evidence to establish service connection, unless they had been assisted and advised by someone.

Because of these experiences, I feel sure that there are many scores of thousands of World War veterans, now suffering with partial or total disabilities, which were actually caused or aggravated by their World War service, who have not yet been able, and who never will be able, to prove themselves entitled to compensation on the basis of service connection of their disabilities, even though their buddies are convinced that they had their origin in service. The very least that the Federal Government can do is to provide pensions for these deserving "vets" for their permanent disabilities, in the same manner, in the same amounts, and for the same reasons, as granted to disabled veterans of the Spanish-American War.

Incidentally, the payment of pensions to disabled World War veterans would, at the same time, produce new purchasing power in all of the localities where such disabled veterans live. The same amounts would be payable, for the same degree of disability, without regard to the location of the village, town, city, or State in which they were living.

No State or local community could complain that beneficiaries were receiving more in certain other communities and States, because of an alleged difference in cost of living—such as is now the case as to the employees under the W. P. A., the N. Y. A., or under P. W. A. contracts, or as to social security public assistance benefits, etc. No one would have any justification for complaining that the Federal Government was pumping out purchasing power in greater amounts to various groups of beneficiaries, in certain States than to those in certain other States.

Pumping out such Federal purchasing power into every village, hamlet, and city throughout the country, by granting disability pensions to permanently handicapped World War veterans, would indirectly make it possible for every State, if it desired, to provide more generous old-age assistance to its other needy old folks, more liberal benefits for the dependent children of non-veterans, and more adequate aid to the blind, and thus to be entitled to more matched money from the Federal Social Security Board.

Disability pensions for all handicapped World War veterans are right in line with the main theme of the well-coordinated Veterans of Foreign Wars' program, Security for America. The principles of Americanism could be more effectually upheld and promoted by pensioned veterans, who would no longer be demoralized by the stigma of being dependent upon local charity. Thousands of unemployed pensioned veterans would thus be enabled to, and would, devote their time, talent, and energies to many constructive activities, incident to the promotion of good Americanism.

I do not regard the V. F. W. disability pension bill as a proposal for general pensions for all veterans. There is no reason to provide pensions for able-bodied, employed, self-sustaining World War veterans. No one proposes any such general pension law. Those who use the term "general pension bill" do so for the deliberate purpose of deceiving the American public into thinking that something unreasonable is being requested in the V. F. W. proposal, which is simply that Federal pensions be provided for all permanently disabled World War veterans.

There are thousands of V. F. W. members who are advocating disability pensions not because they themselves would benefit therefrom but because their less fortunate handicapped comrades, sorely in need, would be able to call for help from the Nation which they served some 22 years ago.

At the same time it should be borne in mind that no one can know when a man now able-bodied may become permanently disabled and definitely handicapped in his further efforts to make a living for himself and his family. The enactment of such a disability pension law would thus in effect constitute a paid-up disability insurance policy, upon which benefits would become payable according to the terms provided for therein.

As to those who have become somewhat fearful that the enactment of H. R. 7980 would reduce the amount of compensation now provided for veterans suffering with service-connected disabilities, may I emphasize the fact that the laws pertaining to service-connected disabled veterans would not be touched in any way. The enactment of a law providing pensions for non-service-connected disabilities for veterans of the Civil War, and subsequently for veterans of the Spanish-American War, did not result in a reduction of the basic pensions provided for veterans of such wars suffering with service-connected disabilities.

No reduction of the compensation now provided for service-connected disabilities would ever result by reason of the payment of pensions to World War veterans permanently handicapped by non-service-connected disabilities.

Incidentally, I think it is appropriate to call to your attention the fact that more than 80 percent of the more than 344,000 World War veterans, who are receiving compensation for service-connected disabilities, receive less than $60 per month compensation. Many of them are now, and will henceforth be found to be, suffering with other non-service-connected disabilities which, in connection with their partial service-connected disabilities, have rendered them unemployable and actually totally disabled. In the event of the enactment of H. R. 7980, these partially compensated, but totally disabled, World War veterans, would have the option of receiving the proposed pension of $60 per month for total disability. The option would very probably prove beneficial eventually, to thousands of veterans now receiving less compensation than $60 per month for partial service-connected disabilities.

For the benefit of our less fortunate comrades, of our own respective local communities and States, and, in line with the V. F. W.'s main objective, "Security for America," the V. F. W. should continue the fight which it has started, until there has been enacted into law provisions for payment of pensions to disabled World War veterans, on the same basis as now provided for as to veterans of the Spanish-American War.

The Antilynching Bill

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

EDITORIAL FROM THE TULSA (OKLA.) TRIBUNE

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tulsa Tribune, Tulsa, Okla., for Thursday, March 28, 1940:

[From the Tulsa (Okla.) Tribune of March 28, 1940]

THE OLD VOTE GRABBER

That old fake, the antilynching bill, is back again.

The Senate Judiciary Committee has reported it out to the Senate. It passed the House on January 10 by a vote of 252 to 131.

The antilynching bill was designed for the purpose of snaffling Negro votes and for nothing else. If it isn't unconstitutional, nothing is. It provides that in a community where a lynching has occurred the whole community may be fined, regardless of the guilt or innocence of the individual members. This is perhaps the first time in the history of America where a law was seriously proposed which lumps the blameless with the guilty.

But the worst thing about the antilynching bill is that most of its supporters are hypocritical. They know that it is a bad law. But they vote for it because, presumably, it will please their Negro constituents. In 1937 the House passed a previous antilynching measure 277 to 120, but when it came before the Senate on January 6, 1938, it ran into a determined filibuster led by CONNALLY, of Texas. Supporters of the bill filed two petitions for cloture, so as to get a vote by limiting debate. The first was rejected 51 to 37, the second by 46 to 42. Finally, after 6 weeks, a motion to proceed to other business was carried by a vote of 58 to 22. Many Senators who were prepared to vote for the bill privately admitted in the cloak rooms that they hoped it wouldn't pass.

Unlike the Lindbergh kidnaping law, which permitted the Federal Government to aid the State in suppressing a horrible and expanding racket, the antilynching law is directed at a crime that has almost vanished of its own accord. Last year in the entire Nation only eight persons, two of them whites, were lynched. Lynchings have dropped steadily from 179 in 1895, 76 in 1910, and 17 in 1925 to the present near vanishing point. In view of such figures there is no possible necessity, other than a political one,

for emergency Federal intervention such as the antilynch law provides.

The struggle which the two major parties are waging for the Negro vote is best understood when one considers that Negroes now comprise at least 10 percent of the population of the major northern and eastern cities. But it is a shame that both parties have resorted to such demagogic and dangerous methods in order to woo that vote.

The antilynching bill is not a piece of honest legislation.

A United America, Part 10

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. THORKELSON. Mr. Speaker, in this, the tenth and last article on A United America, I have tried to cover such parts of the Constitution as I believe are the most important to those of us who still hope that this Republic will be restored as it was given to us by the founders of our Nation.

We are far afield from those sound principles, and to continue along the liberal paths which have been paved by our enemy can only lead us toward a despotic and chaotic democracy in the true meaning of that word. No one who respects the Constitution and that which it guaranteed before the seventeenth amendment was adopted should ever use the word "democracy," for such governments can only end as they have before—in oligarchies or despotisms.

There are two types of governments, the aristocratic and the democratic, one ruled by the classes and the other by the masses. Neither of these types is desirable, for each caters to its own group and is therefore destructive to popular government. Recognizing this, the founders of our Republic selected the better element of each of the two for the government of these United States, and, uniting these, the State represents the aristocratic element and was placed in control of the Senate, and the people, the democratic element, selected directly from the masses to represent them in the lower House.

It was in this manner that the founders of our Republic succeeded in establishing balance in our Government, and to further safeguard and protect all of us, they gave the President veto powers, and the Supreme Court the power to nullify or declare unconstitutional such laws as were not based upon constitutional facts. These are the checks and balances in our Government, but the greatest power by far was placed in Congress. This should be clear, for it is through Congress the people speak. It is through this body the people may request removal of all officers by impeachment—from the highest to the lowest. To this public redress, Congress itself is not immune, for the Representatives can be removed every 2 years, and the Senators could, before the Constitution was amended, be removed whenever the State felt it was necessary to do so.

The President is, in a sense, chairman of a board of directors. He is head and Chief Executive of the Nation, but is devoid of any power, without the approval of the Senate, except that of granting reprieves and pardons.

I shall now quote from Report No. 394, Thirty-sixth Congress, where impeachment charges against the President were discussed on the floor of the House. It appears that the charges were not specific, and did not state that he had been instrumental in furnishing compensation to promote legislation, or that he had asked or coerced Members of the House to uphold legislation, but the report intimates that, had he done so, impeachment would have been in order. On the strength of his office, the President claimed certain immunities, to which the House replied in the following manner:

> The President of the United States, under the Constitution, possesses neither privilege nor immunity beyond the humblest citizen, and is less favored in this respect than Senators and Representatives in Congress. Article I, section 6, reads: "They (the Senators and Representatives) shall, in all cases except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective Houses and in going to and returning from the same." No such exemption is made in behalf of the Executive or any other officer of government. The conduct of the President is always subject to the constitutional supervision and judgment of Congress; whilst he, on the contrary, has no such power over either branch of that body. He is left, under the law, without shield or protection of any kind, except such as is borne by all. He is as amenable for all his acts after inauguration as before. He can make no plea which is denied to any other citizen, and is subject to the same scrutiny, trial, and punishment, with the proceedings, hazards, and penalties of impeachment superadded. The President and the citizen stand upon equality of rights. The distinction between them arises from an inequality of duties. Wherever the conduct of the latter is open to inquiry and charge, that of the former is not the less so. The President affirms, with seeming seriousness, in comparing himself with the House of Representatives, that "as a coordinate branch of the Government he is their equal." This is denied in emphatic terms. He is "coordinate" but not coequal. He is "coordinate," for he "holds the same rank," but he is not coequal, for his immunities and powers are less. The Members of the House may claim a privilege, whether right or wrong, which he cannot, and the Executive or law-executing power must always be inferior to the legislative or lawmaking power. The latter is omnipotent within the limits of the Constitution; the former is subject not only to the Constitution but to the determinations of the latter also. To repeat the point: The President is not, in any respect, superior to the citizen merely because he is bound to discharge more numerous duties, and he is not coequal with that branch of government which helps to impose and define those duties. The fact that he holds a limited veto over the legislation of Congress cannot affect the soundness of the views here briefly presented. His claim to "legislative capacity"—in other words, to possess legislative power—will scarcely be conceded in view of article I, section 1, of the Constitution, declaring that "all legislative powers herein (therein) granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

Much deterioration has taken place in the Government since that day, when men shot straight and talked right. We are now a bunch of pussyfooters, afraid to express our opinions about our own Government for fear of retaliation and persecution by people that we employ, pay, and pension.

The State is to blame for the loss of State rights, in having allowed municipalities or city governments to invade the field of private industry as competitors of private citizens. The States are now confronted with the same situation, as the Federal Government is now invading the State domain, competing with private industries on a national scale.

This must be recognized as opposed to the principles of popular government. If we are to maintain popular government, the field of industry must be left free to the private citizen, for it is only upon that principle that popular government can survive. Government ownership and operation in the industrial or business field leads to greater encroachment, which finally terminates in total Federal ownership. When this point is reached, popular government is lost and we have either an autocratic despotism or a democratic despotism, both of which are totalitarian governments.

This distinction between a popular government and a totalitarian government is very important, for it resolves itself into whether the people shall direct the government, or whether the government shall rule the people. Federal ownership of industries and business, no matter how inoffensive it may appear at first, will ultimately lead to complete Federal control of industry, and a centralized, totalitarian state.

In these 10 articles of "A United America," I have addressed myself to the people of this Nation, who have forgotten that it is their duty to reconstruct their own government so as to provide a protection for themselves and for generations to come. For the Federal Government to assert the power and

to proceed, as it has to date, should not be tolerated by the people if the smallest fragment of self-respect remains.

Congress still has the power to impeach, and the people should demand that such procedure begin against those who are tolerating subversive activities and sabotage of the Government of the United States. It didn't stick with Buchanan, because there was dissension between the North and the South, and he was not actually guilty of any violation, but that in no sense should be taken as a criterion, because the conditions are different today.

In conclusion I want to refer to amendment V, which I shall quote:

ARTICLE V. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

This article means exactly what it says—that the Federal Government has no business to deprive anyone of life, liberty, or property without due process of law—and that means constitutional law. It also means that the Federal Government has no right, under one pretext or another, to confiscate private property in order to please some fanatic who sits in some one of the Federal departments. It is high time that Federal department chiefs be informed of the fact that they are servants of the people; and may I add, not very important servants at that.

Congress is responsible to the people and to this Nation, and must in the end shoulder that responsibility. I say, let Congress proceed according to the Constitution and place this Government back where it belongs so that the people may rule and direct as the Constitution provides.

A Great Man

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. PLUMLEY. Mr. Speaker, the news of the death of CARL E. MAPES shocked all of us into a realizing sense of the magnitude of the personal loss sustained, and into a genuine appreciation of the inestimably valuable public service he had in the long years of sustained effort rendered to both his constituency and the country.

As Theodore Marburg so well says in his Story of a Soul:

Although we know it to be
Blessed release from suffering, yet when
The dark, forbidding angel beckons those
Whom we hold dear, and pushes wide the door,
That door through which we all must some day pass,
How trying the vast emptiness they leave.

Of CARL E. MAPES, I would like, in closing this tribute to him and to his memory, to say, in the words of Edward Robert Lytton, he was a man—

Who hath not bow'd his honest head
To base Occasion; nor, in dread
Of duty, shunn'd her eye:
Nor truckled to loud times; nor wed
His heart to lie:
Nor feared to follow, in the offense
Of false opinion, his own sense
Of justice unsubdued:
Nor shrunk from any consequence
Of doing good.

Adequate National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 3 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an address which I recently delivered at Raleigh, N. C., pertaining to adequate national-defense outposts. The address was broadcast over station WRAL, a station recently installed at Raleigh, N. C., the capital of my State.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good afternoon, ladies and gentlemen, I am very grateful for the opportunity to reach the ears of my audience provided by this newly created radio-broadcasting station, WRAL. I thank the manager of this station for this opportunity.

At this hour I wish to talk with you about a subject of interest, not only to you and to me, but of vital interest to the whole American people, adequate national defense.

Last Monday I introduced a joint resolution in the Senate of the United States which requested and authorized the President of the United States to enter into negotiations with Great Britain for the acquisition of its island possessions in the West Indies, as well as Bermuda in the North Atlantic, and British Honduras in Central America. This resolution was introduced in the House by my colleague, Hon. JENNINGS RANDOLPH, of West Virginia. The resolution in the upper House was referred to the Committee on Foreign Relations, and several days ago I was advised by Hon. KEY PITTMAN, chairman of the Foreign Relations Committee of the Senate, of which committee I am a member, that my resolution had been referred to the State Department for comment. I am in high hopes that our committee may soon be provided the opportunity of discussing it fully and thoroughly in connection with any comments submitted by the State Department.

We are all interested in protecting the Panama Canal, located in the Canal Zone, and particularly are we interested at this time, in view of the fact that our President has but recently returned from fishing waters in that vicinity.

In the North Atlantic we have no outposts. We should have. I have in mind the acquisition of Bermuda, this island owned by Great Britain, the capital of which is Hamilton, only 500 miles off the coast of North Carolina directly east, and, to be more exact, I might add that it is precisely 534 miles from Kitty Hawk, N. C. Our clipper ships of the Pan-American Lines have been recently stopping at Bermuda for the purpose of accommodating the islanders with air mail delivered several times weekly, but recently, on account of the British having at bayonet points and side arms seized and censured this mail, these trans-Atlantic stops have been abandoned by the Pan-American Lines. However, if Bermuda were ceded to the United States, these clipper ships could then resume stops there without embarrassment to the American and British Governments. We need an outpost in the North Atlantic, and in view of the immediate proximity of Bermuda to American shores I am in high hopes that we may be able to make acquisition of that property.

Bimini, British territory, a small island, is only about 50 miles from the shores of Florida, while Nassau, in that vicinity, is only about 150 miles from Miami. Jamaica is just south of the mainland of the Republic of Cuba. With the acquisition of these islands of Nassau, Bermuda, and Jamaica, together with friendly relations existing between the United States and the Republic of Cuba in those waters, we would have opportunities to more thoroughly fortify American shores, and this is particularly true when we take into consideration the friendly relations existing between the Republic of Haiti and that of the Dominican Republic.

We are now constructing additional fortifications near San Juan, the capital of Puerto Rico, and only about 60 miles from there we find the Virgin Islands which we purchased during the Wilson administration for $25,000,000. South of the Virgin Islands are the Windward and Leeward Islands possessed by France and Great Britain. There are a number of British islands here and if we secured them in addition to the Island of Trinidad we would have completed circled possessions of islands extending from Bermuda southward to the Port of Spain at Trinidad, which is only a stone's throw across into Venezuela located in the northeastern section of South America. Thus we would have provided adequate

and sure protection for the Canal locks from the Atlantic approach.

These aforementioned islands in square mile area totals approximately 12,000 square miles.

In addition to the above as heretofore suggested we should endeavor to acquire, and I hope to under my resolution, British Honduras, which is located in Central America and which borders on Guatamala and Mexico. This covers an area of about 8,000 square miles so this area added to the 12,000 square miles of the islands heretofore mentioned would make a total of approximately 20,000 square miles sought under my resolution, which would be paid for by crediting Great Britain with the amount agreed upon, this credit to be applied to Great Britain's debt to the United States, which debt in principal and interest now exceeds $5,557,000,000.

In concluding I might remind my listeners that more than 90 percent of the tourists visiting Nassau, Bimini, Jamaica, and Bermuda come from the United States and it has been said that 95 percent of all the revenue derived by the Bermudan Government comes out of the metropolitan port of the city of New York.

While we are so thoroughly interested in the protection of the Panama locks I am confident that serious consideration should be given to my proposal, and I am in high hopes that some plan may be worked out with the British Government by our own Nation by which we may make acquisition of these possessions. Such an arrangement would provide Great Britain with an opportunity to at least liquidate a portion of her indebtedness to the United States as a result of the World War, debts upon which no payment of interest or principal has been made since 1934, when the British Government paid the American Government $750,000,000, without designating as to whether or not the sum should be applied to principal or interest.

In connection with this resolution and with a view to providing further adequate national defense by way of outposts and aiding our neighbors across the Atlantic to liquidate a part of their obligations to this Government I propose to introduce a similar resolution shortly for the acquisition of the French islands in the Caribbean, which lie between the Virgin Islands and the island of Trinidad, and also the acquisition of two French islands just off the coast of Newfoundland, which latter could be well used by trans-Atlantic planes in negotiating the northern route during seasonable weather.

Now with respect to our outposts in the Pacific and the far north. In view of the fact that the Government of Mexico has confiscated millions of dollars worth of American property in the form of farm lands owned by American citizens in Mexico, claims for which are now pending, and further in view of the fact that recently millions upon millions of dollars worth of oil property were seized by that republic the time is propitious for a suggestion to negotiate with the Mexican Government for the acquisition of the peninsula of Lower California.

This would be an ideal place for the establishment of air bases, at the end of the peninsula in further adequate defense of the locks of the Panama Canal on the west coast.

An island which belongs to Costa Rica off the coast in the Pacific probably should be acquired, and with these acquisitions I am confident that the Canal would be amply protected from the Pacific.

With the Hawaiian Islands we have outposts which are of tremendous value to the United States, and near Honolulu we have fortifications which may be favorably compared with Singapore in the Malay Straits and other large outposts of the world.

Recently the Navy Department has evidenced interest in our outposts in the far north, particularly in the Alaskan waters at Sitka, Dutch Harbor, and Unalaska. This is well.

Our Government purchased from Russia all of Alaska, including the Pribilof Islands, the little Diamedes, and the Aleutian Islands for the sum of $7,200,000. Only a few Americans realize that the little Diamede Island off the coast of Alaska not far from Nome is only about half a mile from the big Diamede Island, which is owned by the Soviet Union. In other words, our American territory is only a stone's throw from Russian territory and as a matter of fact, the mainland of Alaska but a few hours by steamer to the mainland of Siberia. We are in immediate proximity of Russian territory. I am of the opinion that we should develop outposts in the Arctic, perhaps a small post in Point Barrow, which is the northernmost point of the Western Hemisphere, at Nome, and other points in the Arctic and in the Bering Sea, where are located the Pribilof Islands.

In connection with the Arctic, I likewise have in mind Wrangel Island, which is located north of the Diamedes. The first flag of any nation planted thereon was an American flag, but at the present time it is occupied by the Russians. The day will come, in view of the tremendous development of air travel, that Wrangel Island will prove to be a very important one, particularly in view of the fact that it is on a direct line from New York to Manila, and for the further good reason that it is in the immediate proximity of Russian territory.

The Aleutian Islands extend westward for a distance of about 700 miles, and Attu, the most westward of them all at the tip of this chain, is in reality only a few hours by air from Japanese territory.

With the fortifications and outposts suggested in the Arctic, in the Aleutian Islands, and with the acquisition of lower California and island possessions of Costa Rica and the further acquisition of the French and British Island possessions, together with British Honduras, as suggested in the outset, the United States would have thereby provided itself with adequate outposts north, south, east, and west.

In conclusion, may I say that I am now preparing a resolution to be introduced in the Congress of the United States calling upon the State Department to ascertain the legal status of Wrangel Island in order that its ownership may be definitely determined.

All of the foregoing, of course, is in the form of suggestions expressed or implied and are subject to the consideration of our Navy, War, and State Departments.

The Federal Prosecutor

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 3 (legislative day of Monday, March 4), 1940

ADDRESS BY ATTORNEY GENERAL ROBERT H. JACKSON

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Robert H. Jackson, Attorney General of the United States, at the Second Annual Conference of United States Attorneys held at Washington, D. C., on April 1.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It would probably be within the range of that exaggeration permitted in Washington to say that assembled in this room is one of the most powerful peacetime forces known to our country. The prosecutor has more control over life, liberty, and reputation than any other person in America. His discretion is tremendous. He can have citizens investigated and, if he is that kind of person, he can have this done to the tune of public statements and veiled or unveiled intimations. Or the prosecutor may choose a more subtle course and simply have a citizen's friends interviewed. The prosecutor can order arrests, present cases to the grand jury in secret session, and on the basis of his one-sided presentation of the facts, can cause the citizen to be indicted and held for trial. He may dismiss the case before trial, in which case the defense never has a chance to be heard. Or he may go on with a public trial. If he obtains a conviction, the prosecutor can still make recommendations as to sentence, as to whether the prisoner should get probation or a suspended sentence, and after he is put away, as to whether he is a fit subject for parole. While the prosecutor at his best is one of the most beneficent forces in our society; when he acts from malice or other base motives, he is one of the worst.

These powers have been granted to our law-enforcement agencies because it seems necessary that such a power to prosecute be lodged somewhere. This authority has been granted by people who really wanted the right thing done—wanted crime eliminated—but also wanted the best in our American traditions preserved.

Because of this immense power to strike at citizens, not with mere individual strength, but with all the force of Government itself, the post of Federal District Attorney from the very beginning has been safeguarded by Presidential appointment, requiring confirmation of the Senate of the United States. You are thus required to win an expression of confidence in your character by both the legislative and the executive branches of the Government before assuming the responsibilities of a Federal prosecutor.

Your responsibility in your several districts for law enforcement, and for its methods, cannot be wholly surrendered to Washington, and ought not to be assumed by a centralized Department of Justice. It is an unusual and rare instance in which the local district attorney should be superseded in the handling of litigation, except where he requests help of Washington. It is also clear that with his knowledge of local sentiment and opinion, his contact with and intimate knowledge of the views of the court, and his acquaintance with the feelings of the group from which jurors are drawn, it is an unusual case in which his judgment should be overruled.

Experience, however, has demonstrated that some measure of centralized control is necessary. In the absence of it, different district attorneys were striving for different interpretations or applications of an act, or were pursuing different conceptions of policy. Also, to put it mildly, there were differences in the degree of diligence and zeal in different districts. To promote uniformity of policy and action, to establish some standards of performance, and to make available specialized help, some degree of centralized administration was found necessary.

Our problem, of course, is to balance these opposing considerations. I desire to avoid any lessening of the prestige and influence of the district attorneys in their districts. At the same time we

must proceed in all districts with that uniformity of policy which is necessary to the prestige of Federal law.

Nothing better can come out of this meeting of law-enforcement officers than a rededication to the spirit of fair play and decency that should animate the Federal prosecutor. Your positions are of such independence and importance that, while you are being diligent, strict, and vigorous in law enforcement, you can also afford to be just. Although the Government technically loses its case, it has really won if justice has been done. The lawyer in public office is justified in seeking to leave behind him a good record. But he must remember that his most alert and severe, but just, judges will be the members of his own profession, and that lawyers rest their good opinion of each other not merely on results accomplished but on the quality of the performance. Reputation has been called "the shadow cast by one's daily life." Any prosecutor who risks his day-to-day professional name for fair dealing to build up statistics of success has a perverted sense of practical values, as well as defects of character. Whether one seeks promotion to a judgeship, as many prosecutors rightly do, or whether he returns to private practice, he can have no better asset than to have his profession recognize that his attitude toward those who feel his power has been dispassionate, reasonable, and just.

The Federal prosecutor has now been prohibited from engaging in political activities. I am convinced that a good-faith acceptance of the spirit and letter of that doctrine will relieve many district attorneys from the embarrassment of what have heretofore been regarded as legitimate expectations of political service. There can also be no doubt that to be closely identified with the intrigue, the money raising, and the machinery of a particular party or faction may present a prosecuting officer with embarrassing alinements and associations. I think the Hatch Act should be utilized by Federal prosecutors as a protection against demands on their time and their prestige to participate in the operation of the machinery of practical politics.

There is a most important reason why the prosecutor should have, as nearly as possible, a detached and impartial view of all groups in his community. Law enforcement is not automatic. It isn't blind. One of the greatest difficulties of the position of prosecutor is that he must pick his cases, because no prosecutor can even investigate all of the cases in which he receives complaints. If the Department of Justice were to make even a pretense of reaching every probable violation of Federal law, 10 times its present staff would be inadequate. We know that no local police force can strictly enforce the traffic laws, or it would arrest half the driving population on any given morning. What every prosecutor is practically required to do is to select the cases for prosecution and to select those in which the offense is the most flagrant, the public harm the greatest, and the proof the most certain.

If the prosecutor is obliged to choose his cases, it follows that he can choose his defendants. Therein is the most dangerous power of the prosecutor; that he will pick people that he thinks he should get, rather than pick cases that need to be prosecuted. With the lawbooks filled with a great assortment of crimes, a prosecutor stands a fair chance of finding at least a technical violation of some act on the part of almost anyone. In such a case it is not a question of discovering the commission of a crime and then looking for the man who has committed it, it is a question of picking the man and then searching the lawbooks, or putting investigators to work, to pin some offense on him. It is in this realm, in which the prosecutor picks some person whom he dislikes or desires to embarrass, or selects some group of unpopular persons, and then looks for an offense, that the greatest danger of abuse of prosecuting power lies. It is here that law enforcement becomes personal, and the real crime becomes that of being unpopular with the predominant or governing group, being attached to the wrong political views, or being personally obnoxious to or in the way of the prosecutor himself.

In times of fear or hysteria political, racial, religious, social, and economic groups, often from the best of motives, cry for the scalps of individuals or groups because they do not like their views. Particularly do we need to be dispassionate and courageous in those cases which deal with so-called subversive activities. They are dangerous to civil liberty because the prosecutor has no definite standards to determine what constitutes a subversive activity, such as we have for murder or larceny.

Activities which seem benevolent and helpful to wage earners, persons on relief, or those who are disadvantaged in the struggle for existence may be regarded as "subversive" by those whose property interests might be burdened or affected thereby. Those who are in office are apt to regard as "subversive" the activities of any of those who would bring about a change of administration. Some of our soundest constitutional doctrines were once punished as subversive. We must not forget that it was not so long ago that both the term "Republican" and the term "Democrat" were epithets with sinister meaning to denote persons of radical tendencies that were "subversive" of the order of things then dominant.

In the enforcement of laws which protect our national integrity and existence, we should prosecute any and every act of violation, but only overt acts, not the expression of opinion, or activities such as the holding of meetings, petitioning of Congress, or dissemination of news or opinions. Only by extreme care can we protect the spirit as well as the letter of our civil liberties, and to do so is a responsibility of the Federal prosecutor.

Another delicate task is to distinguish between the Federal and the local in law-enforcement activities. We must bear in mind that we are concerned only with the prosecution of acts which the Congress has made Federal offenses. Those acts we should prosecute regardless of local sentiment, regardless of whether it exposes lax local enforcement, regardless of whether it makes or breaks local politicians.

But outside of Federal law each locality has the right under our system of government to fix its own standards of law enforcement and of morals. And the moral climate of the United States is as varied as its physical climate. For example, some States legalize and permit gambling, some States prohibit it legislatively and protect it administratively, and some try to prohibit it entirely. The same variation of attitudes toward other law-enforcement problems exists. The Federal Government could not enforce one kind of law in one place and another kind elsewhere.

It could hardly adopt strict standards for loose States or loose standards for strict States without doing violence to local sentiment. In spite of the temptation to divert our power to local conditions where they have become offensive to our sense of decency, the only long-term policy that will save Federal justice from being discredited by entanglements with local politics is that it confine itself to strict and impartial enforcement of Federal law, letting the chips fall in the community where they may. Just as there should be no permitting of local considerations to stop Federal enforcement, so there should be no striving to enlarge our power over local affairs and no use of Federal prosecutions to exert an indirect influence that would be unlawful if exerted directly.

The qualities of a good prosecutor are as elusive and as impossible to define as those which mark a gentleman. And those who need to be told would not understand it anyway. A sensitiveness to fair play and sportsmanship is perhaps the best protection against the abuse of power, and the citizen's safety lies in the prosecutor who tempers zeal with human kindness, who seeks truth and not victims, who serves the law and not factional purposes, and who approaches his task with humility.

Meeting of Stockholders of Southeast Colorado Power Association

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 3 (legislative day of Monday, March 4), 1940

ARTICLE FROM LAMAR (COLO.) SPARKS

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Lamar Sparks, published at Lamar, Colo., regarding a meeting of the stockholders of the Southeast Colorado Power Association, which was held on the 5th day of March last.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Lamar (Colo.) Sparks]

STOCKHOLDERS OF R. E. A. TO MEET HERE MARCH 5—BIG COOPERATIVE ENTERPRISE HAS MADE RAPID GROWTH

The stockholders of the Southeast Colorado Power Association, original Rural Electrification Administration project in this section of Colorado, will meet in Lamar Tuesday, March 5, for their annual session, at which they will elect directors, pass on a proposed set of bylaws, and transact considerable routine and special business.

Under the rules the session is called to met at the offices of the association located on West Elm Street, but with a membership of 700 stockholders it is expected that the meeting will quickly adjourn to the State armory. This will be the first general meeting of stockholders since the organization of the project and it is expected to be well attended.

In the late fall of 1936 the former Prowers County extension agent, A. J. Hamman, was awakened to a vision. He had dreamed of electricity for the farmers. District meetings were called. The opportunity was explained to the people who gathered. Some of them said, "Pooh! Pooh! It is impossible. We farmers can't do that. Where are the big financiers?" Some of them said, "We can't afford it. Let the old lady keep on cleaning the lamp chimneys." Some of them said, "We're busy. Let George do it." But there were some inspired by hope and alert with courage and energy and a willingness to serve their neighbors and their friends, who said, "Come on, let's try."

So, at each community meeting a committeeman was appointed and he was generously told to go out at the expense of his own time and gasoline and see what he could do in getting the people to

"sign up." Since then arrangements have been made to pay some expenses to such missionaries. But the pioneers did the work wholly "on their own."

One of the first communities was May Valley, and there Neill B. McGrath was given the task of signing them up. Then the Wiley community got together and picked on J. C. Fasnacht. The Carlton district selected Donald C. McMillin, Hartman chose Horace M. Cox, Prosperity Lane picked J. O. Scott, and the McClave district chose J. L. Wertz.

At their own expense these men and their volunteer assistants canvassed the territory. A meeting was held of all the districts at the courthouse and the six named were told to apply for an allotment, and if successful to organize a corporation with themselves as directors. The boundaries of their expectation were indicated in the name of the corporation—the Bent-Prowers Rural Power Lines Association, organized in August 1937.

Up to this time the only money visible was the membership fees put up by the 11 organizers and what little could be sequestered from the association's attorney, Edward O. Russell, who had soon joined Hamman in the missionary work and was given the honorary position of official correspondent on condition that he provide an office and postage and telegrams.

Of course, maps of the proposed distribution lines had to be made, and the committee made a deal with Glenn R. Fickel, a consulting engineer, by which he was to be paid if the association got an allotment from the Rural Electrification Administration. Up to this point the whole project was a matter of expectancy only.

However, an allotment was secured, completed maps for the construction were made, bids were asked for, a bookkeeper and a project superintendent were employed. The vision was assuming actual bodily existence. And the six directors had another job imposed on them—the building of 175 miles of electric distribution lines.
